Hose Connection: Crude oil is discharged through 2×10 in. and 1×8 in. arm. All cargo connections are made with hydraulic quick coupler loading arms. Maximum loading and discharge pressure is 100 lbs. Fuel oils and heating oil are discharged through 10 in. and 8 in. arms to the vessel. The terminal has storage facilities for up to 92,000 bbls. of ballast and does not handle slops.

Facilities and equipment available at the terminal for cargo control include check valves on the dock leading to the shore pipeline system. An emergency control to stop loading is located at the dock manifold.

Bunkers: Fuel oil and diesel oil are available from an 8 in. line with a maximum delivery rate of 2,500 bbls.p.h Quantities delivered are as required. Fresh water is piped at a maximum rate of 20 t.p.h. through a 3 in. line, there are no restrictions on amount delivered.

British Petroleum – Paulsboro:

General: The BP refinery at Paulsboro is located 1.5 miles Eastward of Bramell Point (87 miles from the Sea Buoy). The terminal has 2 offshore wharves which provide 1,053 ft. of berthing space. Depths of 38 ft. are reported alongside, and deck heights are 11 ft. and 12 ft. There is a 3.5 million-barrel storage capacity. The terminal is used for receipt and shipment of petroleum products and bunkering vessels. The berths are parallel to the channel and each have 4 steel dolphins.

Vessels up to 675 ft. in length and a maximum of 38,000 d.w.t. can be accommodated at the Terminal Dock. Max. draft (fwd) is 37 ft. at the dock. Docking of vessels is done 2 hours prior to HW. Vessels up to 26 ft. can dock or undock at any stage of the flood tide. Vessels in excess of 26 ft. must wait for HW to dock or undock. Passing river traffic will cause some surge to take place. Proper tension should be maintained on all mooring leads. A gangway is not provided by the terminal.

Pilotage and Tugs: The services of a Pilot and Docking Master is both compulsory and recommended. Vessels tonnages in excess of 1,000 g.r.t. required tug assistance from 1 or 2 tugs depending on prevailing winds. For undocking vessels of any tonnage 1 tug is required. Due to shoaling adjacent to the berth, be advised that undocking vessels should be lined up on the Billingsport Range prior to the exchange of the Docking Master and Pilot.

Hose Connection: Clean products, No. 4 fuel oil and No. 6 fuel oil are handled at this terminal through 8 in. hoses. These hoses are connected with bolted flanges, there are 2 connections for each product. All products are pumped with a maximum pressure of 100 lbs. The terminal has no facilities for handling ballast or slops.

Bunkers: Fuel oil and diesel oil are available in desired quantities. Maximum delivery rate is 2,000 bbls.p.h. through 8 in. lines. Fresh water is not available.

Dupont – Gibbstown: General: Deepwater Point, located 0.6 miles above the New Jersey end of the Delaware Memorial Bridge and 59 miles from the Sea Buoy, is the site of the Dupont Chemical Company plant. The 550 ft. wharf (Lat. 39° 41′ 37″ N., Long. 75° 30′ 40″ W.) at the plant can provide 600 ft. of berthing space with dolphins. Depths of 33 ft. are reported alongside; dock height is 10.5 ft. Liquid sulphur, acids, and chemicals are handled at the wharf.

Pilotage and Docking: Vessels up to 630 ft. in length, beam 90 ft. and 28,000 d.w.t. can be accommodated at the dock. Max. draft allowed is 32 ft. The dock has a limited strength. Shoaling in the berth places a limit on vessel draft. For drafts of 32 ft. docking is done 2 hours prior to HW. Undocking can be done at any stage of the tide. Passing river traffic will cause the vessel to surge in it's berth. Proper tension should be maintained on all mooring leads. A gangway is not provided by the terminal.

The services of a Pilot and Docking Master is compulsory and recommended. Recommended mooring is with the bow downriver. The vessel is turned off the dock with tug assistance. For docking, 2 tugs (approximately 2,000 h.p.) are required. When undocking 1 tug (approximately 2,000 h.p.) is sufficient. The dock runs parallel to the river channel. All vessels are moored port side to. No mooring cables can be employed. All leads must be manilla or polypropylene lines.

Hose Connection: Fuel oil is discharged through 2×10 in. lines. These lines are connected by a flange. Maximum pumping pressure is 100 lbs. Numerous cargo lines are located on the dock for handling barge shipments of petro-chemicals and acid. Assigned vessels are cautioned to keep mooring lines clear of cargo lines. Safety check-lists are employed at this facility. Personnel at the facility are familiar with and follow safety practices. The terminal has no facilities for ballast or slops.

Fresh Water: Fresh water is only available at the dock. Fresh water is piped at 20 t.p.h. and supplied in an emergency only.

Chevron Oil – Hog Island (Berths No. 3 and 4):

General: The Hog Island Wharf is located 90 miles from the Sea Buoy on the Mifflin Range section of the Delaware River at Lat. 39° 51′ 46″ N., Long. 75° 14′ 15″ W. The terminal is a deepwater berth providing 2,754 ft. of berthing space with dolphins. Depths of 37 ft. are reported alongside the dock and deck height is 16 ft. The terminal is used for receiving crude oil and shipping refined petroleum products. There is a 5.5 million-barrel storage capacity at the terminal.

Entering and Docking: Vessels up to 1,000 ft. in length, 135 ft. beam and 110,000 d.w.t. can be accommodated at both berths. Maximum fresh water departure draft allowed is 37 ft. Vessels over 35,000 d.w.t. have a maximum fresh water departure draft of 36.5 ft. For vessels making arrival to the Hog Island Berths that have pre-arrival displacements over 35,000 d.w.t. a lightering service is available in the vicinity of Big Stone Beach. Chevron provides Yokohama Fenders for the lightering operations. Vessels over 35,000 d.w.t. should have a minimum arrival draft of 36.5 ft. (salt) prior to transit up the Delaware River. A gangway is not provided by the terminal.

Pilot and Tugs: The services of a Pilot and Docking Master is compulsory and recommended. Vessels should arrive off the berth 2 hours prior to HW. All vessels are turned prior to docking for starboard-side berthing with the heading down-river. 2 tugs are required if the tug is between 1,000 h.p. and 2,000 h.p. 3 tugs are required for vessels exceeding 35,000 d..w.t. For undocking 1 tug is required for all tonnages. No gangway is provided by the terminal. Passing river traffic will cause berthed vessels to surge. All mooring lines and/or wires should be tended at all times. Additional spring lines are recommended for vessels in excess of 35,000 d.w.t.

Hose Connection: Crude oil is discharged through 4 loading arms at both berths. The hoses are 12 in. and are connected with a bolted flange. Max. discharge pressure is 100 lbs. All lines on shore are common crude lines. The terminal has no facilities for ballast or slops.

Fresh Water/Fuel: Fresh water when required by the vessel can be provided by the terminal. Max. delivery rate is 50 t.p.h. through a pipeline. Fuel oil can be delivered by barge only.

Citgo Petroleum: General: The Citgo Fuel Pier is located at the S.W. limits of Mantua Anchorage, 81 miles from the Sea Buoy. The entrance of Mantua Creek is adjacent to the Western end of the Fuel Pier dolphin located at each end of the pier. The terminal is used for the discharge of crude oil, fuel oil, heating oil, jet fuel and petrochemicals.

Vessels up to 800 ft. in length, 125 ft. beam and 80,000 d.w.t. can be accommodated at the berth. Maximum fresh water draft allowed at the pier is 37.5 ft. Shoaling at the berth may place further limitations on the allowed fresh water draft.

Pilotage and Tugs: The services of a Pilot and Docking Master is compulsory and recommended. Following transit of the Delaware Riveron a rising tide, vessels should arrive off the dock 2 hours prior to HW. Vessels are turned around in the Anchorage Area North of the terminal with 2 tugs assisting. After completion of the turn the vessel is then breasted, port side, into the berth. The berth is almost parallel to the channel. 2 tugs are used for docking vessels of all sizes. 1 tug is used for undocking all vessels. Approximate tug horse-power required is 2,000 h.p. All vessels are moored port-side to. The terminal recommends that manila or polypropylene mooring lines be used at this location. Passing river traffic will cause surging of the vessels at the berth. To minimise this surging, the terminal recommends doubling of fore and aft spring lines. All mooring lines should be tended constantly.

Hose Connection: Cargo handled at this terminal includes crude, heating oil, fuel oil and jet fuel. Jet fuel is handled through an 8 in. line. All other cargoes are handled through 10 in. lines. Connections of hoses are made with flanges. Maximum pumping pressure is 90 lbs. On completion of cargo discharge the terminal displaces the cargo in the hose with nitrogen. The terminal connects and disconnects all hoses and has no facilities for ballast or slops.

Bunkers and Freshwater: No fuel or freshwater is available at the berth. The terminal will not permit fueling of vessels at this berth.

Mobil Oil – Paulsboro: (Also see "Shipmaster's Report da November 1992).

General: The Mobil Oil Terminal is located at Bramell Point at West end of the Paulsboro waterfront which is approximately 80 mi from the Sea Buoy. Facilities include a 2,453 ft. marginal wharf provid 2,254 ft. of berthing space. Depths of 39 ft. have been repor alongside and deck height is 12.5 ft. There is a 6.2 million-barrel storag capacity. The terminal is used for the receipt and shipment of petrole products and bunkering vessels.

Vessels up to 900 ft. in length, unlimited beam and 80,000 d.w.t. c be accommodated at the terminal berths. Drafts to 38 ft. (fresh-wa have also been accommodated at these berths. Shoaling at the be may place further limitations on the allowed fresh-water draft.

Pilots and Docking: The services of a Pilot and Docking Maste compulsory and recommended. Vessels should arrive off the doc hours before HW and are turned prior to docking for a port side moor After completion of the turn the vessel is breasted into the be Additional spring lines are recommended to prevent surging caused passing river traffic. To insure a proper lead on the spring lines, t terminal recommends the spring lines be crossed. The terminal do not provide a gangway.

Tugs: Tug requirements for docking vessels include: 1 tug for vesse up to 30,000 d.w.t., 2 tugs for vessels over 30,000 d.w.t. For undocki vessels tug requirements include 1 tug for vessels up to 50,000 d.w and 2 tugs for vessels in excess of 50,000 d.w.t.

Hose Connection: Crude is discharged at No. 1 Berth. 4 loading ar with 10 in. hoses using bolted flanges are connected to the ship. Ma discharge pressure is 125 lbs. Clean lubes are handled at No. 2 Ber through 3 loading arms when loading and 4 loading arms wh discharging. 8 in. hoses with bolted flanges are connected to the sh Max. line pressure is 100 lbs. Lube oils are handled at No. 3 Bert the same manner as No. 2 Berth. The terminal has limited facilities handling ballast through a 6 in. line. There are no common pipelines cargo in the terminal. Safety check lists and practices are followed terminal personnel.

Bunkers and Fresh Water: All quantities of fuel oil, diesel oil and fre water are pumped to the vessel as required.

Sun Oil – Marcus Hook: (Also see "Shipmaster's Report" da September 1984).

General: Located at Mile 69 North, Marcus Hook is an importa petroleum centre where large quantities of crude oil are received a refined petroleum products are shipped. Vessels can be bunkered the rate of 1,500 and 5,000 bbls.p.h. Sunoco Wharf No. (Lat. 39° 48′ 23″ N., Long. 75° 25′ 10″ W.), and Sunoco Wharf No. (250 yards and Northeastward of Wharf No. 3) are both owned a operated by Sun Oil Company.

Wharf No. 2A can accommodate vessels up to 750 ft. in length, 125 beam, max. 50,000 d.w.t. and max. fresh water draft 35 ft. Wharf No. can accommodate vessels up to 810 ft. in length, 125 ft. beam, ma 76,000 d.w.t. and max. fresh water draft of 35 ft. Wharf No. 3C c accommodate vessels up to 1,000 ft., 125 ft. beam and draft 35 Shoaling at the berth may place further limitations on allowed fresh wa drafts.

Pilots and Docking: The services of a Pilot and Docking Maste compulsory and recommended. Vessels should arrive off the doc hours prior to HW. Vessels are turned above the facilities prior docking. Undocking is done at any stage of the water height. Af completion of turn the vessel is then breasted into the berth fo starboard side mooring. Passing river traffic will cause moored vess to surge unless proper tension is maintained on mooring leads a times.

Tugs: Tug requirements for docking vessels include 2 tugs betw 1,500 h.p. and 2,000 h.p. For vessels undocking 1 tug is sufficient.

Hose Connection: Crude and fuel oil are discharged at Berths No. and 3A. Both berths have 4 loading arms, 12 in. hoses, and ma pumping pressure of 125 lbs. All connections are made with a bol flange. Clean products are handled at all 3 berths through 8 in. or 12 hoses. Maximum pumping pressure is 125 lbs. Petro-chemicals discharged at Berth No. 3A through a 10 in. line with a max. pump pressure of 125 lbs. All connections for clean products and pe chemicals are made with bolted flanges.

Bunkers and Fresh Water: Fuel oil and water is available at all ber Fuel oil is delivered at 2,000 bbls.p.h. through an 8 in. line. Fresh wa is piped at a rate of 45 t.p.h. Quantities available are enough to sa individual vessel requirements.

Tank Cleaning Inc. – Harkness Point, Schuylkill River:

General: The Schuylkill River is approximately 85 miles from the S Buoy on the Northside of the Delaware River. The junction is ma with a flashing red 4 sec. light mounted on a stone pile on the right s of the junction and Buoy "C1" on the lest side of the junction. A fogs is located on the West side of the river junction. A lighted range (bea 021.5°T) marks the entrance. Vessels proceeding to Harkness Poi pass under the Girard Point Bridge and Penrose Avenue Bri 0.6 miles and 1.3 miles, respectively, above the river mouth. B bridges have fixed spans with clearances of 135 ft.

Pilotage and Docking: The terminal berth can accommodate ves up to 630 ft. in length, 90 ft. beam, max. 28,000 d.w.t. and max. fr water draft of 33 ft. There is a bow-to-manifold restriction and no p breast line leads therefore the present mooring arrangement cons to be unsafe. Vessels should arrive at the Schuylkill River at HW s for docking. Undocking can take place at any stage of the tide. A pa approach is made when docking. A Pilot and Docking Maste compulsory and recommended. 2 tugs are assigned to all vessels w docking. For all vessels undocking 3 tugs must be employed. Undo vessels have to be backed down the Schuylkill River to the junctio the Delaware River before turning can be accomplished.

Hose Connection: Fuel oil, heating oil, bunker and gasoline are all offloaded at this terminal. Bunkers are also loaded onto vessels at the berth. 4×10 in. lines are used for fuel oil and heating oil. All cargo lines are connected with a bolted flange. Max. pumping pressure on all lines is 100 lbs. 1×6 in. line is used for bunkers and 1×8 in. line is used for gasoline. The terminal has no facilities for ballast or slops. The dock manifold only permits the discharge of one grade at a time, this could affect the trim of the vessel.

Fresh Water/Fuel: Fuel oil and water is available at the berth. Fuel oil is delivered through a 6 in. line at 2,000 bbls.p.h. as per vessel requirements. Fresh water is piped at 40 t.p.h. maximum delivery rate.

Coastal Eagle Point Oil Co. – Westville Nos. 2 and 3:

General: The Terminal is located 90 miles from the Sea Buoy at Lat. 39° 52′ 43″ N., Long. 75° 09′ 30″ W., East of Eagle Point. The facility has an offshore wharf which provides 1,380 ft. of berthing space. Depths of 40 ft. are reported alongside and deck heights are 6 ft. and 16 ft. There are water and elecrical shore power connections. Vessels can be bunkered at the rate of 1,500 bbls.p.h.

The terminal can accommodate vessels up to 910 ft. in length, unlimited beam, max. 85,000 d.w.t. with a max. fresh water draft of 38 ft. The controlling depth at the berth is 40 ft.

Pilotage and Docking: A Pilot and Docking Master are compulsory and recommended. Vessels dock at HW or first stage of ebb. Undocking takes place at any stage of the tide. For docking 2 tugs are recommended. For undocking the Master may decide to use 1 or 2 tugs, depending on the weather and tidal conditions. Vessels are turned prior to docking for a port side mooring. No gangway is provided by the terminal. A normal mooring arrangement is used. Distance between shore manifolds is 878 ft. The terminal requires 100 ft. clearance between vessel when Berths No. 2 and 3 are occupied simultaneously.

Hose Connection: Berth No. 2 handles off-loading of crude, No. 4 and No. 6 fuel oil through 12 in. and 8 in. hoses. All connections at both berths are bolted flanges. Max. pumping pressure at both berths is 100 lbs. for all cargoes except chemicals which are pumped at 95 lbs.

Berth No. 3 handles No. 4 and No. 6 fuel oil through 6 in., 8 in. and 12 in. hoses. The terminal can handle up to 10,000 tons of ballast providing the separator is operational. Slops can also be sent ashore. The shore ballast line is segregated. Fuel Oil and crudes are handled through a common line.

Fresh Water/Fuel: Available.

Dirty Ballast Facilities:

Marcus Hook (Sun): Line 8 in. Max. quantity acceptable 1,800 tons. Rate 250 t.p.h. Clean ballast may be pumped overboard.

Marcus Hook (B.P.): Line 8 in. Max. quantity acceptable 2,000 tons. Rate 250 t.p.h. Clean ballast may be pumped overboard.

Paulsboro (Mobil): Line 6 in. Max. quantity acceptable 2,000 tons. Rate 150 t.p.h. Clean ballast may be pumped overboard.

Paulsboro (B.P.): Line 10 in. Max. quantity acceptable 4,000 tons. Rate 800 t.p.h. Clean ballast may be pumped overboard.

Point Breeze (Atlantic): Line 6 in. Max. quantity acceptable, no limit. Rate 300 t.p.h. Clean ballast may be pumped overboard.

Eagle Point (Coastal): Line 10 in. Max. quantity acceptable, no limit. Rate 1,000 t.p.h. Clean ballast may be pumped overboard.

Girard Point (Chevron): Line 8 in. Max. quantity acceptable, no limit. Rate 500 t.p.h. Clean ballast may be pumped overboard.

General: Lighterage of deep drafted tankers effected at anchorage inside the Capes and before entering the main Ship Channel, i.e. at Big Stone Reach Anchorage, etc.

The holding ground in the upper river anchorages, such as Reedy Point, Marcus Hook, Mantua Creek, etc. is reported to be poor, whilst considerable siltation is also reported in these areas. Masters are therefore advised to take suitable precautions when having to use these anchorages.

Loading Fresh Water: This is effected at Mantua Creek Anchorage only.

Shipmaster's Reports:

September 1984.
Sun Oil Jetty (3C) at Marcus Hook.

Vessel: 140,000 d.w.t. LOA 270 m.

This is the only berth at Marcus Hook suitable for tankers of this size. Usually berth starboard side alongside, arriving off berth about 2 hours before HW. 1 tug each end, tugs' lines and usually made fast on main deck. 2 back springs first then 2 to 3 breasts and 2 to 3 head/stern lines. With this size of vessel it is better to have forward back springs from forecastle and use main deck moorings as head lines. Aft normally have back springs and stern lines from poop and breast lines from main deck.

Shore gangway and with an accommodation ladder about 20 m. abaft after manifold it is best to remove platform and land shore gangway there.

If bunkering then usual to pull off berth and anchor in Marcus Hook Anchorage.

Berthing Pilot boards off and normally uses accommodation ladder.

November 1992.

Mobil Oil No. 1 Jetty at Paulsboro.

Vessels normally berth port side to at the beginning of the flood tide. Normal mooring is 3-2-2, and all lines sent by shore messenger. Springs and breasts are sent first, and finally head/stern lines by boat.

Fresh water available by barge only.

Bunkers available from jetty to Mobil vessels only.

Shore gangway available.

Transport to and from main gate by security van.

No crane available for taking stores.

Report: September 1993.

The following was sent by an Agent to an Owner/Operator:

Port of Philadelphia Bulletin:

1. The United States Coast Guard Captain of the port in Philadelphia has issued a directive that eliminates the grace period for vessels arriving in Philadelphia with an expired Tank Vessel Examination (TVE) or Letter of Compliance (LOC). Vessels will not be allowed to commence cargo operations until they complete their TVE. Those vessels arriving at Big Stone Anchorage with an expired TVE may incur costly delays, as the U.S.C.G. will only normally conduct a TVE during daylight hours.
2. Past U.S.C.G. practices would allow a vessel to lighter at Big Stone Anchorage, and then complete the TVE when berthed. This will no longer be allowed.
3. To prevent delays we advise that all vessels have a valid TVE upon arrival at Big Stone.
4. At the September 9th meeting of the Mariners' Advisory Committee, it was resolved that vessels of Panamax size and greater would not be allowed up river on an ebb tide, if their draft exceeded 35 ft. 6 in.
5. Also note that as of 0001 hrs. on September 10th, Marcus Hook Anchorage will be closed due to dredging. Only one vessel at a time will be allowed access to the Anchorage. 24 hours advance notice must be given to the U.S.C.G. Vessels are allowed to anchor for a period of up to 12 hours. If the Anchorage is not available, vessels will have to bunker at Mantua Creek or Wilmington with a stand-by tug. Dredging is expected to continue until November 10th 1993.
6. In order to reduce possible vessel delays, we request to be advised immediately of any vessel that will arrive with an expired TVE. We will coordinate with the Terminals and pilots on arrival times to reduce waiting for flood tides for those vessels mentioned above.

LNG/LPG: COAST GUARD REGULATIONS:

REQUIREMENTS FOR THE TRANSPORT AND TRANSFER OF LNG/LPG:

The following requirements are issued in the interest of port safety to supplement existing local, State, and Federal Regulations.

A. GENERAL REQUIREMENTS.

1. *Pre-arrival Conference:* Prior to a vessel's initial port call, or when such a vessel has not been to the port within six months, and is laden with LNG or LPG enroute to a facility under the jurisdiction of the Captain of the Port, Philadelphia zone, as defined in 33 CFR 3.15-25, a pre-arrival conference shall be held with all personnel concerned in the delivery and operation of the facility. The purpose of this conference is to disseminate and explain Captain of the Port requirements, local regulations, and establish emergency procedures for that vessel during the initial and subsequent port calls. The conference will include representatives of the Coast Guard, the vessel's Agent and charterer or operator, terminal owner/operator, and local authorities including the fire department.

2. *Notification:* The Captain of the Port must be notified:

(a) At least 72 hours in advance of a vessel's arrival at the Delaware Breakwater with confirmation 12 hours in advance, and certification upon arrival.

(b) Of the vessel's ETA at Delaware Memorial Bridge.

(c) Of the intended length of port call and estimated time of departure.

(d) Of any changes in the intinerary.

B. VESSEL DOCUMENTS: Prior to proceeding past the Delaware Breakwater at Cape Henlopen, the Master of the vessel shall ensure the following documents are valid and can be produced on demand:

1. A Certificate of Financial Responsibility issued by the Federal Maritime Commission.

2. If U.S. Flag, a Certificate of Inspection endorsed for the product(s) carried.

3. If foreign flag, a Letter of Compliance (LOC) for the carriage of the product(s) carried.

a. Vessels not holding a valid LOC shall be boarded by a joint COTP/OCMI inspection party at the Breakwater Anchorage prior to proceeding upriver. The vessel shall be examined in accordance with 46 CFR, part 154. If the examination is satisfactory, the vessel will be permitted to proceed upriver to the facility. Compliance with Part C of this chapter will be strictly observed.

C. TRANSIT RESTRICTIONS FOR VESSELS LADEN WITH LNG/LPG CARGO:

1. *Vessel Movement:* Vessel movement will be conducted only with prior approval of the Captain of the Port.

2. *Propulsion and Machinery Status Report:* No vessel may proceed past the Delaware Breakwater unless the Master sends a message to the Captain of the Port within 12 hours before arrival stating that "To the best of my knowledge and belief there are no known casualties to this vessel or its machinery and all cargo handling and gas detection equipment is in proper operating condition". Should any condition be present that precludes the sending of this message, the vessel shall be boarded by the Coast Guard at the Breakwater Anchorage so that a determination can be made as to the vessel's seaworthiness and repairs necessary prior to transiting the river.

3. *Transits:* LNG/LPG laden vessels may only transit the Delaware Bay/River daytime during hours if the visibility is two miles or greater. After discharging, a vessel empty of LNG/LPG cargo may depart at any time.

4. *Intra-Harbour Movement:* An LNG/LPG carrier should submit 2 hours' advance notice of intra harbour movement to the Captain of the Port, earlier notice is desired if practicable.

5. *Radio Guards:* Continuous radio guard must be maintained on Channel 13 (156.65 MHz) and Channel 16 (156.8 MHz) during transit.

6. *Tug Escort:* No LNG/LPG laden vessels shall transit the Delaware River above Delaware Memorial Bridge without at least one commercial tug escorting.

7. *Coast Guard Escort:* Unless specifically authorised by the Captain of the Port, no vessel may transit the Delaware River above Delaware Memorial Bridge without a Coast Guard escort vessel.

8. *Meeting and Overtaking:* While transiting the river, the vessel will not overtake river traffic; nor will river traffic be allowed to overtake the vessel. The vessel shall be navigated so as not to meet other vessels at bends in the river channel. During meeting situations, neither vessel shall proceed in such a manner that they will meet at a relative speed greater than 20 knots.

9. *Emergency Situations:* In the event of an emergency situation, the Captain of the Port must be promptly notified of the vessel's position, draft, nature of emergency, time required to restore normal operations and future intentions. The vessel's Master or Agent shall have the authority to immediately enlist commercial assistance in an emergency situation or when the COTP deems that commercial assistance is required to prevent an emergency.

D. ANCHORAGE RESTRICTIONS AND REGULATIONS:

1. Transfer of product at anchorage is not permitted except in the event of an emergency such as to warrant, in the opinion of the Captain of the Port, specific authorisation.

2. A live bridge watch shall be maintained by a qualified watch officer. A round of bearings and/or ranges fixing the vessel's position shall be taken hourly followed by a report on the hour to COTP Philadelphia on Channel 16 FM reporting anchor holding and operations normal or any significant change in position or deviation from the norm. In addition to these requirements, during periods of sustained winds in excess of 25 knots, but less than 40 knots, the vessel must maintain the capacity of having engines on line within 30 minutes; if sustained winds are 40 knots or over, the main propulsion plant must be on line.

3. A continuous radio guard shall be maintained on Channel 16 FM while at anchor.

4. Vessels anchored in Mantua and Marcus Hook Anchorages may be required by the Captain of the Port to have tug assistance during the change of tide.

E. VESSEL TRANSFER OPERATIONS: (The Master shall be responsible for compliance with this section): Prior to the commencement of transfer operations, a Coast Guard boarding party will examine the vessel. Cargo transfer shall commence only after satisfactory completion of the inspection and issuance of Coast Guard Form 4260, Permit to Handle Dangerous Cargo.

1. The following is a partial list of items inspected by the Coast Guard boarding party:
(a) Relief valve records and data.
(b) Gas detection system/alarms operation and records.
(c) Remote shutdown operation.
(d) Firefighting equipment.
(e) Boiler burn off system (if installed).
(f) Condition of piping, flanges, expansion joints, relief valves, cargo valves, and gauges.
(g) Intrinsically safe equipment.
(h) Automatic controls.

2. In addition to the above, the inspection party will ensure the following requirements are complied with:

(a) Person-in-Charge: The Master shall ensure a licensed officer or qualified supervisor is aboard the vessel throughout the entire cargo discharge/loading operation.

(b) Other Vessel Activities: Only such activities as bunkering, loading of stores, repairs i.e., normal ship maintenance and support activities as approved by the Captain of the Port at the pre-arrival conference, will be permitted – under such conditions as stipulated – while vessels are transferring LNG/LPG. No cutting, burning, welding or other hot work is allowed on the vessel without specific approval from the COTP.

(c) Smoking Areas: Smoking areas shall be designated by the Master and posted at the gangway.

(d) Bonding: The Terminal Manager shall ensure the vessel is electrically bonded to the shore ground prior to commencing transfer operations. The connection shall be maintained until transfer operations are secured. An approved connection shall be used for securing, i.e., alligator clamps are not acceptable. "C" clamps would meet minimum requirements, bolted connections are recommended. The Master shall not commence hookup until this action is taken.

(e) Mooring Requirements: The vessel shall, when possible, moor bow to seaward, and be prepared to get underway on short notice. It may be required to have a live tug standing by during operations. A wire rope towing hawser shall be made ready forward, amidships, and aft with the bight at water's edge.

(f) Operations During Storms: Cargo transfer operations shall cease if an electric storm occurs and at any time lightning is observed or thunder heard; cargo transfer connections may be maintained.

(g) Language Requirements: Ship's supervisory personnel directly involved in supervision of cargo transfer operations must be able to read, speak and understand the English Language.

(h) Transfer Connections: Each flange in the overall transfer operation will be secured with all bolts and properly gasketed, or with a Coast Guard approved quick disconnect device.

(i) Venting: Venting of boil off vapours is prohibited. LNG vessels must demonstrate the ability to contain or consume boil off vapours for a minimum of 21 days.

(j) Fire System: The Master shall ensure the vessel's fire main is linked to the waterfront facility fire fighting system so that the vessel will maintain a firefighting capability, even if its fire pumps are inoperative. The bonding hose shall never be charged unless in use during a fire.

(k) Personnel Aboard: A minimum number of personnel to be retained aboard the vessel shall be established during the pre-arrival conference or dockside inspection.

(l) Barge Personnel: In operations involving barges, a tankerman possessing an appropriate certificate for the product being handled shall be present during cargo operations.

F. FACILITY OPERATIONS: (The Terminal Manager shal responsible for compliance with this section).

A pre-arrival conference shall be held in accordance with Para A that the following regulations may be explained and disseminated p to the initial operation of a facility. Drawings indicating cargo routing f the dock to all storage tanks shall be provided to Coast Gu representatives. A current list of qualified cryogenic supervisors sha maintained with copies provided to the COTP. The following regula shall be complied with during all transfer operations.

1. *Facility Security:* All facility/terminal security zone areas are t posted and restricted to personnel authorised by the terminal mana Adequate physical security shall be provided, including a guard for allow on authorised personnel, i.e., those persons who have an of need for presence on the facility, during operations.

2. *Equipment Inspections:* Immediately prior to handling cargo, t shore piping which is to be used in the operation shall be inspected proper operation of automatic controls, gas detection, a instrumentation. If any of the system contains air, it shall be purged p to handling the product by an inert gas, in special circumstances using low pressure LNG/LPG vapour. Care shall be taken in purging minimise the volume of flammable mixtures present at anyt Following the purging, piping shall be so cooled as to prevent excess thermal stress.

3. *Supervisor and Personnel:* A designated cryogenics superv shall be in attendance at the waterfront facility in the proximity of a during all cargo operations. During all periods of cargo transfer, t terminal shall have one man on board the vessel and one man at t tank car or storage tank loading stations who shall be able communicate with each other at all times with intrinsically s equipment.

4. *Language Requirements:* All shore supervisory personnel dire involved in supervision of cargo operations must be able to readily re speak and understand the English language.

5. *Smoking:* No smoking shall be permitted except in designa areas determined by the facility operator, subject to the approval of t COTP.

6. *Hot Work:* Hot Work will not be permitted without prior authori the COTP.

7. *Notification:* The COTP shall be notified one hour in advance the commencement and termination of the cargo transfer operation the waterfront facility.

8. *Fire Equipment:* The Terminal Manager will ensure currently tes and inspected fire hoses are laid out and connected to hydrants in t car and storage tank loading areas unless otherwise provided i approved, permanently installed facilities. The international sh connection shall be connected in accordance with Para E, Ves Transfer Operations. Hydrants shall be tested for satisfactory flow p to connecting hoses. In addition to portable equipment, the offs mooring area or waterfront facility area shall have any combinatio semi-portable dry chemical extinguishers totalling 600 pounds. A main water source and spray equipment must be available as wel will be the Terminal Manager's responsibility to have his fire man and fire equipment present at the connecting and disconnecting sta of the operation.

9. *Lighting:* Adequate shoreside lighting in conformance with National Electric Code shall be provided.

10. *Hoses:* Each hose used to handle cargo shall have been desig for handling such products and shall be tested at 1 – 1.5 times maximum allowable working pressure or 250 psi, whichever is grea prior to commencing the transfer operation.

11. *Vessel Protection:* Vessels moored to existing facilities marginally to a channel, or when otherwise deemed necessary by COTP, must be afforded protection through the use of barges or cam Any such protection shall have specific approval of the COTP.

12. *Inspection of Reception Facilities:* All tank cars, tank tru barges and storage tanks shall be inspected prior to loading. Tim their last test shall be verified. Operability of overpressure protec devices shall be verified by a person designated by the term manager.

13. *Remote Shutdowns:* Remote cargo shutdowns shall be cert satisfactory by a person designated by the terminal manager.

14. *Transfer Completion:* Upon completion of all cargo transfers product line from pier head to tank car and/or storage loading sta in the type of operations where this applies, shall be unloaded into clo containers and not vented into the atmosphere. Where the operatio the LNG/LPG terminal is such that the product will be circul continuously, it need not be unloaded – thus there will be no dela the start of each cargo transfer operation while bringing the piping d to operating temperature, and a resultant reduction in cycling of the stresses. However, the unloading arms shall be drained, using nitro purge and left in a nitrogen atmosphere with the shipboard end of unloading arm blanked off until ready for the next transfer operatio

15. *Bonding:* The terminal manager shall ensure the vess electrically bonded to the shore ground prior to commencing tra operations. The connection shall be maintained until transfer opera are secured. An approved connection shall be used for securing alligator clamps are not acceptable. "C" clamps would meet mini requirements, bolted connections are recommended.

DENSITY: Philadelphia ports are fresh-water ports.

FRESH WATER: Fresh water normally not available directly at t Fresh water available by tank truck or through fire department. W by barge available.

River Associates, Inc. of Philadelphia, Tel: (215) 922 – 6027, pro wash water in Philadelphia and Delaware Bay with two ba 220 tonnes and 1,000 tonnes capacity.

FUEL: Bunker C and diesel fuel available at most oil terminals. Ve Agent should confirm berthing space at least 24 hours in advan

CONSULS: The following countries are represented in Philadelphia:

Austria
Belgium
Chile
Costa Rica
Denmark

PINEY POINT, Maryland: 38.08 N. 76.32 W. (See Plan)

Steuart Petroleum Company Terminal on East bank of Potomac River, 82 miles from sea.
DOCUMENTS/PILOTAGE: Refer to "Baltimore".
ANCHORAGE: Unlimited, available in Chesapeake Bay.
RESTRICTIONS: Berthing 24 hours a day with max. draft of 38 ft. Vessels exceeding 725 ft. or 36 ft. draft, 2 tugs required docking and 1 sailing. Vessels under, 1 tug docking and sailing.
MAX. SIZE: Limited by depth at berth, 38 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: WMH Baltimore Radio. VHF Channel 26.
TUGS: 2 tugs available for berthing, join vessel off berth. Tugs despatched from Baltimore.
BERTHING: 1 tanker berth only operated by Steuart Petroleum Company. Long lines required for first ashore.
FRESH WATER: Available at berth.
FUEL: Bunker "C" only, available at berth.
AIRPORT: Washington National (80 miles) or Baltimore-Washington (100 miles).
TIME: GMT minus 6 hours. Summertime from April to October.
SHORE LEAVE: Allowed.
GENERAL: Nearest city with full services is Washington, 65 miles distance and Baltimore 110 miles.
AUTHORITY: Maryland Ports Administration, The World Trade Centre Baltimore, Baltimore, Maryland 21202. *Tel:* (301) 659-4550.
Operator: Steuart Petroleum Co., Piney Point, Maryland 20674.

PLAQUEMINE, Louisiana:
30.20 N. 91.14 W. (See Plan)

(A) DOW CHEMICAL – DOCK NO. 1
(B) DOW CHEMICAL – DOCK NO. 2

(A) DOW CHEMICAL – DOCK NO. 1

LOCATION: Dow Chemical, Louisiana Dock (Dock 1) is located on the West bank of the Mississippi River 25 miles S.E. of Baton Rouge at Plaquemine, Louisiana, at Mile Mark 209.9, above Head of Passes on the right descending bank in approximate position Lat. 30° 19′ N., Long. 91° 14′ W.
NOTICE OF READINESS: Notice of Readiness must be tendered either at the Dow facility, at Burnside Anchorage (which is customary anchorage for the Port of Baton Rouge at Mile 165.5), or at the nearest available anchorage to Dow. Tendering Notice of Readiness at any other site will not be received or accepted. Agent must be immediately informed at the time of tendering.
RESTRICTIONS: No time restrictions on berthing. No bunkering or lightering. Vessels must berth with bow facing up-river. All connections must be on port side.
MAX. SIZE: Dock accepts vessels up to 825 ft. in length and 130 ft. in breadth. Draft guaranteed to 39 ft. when Baton Rouge River stage is 10 ft. or greater. When river stage is below 10 ft., restrictions may apply.
HEALTH: See "Health: All Ports" before U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Ship must arrange for docking tugs. E.N.Bisso (Tel: (504) 861-3551 or (504) 861-0321) or an approved substitute may be used.
Docking Tugs: 1 tug required if ship length is less than 450 ft.
2 tugs required if ship length is 450 ft. or greater.
Hold-in Tugs (arranged for by the facility): Hold-in tugs required when load arm or hose is connected to ship.
1 tug required when river stage is above 25 ft. or below 10 ft. and ship length is between 600 ft. and 700 ft.
2 tugs required when river stage is above 25 ft. or below 10 ft. and ship length exceeds 700 ft.
Additional hold-in tugs will be invoiced to ship's account.
BERTHING: One chemical berth available with length 893 ft. All loading done by Dow equipment located on shore. All discharging performed by ship's equipment. See "Max. Size" for draft information. Cargoes handled are: Butanol, Ethylene Dichloride, Propylene Oxide, Propylene Glycol, Diethylene Glycol, Chloroform, Caustic Soda, Carbon Tetrachloride, Methylene Chloride, Monoethylene Glycol, along with the following Dowanols products: PM, EB, MEA, DEA, TEA.
Moorings: Minimum mooring requirements are as follows:

Head Lines:	Either 4 soft or 3 soft / 1 wire or 3 wire if no soft available.
Spring Lines:	Either 2 soft or 1 soft / 1 wire or 3 soft when no breast lines (position these on mooring points that allow them to be as long as possible).
Breast Lines:	2 soft or 1 soft / 1 wire (on both bow and stern when possible).
Stern Lines:	4 soft or 3 soft / 1 wire or 3 wire if no soft available.

Under no circumstances should mooring lines be slack. Ship must supply its own gangway.
CRANES: 3 (7,500 lb. capacity) cranes available for handling hoses and fittings, all run by Dow personnel.
CARGO HANDLING: All cargoes mentioned under "Berthing" are transferred through hoses that are 6 in. 150 lb. rated, except for Caustic Soda which is capable of transferring simultaneously through 6 in. 150 lb. and 8 in. 150 lb.
BRIDGES: Sufficient clearance for all stages of river at all times; 3 bridges at New Orleans, 1 at Donaldsonville and 1 at Luling-Destrehan.
TANKERS: See "Cargo Handling" for loading hose specifications. Ship should fit any reducing pieces before arrival. If ship is unable to fit pieces, contact Ship Planner in advance, so dock will be ready with pieces upon arrival. Shore steam is available. No ship-to-ship transfer facilities. Slop discharge facilities available.
DENSITY: No tide. Fresh water at all times.
FRESH WATER: Available at U.S.$3.00/metric ton. Ship must supply hose.
FUEL: Bunkering not permitted.

FIRE PRECAUTIONS: Ship must have a cable hung over the starboard side and attached to a fixture enabling a tug to pull ship away from dock. Equipment is available to combat oil spills; namely 1,000 ft. of oil boom. Approximately 35 fire extinguishers (dry chemical, Foray, CO_2) and 8 monitor guns, all strategically located on dock. In addition, a fire hydrant and hose system that can be connected to fire trucks.
CONSULS: Norwegian at Baton Rouge, all others at New Orleans, 60 miles distant.
REPAIRS: Prior approval needed.
DRY DOCKS: None.
SURVEYORS: Cargo inspector: SGS Control Services, Inc., 6624 Langley Drive, Baton Rouge, LA 70809. Tel: 504-752-1462. Fax: 504-753-6930. Telex: 4979968.
WATCHMEN: Supplied by dock at no cost, 24 hours a day.
CUSTOMS ALLOWANCES: Tobacco: Each crew member allowed 1 carton of cigarettes. Master allowed reasonable quantity. Wine and/or spirit: Each crew member allowed 1 bottle each of wine and spirit. Master allowed reasonable quantity.
REPATRIATION: Crew changes are permitted. Control room must be notified of any pedestrian traffic on dock.
AIRPORT: Ryan Airport in Baton Rouge, 25 miles distant. Serviced by all major airlines.
TIME: Local time is Central Standard Time – GMT minus 6 hours. April through October, local time is Central Standard Daylight Savings Time – GMT minus 5 hours.
POLICE/AMBULANCE/FIRE: State Police (Hazardous Materials Unit): Tel: 504-925-6595.
West Baton Rouge Sheriff: Tel: 504-343-9234.
Iberville Parish Sheriff: Tel: 504-687-5100.
Fire: Tel: 911.
Ambulance: Tel: 1+267-1111.
EMERGENCY CO-ORDINATION CENTRE: Coast Guard Headquarters. Tel: 1-800-424-8802.
SERVICES: Slop facilities available at dock.
Garbage disposal available at dock, although prior notification is needed.
Nigrogen supply facilities available at U.S.$0.50/100 standard cu.ft.
BANKS: Bank of West Baton Rouge. Tel: 687-6111.
Citizens Bank & Trust. Tel: 687-3576.
STORING: Truck service only. Trucks must be parked on levee and dollies used on dock. Cranes equipped with baskets can be used to transfer goods from dock to ship (See "Cranes").
SHORE LEAVE: Shore leave is permitted. Those going ashore must be fully clothed (shirts, long pants, shoes) and proceed directly from gangway to control room or levee. In addition to being fully clothed, those not proceeding to the levee or control room must be wearing appropriate safety gear.
IDENTIFICATION CARDS: None required at dock.
GENERAL: The following information, given through Agent, will be needed before docking: Vessel's name, ETA, ship length, ship breadth, arrival and departure draft, arrival and departure deadweight tons, product name and appropriate quantity (in metric tons), liquid header connections (size, lb., rating), vent connections (size, lb., rating), amount inhibitor, refrigeration (semi or fully), number and sizes of mooring lines (cable and rope; head, bow spring), safety relief valve setting (bars), maximum receiving or pumping rates, involved tank numbers, last contained materials, second to last contained materials, and third to last contained materials, whether tanks are empty and have been cleaned; if cleaned, the method in which they were cleaned.
OPERATOR: The Dow Chemical Company, P.O.Box 150, Plaquemine, Louisiana 70765-0150, U.S.A. *Tel:* (504) 353-6166. *FAX:* (504) 353-1985. *Contact:* Dow Chemical Dock (Dock 1) (KUF 628 on VHF Channel 16). Fax: 504-353-2496. Tel: 504-353-8647 or 504-353-8646 (Dock), 504-353-6186 (Ship Planner).

(B) DOW CHEMICAL – DOCK NO. 2

LOCATION: Dow Chemical, Louisiana Division Hydrocarbon Dock (Dock 2) is located on the West bank of the Mississippi River, 15 miles S.E. of Baton Rouge at Plaquemine, Louisiana, at Mile Mark 221.8, above Head of Passes on the right descending bank in approximate position Lat. 30° 21′ N., Long. 91° 14′ W.
NOTICE OF READINESS: Notice of Readiness must be tendered either at the Dow facility, at Burnside Anchorage (which is customary anchorage for the Port of Baton Rouge at Mile 165.5), or at the nearest available anchorage to Dow. Tendering Notice of Readiness at any other site will not be received or accepted. Agent must be immediately informed at the time of tendering.
RESTRICTIONS: No time restrictions on berthing. No bunkering or lightering. Vessels must berth with bow facing up-river. All connections must be on port side.
MAX. SIZE: Dock accepts vessels up to 825 ft. in length and 130 ft. in breadth. Draft guaranteed to 39 ft. when Baton Rouge River stage is 10 ft. or greater. When river stage is below 10 ft., restrictions may apply.
HEALTH: See "Health: All Ports" before U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Ship must arrange for docking tugs. E.N.Bisso (Tel: (504) 861-3551 or (504) 861-0321) or an approved substitute may be used.
Docking Tugs: 1 tug required if ship length is less than 450 ft.
2 tugs required if ship length is 450 ft. or greater.
Hold-in Tugs (arranged for by the facility): Hold-in tugs required when load arm or hose is connected to ship.
1 tug required when river stage is above 25 ft. or below 10 ft. and ship length is between 600 ft. and 700 ft.
2 tugs required when river stage is above 25 ft. or below 10 ft. and ship length exceeds 700 ft.
Additional hold-in tugs will be invoiced to ship's account.
BERTHING: One hydrocarbon berth available with length 998 ft. All loading done by Dow equipment located on shore. All discharging performed by ship's equipment. See "Max. Size" for draft information. Cargoes handled are: Benzene Toluene Zylene (BTX), Naphtha, LPG, Pentanes, Vynyl Chloride Monomer (VCM).
Moorings: Minimum mooring requirements are as follows:

Head Lines:	Either 4 soft or 3 soft / 1 wire or 3 wire if no soft available.
Spring Lines:	Either 2 soft or 1 soft / 1 wire or 3 soft when no breast lines (position these on mooring points that allow them to be as long as possible).
Breast Lines:	2 soft or 1 soft / 1 wire (on both bow and stern when possible).
Stern Lines:	4 soft or 3 soft / 1 wire or 3 wire if no soft available.

Under no circumstances should mooring lines be slack. One 70 ft. gangway provided at dock. This gangway is located along dock access roadway and can only be utilised from this point.
CRANES: 3 (7,500 lb. capacity) cranes available for handling hoses and fittings, all run by Dow personnel.
CARGO HANDLING: There are 5 loading arms at the berth.

Arm No.	*Connection*	*Size (in.)*	*Rating (lb.)*	*Product*
1	Liquid	8	300	BTX
	Vapour	6	150	
2	Liquid	12	150	BTX Naphtha
3	Liquid	12	300	Naphtha
	Vapour	6	150	
4	Liquid	12	300	LPG
	Vapour	6	300	Pentane
6	Liquid	12	150	VCM
	Vapour	4	300	

Loading Arms No. 4 and 6 have PERC (Pressure emergency release coupling). These arms are also used for purging.
BRIDGES: Sufficient clearance for all stages of river at all times. 3 bridges at New Orleans, 1 at Donaldsonville and 1 at Luling-Destrehan.
TANKERS: See "Cargo Handling" for loading hose specifications. Ship should fit any reducing pieces before arrival. If ship is unable to fit pieces, contact Ship Planner in advance, so dock will be ready with pieces upon arrival. No shore steam is available. No ship-to-ship transfer facilities. Slop discharge facilities available.
DENSITY: No tide. Fresh water at all times.
FRESH WATER: Available at U.S.$3.00/metric ton. Ship must supply hose.
FUEL: Bunkering not permitted.
FIRE PRECAUTIONS: Ship must have a cable hung over the starboard side and attached to a fixture enabling a tug to pull ship away from dock. Equipment is available to combat oil spills; namely 1,000 ft. of oil boom. Approximately 35 fire extinguishers (dry chemical, Foray, CO_2) and 12 monitor guns (foam and water with remote control side-to-side swivel), all strategically located on dock. In addition, a fire hydrant and hose system that can be connected to fire trucks.
CONSULS: Norwegian at Baton Rouge, all others at New Orleans, 60 miles distant.
REPAIRS: Prior approval needed.
DRY DOCKS: None.

Depth Alongside: 55 ft. – 80 ft.
3 Berths: 3,000 ft. of continuous docks.
Cranes: 4 travelling clam shell cranes; 1 stationary ship loader (rate 340 tonnes/hr.) with 48 ft. air draft at 0 river stage; 1 travelling ship ader (rate 6,000 tonnes/hr.) with 56 ft. air draft at 0 river stage; continuous river barge unloaders; 4 portable cranes, utilised for shore topping-off services.

.F.P. (Formerly Ferruzzi Inc.):
Location: On West bank, 61.5 miles AHP.
Cargo Handled: Grain.
1 Berth: Total length 790 ft.
Depth Alongside: 50 ft.
Facilities: Storage of 6.1 million bushels.

hevron – Oak Point:
Cargo Handled: Crude and petroleum products.
1 Berth: Total length 250 ft.
Water Depth: 40 ft.
Facilities: Product handled over wharf: Organic chemical compounds sed in the blending of lubricating oils for transportation and industrial elated equipment. Have loading/unloading facilities: Can handle tank ars, tank trucks, also container trucks, drums. Actual product storage stimated roughly on wharf tanks 8 – 10 million gallons. 44 ft. × 110 ft. tructure with 5×8 in. marine loading arms. Accommodates barges from 80 ft. – 250 ft. long. Can handle 5 separate materials at one time.

ANKERS: See "Berthing".
UTHORITY: Plaquemines Port, Harbour and Terminal District, Edna Lafrance Building, 124 Edna Lafrance Road, Braithwaite, LA 70040-9715, U.S.A. *Tel:* (504) 682-0081, (504) 392-6690, Ext. 2610. FAX: (504) 682-0649. *Contact:* Luke A. Petrovich, Chief Executive Officer. Robert L. Thomas, Director of Operations. Urban L. Treuil, Jr., Chief Parish/Port Safety Engineer.

ORT ADAMS, Texas: 29.45 N. 95.11 W.

efer to "Houston" for all general information.

EALTH: See "Health: All Ports" before first U.S.A. port (Albany). lness reports made to Miami Quarantine Station.
GRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

PORT ANGELES, Washington: 48.08 N. 123.25 W.

(See Plan)

DOCUMENTS, etc.: Refer to "Tacoma".
APPROACHES: Depth at entrance 100 ft. – 160 ft. No bar.
PILOTAGE: Compulsory for all vessels except those in coasting trade. Pilot station at Ediz Hook serves all vessels bound for Puget Sound ports. Pilot boards off Port Angeles.
ANCHORAGE: In harbour, depth at least 42 ft. MLLW.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Available from Foss Launch and Tug Co.
BERTHING: 3 pier berths and 2 dolphin berths, depth up to 45 ft. MLLW. Forklifts with capacity to 10 tons.
STEVEDORES: 8 local gangs, additional gangs may be imported if required.
MEDICAL: All medical facilities available. Local hospital.
DENSITY: Salt water.
FRESH WATER: Available at all wharves.
FUEL: Barge delivery only.
REPAIRS: Minor repairs only.
GANGWAY/DECK WATCHMEN: Required only if detainees aboard.
CUSTOMS ALLOWANCES: No definite quantities specified; reasonable allowance at discretion of Custom's Inspector.
AIRPORT: William R. Fairchild International Airport 3.5 miles from the harbour.
HOLIDAYS: See "Tacoma".
GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany). Service available through local agent. City provides dumpsters alongside. Contact Solid Waste. Tel: (206) 457-0411.
WASTE OIL DISPOSAL: Disposal available via Seattle or Tacoma environmental transporters. Contact Port of Angeles, Marine Terminal. Tel: (206) 457-1909. Fax: (206) 452-1129.
SEAMAN'S CLUBS: Limited services available through church groups. Contact Port Authority.
CURRENCY: U.S.Dollar (U.S.$).
AUTHORITY: Port of Port Angeles, P.O.Box 1350, 338 W. 1st Street, Port Angeles, Washington 98362. *Tel:* (206) 457-8527, 457-1909. *FAX:* (206) 452-3959, 452-1129. *Contact:* Chris Anderson, Executive Director. David H. Hagiwara, Director of Marketing. David Callentine, Marine Terminal Supervisor.

PORT ARTHUR, Texas: 29.52 N. 93.56 W. (See Plan)

DOCUMENTS:
Entrance Direct from a Foreign Port:
Master's Oath on entry on vessel in Foreign trade, Customs Form 1300 (2 copies).
General Declaration, Customs Form 1301 (2 copies).
Ship's Stores Declaration, Customs Form 1303 (2 copies).
Crew Effects Declaration, Customs Form 1304 (2 copies).
Clearance from Last Port.
Inward Foreign Manifest, Customs Form 1302 (2 copies)
Passenger/Crew List. Form I-418 (3 copies).

In event import cargo is onboard, an additional copy of each of the above Forms is required for travelling Manifest. A copy of the Manifest for each port is also required.

Entrance from Domestic Port:
Clearance from Last Port.
Crew Effect Declaration, Customs Form 1304 (2 copies).
Stores List, Customs Form 1303 (2 copies).
Crew List, Customs Form I-418 (2 copies).
Master's Oath, Customs Form 1300 (2 copies).
General Declaration, Customs Form 1301 (2 copies).

PILOTAGE: Come up in vicinity of the Sea Buoy. 24 hours notice of ETA should be given and revised if ship is delayed 1 hour or more. Telegraphic address is "Sabine Pilots, Port Arthur, Texas". Pilot station keeps 24 hour continuous watch on VHF Channel 12 – 156.6 MHz and on 2738 kHz. Pilot boat is motor vessel with black hull, white housing flying Pilot insignia by day and Pilot light by night. Location of pilot boat is in general vicinity of Sabine Pass Sea Buoy. Pilot ladder only on lee side of vessel.

Pilot will, upon request and at extra cost, board incoming vessels at buoy marked "SB" in position Lat. 29° 25' N., Long. 93° 40' W.

Gulf of Mexico Pilots

American Master Mariners licensed by the United States Coast Guard. They are experienced in handling vessels of all types and sizes, and have many years of experience in navigating the Gulf of Mexico.

Gulf of Mexico Pilots cover the entire Gulf and the Florida Straits. They are on call to board vessels wherever requested within the service area, on 48 hours advance notice.

Request for service may be directed to:
Gulf of Mexico Pilots, 3741 Memorial Blvd., Port Arthur, Texas 77640.
Cables: Gompilots. Tel: (409) 982-2961.

The Gulf of Mexico Pilot will provide assistance and advise in heavily congested areas. He will utilise up-dated local knowledge of conditions peculiar to navigation in the Gulf of Mexico. He will assist with VHF radio communications, expedite arrivals and departures between the Gulf Ports resulting in savings of time and fuel, while easing the human-fatigue factor caused by the demanding duties of Shipmasters operating in unfamiliar environment and the continuously changing conditions therein.

RESTRICTIONS: The Port Arthur Ship Channel is in operation 24 hours per day. The only restrictions that might hamper vessel traffic would be the draft of the vessel (Port will be able to handle vessels taking up to 40 ft. of water) or extremely bad weather conditions such as fog or high winds. Also, vessels of the 85,000 ton or more class can only be moved during daylight hours.

MAX. SIZE: Port Arthur Ship Channel will be authorised to 40 ft. in depth and will vary from 400 to 800 ft. in width. Turning basin, which is located at Mile 19 (only about 0.5 miles upstream from existing port facility) is 900 ft. in width. Bulk carriers going to grain elevator at Port Arthur or to one of the oil refineries would only be restricted by draft which would vary from 30 ft. to 40 ft. depending on load/discharge berth the vessel is en route to. See "Berthing".

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: For a vessel in the Gulf of Mexico, and en route to Port Arthur, the best way to route an ETA message is to radio "Port Arthur Radio" (Radio Marine Corporation of America) whose call sign is WPA. Port Arthur Radio will then either send the message through Western Union via its telefax machine or via telex if the receiver of the message has a telex machine. There are also radio stations located in Galveston, Texas (Mackay Radio, call sign KLC) and in Mobile, Alabama (call sign WLO).

VHF: Pilot office on Channel 20. Pilot boat on Channels 12, 13, 16 and 65A.

TUGS: The exact position that the tug meets the vessel varies with each vessel but usually they meet just below Texaco Island. In some cases they meet as far up as Great Lakes Carbon Co. Berth (usually when vessel is in ballast and going to Gulf Oil Docks). Whether or not the tug uses the vessel's lines or its own lines depends entirely on the circumstances involved but the tugs usually use the ships lines. Port Arthur is served by 2 towing companies, (1) Moran Towing of Texas and (2) Sabine Towing & Transportation Company, Inc.

BERTHING: The first procedure for obtaining a berth at Port Arthur is to submit a Berth Request Form. The Berth Request will contain the following information and will be submitted, in duplicate, to P.O. Box 1428, Port Arthur, Texas: Date of request; type and name of vessel; loading ports; registry or flag; where vessel is to arrive from; ETA; where vessel is to sail for; estimated date of departure; what inbound cargo, if any, consists of; what outbound cargo, if any, consists of; date you expect to begin receiving outbound cargo. The Form must be signed by the Agent or Owner of the vessel. (Berth Request Form will be made available by the Port.) Upon receipt of a Berth Request from the Agent or Owner, the Port will then, upon determining availability of berth, return one copy of the initial Berth Request to the Owner or Agent as an assignment of berth. Berths are assigned on a first come first served basis at all times. All changes in vessel's ETA must be given to the Terminal Office immediately. All mooring and unmooring will be done by the Port. Procedure may differ at the various private terminals which are not under the jurisdiction of the Port Arthur Navigation District.

Also see "Developments".

BULK HANDLING FACILITIES: *Pabtex Terminal Company:* Bulk Marine Terminal in the Port's deepwater industrial park is located at Mile 26, handles dry bulk commodities from rail cars to storage to vessels at rates up to 3,000 t.p.h. and has space available for shipper storage tanks on pads, with open storage for 300,000 tons. The terminal also includes a 750 ft. wharf and is located directly on the Sabine-Neches Waterway which presently offers an authorised channel depth of 40 ft. All terminals described above are served by subject waterway and limitations of depth will vary at the face of dock at individual terminals. Pabtex maintains 40 ft. depth at the face of their facility.

Great Lakes Carbon Co.: Length of berth 300 m. Max. LOA 210 m. Max. draft 10.5 m. 2 loaders with total loading capacity 500 tonnes p.h. Petroleum, coke and coal handled.

CRANES: 1×75 ton diesel electrical crane services Berths No. 1 – 3.

BRIDGES: There are no bridges that would require a vessel to arrive at any certain time at Port Arthur, however, the first bridge approached involves a vertical clearance of 136 ft. MHW.

STEVEDORES: Advance order for longshore gangs varies as to contract held by ILA (International Longshoremen's Association). In Port Arthur, gangs have to be ordered as follows: Order by 1800 hrs. for the next morning (either 0700 or 0800 hrs.); order by 0800 hrs. for 1000 hrs; order by 1100 hrs. for 1300 hrs.; order by 1600 hrs. for 1900 hrs. Must order by 1800 hrs. day before for any starting time Sunday or Holiday.

MEDICAL: It is not usually required that the Agent be given advanced notice of required medical attention but in some instances it is helpful in arranging transportation to a hospital and in obtaining a bed in the event the hospitals are near full. Port Arthur is served by 2 hospitals; (1) St. Mary's Hospital and (2) Park Place Hospital, both of which are very well staffed and have adequate facilities for almost any emergency. Also, advance notice is helpful when vessel is scheduled to dock late in evening or during night, as doctors are not in their offices and have to be located.

Particular inoculations required by the Public Health Department vary as to the vessel's last foreign port of call. Any crew members who have not had the required inoculations can usually be given these inoculations on board either by the Public Health Officer or a Physician. This is usually arranged by the Agent or Owner.

TANKERS: There are 3 major oil companies: Chevron Oil Corporation; Star Enterprise Inc.; and Fina Oil and Chemical Company. Chevron Oil Corporation and Star Enterprise Inc. are 2 of the largest oil refineries in the country. The diameter of load/discharge lines range anywhere from 4 in. to 12 in. depending on the grade of the petroleum product being loaded. As far as slop discharge facilities are concerned there are ballast tanks at all major oil companies. Chevron Oil has 3,400 linear ft. of berth accommodation and Star Enterprise has 5,299 linear ft. of berth accommodation together enough to accommodate 11 supertankers plus barges. Fina Oil and Chemical Co., being the smaller of the 3 oil companies, has berth accommodation for 3 vessels.

Report: Chevron Oil Terminal is located on the East side of the Ta Bayou Turning Basin 30 miles from the Sea Buoy. The controlling de of the channel and turning basin is 40 ft. The maximum size ve normally received at this terminal is 50,000 d.w.t. The water about terminal is salt. Docking and undocking occurs day and night. Vess are cautioned of shoaling in the basin.

Vessels are normally turned upon arrival so as to head out. Wire ro are not permitted unless fitted with fibre rope pennants of at le 3 fathoms in length. Fire wires must be rigged fore and aft.

Two tugs are normally used when docking unless vessel is o 34,000 d.w.t. when 3 would be used. When undocking, 2 tugs are u for vessels over 30,000 d.w.t., under 30,000 only one tug is used.

Amdel Pipe-line is located at the former ARCO Docks on the Nech River Channel 42 miles from the Sea Buoy and includes Berths 1, and B. Controlling depths for the channel, manoeuvring area/turn basin, and berth is 40 ft. The water at the berth is fresh to brack Attention to moorings by deck watch is required when passing vess approach due to the close proximity of the berths to the channel.

Berth No. 1 is the largest and will accommodate vessels approximately 50,000 d.w.t. Berth "A" normally accommodates vess of 28,000 d.w.t. Berth "B" is normally used for crude oil and barge tra Loaded vessels normally moor starboard side to with standard moor lines fore and aft. 2 tugs are used for both docking and undock Incoming vessels are met by tugs 1 mile below the berth. Vessels a turned just above Berth "B". Fire wires must be out fore and a For undocking 2 tugs are normally used.

DENSITY: Varies from fresh water (1000) to pure salt water (102 depending on amount of rainfall and tide variations. According to figu obtained from the National Cargo Bureau, average density is 50% s water or (1012.5).

FRESH WATER: The Port has 4 ships service outlets for fresh wa each of which is served by a 4 in. water line. Watering barges a available in the area for facilities which are not equipped to prov watering services.

FUEL: Almost any grade of fuel or marine diesel is available. In so instances there are fuel lines running directly to docks, but if n bunkering barge is available. An advance notice is usually required bunkering barge depending on number of vessels awaiting bunkerin

FIRE PRECAUTIONS: The Port has, in each of 4 equally spac indentations along the front of its transit shed, a fire hose outlet fed an 8 in. water line and there are numerous fire hose boxes through the transit shed. In addition to this a 24 hour guard service is constan on the watch and is in direct communication with the Port Arthur Fi Department which is only seconds away. Authorized on-dock smok areas are clearly defined for proper safety controls.

CONSULS: The nearest Consul-Generals are in Houston, Tex approximately 90 miles from Port Arthur.

REPAIRS: All types of deck and engine repairs can be accomplishe Main ship repairers are: Vessel Repair, Inc., Bethlehem & Gulf Copp & Manufacturing Corp., Sabine Propeller Company and Coastal Mar Service, all of which are located in Port Arthur.

DRY DOCKS: 2 dry docks, largest being Bethlehem Steel's new b service rig/vessel facility located 8 miles up-river from the Sabine Pa Anchorage. The dry dock at this new Bethlehem repair yard is b enough to lift any mobile offshore unit working the Gulf today. It w handle any jackup, whether mat-supported or independent-leg. P semi-submersibles, submersibles or drill ships. This sectional steel do offers lift capacity of 56,000 long tons, 30 ft. of water over the bloc and it can be configured to provide a clear docking area of eith 362×310 ft. or 825×122 ft., depending on the size and shape of th incoming vessel. The dock is outfitted with machine, pipe and oth shops, and has the crane capacity to give it full repair service capac For especially heavy lifts Bethlehem's 400-ton capacity derrick barg available.

The smaller dry dock is Vessel Repair, Inc., which occupies 60 ac with 3,200 linear ft. of frontage on Port Arthur Ship Channel. This ya also designs, constructs and repairs barges, tugs and other vessels has fully equipped shops, 2 marine railways with haul-out capacities 1,000 and 1,500 tons and 1 floating dry dock of 3,000 ton capacity

SURVEYORS: American Bureau of Shipping, Goodhue Build Beaumont, Texas.

GANGWAY/DECK WATCHMEN: Under normal conditions a watchm is not necessary on most vessels. Under certain conditions such a communicable disease or a malafide crewman, a watchman would b feasible but the decision is left up to Master or owner of the vess There is a $1,000 fine if a malafide crewman disembarks from the ves

OPENING/CLOSING HATCHES: Paragraph 2, Rule No. 1 of the De Sea Longshore and Cotton Agreement for Texas ports and Port of La Charles, Louisiana, states as follows: "When vessel is in loading unloading berth, loading and laying of dunnage and the opening a closing of hatches, when in connection with the handling of general ca and/or cotton, is longshore work and will not be done by ship's cre This agreement, however expired in 1978.

CUSTOMS ALLOWANCES: Tobacco: Each crewman is allowed t keep 300 cigarettes out of bond while in port. Wine and/or Spirits: Ea crewman is allowed to keep 1 quart of spirits out of bond while in po

CARGO GEAR: A current certified Gear Certificate is required to be on board at all times and is to be kept up to date.

REPATRIATION: There are facilities for effecting crew changes and repatriation.

AIRPORT: Port Arthur is served by Mid-Jefferson County Airport which is located approximately 10 miles North of Port Arthur on Highway 69. The Mid-Jefferson County Airport is served by various airlines.

TIME: Central Standard Time (GMT minus 6 hours) during Winter. From first Sunday in April till last Sunday in October Central Daylight Time clocks are moved ahead 1 hour).

HOLIDAYS: Longshore Holidays are: Veterans Day (Nov. 11th), Thanksgiving Day (Fourth Thursday in Nov.), Christmas Day (Dec. 25th), New Year's Day (Jan. 1st), Martin Luther King's Birthday (Jan. 15th), Washington's Birthday (Third Monday in Feb.), Texas Independence Day (March 2nd), Good Friday, Memorial Day (Last Monday in May), June 19th, July 4th, Labour Day (First Monday in September). At Lake Charles, LA., Mardi Gras Day to be substituted for Texas Independence Day. No work shall be performed on Labour Day or Christmas Day, except in case of fire or where property is in danger.

When holidays fall on Sunday, the following Monday to be recognised as the holiday. No work to be performed between 1600 hrs. and 1900 hrs. on election days. When Christmas falls on Sunday, Monday will be an overtime day and gangs will work as ordered.

POLICE/AMBULANCE/FIRE: Police Department Tel: 983-8600; Fire Department Tel: 983-8700; Ambulance Service Tel: 985-5504 or 983-5666.

EMERGENCY CO-ORDINATION CENTRE: Coast Guard Captain of the Port, 2875 75th St., Highway 69, Port Arthur, Texas 77640. Tel: (409) 724-4343.

TELEPHONES: Facilities for placing a telephone on a vessel by request. There is a coin-operated telephone on the dock for anyone's use.

SERVICES: Tank cleaning done in port must be done by longshore labour. All major oil companies have facilities for removing tank washings.

BANKS: First Interstate Bank, 441 Austin Avenue, Port Arthur, Texas 77640. Tel: (409) 985-8851.

First Bank & Trust, 4000 Twin City Highway, Groves, Texas 77619. Tel: (713) 963-1141.

Nederland State Bank, 1308 Boston, Nederland, Texas 77627. Tel: (409) 727-3161.

Bank One, 3723 Gulfway Drive, Port Arthur, Texas 77640. Tel: (409) 982-5741.

STORING: See "Prelims".

1. Vessels are generally stored by truck in the area but barge storing does occur on rare occasions.
2. There are no specific regulations covering barge storing while vessel is working other than what the individual terminal may deem proper.
3. Trucks normally deliver at shipside at the Ports' facilities but this will vary from terminal to terminal.
4. Fork lift trucks are never used on the jetty to handle stores.
5. None other than Bonded Warehouse products.
6. Can but are seldom used. Generally handled by ship's crew or other less costly labour that is available in the area.

SHORE LEAVE: The question of whether shore leave is allowed is entirely up to the ship's Master. The only requirements being; each crewman on shore leave must have a landing permit issued by the Immigration Department and no malafide crewman may be granted shore leave. Port Arthur has no restrictions pertaining to shore leave.

IDENTIFICATION CARDS: American crewman do not need any identification card. Foreign crewman need only the landing permit from Immigration Department in order to go ashore.

GARBAGE DISPOSAL: Arrangements should be made through local steamship agent. Service provided by Browning Ferris Inc. (BFI), Highway 69, Nederland, TX 77627. Tel: (409) 724-2371.

WASTE OIL DISPOSAL: Arrangements should be made through local steamship agent. Service provided by Carotex Inc., P.O.Box 3901, Port Arthur, TX. 77643. Tel: (409) 962-0251.

SEAMAN'S CLUBS: Port Arthur International Seaman Center Inc., 700 Fourth Street, Port Arthur, TX. 77640. Tel: (409) 982-4504.

DELAYS: Delays in berthing usually arise from vessels ETA being delayed and thereby causing a berth conflict. The port is on a first come, first serve basis.

GENERAL: On vessels arriving directly from a foreign port there are 3 Government Agency Representatives that must board. Already mentioned and explained are Customs and Immigration. The remaining one, Animal and Plant Inspection Services. The Meat Quarantine representative boards the vessel to seal up all meat with the exception of what will be needed while in port. In the event a vessel is detained in port for some reason and more meat is needed the Meat Quarantine Rep. must return to the vessel and personally break the seal and then re-seal the remaining meats. This representative boards all vessels entering the port whether from foreign or coastwise.

The Plant Quarantine Rep. boards all vessels entering from a foreign port to check all fresh fruits and vegetables for any foreign insects such as the Khapra Beetle.

NOTICE:

Notice from U.S. Coast Guard (Dated May, 1983).

Liquified Gas Vessels.

This is to clarify U.S. Coast Guard policy regarding liquified gas vessels operating in the Calcasieu Waterway that seems to be causing some confusion. Synopsis of each is as follows:

(1) The Captain of the Port (COTP), Port Arthur, Texas, needs to be informed of the arrivals and departures of all liquified gas vessels, whether loaded or in ballast, a minimum of 4 hours advance notice is required to ensure that a Notice to Mariners is broadcast. The vessel is reminded to have a Calcasieu River Pilot's confirmation of movements prior to notifying the COTP at (409) 724-4330.

(2) The COTP has determined that it is an unsafe practice to bunker a loaded or partially loaded liquified gas vessel at anchor from a barge alongside. If you have a loaded vessel arriving that needs bunkering, make your arrangements so that the vessel is offloaded prior to bunkering. If an empty vessel arrives, make arrangements to have the vessel bunkered prior to loading.

If there are any questions concerning these guidelines, please contact Port Arthur (Tel: (409) 724-4337 or 724-4339) or Lake Charles, La (Tel: (318) 433-3765).

Signed: Captain, U.S. Coast Guard, Capt. of the Port, Port Arthur, Texas.

DEVELOPMENTS: Located only 19 miles from sea, the new Public Ocean Terminal of the Port is located on the Sabine-Neches Waterway, presently 40 ft. deep with a minimum bottom width of 400 ft. The initial facility encompasses 360,000 sq.ft. including 1 transit shed 180 ft. × 1,080 ft. or 194,400 sq.ft. Rail trackage totals 120 car-spots at dockside with a 150-car storage yard behind the wharves. The facility includes a Gantry Crane (handling dry bulk, magnet, container and heavy lift cargoes) which straddles 2 of the 3 marginal tracks, travelling the entire 1,200 ft. length of dock. Crane will lift 75 tons a distance of 75 ft. off the face of docks, with all areas brilliantly lighted for 24 hour cargo operations. In addition to the 25 acre facilities described above, the District owns a total of 73 acres or 1 mile of frontage for future development. The master plan calls for a total of 4 Transit Sheds, additional open-dock wharves and Roll-on/Roll-off facilities.

AUTHORITY: Port of Port Arthur Navigation District of Jefferson County, Texas, 900 Fourth Street, P.O. Box 1428, Port Arthur, Texas 77641. *Tel:* (409) 983-2011. *FAX:* (409) 985-9312. *Contact:* Ben Goldstein, Port Director.

PORT CANAVERAL, Florida: 28.25 N. 80.35 W.

(See Plan)

DOCUMENTS: Vessels arriving in the Customs Territory of the United States, Bureau of Customs Documentary Requirements:

1. The vessel's Register, International Load Line Certificate, Tonnage Tax Certificates, Clearance from last Foreign Port, and Certificate of Financial Responsibility (Oil Pollution).

2. Additional Documents required:

(a) Original Manifest (lists) of:
All Cargo on Board – Customs Form 1302.
All Passengers on Board.
Stores List.
Crew Purchase List.
Crew List.
Narcotic List.

(b) All items listed in Nos. 1 and 2 *(a)* must be presented to the boarding Customs Inspector and later at the Customhouse for entry. In addition a Customs Form 1300 (Master's Oath) and Customs Form 1301 (General Declaration) must be presented at the Custom House.

(c) Duplicate Manifest (lists) of:
1. All Cargo for discharge at this port.
2. All Passengers for discharge at this port.
3. Stores List.
4. Crew Purchase List.
5. Crew List.
6. Narcotic List.
7. CF3171 – Permit to Lade or Unlade (this will usually be furnished by the vessel's Agent prior to the arrival of the vessel).

(d) If vessel is proceeding coastwise from Port Canaveral with residue foreign cargo on board, prepare a Traveling Manifest which is a true copy of everything listed in the Original Manifest (*2(a)*). This must be presented to the boarding Customs Inspector and later at the Customhouse.

3. Other Documentary requirements: The Immigration Officer will require the original certificate Crew List on Form I-418. The same for passengers. He will also require the presentation of all passports and documents of seamen and passengers as to their immigration status for entry into the United States. A supply of Seaman's Landing Permit Form No. I-95A and passenger Permit No. I-94 should be maintained and they should be typed and ready for landing.

The Immigration Officer will want to inspect the entire crew. The Customs and Agriculture Officers will want to inspect the food storage areas and the quarters of the crew. The Agriculture Officer will also require a stores list. The Customs Officer will place a seal on the Bonded Stores Locker.

PILOTAGE: Pilotage is compulsory for all foreign vessels and for United States vessels under register in the foreign trade. Pilotage is optional for United States coastwise vessels who have on board a Pilot licensed by the Federal Government. Vessel applies for Pilot through Agent or Port Authority. May also call Pilot Office direct, Tel: (407) 783-4645. Pilot will board at Buoys 3 and 4 (Lat. 28° 22.6′ N., Long. 80° 31.7′ W.). Pilot boat is 37 ft. long with black hull, white house and buff deck, has "Pilot" painted on sides. Standard day/night pilot signals are displayed. Pilot boat stations itself 1 mile S.E. of Buoys 3 and 4, 0.5 hours before ETA of vessel. Vessels may anchor anywhere in area. Pilot boat is equipped with VHF Channels 12 (156.60 MHz) and 16 (156.80 MHz), but no continuous radio watch is maintained. Advance notice of at least 24 hours should be given.

ANCHORAGES: Within the harbour itself, none. Vessels may anchor anywhere in the area of the Pilot Station, Buoys 3 and 4.
RESTRICTIONS: Docking and undocking carried on day and night. Draft restrictions – if draft exceeds 34.6 ft. vessel must await rising tide to enter port.
MAX. SIZE: Length and draft at Tanker Berth No. 1 and No. 2, 650 ft., with 41 ft. draft. Cargo dock, length unlimited – 41 ft. draft.
HEALTH: See "Health: All Ports" before first U.S.A. ports (Albany). Illness Reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Pilot boat is equipped with VHF Channels 12 (156.60 MHz) and 16 (156.80 MHz) but no continuous radio watch is maintained. Advance notice of at least 24 hours should be given. Best to route ETA cables through Western Union Telegraph. Port Canaveral is equipped with VHF Port Operations frequency 156.6
TUGS: There are 2×1,800 h.p. tugs and 1 × 2,400 h.p. at Port Canaveral; most ships use the tugs for docking and undocking, but it is not mandatory. Tugs normally join vessel inside jetties and tugs lines are used.
BERTHING: All vessels unless prevented by conditions will be turned around upon entering turning basin and will be berthed headed seaward. No berthing permitted without Port Pilot aboard.
Northside:
Piers 1, 2, 3 and 4, all 41 ft. draft, general cargo, water available. Piers 3 and 4 with combined continuous length of 1,200 ft. – 41 ft. draft. Potable water and electricity available.
Southside:
Marginal Wharf with total length of 1,620 ft. at 41 ft. draft, 250 ft. at 24 ft. draft, general cargo, bunkers, water available.
Ro/Ro Ramp No. 1: 30 ft. width, elev. + 3 ft. MLW.
Tanker Berth No. 1: Dolphin type, 41 ft. draft, petroleum products, cement, bunkers, water available.
Tanker/Cargo Berth No. 2: Length 400 ft., 41 ft. draft, petroleum products, water available.
Cruise Terminals No. 2, 3 and 4: 35 ft. draft, 2,060 ft. combined length.
Cruise Terminal 5: 35 ft. draft, 525 ft. berth.
Cruise Terminal 10: 35 ft. draft, 725 ft. berth.
Also see "Tankers".
STEVEDORES: Important that vessel gives accurate ETA at least 24 hours in advance to enable Agent to order gangs.
MEDICAL: Advance notice for Agents not required, but if available is appreciated. There are good hospital facilities available and an emergency walk-in clinic at the Port. A contract physician's office of the U.S. Public Health Service is at Cocoa Beach, just South of the port.
TANKERS: Tanker Berths No. 1 and 2 available at present for discharge operations, with 35 ft. draft limit. No oil to be pumped overboard. Heavy fines imposed for oil pollution, however slight. The ship or ship's Agent will immediately report any spillage of oil on the wharf or on the water and the extent of the spill to the Port Manager and the Harbour Master. If spillage is considerable all cargo operations must stop and vessel prepare to undock.
FRESH WATER: All wharves have facilities for supplying fresh water, delivered by 4 in. water line.
FUEL: The general cargo wharf and Tanker Berth No. 1 have facilities for supplying fuel. 24 hours' notice requested. Fuelling by truck available at other berths.
FIRE: Ships discovering fire on board or close by on shore will sound repeated long whistle blast signals and use every other available means to report the fire.
Gasoline Tankers: All deck scuppers must be plugged before starting to discharge cargo. Supply of sand or sawdust must be on hand near the discharge headers. Static cable must be connected to wharf. Minimum 100 lb. pressure must be on water main and fire hose connected. Discharging must be stopped during severe lightning. Deck Officers must keep close check on hose connections for gasket leaks. Emergency Ship Movement Policy of Port Canaveral must be observed.
CONSULS: None.
REPAIRS: Available in the port.
SURVEYORS: Surveyors are available on request.
GANGWAY/DECK WATCHMEN: Not usually employed, this service left to discretion of Master.
OPENING/CLOSING HATCHES: Usually done by stevedores.
CERTIFICATES:
Ship's Register.
Load Line Certificate.
Tonnage Tax Certificate.
Derat Certificate or Derat Exemption Certificate.
CUSTOMS ALLOWANCES: 300 cigarettes per crew member. Wine and/or spirits: 1 quart per crew member.
REPATRIATION: All facilities available for effecting crew changes and arranging any necessary repatriations.
AIRPORT: Two airports available, serviced by regular airlines, Orlando International Airport, Orlando, Florida, approximately 50 miles from the Port; Melbourne Regional Airport at Melbourne, Florida, approximately 35 miles from Port. Also Space Coast Executive Airport approximately 25 miles from the Port, but this airport has only limited service.
TIME: GMT minus 5 hours normal, GMT minus 4 hours Daylight Saving Time.
HOLIDAYS: Numerous holidays do not effect operation of port, which operates 24 hours a day, 7 days a week.
POLICE/AMBULANCE/FIRE: Police/Fire, Tel. 783 – 7800; Ambulance, Tel. 452 – 1444.
EMERGENCY CO-ORDINATION CENTRE: United States Coast Guard Station, Port Canaveral. Tel: (407) 853-7601.
TELEPHONES: Arrangements are not available for placing on board.
BANKS: The American Bank, 326 E. Merritt Island Causeway, Merritt Island, Florida.
Barnett Bank, 430 Brevard Avenue, Cocoa, Florida.
The First Bankers of Florida, N.A., 111 George King Boulevard, Port Canaveral, Florida 32920.
The First National Bank of Brevard, 15 E. Merritt Island Causew Merritt Island, Florida.
United National Bank, 82 N. Atlantic Avenue, Cocoa Beach, Flor 32931.
Numerous other banks are available in this area.
STORING: See "Prelims".
1. Vessels stored by truck only.
2. N/A.
3. Yes.
4. No.
5. Usual.
6. Yes, if required.

SHIP SUPPLY SERVICE: No ship supply services operate at the po
In times of emergency, launch or tug service could be arrang through the Port Authority, and helicopter evacuation provided throu the United States Coast Guard.
SHORE LEAVE: Crew allowed ashore.
IDENTIFICATION CARDS: Required.
REGULATIONS: All radio frequency radiations from ships in P Canaveral must be scheduled to prevent any possible interference missile tests conducted on the Cape Canaveral Missile Test Annex. Th only exception is standard ship/shore HF harbour control frequenc Vessels desiring to radiate will request permission from the P Manager and/or Harbour Master.
GENERAL: All vessels, civilian and military, will provide wire ropes fro the bow and stern with eyes that can be reached by tugs com alongside. Pilots will make sure wires are in proper position bef leaving vessel. All vessels will undock and proceed to outer anchora when so ordered by Port Manager and/or Harbour Master in the eve of: *(a)* a severe oil spillage; *(b)* fire is discovered on board a vess laden with petroleum, explosives or a quantity of dangerous carg *(c)* vessel is in jeopardy due to conditions on shore. Emergenc movement of ships will be made with an able sea watch without awai for return of other ships personnel.
DEVELOPMENTS: Western Basin Expansion started in mid-198 completion 2008. 7 additional ship berths, including container, gene cargo, bulk cargo, shipyard and cruise terminals. Estimated co U.S.$400 million.
Inlet channel to be widened from 300 ft. to 400 ft. and entranc channel to be deepened.
Middle Turning Basin and part of West Turning Basin to be deepene to 39 ft.
AUTHORITY: Canaveral Port Authority, P.O.Box 267, Cape Canave Florida 32920. *Tel:* (407) 783-7831. *Telex:* 981573 Ptcanave *FAX:* (407) 784-6223. *Contact:* Charles M. Rowland, Executive Direct Joseph Lapolla, Deputy Executive Director. Louis J. Perez, Director Cargo and Cruise Marketing. Dwight Fender, Director of Operations.

PORT EVERGLADES (including Fort Lauderdale), Florida: 26.05 N. 80.05 W. **(See Pla**

LOCATION: Port Everglades is on the Southeastern coast of the Flor Peninsula, within the three cities of Hollywood, Fort Lauderdale, an Dania, as well as unincorporated Broward County. The seaport is loca approximately 23 miles North of Miami, 48 miles South of West Pa Beach, and 312 miles South of Jacksonville.
Sea Buoy: The Port Everglades Sea Buoy is located a Lat. 26° 05′ 31″ N., Long. 80° 04′ 46″ W.
DOCUMENTS:
3 copies Travelling Cargo Manifest (Form 1302), the original show all cargo on board, and 2 copies showing only cargo for this po
2 copies Crew Manifest (Curio List).
2 copies Stores List.
2 copies Passenger List (Form I-418).
2 copies Crew List (Form I-418).
Customs Boarding Officer will also examine Ship's Register and Lo Line Certificate. In addition, the following documents will be required f formal entry to be made within 48 hours of arrival from abroad 24 hours from arrival from a United States port:
Health Pratique.
Master's Oath (Form 1300).
All foreign clearances.
All other ship's documents (Water Pollution Certificates, etc.).
U.S. Certificates of payment of tonnage tax (Customs Form 1002
Certified Crew List.
American vessels only – All foreign repairs (Customs Form 226).
PILOTAGE: Pilot boards at Port Everglades Sea Buoy, located Lat. 26° 05′ 30″ N., Long. 80° 04′ 45″ W. Pilot available 24 hours a d
ANCHORAGE: A Sea Anchorage is designated outside the harbour a North of the Entrance Channel, where ships may anchor witho damaging existing underwater cables or the local reef system. Wa depth is 60 ft. – 90 ft. The rectangular anchorage is 1,000 ft. wide a 1.5 miles long, inside the following designated area:

N.E.	Lat. 26° 07′ 46″ N.,	Long. 80° 04′ 51″ E.
N.W.	Lat. 26° 07′ 46″ N.,	Long. 80° 05′ 01″ E.
S.E.	Lat. 26° 06′ 20″ N.,	Long. 80° 05′ 01″ E.
S.W.	Lat. 26° 06′ 20″ N.,	Long. 80° 05′ 10″ E.

There is a Government Restricted Area immediately offshore, Sou of the Entrance Channel.
Offshore Loading: Sea Anchorage limited to above coordinates. Wa depth 60 ft. – 90 ft. No lighters based at Port.
RESTRICTIONS: Entrance to Port Everglades is by a straight cha running in a due Westerly direction for a distance of 1.7 miles from t 50 ft. contour of the ocean to the turning basin. The channel is 50 wide at its seaward end, narrowing to 450 ft. wide from the jetty entra to the Turning Basin. The water depth is 44 ft. including the Tur Basin. All depths are at Mean Low Water.

BASIN: *Main Turning Basin:* The Main Turning Basin is 1,200 ft. East and West and 2,450 ft. North and South with a depth of 44 ft. The North extension of turning basin is 620 ft. wide East and West on the North limits and 900 ft. wide East and West on the South limits and 1,150 ft. North and South, with a depth of 31 ft. The South extension of the Main Turning Basin is 1,300 ft. wide East and West by 1,300 ft. North and South, with a depth of 38 ft.

Southport Turning Basin: 900 ft. East and West by 800 ft. North and South, with a depth of 44 ft.

Tide: Mean tidal range at the harbour entrance is 2.5 ft. with a Spring tide of 3.0 ft. Tide range in the slips is from 0.2 ft. – 0.3 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO/VHF: The following radio channels are available to communicate with facilities at Port Everglades:

Ship calling and safety: Channel 16.
Harbour Master: Channels 16, 14, 7A and 18A.
Operations: Channels 14, 7A and 18A.
Port Everglades Bar Pilot: Channels 12, 16, 13, 14, 18A, 19A.
Port Everglades Towing Co.: Channels 16, 13, 77, 14 and 18A.

TUGS: 4 tugs available to assist berthing with up to 4,200 h.p. Available 24 hours a day.

Port Everglades Towing Inc., P.O.Box 13038, Port Everglades, FL 33316. Tel: (305) 523-2200. Fax: (305) 527-1744. Telex: 514840.

BERTHING: *Berth Bulkheads:* Bulkheads are sheet steel piling with concrete caps and rubber high impact absorbing fendering.

Berth Dimensions and Usage: There are 45 berths available with various lengths and depths for ocean-going vessels. Ten are in 3 slips, the remainder are located along marginal wharves and T-heads. Total berthing space is 25,222 lineal ft.

Berth	*Length* ft.	*Depth* ft.	*Use*
1A	180	12	Cruise/Lay-in

Cruise Terminals: There are a total of 9 modern air-conditioned passenger terminals, 8 of which are equipped with elevators, escalators and loading bridges. Cruise facilities are at Terminals No. 1, 2 and 4 at the North end of the Port, and 19, 21, 22/24, 25 and 26 at Midport. The 9th cruise facility, Terminal No. 25, was dedicated in May 1992.

Footage dedicated to Cruise Operations:

Cruise Terminal No. 1:	21,600 sq.ft.
Cruise Terminal No. 2:	34,000 sq.ft.
Cruise Terminal No. 4:	30,000 sq.ft.
Cruise Terminal No. 19:	40,000 sq.ft.
Cruise Terminal No. 21:	42,000 sq.ft.
Cruise Terminal No. 22/24:	42,000 sq.ft.
Cruise Terminal No. 25:	36,000 sq.ft.
Cruise Terminal No. 26:	29,000 sq.ft.

Foreign Trade Zone Warehouses: There are 5 warehouses in the Foreign Trade Zone (FTZ) with a total of 401,000 sq.ft. of space.

FTZ "A"	110,000 sq.ft.
FTZ "A Annex"	110,000 sq.ft.
FTZ "B"	30,000 sq.ft.
FTZ "E"	45,000 sq.ft.
FTZ "F"	106,000 sq.ft.

Transit Warehouses: There are 9 transit sheds containing a total of 536,900 sq.ft. of in-transit storage space.

Warehouse area (sq.ft.):

No. 1	50,400
No. 2	38,000
No. 4	65,000
No. 6	17,500
No. 16	90,000
No. 18	90,000
No. 19	50,000
No. 26	80,000
No. 29	54,300

Open Storage: Approximately 286 acres, paralleling the length of the harbour, and located next to cargo berths, and transit warehouses are set aside for open storage. All berths have vehicular access, and Berth No. 4 has rail service. Most dry and general cargo berths are designed for dual requirements of open and coverage storage, eliminating the necessity of shifting vessels after partial unloading. Open storage areas are enclosed and secured with chain link fencing.

Typical commodities consigned to open storage are lumber, containers, construction steel and steel products, automobiles, heavy duty equipment, scrap metal and other bulk commodities.

Open Yard Area Facilities:

Location	*Acres*	*Use*
West of Building 4	4	Containers
West of Berth 4A	4	Containers
Pier 2	1	Containers/Steel
Midport Container Yards	44	Containers
Midport Marina	10	Containers
Berth 29	18	Bulk/Lumber/Steel
Southport	155	Containers/Trailers
S.E. 18th Avenue	18	Future Development
Southport	20	Scrap Metal
FTZ	4	Vacant
FTZ	8	Warehouse Expansion

Foreign Trade Zone: Port Everglades Authority is the Grantee and Operator of Foreign Trade Zone No. 25 located within the Port. Use of the facilities is outlined in Foreign Trade Zone No. 25 Tariff No. 1, which may be obtained from Foreign Trade Zone staff.

Reefer Outlets: There are currently 421 reefer outlets located at Port Everglades, primarily 3 phase 480V, 60 cycle, 100 amps. Includes the Sea Land Terminal at Midport with 141 outlets and the CCT Terminal at Southport with 120 outlets.

Refrigerated Warehousing: A one million cubic foot reefer plant with 6 temperature adjustable chambers (Primlaks (USA), Inc.) is located less than 200 ft. from the Container Terminal (Berths No. 16 – 18).

Roll-On/Roll-Off Facilities: There are 8 Ro/Ro ramps built into the sea walls. One ramp is located at Berth No. 1, two ramps are located at the West end of Berths No. 4 and 5, and two additional ramps are located at the corner of Berths No. 18 and 19. Three ramps are located in Southport at Berths No. 33A, 33B and 33C.

Ramp	*Width* (ft.)	*Depth* (ft.)
Berth 1	70	31
Berth 4	145	43
Berth 5	145	43
Berth 18	43	38
Berth 19	84	38
Berth 33A	140	44
Berth 33B	120	44
Berth 33C	120	44

CRANES: With the exception of rail-mounted container gantry cranes, all cargo handling equipment is owned and operated by stevedoring and agency firms. Companies provide modern handling equipment, mobile cranes of 100, 65, 30 and 20 tons. Attachments include clamshell buckets, electric magnets and automated ship-unloaders. No floating cranes or derricks are based at the Port.

BULK CARGO FACILITIES: Port Everglades is highly diversified in the type of cargoes it handles. Storage facilities are available for petroleum, scrap metal, bulk cement, etc.

Cement: Berths No. 14 and 15 are the Port's designated berths for handling bulk cement. There are currently 30 bulk cement silos, 12 owned by Rinker Cement and 18 owned by Continental Cement Company of South Florida, Inc. The Rinker facility has a total holding capacity of 50,000 short tons and handles both white and grey cement with bagging for white cement. Product is distributed by Rinker Transport Company and others, to destinations throughout Southeast Florida. Rinker has a newly installed, privately owned Kovako ship unloader sitting on approximately 700 ft. of dockside rail, and providing the capacity to unload up to 400 metric tons of bulk cement per hour. Continental Cement's 18 silos have a total bulk grey cement capacity of 30,000 tons. Continental has a privately owned Siwertell ship unloader, located adjacent to its dockside silos sitting on 400 ft. of rail, with the capacity of discharging cement at a rate of 800 metric tons per hour. Bagging services are available at Continental, which also distributes its product throughout Southeast Florida.

Lumber: The designated lumber yard is located at Berth No. 29. There are currently two primary lumber companies with Port Everglades operations. MacMillan Bloedel Ltd. ships hemlock, cedar and spruce from private mills in British Columbia, and provides transportation and distribution services throughout South Florida. Gulf Atlantic Lumber Sales ships Western red cedar and Western hem fir from British Columbia mills with distribution throughout the State of Florida.

Petroleum: There are 264 various sized petroleum storage tanks located in the Port Everglades jurisdiction, with a total capacity of approximately ten million barrels. The majority of tanks are privately owned. Also see "Tankers".

Scrap Metal: Ten acres are dedicated to scrap metal storage and processing. The two primary companies providing these services are Port Recycling Industries, and SIDCO Enterprises, Inc./Sunshine Metal Processing, Inc.

Steel: Construction steel and other steel products are normally stored at Berth No. 29. Indoor storage of steel coils at Terminal 29.

Waste Paper/Newsprint: Indoor storage is made available for these commodities in dockside transit warehouses No. 1, 2, 19 and 20. St.John's Shipping is the Port's principal waste paper shipper.

CONTAINER HANDLING FACILITIES:

Berths: Container operations are currently centered around Midport Berths No. 16, 17 and 18 with 2 gantry cranes, lighted and secured, also at Berth No. 6, 28F, 29 and Southport Berths No. 30 and 33A with 3 low profile Post-Panamax gantry cranes.

Handling Equipment: A full range of container handling equipment is available, including container top handlers, yard mules, high capacity forklifts, chassis and flatbed trailers.

Terminals: Storage areas total 59 acres in the Midport and Northport area, accommodating both wheeled and grounded configurations. All container terminals are adjacent to the Berths to facilitate container transfer and loading. Trailer operations are already in effect at the developing 155 acre Southport Container Complex through Crowley Caribbean Transport's 55 acres container/trailer facility. Gantry crane operations available at Southport.

Cranes: Port Everglades currently has 3 container cranes available for service. All are rail-mounted, diesel electric single trolley, through-leg load handling, gantry type container cranes.

Kone Oy Gantry Crane (Located at Midport):

Operator: Port Everglades Authority.

Operating features:

Rated capacity (below spreader)	30 long tons
Rated capacity (below cargo hook)	37 long tons
Hoist speed at rated capacity	160 ft./min.
Lower speed at rated capacity	160 ft./min.
Hoist acceleration at rated capacity	2 sec. (approx.)
Hoist speed with empty spreader	380 ft./min.
Trolley travel	500 ft./min.
Boom travel (up or down)	5 min.

Principle Dimensions:

Rail gauge	50 ft.
Frame leg clearance	50 ft.
Overall portal clearance	44 ft.
Total lift, top of rail to underside of spreader	81 ft.
Total lift minimum	131 ft.
Outreach, centreline waterside rail – centreline spreader	130 ft.
Backreach, centreline landslide rail to centreline of spreader	40 ft.
Width of crane with bumpers extended	95 ft.
Boom stowed crane height	240 ft.

Paceco Gantry Crane (Located at Midport).

Operator: Port Everglades Authority.

Operating features:

Rated capacity (below spreader)	50 long tons
Rated capacity (below cargo hook)	58 long tons
Hoist speed at rated capacity	150 ft./min.
Lower speed at rated capacity	190 ft./min.
Hoist acceleration at rated capacity	2 sec. (approx.)
Hoist speed with empty spreader	360 ft./min.
Trolley travel	500 ft./min.
Gantry travel	150 ft./min.
Boom travel (up or down)	5 min.

Principle Dimensions:

Rail gauge	50 ft.
Frame leg clearance	60 ft.
Overall portal clearance	51 ft.
Total lift, top of rail to underside of spreader	100 ft.
Total lift minimum	150 ft.
Outreach, centreline waterside rail centreline spreader	135 ft.
Backreach, centreline landslide rail to centreline of spreader	75 ft.
Width of crane with bumpers extended	95 ft.
Boom stowed crane height	270 ft.

Spreaders:

Bromma Telescopic 20 ft., 35 ft., 40 ft. rated 40 long ton capacity.

Paceco Telescopic 20 ft., 35, ft. 40 ft. rated 40 long ton capacity.

Paceco Telescopic 20 ft., 35 ft., 40 ft., 45 ft. rated 50 long ton capacity.

Southport: 3 cranes operational.

Operator: Port Everglades Authority.

Operating and maintenance features:

Main hoist speeds at:	40 long tons
Hoist loaded	180 ft./min.
Hoist unloaded	380 ft./min.
Lowering loaded	180 ft./min.
Lowering unloaded	380 ft./min.
Trolley speed	600 ft./min.
Boom shuttle time	2.5 minutes in, 2.5 minutes out.
Gantry speed	150 ft./min.

Principle Dimensions:

Post Panamax, low profile type shuttle boom.

Dock rail gauge	100 ft.
Clear height under spreader over rail	106.25 ft.
Maximum gantry width (bumpers free)	86.5 ft.
Workable outreach	145.5 ft.
Minimum workable backreach at Post Panamax working position	45 ft.
Overall height limit above rail	151.25 ft.
Total lift	155 ft.
Maximum boom width	30 ft.
Portal clearance	50 ft.
SWL capacity	40 long tons

STEVEDORES: These services are provided by licensed stevedoring firms. Arranged by Agent.

TANKERS:

Berth 4: Length 900 ft., depth 43 ft.

Operators: Coastal Fuels Marketing Inc.; Exxon Co., U.S.A.; Marathon Oil Co.

Berth 5: Length 900 ft., depth 43 ft.

Operators: Coastal Fuels Marketing Inc.; Exxon Co., U.S.A.; Amerada Hess Corp.; Marathon Oil Co.; Shell Oil Co.; Trumbull Asphalt.

Berth 6: Length 400 ft., depth 38 ft.

Operators: Coastal Fuels Marketing Inc.

Berths 7 and 8: Length 1,200 ft., depth 38 ft.

Operators: Amoco Oil Co.; Coastal Fuels Marketing Inc.; Citgo Co Exxon Co., U.S.A.; Porto Fina Oil Co.; BP Oil Co.; Amerada Hess Co Marathon Oil Co.; Mobil Oil Corp.; Shell Oil Co.; Chevron, U.S.A Texaco, U.S.A.; Louis Dreyfus Energy Corp.

Berths 9 and 10: Length 1,200 ft., depth 38 ft.

Berth 9 Operators: Coastal Fuels Marketing Inc.; Citgo Petroleu Corp.; Porto Fina Oil Co.; BP Oil Co.; Mobil Oil Corp.; Chevron, U.S.A Texaco, U.S.A.; Louis Dreyfus Energy Corp.

Berth 10 Operator: Florida Power & Light.

Berth 11: Length 500 ft., depth 38 ft.

Operators: Coastal Fuels Marketing Inc.; Warren Petroleum Co.

Berths 12 and 13: Length 1,225 ft., depth 38 ft.

Operators: Coastal Fuels Marketing Inc.; Citgo Petroleum Corp.; Por Fina Oil Co.; BP Oil Co.; Mobil Oil Corp.; Chevron, U.S.A.; Texac U.S.A.; Louis Dreyfus Energy Corp.

Berths 14 and 15: Length 1,225 ft., depth 38 ft.

Operators: Coastal Fuels Marketing Inc.; Florida Power & Light.

Size of Pipelines:

Amoco: 3×12 in.

Coastal Fuels Marketing Inc.:

Berth No. 1: 6 in. and 8 in. bunker and diesel.
Berth No. 2: 6 in. and 8 in. bunker and diesel.

TELEPHONES: Public telephone are available at all cruise termi and most berths.

IDENTIFICATION CARDS: Standard U.S. Immigration Form I-95 t made up for each crew member on arrival. Not necessary for crew m already holding Form I-95 if issued for the same vessel.

GARBAGE DISPOSAL: Dumpsters for domestic garbage only are available with 3 cu. yard capacity and 30 cu. yard capacity.

WASTE OIL DISPOSAL: *Oily Mixture Discharge:* The Port has facilities to receive oily mixtures from ships, and holds a U.S. Coast Guard Certificate of Adequacy as a reception facility. Oily mixtures may not be discharged, except to Port-approved facilities which are assigned when the vessel docks. Oily mixtures include bilge slops, oily wastes, oil residues, sludge, oily ballast water and washings from oil tanks.

SERVICES: *Post Office:* A United States Post Service Contract Station is located within the Port at the Sailor's Canteen, Building No. 64, Spangler Blvd. Hours are Monday – Friday, 0830 hrs. – 1200 hrs., 1430 hrs. – 1700 hrs., Saturday 0830 hrs. – 1200 hrs.

Restaurants:

Burt & Jacks Restaurant: Located at Berth 23. Formal American dining in a Mediterranean villa with water on three sides. Prime steaks and Jumbo Maine lobster are the specialities for this award winning restaurant. Owners are Mr.Jack Jackson and Mr.Burt Reynolds. Entertainment nightly. Jackets required for dining. Tel: (305) 522-5225.

Port Restaurant: Located in Building No. 62, 1600 S.E. 24th St. Counter or table service. Hours: Monday – Friday, open until 1900 hrs. Food service until 1500 hrs. Saturday: 0700 hrs. – 1300 hrs. Tel: (305) 462-2335.

Sailor's Canteen: Located in Building No. 64, State Road No. 84 (S.E. 24th St.), 0.5 mile inside Port Everglades. Hours: Monday – Friday 0500 hrs. – 1730 hrs. Saturday 0500 hrs. – 1400 hrs. Serving fresh sandwiches, soda/coffee. Counter service only. Candy, cigarettes, post cards, film, magazines, books, radios, cameras, sundries available. Tel: (305) 524-1467.

Snack Bars: Snack bars are in operation at each cruise terminal when a cruise ship is embarking or disembarking passengers at that terminal.

DEVELOPMENTS: Construction of 155 acre Southport Container/Trailer Complex underway. Ro/Ro ramps operational. Depth 44 ft.

AUTHORITY: Port Everglades Authority, 1850 Eller Drive, Fort Lauderdale, Florida 33068, U.S.A. *Tel:* (305) 523-3404. *Telex:* 240042. FAX: (305) 525-1910. *Cables:* Portglades. *Contact:* James J. O'Brien, Port Director. Dave Miller, Director of Corporate Communications.

PORT HURON, Michigan: 42.59 N. 82.26 W.

Refer to St. Lawrence Seaway for important general information.

PILOTAGE: Compulsory, by Seaway Pilots.

ANCHORAGES: Near head of St. Clair River at Sarnia. Vessels should anchor as close to shore as safely possible to keep channel clear for passing vessels.

RESTRICTIONS: Navigation season from mid-March to end-December approx. Dock channel depth – 25 ft. Vessel's size restricted by Seaway locks.

MAX. SIZE: 730 ft. length; 26 ft. draft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Chicago Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Master must give at least 24 hours notice to Commander 9th Coast Guard District, Cleveland, Ohio, of the vessel's ETA at Snell Lock. Also, at least 24 hours notice of ETA at first U.S. discharge port is required. Port can be contacted through Marine Operator, Sarnia.

TUGS: Available. Not compulsory, but sometimes necessary in bad weather.

BERTHING: Port Terminal Co. Dock: 700 ft. long 26 ft. – 31 ft. depth.

MEDICAL: All facilities available.

DENSITY: Fresh water.

FRESH WATER: Obtainable by pipeline at all docks.

FUEL: All grades available by pipeline at all docks.

REPAIRS: Machine shops available for limited deck and machinery repairs.

AUTHORITY: *Managers:* Port Huron Seaway Terminal Co., 2336 Military Street, Port Huron, Michigan 48060. *Contact:* W.R. Neal, President.

PORT JEFFERSON, New York: 40.59 N. 73.06 W.

(See Plan)

OPERATOR'S REPORT: 1981

PILOTAGE: Harbour Pilot/Docking Master will board outside of the sea buoy. If at anchor, Docking Master will board at the anchorage.

APPROACHES: *Port Approaches – Cautionary Advice:* (via New York) Charts: 12339, 12366, 12367, 12363, 12362, 12354.

Vessels leaving New York bound for Port Jefferson transit New York's East River and Long Island Sound.

Sandy Hook Pilots handle the ship in the East River and Hell's Gate, and the Long Island Sound Pilots handle the ship in the Sound. The change of Pilots is made off City Island. The pilot boat can be raised on Channel 13. All shoals and rocks are well marked and the shore line provides an excellent radar target for position checking.

During Summer months, thick fogs present a hazard on this route. Long Island Sound is also a major yachting centre so extreme care must be exercised while transitting this area.

There are several dangers to be wary of when making the passage from New York to Port Jefferson; in order of approach they are:

1. East River and Hell's Gate are areas of strong tidal currents averaging 4.6 knots during ebb tide which set in a Southwesterly direction. Vessels drawing up to 35 ft. may transit Hell's Gate only at Slack High Water. Sluggish handling vessels should arrange for tug assistance through the East River and Hell's Gate.
2. 26-ft. buoy "32A"; usually passed well clear to the South.
3. Cable and Anchor Reef; usually passed to the South.

Port Approaches – Cautionary Advice: (From Block Island) Charts: 13205, 13215, 13209, 12354, 12362.

On approaching Block Island from a Southerly direction, a good radar picture is obtained of the Island's South coast. The RDF station at S.E. Light is also useful.

It is advisable to remain at least 1 mile to the East of Block Island because of the numerous shoals close in shore.

Non-U.S. flag vessels and U.S. flag vessels under registry approaching from Block Island embark Pilot about 2.5 miles South of Point Judith.

U.S. flag vessels under enrolment approaching from Block Island embark Pilot 1.4 miles East of Old Harbour – Block Island.

There are several dangers to be wary of when making the passage to Port Jefferson; in order of approach they are:

Block Island North Reef Buoy "1B1" marks a dangerous shoal and should be passed well clear.

The Race is a narrow channel into Long Island Sound. Strong East to West currents occur during maximum ebb or flood and knowledge of position should be maintained in view of possibility of unusual set. Valiant Rock may be passed on either side. The Race is an extremely popular area for sport fishermen and the area is usually congested with small craft.

Extreme caution should be exercised during the Summer months when transiting through Block Island and Long Island Sound as there is heavy traffic of pleasure craft.

Thick fog is prevalent during Summer months.

Good water is found in Long Island Sound from The Race to Port Jefferson as long as the mid-channel Buoys "P1" and "CF" are passed close to, and care is taken so as not to pass North of "28-ft. shoal" buoy.

Vessels headed for Port Jefferson will pass South of "Stratford Shoal" light. Radar is the best navigational aid in this area, also, there are several RDF stations that can be used.

ANCHORAGE: Anchorage is available North of "Mount Misery" shoal in depth of 80 ft. to 100 ft. Barges are available for lightering from New York. Winter weather conditions with strong winds sometimes hold up lightering operations 2 to 3 days. Vessels with stern anchors can sometimes minimise this delay by making a lee for the barge.

RADIO: Send ETA to Agent 72 hours, 48 hours and 24 hours prior to arrival at Block Island pilot station. Advise max. draft (salt water) in the initial message.

VHF: Pilot: Channel 13, 16 and 18A. Tugs: Channel 19A "KFT 234" 18A. Traffic Control: Channel 13. USCG: Channel 16. Terminal: Channel 13.

TUGS: 3 tugs available from New Haven, 2 single screw diesels of 1,800 s.h.p. and 1,600 s.h.p. and a twin screw boat of 1,800 s.h.p.

TANKERS: Tosco Pipeline Company: Traffic at times may be heavy near the harbour entrance and in the inner harbour. Sand and oil tows, coastal tankers, and the Bridgeport/Port Jefferson ferry may be encountered. Arrangement should be made with the Pilot ensuring that other traffic is not hampering the safe entrance and channel transit.

Vessels start in one hour prior to HW. The entrance between the jetties is made by lining up with the ranges at the head of the harbour. Consideration should be given to a possible cross set. Once inside the jetties, speed is reduced, and the vessel is stopped off the dock. The vessel is then breasted into position starboard side to with the assistance of 1 or 2 tugs. The terminal is located approximately 1.8 miles from the breakwaters on the starboard side of the channel.

Vessels in a light condition, when departing with the assistance of 1 or 2 tugs, are backed and turned off the LILCO dock with the forward draft not exceeding 14 ft.

Shore Facilities: 2×8 in. hoses.
2×16 in. shoreline (3.5 miles long).
Shore booster pumps.

FRESH WATER/FUEL: Bunkers are not readily available; in an emergency, bunkers could be arranged by Ecklof Marine, Bayway, N.J. and delivered by barge from New York. Fresh water is available ex berth.

GARBAGE DISPOSAL: Drums available alongside. Service provided by Miller Environmental Group at 24 hours notice.

WASTE OIL DISPOSAL: Contact Mr.Czujko at Tosco (Tel: (516) 941-4040) 24 hours in advance. Tanker trucks available with 2 in. hose.

SEAMAN'S CLUBS: At New York, which is 40 miles away.

GENERAL: *Gangway:* Ship's gangway is required.

Tides and Depth of Water: The depth of water in the channel determines the safe draft for entering. Agent and Pilot should be consulted as to safe draft. Strong Westerly winds will cause the water level to be lower than usual, and strong Easterly winds will increase the water level. Average range of tide is 6.6 ft.

Oil Pollution: This area is very sensitive to oil pollution, so extreme care should be exercised. In case of an oil spill, consult with Pollution Control Officer and notify U.S. Coast Guard, Terminal Representative and Agent. Visible smoke from ship's stack is also a very critical area of pollution in this port. Spill booms are deployed.

Security: The terminal is fenced and guarded. Maintaining a gangway watch is recommended.

Ballast/Slop Facilities: There are no dirty ballast or slop facilities in Port Jefferson.

Firefighting Facilities: The terminal is equipped with 2 fire pumps which service 2 fire monitors on the dock. The fire line has the capability to deliver foam. There is a 3,150 lb. wheeled dry chemical extinguisher and various hand extinguishers to cover the hose tower area.

Fire wires should be hung, one forward and one aft, on the offshore side with eyes which can easily be reached by tugs in case of fire. The tanker should have all fire fighting equipment aboard in readiness to combat any fire that may arise.

AUTHORITY: Tosco Pipeline Company, 19 Belle Mead Road, East Setauket, New York 11733, U.S.A. *Contact:* Zenon Czujko, Manager.

PORT LAVACA/POINT COMFORT, Texas: 28.40 N. 96.35 W. (See Plan)

DOCUMENTS:
- 2 Cargo Manifests.
- 2 Stores Lists, Form CF1303.
- 2 Crew's Effects Declaration, Form CF1304.
- 1 Clearance from Last Port.
- Vessel's Register, tonnage, tax receipts, etc.
- 2 copies Crew List.
- 2 copies Passenger List.

PILOTAGE: Ship's Agents notify Matagorda Bay Pilots as to vessel's ETA. Pilot boat can be contacted on VHF Channel 16, then switch to Channel 26 to continue conversation. Pilot boards at Buoy 1-A at position Lat. 28° 23′ N., Long. 96° 17′ W.
ANCHORAGES: Marked on chart of Matagorda Bay and approaches.
RESTRICTIONS: Vessels may enter any time day or night. Entrance channel depth 38 ft. Bay Channel depth 36 ft.
MAX. SIZE: Public Dock – max. length approximately 750 ft. Draft controlled by channel depth of 36 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Galveston Radio (ITT Mackay Marine) and Port Lavaca Marine operator can be contacted on VHF Channel 16, then switch to Channel 26 for continued conversation.
TUGS: One tug available, joining vessel shortly before arriving at berth. A second tug is normally available on request.
BERTHING: Vessels berth at Public Dock.
STEVEDORES: Boyd-Campbell & Co. and Dix Shipping Company of Corpus Christi, Texas. At Alcoa's Dock all plant labour is used.
MEDICAL: No advance notice required. Several clinics and 1 hospital available in Port Lavaca.
DENSITY: Average density is 1010/1012.
FRESH WATER: Fresh water available alongside berth.
FUEL: Fuel is available from VAL-CAP located in Port Lavaca. Can be delivered by barge or truck.
CONSULS: Only Norwegian Vice-Consul Tel: 512-987-2311.
REPAIRS: Only minor repairs possible. No dry docks.
OPENING/CLOSING HATCHES: At Public Dock this is done by stevedores. At Alcoa Dock this is done by ship's crew.
CERTIFICATES: Load Line, Foreign Clearance, Safety Equipment, Financial Responsibility (oil pollution), Tonnage Tax Receipts, will be required.
REPATRIATION: Arrangements are possible but preferably should be accomplished in larger ports.
AIRPORT: Nearest airport 30 miles at Victoria, Texas, served by Continental Express only, Corpus Christi Airport about 90 miles; Houston Airport about 150 miles.
TIME: Central Standard Time during Winter (GMT minus 6 hours). Beginning first Sunday in April until last Sunday in October, Daylight Saving Time (clocks are moved ahead 1 hour).
HOLIDAYS: All holidays observed by contract with ILA. See "Houston".
POLICE/AMBULANCE/FIRE: Police Department, Fire Department and Ambulance Service, Tel: 911.
TELEPHONES: Telephones are available ashore only. Telephone booth on Public Dock.
IDENTIFICATION CARDS: Immigration Crew Landing Permit I-95 required for each man.
GARBAGE DISPOSAL: Dumpster available on pier for non-APHIS waste. No charge for use of dumpster. APHIS waste minimum charge is $ 550.00. Garbage services arranged through Port Authority.
WASTE OIL DISPOSAL: Waste oil disposal available through use of vacuum truck. Arranged through Port Authority.
SEAMAN'S CLUBS: None.
CURRENCY: U.S.Dollar.
DEVELOPMENTS: Plans for lengthening dock and another warehouse are now being considered.

SHIPMASTER'S REPORT: July 1991.
Radio: Unable to contact any public correspondence radio station by VHF. The tug relays any arrival message to pilot, etc.
Bauxite: The Aluminum company imports several million tons of ore per year using both sides of its finger pier. This is said to be 875 ft. long with 39 ft. depth alongside. It is equipped with 2 grab cranes and one conveyor belt, said to be capable of handling 1,750 long tons/hr. Cargo from 2 ships may be discharged at the same time onto the single belt.
Charter Party: This has been amended to read discharge to "machine clean only", the implication is that if the ship's crew do not dig out cargo from the corrugations, ladders, ledges, brackets and sloping sides, the ship will be ordered off the berth with several hundred tons of cargo remaining. At least one regular caller with wet grade bauxite engages a 15 man cleaning gang for the passage to the next port. This gang brings its own high pressure water pump and its own bilge pumps for the operation.
General: Fresh water was obtained from a single outlet at the outer end of the pier, well placed for the after peak. Local provisions can be obtained, such as for port use. Technical stores ordered by owners delivered from Corpus Christi at a charge of U.S.$85.00. All messages, copying, doctor, etc., were handled by Owner's A attending from Galveston. Ship's crew access by locked turnstile no visitors allowed. Nearest shopping centre is surprisingly large charge is U.S.$12 each way. Walking is prohibited and uncomfortable because of the heat and mosquitos.

AUTHORITY: The Port of Port Lavaca/Point Comfort, The Calh County Navigation District, P.O.Box 397, Port Lavaca, Texas 77 *Tel:* (512) 552-2727/3237. *FAX:* (512) 987-2189. *Contact:* Doug Ly Port Manager.

Private Dock owned by Aluminium Company of America with its Ag being Alcoa Steamship Company Inc., Point Comfort.

PORT NECHES, Texas: 30.00 N. 93.57 W.

DOCUMENTS, PILOTAGE, RADIO, etc.: Refer to "Port Arthur".
HEALTH: See "Health: All Ports" before first U.S.A. port (Alba Illness Reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany)
TUGS: Meet vessel in Neches River before arriving at berth. Norma 2 tugs used for docking, 1 for undocking.
BERTHING: Texaco Chemical Co. (Jefferson Dock) Chemical C Distance from sea 30 miles, depth at berth November to March 32 and from March to November 35 ft. Max. LOA 800 ft.

Texaco Terminal: Distance from sea 34 miles, depth at berth 3 Max. LOA 810 ft.
MEDICAL: All facilities available.
DENSITY: Fresh water.
FRESH WATER: Available by barge.
FUEL: Bunker C not available ex-wharf at Texaco Terminal, only barge from Port Arthur or Beaumont.
CONSULS: Nearest at Houston.
REPAIRS, DRY DOCKS: See "Port Arthur".
GANGWAY/DECK WATCHMEN: Not required unless crewm detained by Immigration.
CUSTOMS ALLOWANCES: 300 cigarettes and 1 quart wine or spi for each man.
AIRPORT: 15 minutes from docks. Several flights a day 0600 hrs 2200 hrs. to Houston International Airport.
IDENTIFICATION CARDS: Foreign crew only require Immigra Landing Permit.
AUTHORITY: *Operators:* Texaco Chemical Company, P.O.Box 277 Houston, Texas 77227-7712, U.S.A. *Contact:* W.C.Kent, Manage Distribution Operations.

PORT ST. JOE, Florida: 29.49 N. 85.19 W.

DOCUMENTS:
All documentation must be on United States forms.
At least:
- 3 Passenger Lists.
- 3 Crew Lists (1 for visa Crew List).
- 3 Curio Lists.
- 3 Stores Lists.
- 2 Complete Manifests.
- Clearance from Last Port.

PILOTAGE: Apply for Pilot through ship's Agent – address "Port St. Joe, Pilots" and advance ETA 18 hours. "VHF – Channel Pilot boat station is at Sea Buoy, Port St. Joe only and location anchorage for vessel awaiting a Pilot is 1 mile West of Sea Buoy.
ANCHORAGES: Local harbour charts indicate safe anchorage.
MAX. SIZE: Draft 32 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Alba Illness Reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany
RADIO: Call sign WLO, Mobile, Alabama.
TUGS: None presently available.
STEVEDORES: ETA must be received by 1800 hrs. in order to h gangs at 0800 hrs. following day.
MEDICAL: No notice required. Hospital facilities available. Inocula required same as public health U.S. Government requirements.
TANKERS: Discharge lines 8 in. No residue discharge allow 2 tanker berths 32 ft. draft.
DENSITY: Salt water – heavy concentration.
FRESH WATER: Available in unlimited quantities by hose connec from dock to ship, 1.5 in. to 2.5 in. size at 60 p.s.i.
CONSULS: None.
REPAIRS: None.
DRY DOCKS: None.
GANGWAY/DECK WATCHMEN: Only when requested by ship.
OPENING/CLOSING HATCHES: Work can be performed by e stevedores or crew.
CUSTOMS ALLOWANCES: 1 carton of cigarettes per week per c member permitted. Further allowances would depend on circumsta Wine and/or Spirits 1 bottle per crew member as allocated by Custo
CARGO GEAR: Must be in compliance with "U.S. Govern Longshoremen Safety Codes".
REPATRIATION: Can be accomplished by Agent and Immigration should be accomplished in larger ports if possible.
AIRPORT: Served by regular airlines. 6 combined flights a day. Dis 40 miles.

TIME: Standard Time GMT minus 5 hours. GMT minus 4 hours Daylight Saving Time from first Sunday in April to last Sunday in October.

HOLIDAYS: *No Work Holidays:* No work performed New Year's Day, Fourth of July, Labour Day, Christmas Day, or December 24th & December 26th, and Easter Sunday, except handling of mail, baggage and perishables (except bananas) or unless a ship is in distress, such as fire or leaking bottom, or, other causes that would damage cargo or vessel. In event work done on New Year's Day, Fourth of July, Labour Day, Christmas Day, December 24th & December 26th, or Easter Sunday, rate of pay for such ship work shall be double the normal time rate. Should above holidays fall on Sunday, double time will be paid. Following Monday will be paid at time and one-half.

Working Holidays: Armistice Day, Thanksgiving Day and Memorial Day are to be paid for at overtime rate – one and one-half times straight-time rate. Should any of above holidays, except Sunday fall on Sunday, the following Monday will be observed.

POLICE/AMBULANCE/FIRE: Police Tel: 229-8265; 227-4526; Ambulance Tel: 227-1115 (Comforter), 277-1818 (St. Clair), 229-8111; Fire Tel: 227-1115.

TELEPHONES: Available for placing aboard.

SHORE LEAVE: Shore leave allowed when cleared by Immigration.

REGULATIONS: Normal working hours of longshoremen from 0800 to 2230 hrs. only, 7 days a week.

DELAYS: Only when due to port congestion.

GENERAL: In sending ETA when ship is going to arrive over weekends (Saturday and Sunday), an ETA notice should arrive prior to 1700 hrs. Friday.

AUTHORITY: Port St. Joe Port Authority, P.O.Box 280, Port St. Joe, Florida 32456. *Tel:* (904) 227-1111. *Contact:* Amelia Tapper.

PORT **SAN LUIS,** California: 35.10 N. 120.45 W.

(See Plan)

APPROACHES: The approach channel, directly off the end of the Harbour District's Pier is an entrance channel, which is unlit and identified by large green or red buoys.

The tanker channel runs North/South to Pier No. 2 (Union Oil) and small vessels using Pier No. 3 (Harford) run a course of approx. S.E. – N.W.

ANCHORAGE: The best anchorage in the Harbour is on the starboard side, coming from the sea, being the area between Pier No. 3 and the second, Union Oil Terminal Pier. Anchorage be outside of the existing mooring area and the holding ground is primarily sandy bottom.

MAX. SIZE: Tankers up to 750 ft. length and 26 ft. draft.

48,000 d.w.t. tankers may not use Pier No. 3 (Harford). Vessels wishing to use Pier No. 3 must give prior notice in writing, except commercial fishing vessels.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Los Angeles Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Vessels should contact Union Oil Company through Marine Operator. "Walkie-talkie" sets used for communication with terminal. VHF station KTD 411, Channels 10 and 16.

VHF: Harbour Office, call sign "KYZ 664", on VHF Channel 16 throughout 24 hours, working Channels 10 and 12.

TANKERS: Tanker berths only at Union Oil Company Pier. Vessels tie off pier at Berth No. 4. Depth alongside 32 ft. MLW.

1×12 in. and 1×16 in. load/discharge lines. No ballast discharge allowed.

DENSITY: Salt water, 1025.

MEDICAL: Services available.

FRESH WATER: Available.

FUEL: The Harbour District maintains and operates a diesel fuel facility, capacity 12,000 gallons. The facility is at the end of the District's 1,400 ft. pier. Limited use restricted to small vessels (Commercial "Dyed" diesel fuel only) up to 300 d.w.t. Gasoline also available.

CONSULS: Nearest consuls situated at Los Angeles and San Francisco.

REPAIRS: There is a work dock facility available, equipped with power and water.

AIRPORT: County Airport, San Luis Obispo, situated 12 miles distant. 6 flights daily to Los Angeles and to San Francisco.

HOLIDAYS: Christmas and New Year; Martin Luther King Day; President's Day; Memorial Day; Independence Day; Labour Day; Veteran's Day; Thanksgiving Day and following day.

GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany).

No garbage services for large craft other than local garbage dumpsters by special order.

WASTE OIL DISPOSAL: 50 galls. collection drums on one pier only.

SEAMAN'S CLUBS: None.

WEATHER: The mean tidal range in San Luis Obispo Bay is 3.6 ft., the Spring range is 5.3 ft. and the maximum range is approximately 9.8 ft. The highest observed tide was 7.5 ft. above MLLW mark in January, 1948. The lowest tide of −2.3 ft. MLLW mark occured on January 7th, 1951. Tidal level above the MHHW or MLLW will occur approximately 20% of the time during severe storms. The existing breakwater gives partial protection from waves approaching from the Western part of the San Luis Bay. The bay is exposed to open sea from the South to Southwest. Northwesterly winds are predominant, except during the Winter months, October through April, when these storms from the South generate waves that approach from the S.W. to S.E. The magnitude of the surge is usually less than 0.5 ft. However, 1 ft. waves are common. The prevailing wind is from the N.W. and averages 5 to 15 knots and, during a Southerly storm, can go up to 60 knots.

The climate and weather are typically mild and favourable. The rainy season, including the storm season, is generally from November 15th to April 15th. Occasionally, brisk winds or fog make it temporarily difficult to navigate within the Port. Rain and heavy winds are not usually experienced at other times of the year. Normally, the temperature is from the low 50's to the high 70's.

GENERAL: Port San Luis is an official Port of Entry with U.S. Customs. The Port Director is on duty Monday to Friday from 0800 hrs. to 1630 hrs.

There is a boat yard with a 60 ton mobile hoist.

AUTHORITY: Port San Luis Harbour District, Pier No. 3, P.O.Box 249, Avila Beach, California 93424. *Tel:* (805) 595-5400. *Fax:* (805) 595-5404. *Contact:* J.K. Elder, Harbour Manager. John D'Ornellas, Operations Manager.

PORT SULPHUR, Louisiana: 29.28 N. 89.41 W.

(See Plan)

DOCUMENTS, etc: Refer to "New Orleans".

PILOTAGE: A vessel coming into port from sea can arrange to pick up a Bar Pilot (Associated Branch Pilots) by furnishing ETA to the ship's Agents, radio contact by VHF Channel 9 and AM Channels 2738 and 2182. Bar Pilot is exchanged for river Pilot at Head of Passes, Pilot Town, Louisiana. River Pilot (Crescent River Port Pilot's Association) can be arranged through ship's Agent in New Orleans and radio contact as above. Vessel awaiting Pilot for departure may remain at dock until Pilot arrives. Advance notice of 3 hours is required for departing Pilots. This can be arranged by the ship's Master with the shipping foreman.

ANCHORAGES: Anchorage is available on East bank of river opposite to Freeport Sulphur Company Dock. Depth of water at anchorage is 40 ft., the controlling depth in the river.

RESTRICTIONS: No restrictions for entry because of time of day, nor conditions of tide or draft except the controlling depth of Mississippi River to Port Sulphur (35 ft. – 40 ft. as published in reports by U.S. Army Corps of Engineers).

MAX. SIZE: Max. permissible length – 750 ft., breadth not limited, draft equal to controlling depth of river.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Tropical Radio WNU New Orleans.

TUGS: Tugs not normally required. Shore crews usually handle ship's lines. Tug may join the vessel opposite the dock. Charges for handling ship's lines.

STEVEDORES: Not normally required. When requested, stevedoring services can be obtained from Port of New Orleans; contact ship's Agents for particulars.

MEDICAL: Advance notice for personnel requiring medical service is required through ship's Agents. Hospital facilities are available.

TANKERS: 1 tanker berth, permitted draft equal to or greater than controlling depth of Mississippi River. Diameter of loading/discharge lines are 12 in. and 16 in. respectively.

DENSITY: Density in port not affected by tide. Fresh water.

FRESH WATER: Not available.

FUEL: Fuel may be loaded by barge with vessel at anchor. Fuel transfer is not permitted at dock.

FIRE PRECAUTIONS: No welding repair permitted at dockside. Fuel transfer is not permitted. No other specific precautions observed except for "no smoking" precautions, etc.

CONSULS: Consuls offices are located in New Orleans, Louisiana.

REPAIRS: Engine and deck repairs are possible when the dock is not otherwise occupied.

CERTIFICATES: Certificate of condition of cargo handling gear required when use of gear is necessary.

GANGWAY/DECK WATCHMEN: Services of watchmen desirable but not required. Port does not furnish this service.

AIRPORT: New Orleans International Airport, served by most major airlines. 55 miles from Port Sulphur.

TIME: Local time is Central Standard Time (GMT minus 6 hours), except from April/October, Daylight Saving Time is in effect.

HOLIDAYS: Vessels are loaded on all holidays.

POLICE/AMBULANCE/FIRE: Police Tel: 564-2525; Ambulance Tel: 564-2525; Fire Tel: 564-3231.

TELEPHONES: Pay telephones are available.

SHORE LEAVE: Crew members are allowed ashore.

IDENTIFICATION CARDS: Immigration Form I-95.

DELAYS: Loading will not commence until all holds are clean of scale and other foreign matter.

AUTHORITY: Freeport Sulphur Company, P.O.Box 1025, Port Sulphur, Louisiana 70083. *Tel:*(504) 564-3981. *Contact:* A.W. Dow, Operations Manager.

PORT WENTWORTH, Georgia: 32.09 N. 81.08 W.

PILOTAGE: Compulsory. Pilot boards at Savannah Sea Buoy. 48, 24 and 12 hours notice required through Agent.
RESTRICTIONS: Vessels can enter and leave port during hours of darkness and at any stage of the tide, however, depth of water at River Bends controls draft.
MAX. SIZE: See "Berthing".
VHF: Pilot on Channels 16, 14 and 13.
TUGS: Tugs from Savannah assist with berthing and unberthing.
BERTHING: *Continental Can & Paper Co.:* Port Wentworth is the most inland berth up the Savannah River and is 29 miles from the entrance. Max. size of vessel so far to berth was LOA 628 ft. Pilots would accept vessels of 700 ft. LOA but would be unable to swing with this length. The berth is dredged to approximately 40 ft. for a length of 700 ft. Least depth of water in channel from sea to berth 28 ft.

Mean tidal range at berth 8 ft. to 9 ft. Nature of bottom – mud.

Vessel is able to dock at any stage of the tide, however, vessels undock on the flood to swing off berth. (Approximately one hour's flood tide required). The berth is a timber faced concrete wharf of length 240 ft.
Facilities: There are no bulk handling facilities or quay cranes. Three mobile cranes used. There are no Ro-Ro facilities or floating cranes available. Fork lifts are available for handling reels of linerboard. There are no facilities for handling containers as berth is only used by Paper Mill.
STEVEDORES: Savannah labour used (Experts on loading paper reels).
MEDICAL: Doctor and hospital available.
DENSITY: 1001.
FRESH WATER: Not available.
FUEL: Bunker fuel oil available by barge. Diesel oil and lubricating oils also available.
SERVICES: (Available locally or from Savannah). Fresh provisions, repairs, dry dock, airport, surveyors and laundry service.
GARBAGE DISPOSAL: Service available on request at a charge.
WASTE OIL DISPOSAL: Service available on request at a charge.
SEAMAN'S CLUBS: None.
AUTHORITY: Stone Savannah River Pulp and Paper, Inc., P.O.Box 548, Savannah, Georgia 31402. *Tel:* (912) 964-1271. *FAX:* (921) 966-4342. *Contact:* J.R.Knight, Traffic Manager.

PORTLAND, Maine: 43.39 N. 70.14 W. (See Plan)

DOCUMENTS:
1 Crew List.
1 Passenger List.
2 Stores Lists.
2 Foreign Purchases Lists.
2 Inward Foreign Manifests uniform cargo.
Original Bill of Lading.
1 Form 1300 Master's Oath on entry of vessel.
2 Form 1374 Outward Foreign Manifest.

PILOTAGE: Ship's Agents usually notify Pilot approximately 48 hours in advance of arrival then changes are made at 24 and 12 hours. Pilot boat usually called on Channel 16 and then switched to Channel 11 to continue conversation. Pilot goes aboard ship in vicinity of the large navigation buoy using ladder on lee side. When weather bad, suggest vessel anchors approximately 1 mile North of the large navigation buoy (LNB).

Portland Pilots Inc. Tel: (207) 774-5623. Fax: (207) 774-5683.
Docking Pilots: McDuffie Pilots Inc. Tel: 781-3954.

ANCHORAGES:
Anchorage A (General): Beginning at Eastern corner of Grand Trunk Railway Company Pier No. 3 (Pier removed); thence approximately 90°, 1,700 yd. to Brooklyn Ledge Buoy 16; thence 330°, 350 yd.; thence 25°, 780 yd.; thence 303°, 750 yd.; thence 254°, 560 yd.; thence 186°, 750 yd.; and thence to the point of beginning.
Anchorage B (General and Quarantine): Beginning at Brooklyn Ledge Buoy 16, thence 58° to Little Diamond Island thence along the S.W. shore to the pier on the Southern end of Little Diamond Island; thence 143°, 1,200 yd.; thence 270.25° to House Island Light; thence along the Western shore of House Island to Fort Scammel Point Light; and thence 329°, 1,620 yd. to the point of beginning. Anchorage B is intended for general purposes, but especially for use by oil tankers and other deep-draft ships entering the harbour at night and intending to proceed to the dock allotted at daylight the following morning, or as soon as practicable. This area also is to be used for quarantine anchorage. Any vessel anchored in this area shall be ready to move on short notice.
Anchorage C: Bounded on the N.W. by House Island; on the North by a line running 90° from House Island Light to Peaks Island; on the East by the Western shore of Peaks Island, by a line running 198° from the Westernmost point on Peaks Island to Cushing Island, and by the shore of Cushing Island to its Westernmost point; and on the Southwest by a line running from the Westernmost point on Cushing Island to Fort Scammel Point Light. Anchorage C is intended for use only by small vessels and for temporary anchorage.
Anchorage D: Southerly and Westerly of a line beginning at Lighthouse Channel Buoy 1; thence 35° to Anchorage Buoy E; and thence 145° to the mainland. Anchorage D is for use only by small yachts and pleasure craft, and small, light draft coastwise freighters.
RESTRICTIONS: No entry restrictions at night. Deep draft vessels brought in on high water only.

Max. beam through bridge – 93 ft.
Max. draft through bridge – 35 ft.

MAX. SIZE: Size of vessel restricted to 45 ft. draft in harbour area. No outside installations at port at present.
HEALTH: See "Health: All Ports" before first U.S.A. port (Alba Illness Reports made to New York Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany
RADIO: Tugs in Portland Harbour use Channel 7. Vessels arrivin Portland go through radio station in Chatham, Mass., RCA installatio or call station WOU via radio-telephone. VHF Harbour Control Portland.
VHF: Voluntary reporting system in effect on Channel 13.

Channel 16, Calling & Distress Frequency, monitored 24 hours da
Channel 22A, Main Coast Guard Frequency;
Channel 11, Portland Pilots;
Channels 7A and 78, Portland Tugboat and Ship Docking;
Channel 13, Ship to Ship.

TUGS: Tugs join vessel at Spring Point in Portland Harbour. Tugs u own lines at no additional charge. Docking Pilots not supplied Company but are available.
BERTHING: Tidal conditions govern arrivals and departures. Dep alongside up to 35 ft.
Merrill Marine Terminal: Located in the upper Fore River. 600 ft. × 134 concrete marginal wharf with 4 dolphins and provides 900 ft. berth w 35 ft. MLW and a 450 ft. Ro/Ro berth with 25 ft. MLW. 2 cranes. Liq storage, covered storage. This Berth handles a variety of cargoe including woodpulp, steel, fertiliser, long logs, tapioca.

This is the only general cargo facility within the Port. Located on t upper Fore River approximately one mile above the lift bridge a adjacent to the fixed highway (U.S. Route 1) and railroad bridge Vessels normally navigate the Fore River on a rising or high tide a depending on vessel's manoeuvring equipment (bow thrusters, etc either one or two tugs may be required for berthing. Vessels may do either port or starboard side to. There is no minimum number of moori lines required. Each berthing is handled on a case by case basis. Fre water is available at the berth. Vessels may undock at any time a again may require the assistance of one or two tugs, depending manoeuvring capabilities.
International Terminal: A passenger, container and Ro/Ro facility w limited cargo capability. Located immediately East of the lift bridge. T boats required for berthing. Wharf is a marginal wooden structure w 730 ft. of face, the Easterly 290 ft. being new concrete construction, a 35 ft. depth at MLW. Fresh water is available at the berth. Vessels m undock at any time and will require assistance of tugs.

The terminal accommodates an international ferry and Hapag Lloyd container service.
Maine State Pier Transient Berth:

Length:	270 ft.
Utilities:	Water, sewer, reefer hook-ups, floodlighted doc
Location:	Pier face far West end of Bath Iron Works facili
Draft:	25 ft.
General:	Layover berth for small passenger or other vesse Immediately adjacent to downtown area, vehic access limited. Prior reservation required via Of of Portland Waterfront Office, Tel: 207-773-16 during working hours (0800 – 1600).

BRIDGES: No undocking on ebb tide through bridge.
STEVEDORES: 4 hours notice on ordering gangs.
MEDICAL: No advance notice required by Agent. 2 hospitals, Ma Medical Center and Mercy Hospital, who take bed patients.
TANKERS: Tankers arriving at Portland Pipe-line, Pier 2, ma preparations for 2×10 in. and 12 in. hoses.

Berth	*Depth Alongside*
Clean Harbours of Maine	18 ft. MLW
B.P. Oil Terminal	34 ft. MLW
Getty Terminal	34 ft. MLW
Gulf Oil Terminal	28 ft. MLW (at bow)
Koch Terminal	34 ft. MLW
Mobil Terminal	35 ft. MLW
Northeast Petroleum Terminal	35 ft. MLW
Portland Pipe-line Pier No. 1	35 ft. MLW
Portland Pipe-line Pier No. 2	48 ft. MLW
Star Enterprise Terminal	38 ft. MLW

Shore Storage: Due to shore storage difficulties the Portland Pipe-li Authorities have requested vessels leaving Venezuelan ports t discharge at Portland to provide the following information in order t avoid ship delays at this terminal:

(a) Vessel's expected time of arrival at Portland.
(b) Quantity and grade of cargo loaded.
(c) In case of split cargoes, intended order of discharge.

The above mentioned information should be radioed to Portland Ag for forwarding to Portland Pipe-line Authorities immediately on sai from the final Venezuelan loading port.
Report: *General/Anchorages:* Deeply laden vessels will enter Portla through the Witch Rock Channel, passing between Buoys "1" and which mark Witch Rock. Lightly loaded vessels will enter through Wi Rock Channel. All vessels will pass between Portland Head and Cush Island. The swell usually subsides near Spring Point, allowing the t to come alongside. Vessels bound for certain Terminals (N Petroleum, Getty, B.P., Koch, Mobil and Star Enterprises) must pa through the South Portland bascule lift bridge which has a horizo clearance of 98 ft. 2 tugs assist vessels through the lift bridge; one the starboard bow with good backing line, the other on the starbo quarter. The bridge will not open between the hours of 0700 to 0 and 1600 to 1800, Monday through Friday. The bridgetender can contacted on VHF Channel 13; a minimum of 1 hour's notice prio arrival at the bridge is desired.

Vessels proceeding to Hussey Sound to lighter will be taken by Sea Pilot through West Cod Ledge and will enter the sound via channel between Peaks Island and Long Island. Extreme care sh be exercised while passing Soldier Ledge, a rock ledge with 40 f water at MLW marked by lighted buoy "6".

N.E. Petroleum Terminal: The vessel continues approximately 1 mile above the lift bridge where it is turned to port and worked ahead into the berth. Vessels dock starboard side to with a minimum of 12 mooring lines. The terminal prefers synthetic mooring lines. The first lines positioned on the dock are the forward spring lines which are passed as the vessel moves ahead slowly. The pier is a typical wooden finger pier with 2 woodfaced steel pile breasting dolphins. Breast lines are led across the dock to wood pile clusters. Vessels dock at Slack High Water and generally can undock at any time with the assistance of 2 tugs. Upon undocking, the vessel must back into the channel and turn before heading out to sea.

Gulf Cumberland Farms Terminal: The Terminal is located in South Portland about 1 mile outside the lift bridge. The berth consists of 2 steel breasting dolphins 40 ft. in diameter which are fendered with wood. The hose rig and manifolds are located midway between the 2 dolphins. Vessels approach the finger pier and are breasted alongside by 2 tugs. Care should be taken not to work the vessel along the pier face. Vessels dock port side to with a minimum of 10 mooring lines. The 2 stern lines lead to 2 mooring buoys. Vessels start in 3 hours prior to HW in order to arrive at the dock at HW. Vessels undock with either 1 or 2 tugs. Mooring lines should be carefully tended as strong Northeasterly winds may cause a vessel to move off the breasting surfaces.

Getty, B. P. and Koch: This Terminal is located at the extreme Western end of the Fore River, approximately 1.5 miles beyond the lift bridge and adjacent to a fixed highway and railroad bridge. Vessels transit the Fore River on a rising tide in order to dock at Slack High Water. The vessel approaches the dock slowly, in line with the pier and slightly off of the face to prevent rubbing on the wood fendering. The vessel should be stopped dead in the water and then gently breasted alongside. All vessels dock port side to with a minimum of 11 lines. Stern lines are run to a mooring buoy. Vessels undock with the assistance of 2 tugs.

Mobil Terminal: This Terminal is a marginal-type berth located on the South bank of the Fore River approximately 1.25 miles above the lift bridge. The dock has 2 breasting cells 160 ft. apart. The cells are concrete capped supported by cylindrical steel pipes. The hose gantry platform is located midway between the breasting cells and is set back 3 ft. from the outer face of the cells. The breasting cells are equipped with hard rubber fixed fendering. The mooring points for head, stern, and breast lines are smaller concrete caps supported by steel pipes. A wood walkway runs the length of the dock connecting the the concrete caps. 2 tugs breast the vessel alongside for a port side to docking. 12 mooring lines are considered the minimum acceptable. Vessels dock at HW. On departure, the vessel is worked astern and then turned off the dock with the assistance of 2 tugs.

Portland Pipe-line Terminal: Portland Pipe-line Corporation operates 2 separate finger piers in South Portland. The Terminal is the Eastern terminus of a pipeline which carries oil to Montreal, Quebec.

Pier No. 1 is the older of the 2 piers. There is a tanker berth on both the East and the West sides of the pier. Vessels dock bow in, starboard side to on the East side and port side to on the West side. On approaching the pier at Slack High Water, vessels are turned to port with the assistance of 2 tugs and are worked into the berth. Forward spring lines are positioned first. 12 mooring lines are recommended. Vessels undock with the assistance of 2 tugs at any stage of the tide. Max. size: 30,000 d.w.t. and 32 ft. draft at MLW.

Pier No. 2 consists of a 975 ft. extension to an older 1,000 ft. finger pier. There is a tanker berth on both the North and the South sides of the pier. Vessels dock bow in, starboard side to on the South side and port side to on the North side. Vessels drawing less than 42 ft. dock at Slack Water. Vessels dock at Slack Water due to the fact that the tide sets across the pier at about 1 knot. Vessels under 80,000 d.w.t. dock with the assistance of 2 tugs; vessels up to 110,000 d.w.t. may require additional tugs. Vessels make a normal approach to the finger pier, are turned to port, and worked slowly into the berth. Forward spring lines are positioned first. 12 mooring lines are considered the minimum acceptable. Vessels undock at any stage of the tide with the assistance of 2 tugs. Max. size: 124,000 d.w.t. and 45 ft. draft at MLW.

Vessels bound for Portland Pipe-line Terminal are usually brought to the inner anchorages, Diamond Island Roads, one tide before their scheduled berthing in order to dock at Slack Water.

Star Enterprise Terminal: The Terminal is located on the South side of the Fore River directly inside the lift bridge. Vessels dock with the assistance of either 2 or 3 tugs. The vessel must transit the bridge as slowly as possible for it must stop immediately after the bridge. It is then slowly turned slightly to starboard and breasted alongside the pier by the tugs for a port side to docking at Slack High Water. Vessels undock at any time with the assistance of 2 tugs and are turned before proceeding through the bridge outbound. 10 mooring lines are considered the minimum acceptable.

DENSITY: Average density 1024.

FRESH WATER: Available by tug for boilers only at rate of tug hire. Drinking water available at piers.

FUEL: No. 6 diesel oil and blended intermediate fuel oils. Delivery is via barge only and 24 hours notice required.

FIRE PRECAUTIONS: None – except at certain oil piers where information given to Shipmaster upon arrival at pier. Ample fire protection, salt water lines, sprinkler system on pier, local fire department.

CONSULS: Honorary Consuls for France and Sweden.

REPAIRS: Repair facilities for all types of machinery available.

DRY DOCKS: 3 basins divided into 7 berths which can handle a vessel up to 455 ft. long and 62 ft. wide (not currently activated). Also 3 other smaller marine slipways.

80,000 ton lift floating dock. Depth over keel blocks 14 m. Length 257 m. Clear width 40.7 m.

New Bath Ironworks: New dry dock in operation.

Specifications:	Clear Width:	134 ft.
	Draft:	46 ft. over 4 ft. keel blocks
	Max. Size:	LOA 1,000 ft. Beam 130 ft.
	Max. Lift:	90,000 long tons
	Dock Length:	747 ft. without outriggers 797 ft. with one outrigger.

SURVEYORS: National Cargo Bureau, Tel: 781-4467. Caleb Brett U.S.A. Inc., Tel: (207) 799-5569. E.W.Saybolt, Tel: (207) 799-1142.

GANGWAY/DECK WATCHMEN: Not required.

OPENING/CLOSING HATCHES: Ship's crew open hatches.

CERTIFICATES: Load Line Certificate, Certificate of Foreign Clearance, Ship's Safety Certificate, U.S. Tonnage Tax Certificate of previous trip if available, Radio Operator's Licence.

CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes per man. Wine and/or Spirits, 1 bottle per person.

CARGO GEAR: Additional gear may be required for dry cargo. Vessel or agent should contact stevedores regarding same as soon as possible prior to vessel's arrival.

REPATRIATION: Arrangements must be made with Agent in advance by telegram.

AIRPORT: Portland Municipal Airport 3.5 to 4 miles distant.

HOLIDAYS: Accepted holidays: New Year's Day; Memorial Day; Independence Day; Labour Day; Thanksgiving Day and Christmas Day. Stevedoring available on any of these days by prior arrangement.

POLICE/AMBULANCE/FIRE: Switchboard 775 – 6361. Emergencies 911.

TELEPHONE: Arrangements can be made to have phone put on ship, but most docks have pay phones.

IDENTIFICATION CARDS: Form I-95 must be filled-out on arriving unless seaman has had a prior one made out for a previous arrival on same ship.

GARBAGE DISPOSAL: Several local companies available. Contact Department of Agriculture. Tel: (207) 780-3237.

WASTE OIL DISPOSAL: Several local companies available.

SEAMAN'S CLUBS: New England Seaman's Mission Inc., Boston. Tel: (617) 569-6719.

GENERAL: Discussions underway with Coast Guard and other officials to install fixed lighthouse stations to replace lightships at entrance.

DEVELOPMENTS: Plans under way for redevelopment of waterfront. Plans call for deepening Fore River from 35 ft. to 45 ft.

AUTHORITY: Port of Portland, Waterfront Division, Two Portland Fish Pier, Suite 307, Portland, Maine 04101. *Tel:* (207) 773-1613. *Contact:* Thomas F. Valleau, Director. Captain Steve Richmond, Waterfront Manager.

State of Maine, Department of Transportation, State House Station No. 16, Child Street, Augusta, Maine 04333. *Tel:* (207) 287-2841. *FAX:* (207) 287-2896. *Contact:* R.D. Elder, Port Development Director.

PORTLAND, Oregon: 45.30 N. 122.40 W. (See Plan)

LOCATION: Portland is located 96 miles up-river from Astoria.

DOCUMENTS:

3 Cargo Manifests.
3 Stores Lists.
3 Crew Curio Lists.
3 Crew Lists.
1 Clearance from Last Port.
1 Tonnage Tax Certificate.
1 Copy of Vessel's Register.
1 Itinerary of Vessel, port by port.

PILOTAGE: Compulsory. ETA Bar Pilot Astoria at least 12 hours before arrival giving deepest draft. Bar pilotage covers from sea to the Port of Astoria, river pilotage covers from Astoria to Portland. They change from launch while steaming in channel off Astoria Buoy No. 37.

Warning: Due to heavy swells on bar during stormy Winter conditions, crossings may be temporarily suspended, therefore Masters should attempt earliest VHF radio contact on Channel 16 with Pilots or Coast Guard Station "Cape Disappointment" for latest bar conditions.

During Summer months Masters should use extreme caution in poor visibility as many small fishing craft will be encountered near mouth of Columbia River.

Also see "General – Pilotage" before first U.S.A. port (Albany).

ANCHORAGES: Vessels may anchor to await berths at various locations on the Columbia River. Usual spots are at Tongue Point Astoria, Longview and at Vancouver, Washington.

RESTRICTIONS: All vessels Masters or their Agents to obtain Coast Guard Clearance at least 24 hours before arrival. Captain of Port may impose movement restrictions if any hazardous cargo. Under 36 ft. draft no movement restrictions, 36 ft. and over up to maximum permissible draft of 39 ft. on Pilot's recommendations. Bar Pilots will take vessels up to 45 ft. draft out on HW.

No size restrictions length and beam, however, Corps of Engineers maintain only 600 ft. wide channel, therefore, deep laden vessels over 600 ft. in length to use extreme caution when turning.

MAX. SIZE: No restrictions length and breadth. Depth at Columbia River Bar 55 ft. River channel to Portland/Vancouver maintained at 40 ft. by 600 ft. Seasonal tidal effect up to 3 ft. at Portland.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.

Master to radio with ETA state of crew health noting any sickness. Agent will report sickness to Seattle Quarantine Station for clearance instructions.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Route ETA cables through KLBITT Seattle, Washington.

Marine Exchange of the Columbia River District (Merchants Exchange): 24 hour marine reporting. Call sign "KDO 759". Call on Channel 16 VHF. Working (Astoria – Longview and 50 miles out to sea) on Channel 9 and (Longview – Portland) on Channel 11 and 18A.

Marine Exchange (Tel: 503 – 228 – 4361) pass messages to vessels from Agents and vice-versa. Coverage is good in river and 50 miles to seaward.

TUGS: Tugs normally join vessel at designated berth. Tugs' lines used at no charge.

BERTHING: The port operates 4 public ocean cargo terminals (Terminals 2, 4 and 5 are located on the Willamette River and Terminal 6 on the Columbia River) containing 19 deepwater berths, including 7 container berths with 8 high-speed container cranes. A new Post-Panamax crane is due to be operational late 1995. Present depths alongside berths is 40 ft. min. at MLLW.

There are general cargo berths and berths for commodities which require special handling. Port facilities include 21 transit sheds, and 8 warehouses with 2.2 million sq.ft. of sprinkler protected storage area.

SPECIALISED CARGO HANDLING FACILITIES: As well as the 8 container cranes, there are 2 Whirley cranes, 8×45 ton gantry cranes and a 175 ton mobile crane, largest of its kind on the Pacific Coast.

At Terminal 2 is a 2,535 ft. container/general cargo pier with a 40 ton, a 50 ton, a 36 ton revolving crane and an 85 ton straight line crane and 2×65 ton gantry cranes. Terminal 2 contains a Roll-on/Roll-off berth and a 400 ft. barge dock. Pier has a 27 acre open storage yard with rail and truck service. 4 straddle carriers, capable of stacking 20 ft. containers 3 high, or 40 ft. 2 high, serve the yard. Pierside warehouses and container freight station 300,000 sq.ft.

At Terminal 4 there is an 8.1 million bushel capacity grain elevator (Cargill), with box car tipper, truck dumper and barge unloading facility. There is a Dravo bulk unloader with digging capacity of 900 t.p.h. and a bulk outloader with a loading capacity of 1,500 t.p.h. Tanks are available for special cargoes such as petroleum, molasses, tallow and ore concentrates. Also available is a 120 acre open storage area and floating dock for import of automobiles (Toyota). Three general cargo berths, totalling 2,400 ft., equipped with 1×35.5 ton straight line container handling crane and 1×36 ton revolving crane. 48 acre open yard storage and 200,000 sq.ft. covered storage available.

The Terminal 5 elevator is the most modern grain outloading facility in the lower Columbia River and is operated under sub-lease by Columbia Grain Inc.

The elevator has a storage capacity of 4 million bushels and is the fastest on the river, with an outloading capability of 2,100 tonnes/p.h. The facility can receive grain by rail, truck and barge. The barge leg operates at 1,000 t.p.h., trucks are unloaded at 200 t.p.h. and railcars can be unloaded at 1,250 t.p.h.

Terminal 6 has a container pier, length 2,850 ft., with 3×50 ton and 2×40 ton straight line cranes and a 200,000 sq.ft. container freight station, 72 acres of open storage and 2 on-dock rail facilities capable of handling 60 double stack rail cars. Switching is by Burlington Northern R.R. with direct access by Union Pacific R.R. Also a 150 acre open storage area and 2 floating docks for import of automobiles (Honda and Hyundai).

Bunge Corp: Depth alongside 40 ft. Storage Capacity: 8,000,000 bushels. Receiving Capacity: Ex-barge 500 t.p.h.; ex–rail 750 t.p.h. and ex-truck 750 t.p.h. Loading Capacity: 1,800 t.p.h. (1 belt and 5 spouts).

Louis Dreyfus: Depth alongside 42 ft. Storage Capacity: 1,500,000 bushels. Receiving Capacity: Ex-barge 600 t.p.h.; Ex-rail 350 t.p.h. Loading Capacity: 1,200 t.p.h. (2 belts and 6 spouts).

BRIDGES: No arrival times designated if coming from sea and in excess of 750 tons gross. Departures regulated, with bridge closures during peak traffic flow (0700 to 0900 hrs. and 1615 to 1815 hrs.) unless permission granted by Harbour Master.

STEVEDORES: Allocation for gangs Monday to Saturday must be confirmed at 1100 hrs. to longshore hiring hall. Allocation for gangs Sunday and Monday made at 1100 hrs. Saturday for both day and night gangs. Same procedure applies to allocation of night gangs, but night gangs may be cancelled by 1400 hrs. in afternoon if night gangs are to work.

MEDICAL: Any type medical treatment provided and hospital facilities available.

TANKERS:

	Max. Size Vessel	
Berth	*Length*	*Draft*
Shell Oil Company	575 ft.	32 ft.
Standard Oil	660 ft. – 700 ft.	35 ft.
Texaco Inc.	650 ft.	30 ft.
Phillips Petroleum Co.	No maximum	30 ft.
Time Oil Co.	600 ft.	38 ft.
Mobil Oil Corp.	550 ft.	31 ft.
Richfield	600 ft.	30 ft.
Union Oil Co.	550 ft.	30 ft.

DENSITY: Fresh water at all times.

FRESH WATER: Available at most berths delivered through pier-side connections.

FUEL: Viscosity grades of B and lower. No advance notice required. Barging essential. Also see "Notice" No. 2.

FIRE PRECAUTIONS: Fire precautions respecting tankers administered by U.S. Coast Guard, which enforces shipboard regulations under the Code of Federal Regulations, Part 46, Sub-Part D, Sections 20 to 40; the Police Harbour Patrol, which controls port movements, boards vessels to warn Master regarding harbour regulations, including spilling of oil, etc.; Fire Marshal exercises jurisdiction regarding fire regulations at shoreside facilities serving tankers.

All vessels to have towing cables rigged fore and aft on the offshore side. Cables to be made fast with the eye 1 m. above the water.

CONSULS: The following countries are represented in Portland:

Barbados
Belgium
Cyprus
Denmark
Finland
France
Germany
Great Britain
Ivory Coast
Japan
Korea
Malaysia
Mexico
Netherlands
Norway
Sweden

REPAIRS: All types of deck and engine repairs possible.

DRY DOCKS: 3 floating docks, largest 982 ft.×185 ft. clear width, with lift capacity of 81,000 long tons.

GANGWAY/DECK WATCHMEN: Option of vessel Owner/Agent a available through private firms.

OPENING/CLOSING HATCHES: While ship at dock, opening a closing is work of longshoremen. Ship may open or close own hatch while underway.

CERTIFICATES: Registered Tonnage Certificates. Certificat Financial Responsibility (all details must agree with vessel's register

CARGO GEAR: Valid cargo gear certificate required, acceptable to U Bureau of Labor Standards.

REPATRIATION: Arrangements possible for crew changes or oth repatriation.

AIRPORT: Airport 10 miles distant, served by 14 regularly schedu passenger airlines with direct service and/or connections domestica and world wide. 17 cargo carriers also serve the area.

TIME: GMT minus eight hours. Daylight Saving Time becomes effect annually on the first Sunday in April through the last Saturday in Octob

HOLIDAYS: *New Year's Day; Martin Luther King's Birthday (Janua 15th); President's Day (February 21st); Memorial Day (May 30 *Independence Day (July 4th); Harry Bridges Birthday (July 27 *Labour Day (first Monday in September); Columbus Day (October 8 Veterans' Day (November 11th); Thanksgiving Day, *Christmas D (December 25th), State-wide Election Days. Other legal holidays m be proclaimed by state or national authority. When holiday falls o Sunday, the following Monday is observed as holiday. Longshore wo performed on any of above listed days is overtime, which is one and half time rate. Days marked (*) are stop-work days, i.e. no ships will b worked. This also applies to July 5th, which observed locally on unilater basis.

POLICE/AMBULANCE/FIRE: Police Tel: 911; Fire Tel: 91 Ambulance: provided by several private firms, but can be obtain through police or fire number.

TELEPHONES: Available by order from terminal superintendents $5.00 connection charge.

SERVICES: All services available such as compass adjusting, major minor repairs either with work barges or at ship repair berths; lay bert available; charts available from private companies; all chandle supplies available.

SHORE LEAVE: Crew members permitted ashore except where vess has made first arrival from Communist-controlled port.

IDENTIFICATION CARDS: Immigration Dept. requires Form No. I-9 and No. 31 (Repatriation). Changes can be effected at any U. Immigration Office.

GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. p (Albany).

Service available using private contractors.

Spencer Environmental. Tel: (503) 655-0896.
Western Compliance Service. Tel: (503) 682-2341.

WASTE OIL DISPOSAL: Portland Ship Repair Yard. Tel: (50 240-3041. Fax: (503) 240-3080. Storage tank capacity 250,000 barre

Service also available using private contractors. Contact: Fos Northwest Field Services, Reidel, Spencer or Western (See "Garba Disposal" above).

SEAMAN'S CLUBS: None.

CURRENCY: U.S.Dollar (U.S.$).

NOTICE No. 1:

Customs of the Port: July 1993.

The Customs of the Port with respect to bulk grain and other bu commodities handled through export grain elevators in the Colum River District is published by the Merchants Exchange as a convenie to the trade and to facilitate commerce.

These Customs set forth the normal and customary trade practic of vessels loading in the Columbia River District, considered as one p with grain berths from Astoria, Oregon, to Portland, Oregon, includ Longview, Kalama, and Vancouver, Washington.

These Customs do not, and are not intended to, supersede the ba contractual relationships between the parties (vessel, charterer, shipp etc.). Instead, where these contractual arrangements do not co specific local conditions, these Customs are intended to be ma available for the information of and application by the parties.

SECTION 1:

Subject to the exceptions enumerated below, vessels are assig to a berth(s) in the order in which they file with the elevator(s) as rea to load. A vessel is considered ready when it has obtained Certific of Readiness issued by the National Cargo Bureau, Inc., and an offi Certificate of Stowage Examination from the U.S. Departmen Agriculture, Federal Grain Inspection Service, Inspection Divis stating the vessel is completely fit in all compartments in which i intended to receive cargo.

Exceptions:

(a) In assigning berth to vessels at any elevator, Liners are gi preference over other vessels except that any tramp vessel, wh allowed loading laytime has expired, assumes the status of a li vessel for purposes of berth assignment (Under these Custo the term "Liner" is a vessel sailing under an advertised Paci Coast schedule and operated by a line maintaining regular sai from any Pacific Coast port to named ports, and on which the quantity of all grain to be loaded does not exceed one-half of total deadweight tonnage of the vessel). A vessel which ar and presents Notice of Readiness to load in accordance with the Customs, but which cannot attain "Liner" status because allowed loading laytime is not defined in the contract between parties, will not lose its berthing priority to a tramp vessel with a Notice of Readiness, that has gone on demurrage.

b) An elevator may alter the turn of the vessels whenever confronted with the urgent necessity of receiving or loading any particular grade of grain, or to facilitate conditions at the elevator. When requested, elevator operator will supply written confirmation of such loading alteration as provided under these Customs and/or applicable tariff to Owner's or Charterer's representative.

SECTION 2:

a) Normal working days are Monday through Saturday from 0800 hrs. to 1700 hrs. Exceptions are Sundays and holidays as defined in the Pacific Coast Longshore Contract Document.

b) Overtime – is all work over 8 hours in one day, and work between 1700 hrs. and 0800 hrs., Monday through Friday, and all work on Saturdays, Sundays and holidays as defined in the Pacific Coast Longshore Contract Document.

c) A waiting vessel – where the same holiday is observed on different days in adjoining states, a waiting vessel not knowing where it could work will observe (for laytime purposes) the holiday in the state that it first works.

SECTION 3:

If a vessel refuses to work during a normal working day, or beyond a normal working day when so required in writing by the elevator in accordance with its published tariff, it loses its turn and vacates the berth in favour of the next vessel that is willing to work overtime. The vessel so losing its turn shall be entitled to berth as soon as the berth is next available thereafter. If any vessel refuses to vacate its berth when ordered to do so under the above circumstances, the elevator may effect the removal of such vessel at the vessel's risk and expense.

SECTION 4:

The Board of Directors of the Merchants Exchange will, on an annual basis, select a mediator for the purpose of mediation or interpretation of the Customs of the Port set forth herein.

Requests for mediation or interpretation of these Customs shall be submitted in writing, stating the parties involved and outlining the facts in brief detail to the Executive Director of the Merchants Exchange. The Executive Director of the Merchants Exchange and the mediator will select the time and place for the mediation. Failure of the parties named in the mediation to respond or acknowledge the request for mediation will require the mediator to furnish his interpretation on the facts as presented by the requesting party.

Mediation fees payable to the Merchants Exchange shall be $50, plus any extraordinary charges in connection therewith, to be paid by the party requesting the mediation or interpretation.

Any requests for revisions of these Customs, to reflect new or different custom trade practices, must be submitted in writing to the Chairman of the Customs of the Port Committee with a copy to the Executive Director of the Merchants Exchange.

NOTICE No.2: Issued by the Harbour Master in August, 1980.
SUBJECT: *Discontinuing Ship Repairs at Grain and Oil Docks, and Refuelling at Grain Docks.*

We feel after considerable deliberation that ship repair at Oil and Grain Docks is an unnecessary hazard and should be discontinued at once.

The practice of refuelling ships at Grain Docks also would be considered taking an unnecessary risk, and as such, will be stopped.

After surveying numerous longshoremen and Grain Operators who reaffirmed this position, we are hereby notifying the concerned contractors that this will be our policy from now on.

AUTHORITY: Port of Portland, P.O.Box 3529, 700 Northeast Multnomah Street, Portland, Oregon 97208. *Tel:* (503) 231-5000. Telex: 910-464-5105. *FAX:* (503) 231-5332. *Cables:* Portofport. *Contact:* Mike Thorne, Executive Director.

PORTSMOUTH, New Hampshire: 43.03 N. 70.45 W.

(See Plan)

PILOTAGE: Pilot boards at entrance.

TUGS: The Port of Portsmouth is serviced by 3 regular tugs, one of 1,200 h.p. and two of 1,600 h.p. operated by the Portsmouth Navigation Division of the Central Wharf Towboat Company, Inc. Tel: 1-603-436 1209 (radio frequency 1316). Additional tugs are available in the area if needed.

The rates for moving vessels from the anchorage (1 mile South of Sea Buoy KR2) to berths in the harbour vary according to distance, conditions and tonnage of vessels. Tonnage referred to is s.d.w.t. or Coastwise, whichever greater.

BRIDGES: *Bridge Clearances:*
Memorial Bridge (lift): Horizontal 260 ft., vertical 150 ft.
ME.-N.H Bridge (lift): Horizontal 200 ft., vertical 135 ft.
1-95 Highway Bridge (fixed): Horizontal 440 ft., vertical 135 ft.
General Sullivan Bridge (fixed): Horizontal 100 ft., vertical 46 ft.
New Castle Highway Bridge (Bascule): Horizontal 29 ft., vertical 12 ft.

BERTHING:

New Hampshire State Port Authority:

Operator:	J. T. Clark & Son of N.H. Inc. Tel: (603) 436-8500. Fax: (603) 436-2780.
Location:	3 miles from Outer Anchorage (Buoy KR2).
Depth at Dock:	35 ft. (MLW).
Max. LOA:	700 ft.
Type of Pier:	Length 600 ft. Concrete and steel pile with precast concrete deck.
Products Handled:	General cargo, bulk and containerised.
Dry Storage:	50,000 sq.ft. in two sheds.
Dockside Services:	Potable water, power, telephone, stores and marine bunkers. Modern forklift trucks, bucket loaders, tractors and heavy lift cranes are permanently stationed at the facility to prevent any delays in servicing all types of vessels. The cranes range in size from 35 tons to 225 ton mobile crane. Additional mobile cranes of 165 ton capacity are readily available. A certified weighing system is located in the centre of the freight marshalling area for easy access to trucks and containers entering or leaving the terminal.
Developments:	Expansion of facilities is planned for 1995 and will include a 700 ft. pier with 35 ft. at MLW and a 400 ft. pier with 25 ft. MLW for containers and project cargoes.

Storage Tank Development Corp., Fuel Storage Corp. and Sea-3, Inc.:

Operator:	Fuel Storage Corp. and Sea-3, Inc.
Address:	78 Patterson Lane, Newington, NH 03801. Tel: (603) 431-6000.
Office:	889 Elm Street, P.O.Box 1032, Manchester, NH 03105-1032. Tel: (603) 622-7133.
Sea-3 Terminal:	103 Old Dover Road, Newington, NH 03801. Tel: (603) 431-5990.
Office:	144 Washington Street, Portsmouth, NH 03801. Tel: (603) 436-6225.
Type of Pier:	Steel piled cells offshore 125 ft.
Depth Alongside:	38 ft. (MLW).
Normal Ship Side to Dock:	Port.
Line Handling Boat required:	Motorised shore bollards.
Access to Vessel (for stores and repairs):	Trucks to shoreside, cart or hand to shipyard.
Product Handled:	No. 2 oil, asphalt, MMA, propane, kerosene, low sulphur diesel.
Size and Number of Pipelines:	4 in. – 16 in.
Bbls. per hour Discharge Capacity:	12,420 bbls.p.hr.
Maximum Vessel Dimensions:	44,000 d.w.t.
Storage Capacity:	400,000 bbls.
Other Dock Users:	Coastal Oil, U.S. Government, Trimont International, Cyro.

Also see "Shipmaster's Report".

Public Service Co. of N.H. Dock:

Operator:	Mobil Oil Corp.
Address:	Gosling Road, Newington, N.H. 03801.
Depth Alongside:	32.6 ft. (MLW).
Normal Ship Side to Dock:	Port.
Access to Vessels (for stores and repairs):	Limited.
Products Handled:	Petroleum and liquid bulk.
Size and Number of Pipelines:	Various.
Discharge Capability:	6,000 bbls.p.hr. (varies on product and tank size).
Average Distance to Storage Tanks:	0.75 miles.

Simplex Wire & Cable:

Operator:	Simplex Wire & Cable.
Address:	2073 Woodbury Avenue, Newington, NH 03801. Tel: 436-6100. Fax: (603) 427-0701.
Type of Pier:	T-Shape (permanent).
Depth Alongside:	36 ft. (MLW).
Normal Ship Side to Dock:	Port (bow upstream).
Line Handling Boat required:	Yes.
Access to Vessel (for stores and repairs):	Yes.
Product Handled:	Ocean cables.

Public Service of N.H. – Schiller and Newington Stations:

Operator:	C. H. Sprague & Son.
Location:	1.5 miles above the Interstate Bridge.
Distance Seabuoy to Dock:	7.1 miles.
Controlling Depth in Approaches:	35 ft.
Controlling Depth at Dock – MLW:	37 ft., ledge bottom.
Rise and Fall of Tide:	8 ft.
Products Handled:	No. 4 and No. 6 fuel oil, coal, dry bulk.
Docking and Undocking Conditions:	Docking is restricted to a high water operation – Pilot starting ship in from anchorage area at high water only. Undocking: Low water slack at the dock or 1 hour before high water slack at the dock.
Length of Dock and Construction:	700 ft. with dolphins. Concrete pile, concrete decked T-head wharf with a 100×20 ft. approach.
Tugs and Line Handlers:	2 or 3 tugs used to dock and undock. Terminal personnel used as linesmen.
Bunkers:	Available through 6 in. line at 2,000 bbls./hr.
Water:	Supplied through 2.5 in. line.

Sprague Portsmouth Terminal:

Sprague's Portsmouth Terminal consists of approximately 8.55 acres of industrial-zoned land abutting Public Service of New Hampshire's (PSNH) Schiller Generating Station. The Terminal has 342,000 bbls. of liquid storage capacity.

Other Facilities and Services: Siwertell dry bulk material unloading system rated at 1,000 tons/hr. Vessels of up to 700 ft. length and 36 ft. draft can be accommodated.

Sprague Energy – Newington Terminal:

Operator:	Sprague Energy
Address Terminal:	126 River Road, Newington, N.H. 03801. Tel: (603) 431-5131. Fax: (603) 431-2675.
Office:	One Parade Mall, Portsmouth, N.H. 03801. Tel: (603) 431-1000.
Type of Pier:	Steel piled cells (2) and cement mooring dolphins (3). Offshore 300 ft.
Depth Alongside:	35 ft. (MLW).
Normal Ship Side to Dock:	Port.
Line Handling:	Motorised capstans on all dolphins. Lines handled by Sprague personnel.
Lines:	6-18 depending on size of vessel.
Access to Vessel (for stores and repairs):	5 ton vehicle or less to ship side. 5 ton vehicle or more, cart or hand to ship side.
Size and Number of Pipelines:	1×16 in., 1×14 in., 3×10 in., 1×8 in., 1×6 in.
Discharge Rate:	7,000-20,000 bbls./hr. (varies on product and tank size).
Max. Vessel Size:	736 ft. overall length.
Storage Capacity:	1,200,000 bbls.
Dockside:	Potable water, pay telephone, marine bunkers (light oil only).
Other Facilities and Services:	Sprague operates a dry bulk material handling conveyor system capable of handling self-unloading vessels. Receipt rate approximately 2,500 tons/hr.
Products Handled:	Petroleum: No. 2 fuel oil, diesel fuel, kerosene. Dry Bulk: Cement, gypsum, salt, aggregate. Chemicals: Caustic soda, tallow, calcium chloride, asphalt.

National Gypsum Company:

Operator:	National Gypsum Company.
Address:	Michael Succi Drive, Portsmouth, NH 03801. Tel: (603) 436-4840.
Mailing:	P.O.Box 270, Portsmouth, NH 03802-0270.
Type of Pier:	2 circular marine cells, 40 ft. dia. at shore side.
Depth Alongside:	40 ft. (MLW).
Normal Ship Side to Dock:	Port.
Line Handling Boat required:	Motorised shore bollards.
Access to Vessel (for stores and repairs):	Trucks to shoreside.
Product Handled:	Gypsum ore through a conveyor system designed for self-unloading ships.
Other Dock Users:	Northeast Petroleum Corp.

Granite State Minerals:

Operator:	Granite State Minerals.
Address:	227 Market Street, Portsmouth, NH 03801. Tel: (603) 436-8505.
Location:	3 miles from Outer Anchorage Buoy (2KR).
Type of Pier:	Steel pile with wood deck.
Depth at Dock:	36 ft.
Max. LOA:	735 ft.
Normal Ship Side to Dock:	Port.
Products Handled:	Dry bulk products.
Discharge Capability:	Two shoreside mobile cranes.
Storage Area:	4 acres.
Dockside Services:	Water, bunkers, no shoreside electricity.
General:	Granite State Minerals offers throughput of products such as cement, stone, gypsum, lumb and other dry bulk products and arranges transportation from point of origin to point of destination for most materials.

TANKERS: Also see "Berthing".

Report: Cautionary Advice – Port Approaches: Vessels approachi Portsmouth should pass South of Isles of Shoals, and, if waiting for t Pilot, anchor inside of Gunboat Shoals Buoy No. 1. Vessels should n anchor during periods of heavy swell. It is not prudent to enter por fog, snow or when swell is running West of Whaleback Reef. Numero small craft frequent this area during Summer months.

Tugs: 4 tugs are available at this port. Pilot acts as Docking Master a his advice should be heeded concerning number of tugs and numb and placement of mooring lines.

General: Portsmouth Harbour is at the mouth of the Piscataqua Ri and is the approach to all marine terminals located on the river. T terminals are located above the City of Portsmouth. Vessels transi up-river must pass beneath either 2 or 3 bridges, depending on t terminal. The first bridge is the Memorial Highway Bridge which is a l bridge with a vertical clearance of 150 ft. in the raised position. T second bridge is the Route No. 1 Bypass and Railroad Bridge (No Island Bridge) which is also a lift bridge and has a vertical clearance 135 ft. in the raised position. The third bridge is the Route 95 Brid which is a fixed structure with 135 ft. of vertical clearance. The 2 bridges monitor VHF Channel 13. The minimum horizontal clearan on the bridges is 200 ft.

The Agent must notify the U.S. Coast Guard 24 hours prior to t vessel entering the harbour. The vessel must notify the U.S. Coa Guard on VHF Channel 16 upon entering the harbour. The Pilot will p a vessel under way approximately 1 hour before the tide changes order to make a Slack Water passage. Tugs will come alongside af the vessel has rounded Fort Point.

Sea 3 Terminal: LPG vessels scheduled to discharge at this termi must pass through all 3 bridges. The terminal is located 2.9 miles abo the Memorial Highway Bridge on the South bank of the river. An exa ETA is important for LPG vessels due to the nature of the vessel's car and necessary notification of state, local, and federal agencies (USC LPG vessels must meet the following Port Regulations:

(a) Vessels move within the harbour only during daylight hou (loaded or light).

(b) Vessels move within the harbour only during periods of go visibility. If the visibility falls to less than 2 miles, vessels at s must not enter port without the permission of the USCG Capt of the Port. If a vessel is under way within the harbour and t visibility deteriorates to less than 2 miles, the vessel must no the Captain of the Port and then proceed to the berth or anc as directed.

(c) Vessels must continuously monitor VHF Channel 13 while und way in the harbour. Constant communications must b maintained with the attending tugs and the USCG escort cra

(d) Vessels transiting in-bound may do so only during periods Slack Water. This could be either High or Low Slack Wa depending on the vessel's draft. On departure from the ber vessels leave either at LW or 1 hour before Slack High Wa (daylight only).

(e) Vessels transit the harbour with at least 4 tugs in attendanc

(f) LPG vessels should not enter the port unless the terminal is a to immediately receive cargo.

(g) On a LPG vessel's first call to the port, a USCG inspection te will board the vessel at anchorage. All LPG vessels, whe awaiting inspection or harbour transit, must anchor 1 mile So of the Sea Buoy "KR2". After the initial inspection, a vessel future calls to Portsmouth need only send the following mess to the Captain of the Port, South Portland, Maine:
"To the best of my knowledge and belief, there are no kn casualties to this vessel or its machinery which might affec seaworthiness. I further state that all cryogenic handling detection equipment is in proper operating condition."
This will permit vessel to proceed to the dock for pre-tra inspection. Failure to send the message will require the ve to be inspected at anchor.

(h) Vessels must be prepared to get under way on short notic case of an emergency. One "live" tug must stand-by durin cargo operations.

LPG vessels transit Portsmouth Harbour and the Piscata River escorted by a USCG vessel with 4 tugs in attendance. marginal-type dock consists of 3 concrete cells connecte catwalks. The 4 tugs breast the vessel alongside for a port to docking. The bow is worked in first while head and forw breast lines are positioned and secured to the bitts. The st then worked alongside and the remaining lines positioned. allows for the required tension on the long mooring leads forw 20 mooring lines are considered the minimum acceptable a ebb current forces the vessel off the dock and the bow ha tendency to yaw with the current. All moorings lines mu carefully tended. Light vessels undock with 3 tugs; ve departing with part cargo must use 4 tugs to undock.

Also see "Shipmaster's Report".

New England Tank Industries – Newington: Located approximately 10 miles from the Sea Buoy in the Piscataqua River. Vessels generally dock and undock with the assistance of 3 tugs. Vessels are breasted alongside by the tugs for a port side to docking. 12 mooring lines are considered to be the minimum as current can reach 8 knots especially during Spring freshets. Vessels dock and undock day or night. Vessels are turned off the dock or in the turning basin upon undocking after discharging.

Northeast Petroleum – National Gypsum: Located on the West bank of the Piscataqua River below and adjacent to the Route 95 Fixed Bridge. The berth is approximately 5 miles from the Sea Buoy and is above the City of Portsmouth. The marginal-type dock consists of 2 breasting cells set on 163 ft. centres. The hose gantry is mounted on a third cell which is set back 4 ft. from the face of the breasting cells.

Both breasting cells are fitted with hard rubber fixed fenders. A gypsum unloading conveyor gantry is located at the South end of the pier but the structure does not interfere with tanker operations. The mooring line lead to the shore mooring point is approximately 115 ft. Vessels dock day or night with the assistance of 2 tugs. The tugs breast the vessel alongside for a port side to docking. 17 mooring lines are considered to be the minimum acceptable. Vessels undock with the assistance of 2 tugs and are turned below the berth. Due to the strong river currents and the close proximity to the navigational channel, lines must be tended closely.

C. H. Sprague & Son – Company Shiller Station: Located on the South side of the Piscataqua River about 7.1 miles above the Route 95 Fixed Bridge. The dock consists of a concrete pile, concrete decked 'T'-head wharf and dolphins. The overall length of the dock with the dolphins is 700 ft. Pilots start vessels in from the anchorage area at a suitable time in order to dock during Slack High Water. Vessels dock and undock with the assistance of either 2 or 3 tugs. Vessels dock port side to using approximately 14 mooring lines due to the extreme currents experienced during maximum stages of ebb and flood. After completion of discharge, vessels are turned in the turning basin or off the dock. Vessels undock either at Slack Low Water or 1 hour before Slack High Water. As with other terminals, mooring lines must be closely tended at all times due to the strong river currents.

Tides and Depth of Water: Tidal currents are very strong in the Piscataqua River, averaging between 3 – 5 knots. Spring freshets increase this current. Eddies form around most of the berths making slack tide berthing mandatory. Tidal range is 8.1 ft.

FRESH WATER: Available.

FUEL: Available.

REPAIRS: Facilities available.

BANKS: First National Bank of Boston. Tel: (617) 434-3770.
First National Bank of Portsmouth. Tel: (603) 436-7700.
Maine National Bank. Tel: (207) 439-0451.
State Street Bank. Tel: (617) 786-3839.

VESSEL ARRIVALS AND DEPARTURES

Marine Section, Federal Building, Room 103, Portsmouth. Tel: (603) 436-7620, ext. 737.

District Office (Portland, ME): Tel: (207) 780-3328.

COMMERCIAL VESSELS, ARRIVALS & ENTRY

Report of Arrival: These vessels must report arrival to a U.S. Customs Officer within 24 hours (19 U.S.C. 1433):

A. Vessels arriving at any port or place in the U.S. from any foreign port or place (refers to domestic and foreign vessels);

B. Domestic vessels arriving at any port or place in the U.S. from another U.S. location with bonded merchandise or foreign merchandise for which entry has not been made. Failure to report results in penalties.

Entrance: Within 48 hours of arrival from a foreign port, the Master is required to make entry of his vessel, even though the vessel may be at anchor awaiting berth. Foreign flag vessels arriving in ballast from another U.S. port must also make entry within 48 hours of arrival. When vessels which have residue foreign cargo and/or passengers on board arrive from another U.S. port, entry should be made within 24 hours.

Vessels arriving from a foreign port must have made either Preliminary or Formal entry prior to transacting any type of business or permitting anyone on board other than Customs, Immigration, Agriculture, Public Health, and Agent's personnel. Vessels arriving from another U.S. port to discharge cargo must make Preliminary or Formal entry prior to discharging cargo.

Foreign non-commercial vessels are also required to make entry. In Portsmouth this will be done on board at the time of boarding by Customs. The Officer will provide necessary forms and assistance. Non-commercial vessels may contact the New Castle Coast Guard Station for assistance in obtaining a Customs Officer.

WARNING REGARDING SEA STORES

(U.S. Dept. of Agriculture, Animal & Plant Health Inspection Service)

You are hereby warned that WHILE YOUR VESSEL IS IN THE TERRITORIAL WATERS OF THE U.S., regulations of the Department of Agriculture **prohibit** the unloading for any purpose of:

1. Fresh, chilled or frozen meats;
2. Undrawn poultry carcasses;
3. Plants or plant products, including fruits or vegetables;
4. Garbage, consisting or contaminated with scraps, parts or other waste of meats, plants, fruits, and vegetables.

DEVELOPMENTS: The Port Authority has developed a comprehensive plan for maximum utilisation of existing space on a phased basis. An integral part of that plan is another docking facility, 1,000 ft. long with a depth of 35 ft. alongside at MLW. This new docking facility will provide additional berthing space for new users as well as prevent costly delays due to terminal congestion. The Port Authority is also planning to develop approximately 10 acres of new land from a tidal basin adjacent to the present facility. This area will be used for open as well as enclosed throughput storage.

Also see "Berthing".

SHIPMASTER'S REPORT: February 1983.

Sea-3 Terminal:

The vessel arrived off Portsmouth N.H. on the 2nd February, at the entrance to which port the Pilot boards, to take vessels up river to Newington. At the arrival time a S.E. gale was in force, so the passage was ended at 2400 hrs. and the vessel stood some 20 miles off the coast waiting for the weather to abate, as I considered it unwise to proceed to the waiting area to anchor; as the holding ground is not good, and in S.E'ly winds there is no shelter. The vessel cruised around at reduced speed until the following day.

At 1450 hrs. on the 3rd February, with the weather, and sea conditions much improved, the vessel anchored 1 mile South of Kitts Rock No. 2 Buoy (KR2). Two U.S. Coast Guard officers boarded from a local harbour tug after some difficulty in coming alongside, due to the ground swell that was still running. The Officers carried out an inspection of all cargo handling equipment, and shut down systems. The Coast Guard officers then granted permission for the vessel to enter the Port of Newington, and disembarked at 1715 hrs.

As there is a port regulation that no LPG carrier can move during the hours of darkness, and that large vessels can only dock, and undock during slack water periods, it was necessary to wait until the following morning before docking.

At 1020 hrs. on the 4th February the Pilot boarded. At 1040 hrs. anchor aweigh, and the vessel proceeded up river. At the mouth of the river there is a shallow patch with only 35 ft. over it at low water. This left only 5 ft. clearance under the keel, and the vessel had to proceed very slowly over it. Four tugs were made fast, 2 for'd and 2 aft, and a U.S. Coast Guard cutter escorted the vessel up-river. The river is narrow, with some very sharp bends. There are 3 bridges, with the port limitations governed by the Noble Island Bridge. The vertical clearance on this bridge is 135 ft., and the horizontal distance is 200 ft. Maximum draft loaded, and on high water is 36 ft. On approaching this bridge it was necessary to let go the 2 for'd tugs, and allow them to pass through the bridge first, making them fast again when the vessel has passed through.

The vessel docked at Sea 3 Terminal, at 1315 hrs. 4th February. The berth constructed from 3 cement and steel dolphins, joined together by a steel platform. It stands about 150 ft. out in the river, and is connected to the shore by a narrow footbridge. The mooring arrangements for a vessel of this size are poor. There is not sufficient leads on the head lines or stern lines due to the way the mooring bollards are placed on the shore, and all the weight is taken on the spring lines. Recommended mooring arrangements as supplied by the Port Authority (See "Plan"). On the full run of the tide the water runs at up to 4 knots alongside, and because of this there is a port regulation that a tug must stand-by at all times while the vessel is alongside. The cost of this tug, on this call was U.S.$300 per hour, which can add a considerable amount to the overall cost of calling at Newington.

Before loading commenced, a liquid and vapour return line were connected. At 1530 hrs. on the 4th February loading commenced. The vapour return line proved very important as it appeared there was a large percentage of impurities in the product received judging by the performance of the vessel's reliquification plant. It was necessary to return a considerable amount of vapour to the shore tank during loading operations. I issued a Letter of Protest, to the Terminal Manager, protesting the quality of the product.

On docking, the vessel was again boarded by the U.S. Coast Guard, and further inspections were carried out. The Coast Guard personnel remained on board throughout the loading operation; sometimes as many as 6 Officers, but never less than 3 at any one time. It was explained to me by their Commanding Officer that some of the personnel had no experience of LPG vessels, and were on board to learn. In this respect the ship's Officers gave all assistance possible in showing them around. The loading rate was slow, only reaching an average of 400 tonnes/p.h. on full rate, and the shore installations could not supply the product any faster. Loading was completed at 0730 hrs. on Monday, 7th February when the cargo loaded was estimated as follows:

Ship's figure: 23,965.127 tonnes
Surveyor's figure: 23,901.602 tonnes
Shore figure: 23,828.614 tonnes (taken from shore tank gauge reading)

The draft on completion was 33 ft. 00 in. for'd., 34 ft. 08 in. aft.

Owing to port regulations the vessel had to remain alongside until the next daylight high water which was at 0800 hrs. on the 8th February. The vapour return line remained connected during this time, as regulations prohibit releasing uncondensables to the atmosphere, and in view of the impurities in the product it was found necessary to use this vapour return line.

At 0745 hrs. on the 8th February while the vessel was preparing to sail, a Coast Guard Officer boarded and informed me that the visibility in the river was less than 2 miles, and the U.S. Coast Guard would not grant permisson for the vessel to sail. Heavy snow had fallen throughout the previous day, but had cleared during the night, and the visibility at the vessel was over 2 miles. Evidently further down river it was still snowing, and visibility was restricted. The vessel had to remain alongside until the next daylight high water which was 0900 hrs. on the 9th February.

At 0715 hrs on the 9th February while preparing the vesel to sail, the vapour return line was disconnected, and a further survey of the product on board carried out. The result was as follows:

Loss of product as found by ship: 50.283 tonnes
Loss of product as found by Surveyor: 52.568 tonnes

At 0855 hrs. on the 9th February the vessel sailed for the Panama Canal. She was assisted by 5 tugs, as both the Pilot and the U.S. Coast Guard insisted on an additional tug being employed for the down-river passage as the vessel was deep loaded. There was no difficulty in leaving the berth. All stern lines were let go, and the vessel's stern allowed to swing out into the river, while still made fast for'd, with all weight coming on the for'd spring lines. When the vessel was at right angles to the dock all lines were let go, and the tugs pushed her around until she was heading down river. The river passage went without incident, and the Pilot disembarked at 1037 hrs. when approaching Kitts Rock No. 2 (KR2) buoy. The passage commenced at 1100 hrs on the 9th February, 1983.

AUTHORITY: New Hampshire State Port Authority, Port of Portsmouth, 555 Market Street, Box 506, Portsmouth, New Hampshire 03801. *Tel:* (603) 436-8500. *FAX:* (603) 436-2780. *Contact:* Ernest Connor, Port Director. Captain Thomas Orfe, Harbour Master: Tel: (603) 436-8500. Henry McKay, Marketing and Trade Development.

PROVIDENCE, Rhode Island: 41.48 N. 71.23 W.

(See Plan)

PILOTAGE: Compulsory. Pilot boards 1 mile South of Brenton Reef Light Tower (position: Lat. 41° 25′ N., Long. 71° 23′ W.). Send ETA to Agent 24 hours prior to arrival. Pilots (call sign "Rhode Island Pilots") on Channels 16, 12 and 18A.

ANCHORAGES: There is no port anchorage for dry cargo vessels. It was reported that tankers can discharge into barges off Newport.

RESTRICTIONS: Vessels can enter and leave at any stage of the tide, day or night.

MAX. SIZE: Pilot advised max. draft is 38 ft., however, Agent recommends 38 ft. with 2 ft. keel clearance.

RADIO: Station WCC.

VHF: Port Authority on Channels 16 and 18A. Agent on 16, 18A, 13 and 9. Also see "Pilotage".

TUGS: 9 tugs available, 1,600 h.p. – 3,200 h.p. Vessels may dock and undock without tugs, however, they are required for turning in the harbour.

Providence Steamboat Company serving Ports of Providence, Narragansett Bay, Fall River and New England Electric at Brayton Point. 4 tugs – 24 hour dispatching service. 2×3,000 h.p. tugs.

BERTHING: *Municipal Pier No. 6:* The berth is the first port hand berth when entering Providence. Distance from entrance to berth 25 miles. Length and beam no limit. Max. draft 38 ft. Least depth of water in channel from sea to berth reported to be 40 ft. Mean tidal range at berth 4.5 ft. Also see "General".

Cargo Handling Facilities: Mobile cranes only available for handling bulk steel and scrap cargoes. 6 mobile cranes, capacity 100 tons to 250 tons. No Ro/Ro facilities. No floating cranes. There are facilities for handling 20 ft. and 40 ft. containers, also sufficient storage space. There is also adequate storage space for breakbulk and palletised cargoes.

MEDICAL: Doctor and hospital available.

TANKERS: LPG/LNG carriers – see "Shipmaster's Report" dated February 1985.

Report: *American Chemical-Wilkes Barre:* General: The Wilkes Barre Terminal of the American Chemical Company is located 26 miles from the Sea Buoy on the Providence River. This facility was formerly operated by Exxon Company, U.S.A. It is now operated by Union Oil Company of California and Getty Oil Co., Inc. The wharf has a 75 ft. face, 300 ft. with dolphins; 30 ft. depth alongside. Deck height of 9 ft.

The berth can accommodate vessels up to 600 ft. in length, 85 ft. beam, maximum 25,000 d.w.t., and maximum drafts to 27 ft. Docking is accomplished at HW or rising tide only. Undocking can take place at any state of the tide.

Pilotage and Docking: The services of a Pilot and Docking Master are recommended. The width in the existing berthing area and required approach manoeuvres make utilisation of the Docking Master mandatory. 2 tugs are required when docking vessels of any tonnage. A minimum of 1 tug (1,800 h.p.) is required when undocking. During strong Southerly winds 2 tugs shoud be employed for undocking.

Mooring: Normal mooring leads are adequate for this berth. However, strong Southerly winds are cause for concern. There is a poor lead for the after spring and breast lines. During times of excessive Southerly winds, all lines should be tended and checked frequently. The terminal does not provide a gangway.

Only No. 2 heating oil is discharged at this terminal. Discharge is accomplished through 2×8 in. hoses using ASA flange connections. Pumping pressure is 125 p.s.i. The terminal has no facilities for receiving ballast or slops.

Amoco – Providence, Kettle Pt.: General: The Amoco Wharf is on the East side of Providence River 26 miles from the Sea Buoy. This wharf is used for the receipt and shipment of petroleum products. The berth is aligned North and South with a total of 6 wooden breasting dolphins. The wharf has a 500 ft. face (600 ft. with dolphins). Hose rig and hoist are located on a "T" head 90 ft. long, 30 ft. wide at the centre of the pier.

Entering and Docking: 2 mooring dolphins located approximately 90 ft. inside the main pier and used for fore and aft breast lines, head lines are run to a mooring dolphin, and stern lines to bollards located on shore.

Vessels can dock either port or starboard side to but a starboard side berthing is preferred. Deep draft vessels dock on Slack High Water only, day or night, and can unberth at any stage of the tide any time.

Depth of water alongside the berth is 35 ft. MLW. Average tide at Providence is 4 ft. 6 in.

A Docking Master is recommended. Docking should not be attempted without local knowledge. 2 tugs are used for docking under normal conditions. One tug is used for normal undocking. Both tugs and Docking Master meet the vessel 0.5 miles below Kettle Point and assist vessels to the berth.

Gasoline, heating oil, diesel, and No. 5 fuel are all discharged through 8 in. hoses. All connections are made with ASA flanges. Maximum pumping pressure for all cargo lines is 90 p.s.i.

Gulf – Gulf Oil Pier: General: The berth projects Westerly into the
for a distance of 800 ft., and is 50 ft. wide, wooden piling, open fa
construction, and wooden decked, terminating in a "T" head 90 ft. lo
and 30 ft. wide which is aligned North and South.

There are a total of 6 wooden piling breasting dolphins, 3 on ea
side of the "T" head for a total face of 280 ft. The hose rig, hoist, a
discharge heads are located at the centre of the "T" head.

Entering and Docking: Vessels can berth heading either North
South, but a starboard side-to or up-river berthing is preferred. Bo
stern, and breast lines are run to mooring buoys.

Vessels can dock day or night, any stage of the tide, depending
draft. The depth of water alongside the berth is 35 ft. MLW.

In this area local features are such that current movement in particu
is subject to considerable distortion.

This berth can accommodate vessels up to 675 ft. in length, maximu
100 ft. beam and maximum draft to 31.5 ft. at MLW. Docking should
be attempted without a Docking Master. 2 tugs are employed for dockin
and undocking all vessels. Tugs and Docking Master meet the vess
in the vicinity of Kettle Point and assist the vessel to the berth genera
with the starboard side alongside the berth. Head lines and stern lin
are run out to mooring buoys. Forward and back spring lines are
out to the "T" head. The terminal does not provide a gangway.

Mobil – South Terminal: General: The Mobil Oil Corporation Termin
is located 25 miles from the Sea Buoy on the Eastern side of th
Providence River. This facility is used for the receipt and shipment
petroleum products and bunkering vessels.

Maximum size of vessels that can be accommodated at this facil
include lengths up to 750 ft., beams to 125 ft., 50,000 d.w.t. maximu
and drafts to 39.5 ft. The water at this berth is brackish. Distance fro
bow to manifold is limited to 390 ft. Docking is done at HW only day
night.

Entering and Docking: The services of a Docking Pilot is bo
compulsory and recommended. 2 tugs are used for docking and on
tug for undocking. Tugs and Docking Master meet incoming vessels
the vicinity of Sabin Point and assist vessels to the berth for a starboa
side docking. If a port side landing is required, vessels proceed abo
1 mile beyond the berth to Fox Point Reach and turn around. Norm
mooring leads are used at this berth. No gangway is provided by th
terminal.

C. H. Sprague: General: The C. H. Sprague and Son Terminal is locat
26 miles from the Sea Buoy at the Allens Avenue Terminal.

The main pier projects Easterly into the river and is 526 ft. long a
37 ft. wide, wooden piling, open faced construction. A turning dolph
concrete crown, wooden fendered, and connected by a walkw
extending out from the main pier an additional 75 ft. and fitted w
2 bollards, making for a total face of 601 ft. The berth also h
3 unloading towers serving a belt conveyor system.

The South side of the pier is not used and has a depth of 12 ft.
14 ft. alongside. The North side has a depth of 35 ft. LW, but commenc
to shoal up 35 ft. from the inner bulkhead.

Vessels up to 650 ft. in length, maximum beams of 100 ft., and dra
at MLW of 35 ft. can be accommodated at this terminal. Maximu
deadweight of vessels at this terminal is 38,000 d.w.t. The water at th
terminal is brackish.

Ships having a large flared bow should exercise caution as the loadi
towers extend over the pier, and in light condition the ship has to b
given a 3° list before undocking.

Maximum limit bow to manifold is 380 ft. There are 4×8 in. hoses a
2 lines, 1×18 in. for No. 6 fuel and 1×12 in. line for heating oil. Vesse
scheduled to call at this terminal should have hose derrick ready
lifting the hose as there are no facilities on the berth for this operati
Deep draft vessels dock day or night, HW only, and undock anytim
any state of the tide.

Entering and Docking: A Docking Pilot is not compulsory but
recommended. Docking should not be attempted without lo
knowledge. 3 tugs are used for docking all vessels and 2 tugs are us
for undocking all vessels. Tugs and Docking Master meet incom
vessels in the vicinity of Kettle Point and manoeuvre vessels to the ber
Normal mooring leads are used at this berth.

Normal docking is done port side to. The terminal does not provid
gangway.

Texaco/Curran: General: The Texaco/Curran Terminal is loca
26 miles from the Sea Buoy at the Allen's Avenue Terminal.

The berth projects Easterly into the river for a distance
approximately 100 ft. and is 70 ft. wide, wooden piling, open fa
construction, concrete decked for the first 800 ft. and the remainder
the dock is wooden decked.

The South side has a total of 3 wooden pilings, concrete crown
20 ft.×20 ft. breasting dolphins, wooden fendered for a total face
500 ft. Usable length of the berth on the South side is 650 ft. for fu
loaded vessels and 700 ft. for partially loaded vessels and a controll
depth of 32 ft. MLW.

The hose rig hoist and discharge headers on the South side i
located on a 60 ft.×25 ft. concrete platform 35 ft. from the extre
Eastern end of the pier, and is used by Texaco.

The North side of the dock has a turning dolphin at the extre
Eastern end of the pier, open faced wooden piling construction wi
12 in.×12 in. chafing string piece.

The North side has a usable length of 650 ft. for fully loaded vess
and 700 ft. partially loaded. A controlling depth of 32 ft. MLW. The ho
rig and discharge headers are located 320 ft. from the extreme Eas
end of the pier and is used by Curran & Burton.

Vessels up to 700 ft. in length, beams of any width, drafts to 32 ft
MLW, and 35,000 d.w.t. maximum can be accommodated at this be
Vessels normally dock at HW, day or night, and undock at any sta
the tide. Water at this berth is brackish.

Entering and Docking: The services of Docking Master are not compulsory but are recommended. Docking should not be attempted without local knowledge. Docking Master and tugs meet the vessel about 1.5 miles below the berth and proceed to off the berth where the vessel is turned 90° and manoeuvred into the berth for a starboard side landing. 2 tugs are used for all vessels and 1 tug is used for all undockings under normal conditions. Normal mooring leads are used at this berth.

Cargoes handled at this terminal include heating oil, kerosene, gasoline, jet fuel, diesel fuel, and avgas. Sizes of cargo lines are 6 in., 8 in. and 10 in. All connections are ASA bolted connections. Maximum pumping pressure on all lines is 100 lbs.

DENSITY: 1016.

FRESH WATER: Available, rate 15 t.p.h. – 30 t.p.h.

FUEL: Bunker fuel oil available if vessel has contract. Diesel oil not available. Lubricating oils available.

REPAIRS: Minor repairs possible, machine shop available.

AIRPORT: At Green Airport, Providence, R.I.

SURVEYORS: At Rhode Island.

GENERAL: *Quay:* Granite slab construction with a wooden pile facing. A large number of the piles are missing but there are still sufficient to land on. Surface of quay looks very rough and covered in sand and earth but it is metalled under this and will take heavy mobile crawler cranes.

Ship Chandler: Satisfactory, prices reasonable.

Laundry: Satisfactory and prices reasonable. Laundry collected Saturday 1430 hrs. and returned Sunday morning.

SHIPMASTER'S REPORT: September 1982 (Updated 1990).

Documents: The same as for other U.S. ports.

Pilotage: (Serving all ports in the Narragansett Bay area).

Pilot boards near Brenton Reef Light structure. There is a 24 hour service. Cable address for Pilots is "Rispilot Providence". Pilot launch as well as their shore establishment have VHF and operate on Channels 16 and 10.

Anchorages: There are a number en-route to Providence. Our vessel anchored off Jamestown for 3 days in a well sheltered place and good holding. Max. draft allowed I was informed is about 36 ft.

Berths: There are a number of isolated tanker berths in and around Providence, details of which are found in the Sailing Directions.

A total of 6 berths comprise the Municipal Docks. There are 2 cargo storage sheds, one of recent construction. There are 2 Alliance container gantry cranes.

Fresh Water: Fresh water is laid on to the quay.

Stevedores: Normal cargo working is from 0800 hrs. – 1700 hrs. Monday to Friday), overtime can be worked until 1900 hrs. and also weekends.

Cargo-Imports: Mainly automobiles from Japan, containers from feeder vessels, steel, lumber and general cargo from Europe by regular liner trade.

Cargo-Exports: Scrap steel, logs, timber and latterly waste paper.

Our vessel loaded a full cargo of wastepaper (cardboard) of almost 12,000 tons. Stowage factor was 135 cu.ft./tonne. 1,400 tons were stowed on deck suitably lashed and covered. The whole cargo was loaded in 27 working days using ship's cranes. Sizes of paper bales varied immensely with weights ranging from 500 kg. to 800 kg.

Bunkers: Not available.

Repairs: Main repair facilities are at Providence.

General: It was found difficult to bring the vessel alongside the quay at Berth No. 3 during the whole stay in port. This was due to strong water outlets on the quay face from the adjacent sewage works.

Vessel should be amply moored to compensate for strong off-shore winds which are quite common even in Summer.

SHIPMASTER'S REPORT: February 1985.

Port Limits: Entrance to Narraganset Bay, Brenton Tower.

Documents: Standard for U.S.A. Customs & Immigration. Coastwise documents are sufficient if coming from a U.S. port, no others are asked for.

Pilotage: Rhode Island Pilots, arranged via Agents, require 8 hours' notice. Board off Brenton Tower, listen VHF 16.

Anchorage: Can be obtained 1.5 miles S.E. of Brenton Tower but bottom is rock hard and holding will be doubtful in bad weather. There are allocated anchorages within Narragansett Bay.

Restrictions: Vessels can enter/leave at any time except for LNG/LPG Tankers. These must transit in/out in daylight only, whether they have cargo onboard or just cooldown 'heel' remaining. LPG Tankers are provided with a Coast Guard escort vessel, which creates a Safety Zone 2 miles ahead and 1 mile astern, keeping all other traffic clear.

Max. Size: 35 ft. draft was quoted; this vessel went in at 30 ft. comfortably.

Health: Standard U.S.A. requirements.

Radio: WCC Chatham.

VHF: All Channels used as necessary, no special allocation. "Securite" messages for LPG Tanker transit are broadcast on Channels 13 and 16.

Radar: No radar surveillance or Vessel Traffic Scheme (VTS) Control.

Tugs: Join off berth, using their own lines.

Berthing: LPG (Propane) is discharged at Municipal Wharf No. 5, with empty oil drums providing a safety area around the shore manifold, as this is a Public Wharf with free access.

Moorings were adequate, 2 headlines, 1 breast line, 2 springs forward and similar aft, the berth being a continuous quay with rubber tyre fenders.

Bridges: One vertical bridge, clearance 194 ft.

Medical: All facilities available.

Tankers: LPG discharged at No. 5. Municipal wharf at a bulk rate of 750 tonnes per hour, through a 10 in. Chicksan. This Chicksan is a mobile one connected temporarily into an underground line, and jacked up off its wheels; thus it is rather fragile and demands precise positioning during berthing, and careful control of the list during the discharge as it is at its maximum reach when a 60,000 cu.m. vessel is in ballast.

Density: Salt.

Fire Precautions: LPG Tanker, only those imposed by the ship.

Surveyors: Saybolt attended this LPG vessel on behalf of receivers.

Gangway/Deck Watchmen: None. Ship's accommodation ladder was used to the wharf.

Customs Allowances: Usual U.S.A. allowances but no check of bond made on this visit.

Repatriation: Local Airport with services to Philadelphia for International flights, or by bus – approximately 1 hour ($7.00) to Boston International.

Airport: See above.

Time: GMT minus 5 hours. Eastern Daylight Saving Time GMT minus 4 hours in the Summer.

Emergency: U.S.C.G. "Castle Hill" on Channel 16 VHF, working 22A or 12.

Telephone: At Municipal Wharf No. 5 there is a public telephone booth within 250 ft. of the foot of the gangway, against the wall of a warehouse.

Storing: No known restrictions.

Shore Leave: Bus route into town (2 miles) about 100 yards from Wharf No. 5.

Identification Cards: Standard U.S.A. Immigration requirements.

Regulations: All LNG/LPG Tankers have to anchor off Brenton Tower for U.S.C.G. inspection (2 – 3 hours), even those with valid letters of compliance and if no LOC then the inspection could take about 6 – 7 hours. During the discharge of LPG, 2 U.S.C.G. personnel are permanently stationed by the shore manifold, and do occasional spot checks onboard.

Delays: See above.

SHIPMASTER'S REPORT: October 1991.

Pilotage/Anchorage/Channel/Tugs: See "Fall River" – "Shipmaster's Report – dated 1991".

Berth: Vessel berthed at Municipal Wharf No. 5 to discharge latex.

Vessels can berth either side alongside and generally avoid berthing at night time (1700 hrs. – 0600 hrs.) due to the very high cost of the linesmen. Daytime charge is U.S.$1,000.00 and nighttime charge is U.S.$2,000.00.

The depth alongside is approximately 40 ft. and the tidal range about 4 ft. The fenders and bollards are in good condition and the vessel secures with 2 headlines, 2 breastlines and 2 springs forward and 2 springs, 2 breastlines and 2 sternlines aft.

The quay is a flat open quay with the latex manifold sunk into the quay. The tanks with a total capacity of 300,000 U.S. gallons (10,500 tonnes) are above ground.

Shore pumps and lines are used for discharge of cargo and the ship's crew are required to tend the lines.

A brow gangway is required due to the high quay face.

The berth is good for storing as trucks are allowed alongside the vessel.

LPG is also discharged at this berth using portable Chicksans and then to adjacent tank.

Density: The density at L.W. was 1019.

Fresh Water: Fresh water is available and the quality is excellent. Hoses are provided by the Port Authority and the rate of loading was about 100 tonnes/hr. Cost of water is U.S.$0.75 per tonne plus a standard labour charge of U.S.$130.00.

Fuel: IFO and MDO available at Providence by tanker truck of 31 tonnes capacity. No barge delivery service at the port.

Supplies: Fresh produce is available and of good quality and reasonable price.

Airport: T.H. Green Airport is about 10 miles South of Providence and operates services to New York and Boston.

AUTHORITY: Port of Providence, Marine Terminal Building, Municipal Wharf, Providence, Rhode Island 02905. *Tel:* (401) 781-4717/8.
Contact: John D'Artuono, Port Director.

RED DOG (Kivalina), Alaska: 67.33 N. 164.12 W. (See Plan)

LOCATION: Situated in Lat. 67° 34′ 42″ N., Long. 164° 03′ 30″ W.; Northeast of The Bering Strait near a small town, Kivalina, Alaska. This port is capable of exporting some three quarters of a million tons of zinc and lead concentrates annually for shipment during the Summer season.

DOCUMENTS: See "General".

PILOTAGE: A compulsory pilotage area has been established for vessels calling and leaving from the Red Dog Anchorage. The pilot station is located approximately 14 miles, bearing 238° (T), from the barge loading dock. Vessels bound for Red Dog should amend their ETA to pilot station as necessary and keep North Pacific Maritime, Ketchikan, Alaska, Cable "Sousteve Ketchikan", Telex: 099-55295, Fax: 907-225-8254, well posted of any change.

The Pilot will normally board via a tug from Red Dog. A combination pilot ladder must be properly rigged 2.0 m. from sea level and, in case of arrival during hours of darkness, adequate lighting must be provided. If, because of adverse weather (or for any other reason) the Pilot is prevented from boarding the vessel at the scheduled time, Masters are to obtain permission and instructions from Red Dog Port Control prior to entering the pilotage area and proceed to the assigned anchorage position.

ANCHORAGE: An anchorage, nominally 2.5 by 2.5 miles, has been allocated to the loading of vessels; the Easternmost side of it lies about 3.4 miles from the barge loading pier, and anchorage may be reached from the open sea via a surveyed approach 10 miles long and 1 mile wide with its main axis bearing 058.75°/238.75° (T).

Water depth at the anchorage varies from 55 ft. inshore to 72 ft. offshore (17 m. to 22 m.), and likewise the surveyed approach changes depth progressively with a slight gradient.

There is a steady current at the anchorage that runs parallel to the shore in a Northwesterly direction, and vessels will tend to lie head into this predominant feature.

Although the anchorage can accommodate more vessels, usually no more than 2 vessels will be anchored at any one time, leaving ample room for final manoeuvering, safely mooring and lying at anchor. The seabed in this area is flat, comprising of silty sand with a firm muddy strata lying just below, and has proved excellent holding ground. Vessels can safely withstand winds of up to 45 knots.

The sea swell, when not coming from the 3rd and 4th quadrant, is short and lacks effective energy, and pitching, if any, is minimal.

An anchor chain length of no less than 8 shackles should provide ample holding with the second anchor kept ready to be lowered to the bottom to reduce yawing, should squally conditions develop.

With vessels loading at a maximum draft of 45 ft. or 13.72 m., it is intended that the underkeel clearance will be no less than 10 ft. at all times. However, in line with the customary safety precautions to be taken when loading in an open roadstead, Masters are requested to frequently check their vessel's position visually and by reference to radar, water depth and draft, making regular entries in the log book. Taking into account the visual position fixing aids presently available, the occurrence of lateral drift or dragging can best be detected through observing a permanent radar watch, keeping the secondary radar unit on constant stand-by. We also recommend that engines be kept on permanent short notice stand-by, and the vessel be ready to weigh anchor and shift to a position further offshore, should weather conditions deteriorate sufficiently to warrant it.

Also see "Berthing".

NAVIGATION: *Navigational Charts and Red Dog Port Site Plan:* Navigation and approach to the Red Dog Anchorage are covered by NOAA Chart No. 16005. However, with a scale 1:700,000, it was decided to supplement this with a larger scale chart entitled "Red Dog Port Site" for the final approach and anchoring. This chart has a scale of 1:24,000, and covers the surveyed approach, the anchorage and the barge loading pier. A copy of this chart will be placed on board at the earliest opportunity. The Salvage Association were commissioned by Cominco to ensure that the equipment, used by the vessel engaged to carry out the survey, was of the approved type and in good working order.

Navigational Aids: The coastal profile being low, flat, relatively featureless and with visibility sometimes below 3 miles, radar identification of conspicuous targets is of considerable importance to any approaching vessel.

The following is a list of targets most easily identifiable when approaching Red Dog Pilot Station:

(i) The De Long Mountains, together with Mulgrave Hills profile will provide first good radar targets to those vessels fitted with sensitive long range equipment.

(ii) Concentrate Storage Shed, about 1,300 ft. long and 120 ft. high. This structure lies in a direction N.W./S.E., and is about 0.75 miles inland from the shoreline. The entire structure is painted white with a distinctive left blue corner and a red horizontal stripe on the roof.

(iii) Immediately S.E. of the Storage Shed, 4 oil storage tanks, 150 ft. high, painted white, can be identified.

NOTE: A container storage area has been established in front of the oil storage tanks. Radar reproduction will consequently appear as a straight horizontal line instead of the expected 4 distinct traces.

(iv) Concentrate surge bin (Lat. 67° 34′ 42″ N., Long. 164° 03′ 09″ W.), 112 ft. above sea level, located about 2,000 ft. inshore from the barge cellular loading pier, a "Sea Beacon 2" Racon is installed on top of this structure, operating on both X-Band (3 cm.) and S-Band (10 cm.). The Racon is transmitting the Morse code letter "K" which should be picked up at over 25 nautical miles on X-Band and at over 20 nautical miles on S-Band (recent experience shows that it has been received at a 45 mile range).

The Racon transmits on each band at separate time intervals to allow the picture on a ship's radar planned position indicator (PPI) to clear. The ON intervals for each band is 20 seconds each (i.e. the Racon transmits on X-Band 4 seconds, then on S-Band for 20 seconds, then shuts down for 20 seconds). To the mariner, a 20 second ON time would appear as 4 to 5 clear traces of the Morse code letter "K" on the PPI, before the Racon switches to a different transmit frequency. The letter "K" display size is proportional to the range scale.

Characteristics: Light – Flash (1) white every 8 sec. 15 miles Racon – Morse code letter "K" (dash dot dash) displayed 20 secs. on X-Band, 20 secs. on S-Band, 20 secs. idle.

(v) Barge loading finger pier: This structure is situated on the shore line and lies on the continuation of the surveyed approach centre line. The barge loading boom installed on this pier provides an excellent radar target, and because of the relative location of the other two targets mentioned above, may be the first echo to appear on the 48 mile range. The pier is permanently illuminated by flood lights and a quick flashing, high intensity light, is positioned above the loading control tower.

NOTE: In order not to obliterate the finger pier trace on the P.P.I., the Racon "K" trace will appear on shore on the ship's heading.

APPROACHES: *Approaches Red Dog Port:* After making good The Bering Strait, the navigational aids enroute to the port become scarce. However, for a vessel fitted with LORAN C, SATNAV, or OMEGA and the benefit of a positive departure point from Little Diomede, making good a course well clear of the shoals off Shishmaref is a relatively simple navigational challenge. Masters are, however, cautioned against the possibility of encountering ice in the early part of July, and the consequences of course adjustments on their ship's position.

Prince of Wales and Shishmaref Shoals: The closest approach to either of these shoals occurs passing through The Bering Strait when, out of necessity, the vessel's course brings it within 10 to 12 nautical miles of the Prince of Wales Shoal.

Passing within 10 to 12 nautical miles of the Prince of Wales Shoal does not constitute hazardous navigation when one takes into account:

(i) The abundance of reliable and easily identified radar targets.

(ii) The reliability of Satnav and Loran C in this area.

(iii) The existence of lights on Cape Prince of Wales and Big Diomede.

(iv) The absence of paucity of traffic.

Safely rounding the Northernmost extremity of Cape Prince of Wa Shoal has not presented any problems, due to the excellent radar targ afforded by Cape Dehzneva and Diomede, which provide the ma with reliable reference points for his course alteration.

From the Bering Strait to the Red Dog Lighterage Area (and v versa), vessels follow a Northerly course until reaching Lat. 66° 30′ and passing some 30 nautical miles to the North of the shallow wa off Shishmaref Island. With a reliable departure point as a star reference, a Northerly current set, the ability to obtain frequent accu fixes using Satnav and/or Loran C and echo soundings to war shoaling, it is difficult to conceive how Shishmaref Shoal could pos hazard to navigation to vessels following this track. From t approximate position Lat. 66° 30′ N., Long. 168° 30′ W., the di landfall course to the Red Dog Pilot Station lies approximately 6 mi North of the compulsory pilotage waters boundary. Unless dictated ship's safety considerations, Masters are reminded not to enter pilota waters, unless a licensed pilot is on board (See "Plans").

As an additional guide, the Radio Beacon at Cape Dezhneva (wh operative) can be used as a stern bearing until the Racon or the radar targets are picked up. It should also be remembered t operations are carried out predominantly during Summer months, a long daylight will largely prevail.

The following summarises navigational notes made by the Maste the tug "Justine Foss", whilst on passage from the Bering Strait to R Dog Port Site in September 1989:

(i) *Loran C:* Reception poor from South of Cape Prince of Wales. B combination was slaves 29 and 47.

(ii) *Radar:* Good through The Bering Strait, Diomedes and Ca Dezhneva, providing satisfactory targets up to 10 miles Nort Cape Prince of Wales. 20 miles North of Diomedes, coverage p until making final approach. Mountain Peaks on the Russian s making cross bearings with Diomedes useful for clearing shoa On the final course towards Red Dog, the mountain tops beh the port provided echoes at 40 miles and the storage shed 18 miles *(Please note well, this passage was made before t aids to navigation were installed at the port, and with the inclus of the Racon Beacon and the installation of the loader, m precise position fixing is available).*

(iii) *Radio Beacon:* Cape Dezhneva has a beacon. Not used, as t not equipped with R.D.F.

(iv) *Satnav:* Seemed the most reliable means of fixing after The Ber Strait.

(v) *Current:* Very little set in The Bering Strait, as current n Northerly. No set was experienced during transit from Strait to R Site.

Shipboard Navigation Equipment Performance: Vessels that have far navigated The Bering Strait and the Chukchi Sea, and loaded at Red Dog Anchorage, have reported the following performance:

(i) Gyro Compass: Accurate and reliable.

(ii) Radar: Accurate and reliable with many readily distinguisha targets showing at ranges of 33 to 60 n.m. (nautical miles) particular note were:
Fairway Rock: 33 to 35 n.m.
Diomede Islands: 48 to 49 n.m. (38 n.m. when astern).
Cape Prince of Wales: 51 n.m. (38 n.m. when astern).
Cape Dezhneva: 30 to 58 n.m. (60 n.m. when astern).
Red Dog Port Site: 47 to 50 n.m.
Red Dog Racon: 21 to 48 n.m.
Cape Krusenstern (Igichuck Hills): 46 n.m.
Cape Krusenstern: 34 n.m.

(iii) Satellite Navigator: Accurate and reliable with frequent (hou fixes readily obtainable.

(iv) Omega: Less accurate with errors between 2 and 8 nautical mi The error was found to increase with latitude.

(v) Loran C: Accurate and reliable, until about Lat. 67° N.

RESTRICTIONS/MAX. SIZE: The lead and zinc and concen shipments from Red Dog Anchorage will be carried by bulk carr basically grouped in two size categories:

(a) Panamax vessels up to 70,000 d.w.t. – These vessels will loa a draft of up to 45 ft. S.W. or their Summer marks, whichever is t lesser.

(b) Handysize vessels up to 35,000 d.w.t. – These vessels will loa a draft determined by the available draft at the port of discharge or th Summer marks, whichever is the lesser.

RADIO: *Notices of Arrival:* The following parties must be notifie vessel's ETA and arrival amended as necessary:

(i) Upon departure last port, then daily thereafter.
Cominco Metals, Toronto, att. F. Rizzi. Cable address: "Com Toronto". Telex: 06-22912. Fax: (416) 869-1964 or 869-855
Navios Pacific Representative, Red Dog Port. Fax: (907) 645- Tel: (907) 645-2109, or via North Pacific Maritime, Ketch Alaska.
North Pacific Maritime, Ketchikan, Alaska. Telex: 099-55 Cables: Sousteve, Ketchikan. Fax: (907) 225-8254.
Navios Pacific Co., Stamford, CT. Telex: RCA 238853 Nav MCI 6819519 Navios. Fax: (203) 961-0845/0847. Ca

Navcargo Stamford Connecticut (Routine), Navcarush Stamford Connecticut (Emergency).

In addition to the above, you are to notify all parties immediately of any delays of more than 4 hours since last ETA notice.

(ii) Contractually, it is required that a Stowage Plan, together with a loading sequence should be included with the 7 days ETA notice. However, we urge Masters to provide this information earlier if possible.

(iii) In addition to the above messages, Red Dog Port Site may be contacted when within reach, by VHF Channels 12 – 16. Any last minute change in the Stowage Plan should be notified through the above channels. Upon entering the Chukchi Sea, vessels can also contact Red Dog Site on SSB frequencies 2096.5 and 4125.0 kHz.

Notice of Readiness: To be tendered by Telex or Radio to Cominco Red Dog Operations Centre, with copies to Cominco Toronto and Navios, immediately upon anchoring or, if conditions prevent the vessel from navigating to the anchorage, N.O.R. to be tendered from the *closest safe position*.

TUGS: Two tugs will be employed in this operation: "Sandra Foss" and "Stacy Foss". Both are 3,000 h.p., and equipped with Kort Nozzles, weather fax and communication facilities. A third smaller tug, "Iver Foss", is also available on site, and is mainly used to assist barge operations, hold loading vessel's sterns up wind in case of running swells exceeding 4 ft. or cross swells and embarking/disembarking pilots.

BERTHING/LOADING: *At the Anchorage:* The ocean vessel should anchor as close to the barge loading pier as is safely possible, but not closer than 3 miles offshore. By doing so, the barges' shuttling time will be kept to a minimum.

Loading will commence as soon as hold inspection is satisfactorily completed and the barges are made fast alongside. The vessel's crew should be ready to attend and assist the barges in making fast. An ample supply of heaving lines and good messengers (30 m.) should be prepared and ready on both sides on the main deck. Also, some special gear (wire slings, shackles, etc.) may be passed from the barges onto the ship's deck. They will be used in accordance with special instructions, either from shore or the barge operators.

In order that the barge operator can readily identify the hatch in which the loading boom is to be positioned, a conspicuous object should be placed at the ship's rail adjacent to the desired hatch.

Similarly, during the periods of darkness, Masters are requested to rig cargo lights at the ship's rail and the beams to be directed downwards at the water. It is suggested that three be placed evenly spaced on each side of the vessel, plus one at the stern. This will provide the tug skippers' with assistance, when the barges make their approach to come alongside.

A crew member must be on deck at all times, being ready to open or close the hatches as required, particularly during periods of threatening weather. Holds not actually in use for loading should be kept closed.

Cargo spillage on the deck or the hatch covers should be swept up promptly, and deposited in the appropriate cargo hold to avoid airborne dust pollution.

Communication with the barges is performed via VHF, and a particular working channel will be indicated at the appropriate time (The following working channels have been allocated: Barge Loader Channel 7. Barge "Kivalina" assisted by tug "Barbara Foss" Channel 6. Barge "Noatak" assisted by tug "Stacey Foss" Channel 18). Vessels not in possession of portable VHF sets will be handed one on arrival together with one spare battery and a charger. The Navios representative at portsite will monitor both loading channels and canbe reached on Channel 12. These sets must be returned upon completion of loading. Communication between vessel and barges must be continuous and uninterrupted. The Master is responsible for ensuring that the entire operation is properly supervised.

Loading is performed 24 hours a day, 7 days a week; so an adequate watch schedule must be implemented on board the vessel.

The stowage of the cargo, as always, is the responsibility of the ocean vessel. Its distribution should be carefully supervised. There are no bulldozers available, therefore directing the loading spout to attain an acceptable shaped pile within the hold, is of great importance.

MASTERS PLEASE NOTE WELL:

To facilitate the loading of the end holds, the barges may have to be moored in an unconventional way, i.e. bow to stern. In some instances, where the anchor chain impedes the approach and operation of the barge, the ocean vessel may have to re-moor using the other anchor.

Access to the vessel is limited to official personnel. There is to be *no crew shore leave permitted*. No accommodation ladder is required, but a good safe pilot ladder should be rigged on both sides of the vessel and lowered upon request.

As previously stated, cargo distribution must be planned in a manner which minimises barge shifting, but when shifting becomes necessary, the vessel's crew must be prepared to assist as required.

Red Dog Anchorage does not offer provisions, mail service, bunkering, potable water, stevedoring or other facilities. Medical assistance is confined to emergencies only.

Fishing is prohibited, and the use, distribution and sale of alcoholic beverages is strictly banned during the ship's stay at the anchorage.

The Shuttle Barges: Two 286 ft. × 76 ft. × 18 ft. (87.2 m. × 23.2 m. × 5.50 m.) barges, especially fitted for the transport in bulk of zinc and lead concentrates, are employed to shuttle the cargo to the anchorage (See "Plans").

An extendable boom, 120 ft. (36.5 m.) long and 38 ft. (11.6 m.) high from deck level, is positioned at the centre line.

Particular attention must be paid to the boom movement in relation to the vessel's structure, especially hatch coamings, in order to avoid damage to both the barge and the vessel. Good coordination and constant communication in clear English language are consequently essential. The cargo is transferred at an approximate rate of up to about 1,200 tonnes per hour.

The barge cargo gear has a fixed rubber spout fitted for dust control purposes only, and because the outreach of the boom will comfortably extend to the opposite hatch coaming, ore can be stowed to a pile profile acceptable within tank top stresses, and always in compliance with the provisions of IMO. It remains the responsibility of the Master or his delegated Officers to ensure the cargo is stowed correctly.

In order to take full advantage of the barge's increased stability in its fully loaded condition, and consequently eliminate the danger of contact between the loading boom and the ship's structure, it is recommended that the transfer be performed in the following sequence:

1. Loading should commence in the four corners of the hatch square in suitable pile sizes.
2. Fill in between the piles underneath the coamings.
3. Finally pour into the main body of the hatch square.

There are no bulldozers or other cargo trimming equipment available. Similarly, no discharging or lightering equipment is available at Red Dog, and Masters are warned that it is impossible to correct errors in the cargo distribution once loaded.

The mooring equipment on the barges consists of four remote controlled winches, each fitted with a 1.125 in. wire rope and a "Berger Fairlead". Two are positioned forward on each side; the after winches are, however, positioned inboard, and their fairleads are situated close to the barge's centre line. The barges are also fitted with a train of four "Seaguard" fenders, which can be positioned on either side.

The mooring concept contemplates that barges will moor using their gear only, however in case of threatening weather, or should a particular necessity arise, vessels are requested to assist, and it is recommended that two good polypropylene lines fore and aft, and the fore/aft spring lines on maindeck be made ready for this purpose.

To assist with final trimming, each barge is equipped with belt scales, but draft checks must be regularly implemented throughout loading. Particularly, it is required that a draft survey be performed halfway through the loading, and another prior to the commencement of loading from the last barge. Results are to be passed ashore for comparison and confirmation of the last barge cargo quantity. Whilst the mid-loading draft survey is carried out in order to determine the ship/shore difference, the survey performed prior to the completion of the last barge loading will identify the exact quantity which is needed to put the vessel at her assigned draft and trim with no cargo remaining on the barge.

If possible, this survey should be carried out during the idle time between the last two barges, as time lost in barge loading, due to this particular survey, does not count as laytime.

Prior to completion of each barge discharge, a Mate's Receipt will be signed by the Chief Officer or the Officer responsible for the cargo. Any notation regarding the nature, status and quantity remaining on the barge, should be made on this document.

When loading is completed, the vessel will be requested to produce a ship's figure as early as possible, and the result of the draft survey passed ashore by VHF, as the vessel will be sailing soon after the last barge is clear from the ship's side under the Early Departure Procedure.

Cargo: Three grades are loaded at Red Dog, namely:

(a) Zinc concentrates stowing approximately 15 cu.ft. per metric ton and 130 lb./cu.ft. having an angle of repose of 35°/45°.
(b) Lead concentrates stowing about 12 cu.ft. per metric ton and 180 lb./cu.ft. having an angle of repose of about 35°/45°.
(c) Middlings (or ISF) which is a mixture of two two ores. Stow factor and angle of repose is consequently a prorated average of (a) and (b). Please note that shippers, Cominco, will deliver cargo quantities *measured in short tons*.

The total cargo will be one or a combination of any of the above three grades. Natural segregation between grades is required, and under no circumstances can different grades be stowed in the same hold.

Great care should be exercised to properly identify each barge, its cargo grade and the appropriate receiving hold before permitting cargo transfer to take place.

When dry, these grades are dusty, and given the breezy nature of the anchorage area, every precaution must be exercised to prevent airborne pollution. Hatches not involved in actual loading must be kept closed. In case of consistent heavy rain, loading is to be suspended and hatches closed after due consultation with the Navios on-site representative.

Cargo spillages on deck, however small, *should not* be swept overboard. With deck scuppers properly cemented and plugged, overflowed quantities should be returned to relevant holds either by hand or mechanical means (i.e. available on board). On completion of loading, each hold, dust accumulated on cargo hatches, to be thoroughly swept back into the hold prior to closing. Should a major spillage occur, cargo must be stopped immediately, and Kivalina Port Control informed, and the resulting quantity to be returned to the hold immediately. Cargo flow to be resumed only after normal conditions are restored.

Zinc and lead concentrates must be handled in accordance with the Code of Safe Practice for Solid Bulk Cargoes as recommended by IMO (also see "Safety").

Moisture Content: The moisture content will always be within IMO limits and certified by shippers or their designated surveyors. Documentation stating the Moisture Content and Transportation Moisture Limit will be furnished by the shippers.

Stowage Plan: Upon receiving instructions to proceed to Red Dog, a Stowage Plan must be prepared, inclusive of a hold by hold loading sequence, bearing in mind the following:

1. Cargo wil be brought to the anchorage by two self unloading barges. Each barge will nominally lift about 6,000 short tons of cargo. Cargo distribution and loading sequences should be planned to ensure as many entire barges as possible are discharged into single holds, thereby restricting shifting alongside to a minimum. Quantities needed for final trimming must be of the same grade.

2. Experience gained over past years suggest that:
   (i) Vessels loading for Vancouver discharge are encouraged to adopt an "all holds" distribution which ensured a lower cargo profile in the holds, thereby facilitating future cleaning.
   (ii) Vessels proceeding via the Panama Canal are advised to confine the stowage to the least number of holds possible.
3. Concurrent with the development of a Stowage Plan, ballast discharge sequence should also be worked out very carefully, so that the vessel retains, at all times, a waterline to top of hatch cover airdraft not exceeding 47 ft. In practice and if feasible, it is suggested that ballast discharge commences upon completion of transfer of the first two barges, *but Masters must ensure that the vessel's rate of deballasting should not exceed that which is necessary to comply with the 47 ft. restriction.*

Ballast:

1. A heavy ballast condition on arrival is recommended and all ballast water must be clean; any dirty ballast should be changed well before arrival.
2. Vessels should maintain an even-keel trim during the first loading phase, and only take on a stern trim sufficient to strip ballast tanks after a safe airdraft reserve has been achieved.
3. The maximum recommended draft at the anchorage is 45 ft. S.W. However, in most cases, other restrictions will apply: Either the vessel's Summer marks, the draft at the discharge port, or in the case of vessels sailing to Europe, the Panama Canal draft.
4. Overboard discharge of ballast, especially topside tanks, to be programmed in such a way that barges are not in the path of overflowing water, thereby avoiding the possiblity of wetting and damaging cargo.

Hold Cleanliness: Whilst enroute from the last discharge port, the holds should be cleaned by sweeping and washing by high powered water jet. When previous cargo residues and any loose rust or paint have been carefully removed, a fresh water rinse should be made. Any puddles in the tank tops should be swept into the bilges to ensure that cargo spaces are reasonably dry. Particular attention should be given to removing cargo residues, *especially coal*, which is a serious contaminant to ore concentrates.

Hold Inspections: A representative of Cominco will carry out an inspection for cleanliness. Usually, he will board with the Pilot and carry out his inspection (swell conditions permitting) enroute to the anchorage.

Bills of Lading: The Bill of Lading shall be prepared in metric tons in accordance with the draft survey as ascertained by the authorised surveyor appointed by Cominco Alaska. Should the appointed surveyor be unavailable, the ship's figure, as determined on completion of loading, shall be used as the official quantity to be entered in the Bill of Lading. A letter of authorisation, from the Master to Fednav Montreal to sign original Bills of Lading on his behalf, shall be prepared prior to commencement of loading.

MEDICAL: Assistance only available in an emergency.

FRESH WATER: Not available.

FUEL: Not available.

GENERAL: *Official Formalities:* As the ocean vessel loads outside the U.S. Territorial Waters (i.e. outside the three mile limit), the vessel is not deemed by U.S. Customs to have entered into the United States. There is, therefore, no requirement to Enter In or Clear Out the vessel with Customs.

However, this three mile limit criterion is no longer regarded by the Immigration and Naturalisation Service (I.N.S.) as the limit of their jurisdiction. Instead they consider a vessel within the twelve mile limit to have entered U.S. Territorial Waters, and that they have the right to board. Accordingly, the Master must prepare all the usual documentation, including a visaed Crew List, to satisfy the requirements by the U.S. I.N.S. Whenever possible, the Crew List should be visaed by the American Consulate at the last port of call prior to departure for Kivalina. The local Agent should also be instructed to courier the Crew List to North Pacific Maritime, Ketchikan. Should this not be feasible, North Pacific Maritime, Ketchikan, should be notified with the first ETA message.

On Site Representation: Navios Pacific is represented at Red Dog by one of their senior operations staff. He will be on hand to provide up-to-date information and assistance as needed.

WEATHER: *Sea Surface Current:* From the Bering Strait, the current tends to move in a Northeasterly direction veering North when N.W. of Kotzebue. Its strength is variable, but it may reach over 3 knots, off Red Dog and Kivalina.

NOTE: Current may become variable and sometimes assume a Southerly set in the aftermath of Northerly or Northwesterly strong winds.

Ice Conditions and Reporting: A summary of the typical ice conditions, to be expected during the loading season, may be found in the Climatological Survey.

The U.S. Navy – NOAA Joint Ice Centre and Ice Forecasting Centre, Ottawa, produce frequent ice reports and forecasts for the Western Arctic. This information is available by fax and transmission times and frequencies are listed in the official List of Radio Aids to Navigation (Pub. 117 DMAH 1989). The following Radio Stations also can be used: Point Race (weather only), Kodiak (weather and ice conditions) Kotzebue AM radio 1040/1050 kHz. broadcasts marine weather bulletins that have been found useful to navigation. In addition, Guam, Pearl Harbour and Japanese Stations are all in the broadcast range and cover the area North of the Bering Strait.

SAFETY: In addition to "Code of Safe Practice for Solid Bulk Cargoes", published by IMO, Masters should be aware that zinc/lead concentrates are potentially dusty in nature, and loading in a open roadstead will require care to be exercised by both, deck personnel attending cargo operations, and those in spaces immediately adjacent to the main deck.

Besides the discomfort of working in potentially dusty surroundings, it should be borne in mind that, when in the proximity of holds being loaded, no eating, drinking or smoking should be permitted, in order to prevent involuntary ingestion of these harmful substances.

When loading these cargoes, it is recommended that:

Shut off external ventilation to the accommodation area; in
recirculation system only to be used.

A no smoking, eating or drinking rule should be enforced o
weather deck and any other areas exposed to dust from the ca
Galley doors to be kept closed and no through passage from ou
to be allowed.

One accommodation space with direct access from the main d
should be designated as a changing room. Working clothes, b
and other protective gear to be stored there prior to entering
accommodation spaces. Wearing deck working gear inside
accommodation should be prohibited.

No duty mess service will be available for deck personnel on du

Floor, alleyways and corridors are to be adequately protected f
dirt and dust.

VHF sets used on deck to be covered with plastic bags and chan
regularly.

Deck personnel on watch at hatches to stand always on the windw
side.

Hard hat, goggles, face masks, gloves and boots to be availab
and worn by all those working on deck.

All other precautions and hygiene rules applicable to dusty carg
to be followed (use of protective ointments on exposed skin surfa
showering when going off duty, thorough laundering of working clo
separately from other clothing, etc.).

As strict water pollution regulations are enforced at Kivalina,
garbage, whether treated or not, may be disposed of overside.

No hot work to be performed on deck or inside accommodation or
engine room while loading cargo.

SHIPMASTER'S REPORT: August 1991.

This is an anchorage port and the position of anchoring varies
accordance with the ice edge.

At any one time a maximum of 2 vessels can be handled.

Approaches: The approach to the anchorage is simple, from the Ber
Strait keep Fairway Rock abeam (bearing 270°) and at a distance
6 miles. Steer due North for 53 miles until reaching the posi
Lat. 60° 30′ N., Long. 168° 30′ W. On arrival at this position alter cou
to 058°(T) for a distance of 108 miles, which will bring the vessel to
pilot station which is located at Lat. 67° 27′ N., Long. 164° 35′ W.

Anchorage: The designated anchorage is between the following
ordinates:

Lat. 67° 30.3′ N.	Long. 164° 15.6′ W.
Lat. 67° 32.5′ N.	Long. 164° 19.2′ W.
Lat. 67° 33.9′ N.	Long. 164° 13.4′ W.
Lat. 67° 31.6′ N.	Long. 164° 09.8′ W.

The anchorage is about 10 nautical miles from the pilot station in
direction 058°(T).

Anchoring is in the open sea, so vessels should have sufficient ch
out at all times. We used 7 shackles and the holding ground was go
The maximum wind experienced during our visit was about 30 knots

Restrictions: The port is open from the beginning of July until the mid
of October each year (in 1991 the last vessel left on October 8th). T
closing date is governed by the ice. The port started operating in t
Summer of 1990.

Loading: The cargo loaded is zinc and lead concentrates and at pres
the maximum size vessel that can be loaded is "Panamax" size a
the maximum allowable airdraft is 45 ft.

There are 2 self-unloaders of 6,000 tonnes capacity which bring t
cargo to the anchorage from the shore loading facilities. The rate
loading with one shiploader is about 1,500 tonnes/hr.

At times, 2 self-unloaders can be tied-up alongside the vessel, o
on either side. The self-unloading vessels are secured alongside w
2 headlines and 2 sternlines.

In order to minimise the vessel's rope handling work, all headli
and sternlines are placed on automatic self-tensioning winches and a
controlled from the self-unloaders. The self-unloaders which do not ha
their own propulsion are berthed alongside with the assistance of 3 tu

Medical: Medical facilities are very restricted. In case of serious illne
crew members are flown to Anchorage by a small jet.

Fresh Water: Not available.

Fuel: Not available.

Consuls: None locally.

Repairs: No facilities available.

Repatriation: Crew changes are only possible in cases of emergen

General: Stores: Not available.

Operator: Cominco Alaska.

AUTHORITY: Masters should be aware that the parties involved
operations are:

(i) *Cominco Alaska* are the Operators of the Red Dog Terminal, a
are the Shippers of the cargo loaded onto their vessels.

(ii) *Foss Maritime* of Seattle are the Operators of the self-discharg
barges and tugs, and are contracted to Cominco, Alaska, to prov
shuttling and transhipment of the cargo.

(iii) *Navios Pacific* are the providers of the ocean transportation a
contracted to Cominco, Alaska.

Navios Corporation, Stamford Harbour Park, 333 Ludlow St
Stamford, Connecticut 06902-6913, U.S.A. Tel: (203) 961-08
Fax: (203) 961-0845. Telex: 238853. (Also see "Radio").

REDWOOD CITY, California: 37.32 N. 122.12 W. (See Plan)

DOCUMENTS, PILOTAGE and all general information refer to "San Francisco".

RESTRICTIONS: Though a natural deep water channel extends down the bay to Redwood City there is controlled depth channel 500 ft. wide and 30 ft. deep across San Bruno Shoal. The entrance channel to the port is 2 miles long and 30 ft. deep (all depths are at MLLW) and 300 ft. to 350 ft. wide. There are 2 large turning basins at either end of the port harbour channel. See also San Francisco.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to San Francisco Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

BERTHING:

Port of Redwood City:

Berth	*Length* (ft.)	*Depth* (ft.)	*Remarks*
No. 1	500	36	General cargo and bulk cement through pneumatic pipelines.
No. 2	355	36	
No. 3	450	36	General cargo, heavy lifts and scrap metal.
No. 4 (New Berth)	450	36	General cargo USGS facility.
No. 5	500	36	Designed to accommodate large tankers, general cargo and heavy lift cargoes.
Private Facilities:			
Bell Marine	649	12	Barge unloading dock. Used for storage (not in use).
Lone Star Industries	496	18	Barge dock for loading cement. Not in use.
Lone Star Industries	20	16	Oil berth. Not in use.
Leslie Salt Co.	200	33	Elevator berth used for loading crude bulk salt.

BRIDGES: The San Mateo Hayward Highway Bridge with a vertical clearance of 141 ft. and horizontal of 500 ft. crosses the ship channel.

GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany). Garbage disposal is available. Dumpsters from 4 to 15 cu.yd. can be ordered and placed alongside. The company to order dumpsters from is BFI. Tel: (415) 591-2025.

WASTE OIL DISPOSAL: Collection service is available at Wharf 5 from Gibson/Pilot JV. Tel: (800) 582-3935 or (805) 327-0413. Fee schedule on application.

SEAMAN'S CLUBS: None.

CURRENCY: U.S.Dollar (U.S.$).

DEVELOPMENTS: See "Plan".

AUTHORITY: Port of Redwood City, 675 Seaport Boulevard, Redwood City, California 94063-2794. *FAX:* (415) 369-7636. *Contact:* Floyd Shelton, Executive Director.

RICHMOND, California: 37.56 N. 122.25 W. (See Plan)

(A) CHEVRON, U.S.A.
(B) OTHER TERMINALS AT RICHMOND.

(A) *CHEVRON, U.S.A.*

LOCATION: Richmond Long Wharf is situated on N.E. side of San Francisco Bay, a protected harbour. The refinery and storage tanks are near the wharves.

The exact position of the Long Wharf is Lat. 37° 55′ 20″ N., Long. 122° 24′ 35″ W. Wharf heading is 324° – 144°.

DOCUMENTS: *Quarantine and Pratique:* To clear vessel for entry, the Custom House requires the following papers for Foreign Flag Vessels:

1. Vessel Registry.
2. U.S. Tonnage Tax Receipts.
3. Water Pollution Certificate (CIOPP).
4. Load Line Certificate.
5. Safety Equipment Certificate.
6. International Tonnage Certificate.
7. Clearance from Last Port.
8. Customs Forms (CF):
   1300 – Master's Oath (3 copies).
   1301 – General Declaration (3 copies).
   1303 – Stores List (3 copies).
   1304 – Crew's Effects Declaration (3 copies).
   I-418 – Crew List (3 copies).
   1302 – Cargo Manifest (3 copies).
   On CF1300, "Master's Oath", be sure to note docking time and arrival deep draft papers for Customs clearance.
9. Departing Crew Members, if signing-off a foreign vessel, must fill out a CF-5021 "Crew Member Declaration".
   CF I-418 – Crew List (4) Note CF5129 numbers to be shown in Column 5.
   CF5129 – Crew Member Declaration (one for each officer/crew member).
   CF226 – Foreign Repair Oath/Entry (4) and Supporting Invoices.

Inspectors from various government agencies may require additional information. This additional information may include but not be limited to the following:

1. Certificate of Documentation.
2. Water Pollution Certificate.
3. Load Line Certificate.
4. Safety Equipment Certificate.
5. U.S. Tonnage Tax Receipts.
6. A Certified Crew List from last U.S. port (with Seaman's Action Certificates to account for all crew changes).

Documents required for Customs clearance of U.S. Flag Vessel to Foreign Port:

CF1300 – Master's Oath (2 copies).
CF1301 – General Declaration (2 copies).

State of California Department of Fish and Game Office of Oil Spill Prevention and Response requires documents 1 – 6 as listed above (the Boarding Inspector may require additional information).

Vessel's cargo decks shall be clean with no oil on the deck, or water build-up. They shall be free of dirty rags, rubbish, debris, and loose tools. Excessive hydrocarbon build-up in pump room bilges shall not be permitted.

PILOTAGE: Pilotage in and out of San Francisco is compulsory for all foreign registry and U.S. vessels under enrolment not having a federally licensed Pilot on board.

Pilots board near the San Francisco approach lighted horn buoy "SF". Pilot boat "San Francisco" call sign "WYZ-8288". Pilot boat "California" call sign "WYK-4689". Pilot boats monitor VHF Channels 10, 13, 16 and 18A.

Pilots can be contacted through the pilot boats "San Francisco" or "California". Pilot office monitors VHF Channel 10 (156.5 KHz) and can be contacted by telephone No. (415) 393-0457.

MAX. SIZE: The main ship channel into San Francisco has a project depth of 50 ft. However, the 35 ft. depth of the Southampton Shoal channel restricts the size of ships to wharves.

LIGHTENING: When a lightening operation is necessary the terminal management will direct the ship to Anchorage No. 9. The ship to be lightened will install fenders before the lighter ties alongside. The terminal will provide the fenders. The lightening Supervisor and ship's officer will hold a meeting to discuss the cargo transfer. During transfer, follow the same precautions and safety regulations that apply to cargo transfer at the wharf. The transfer rate will be regulated by the lightening vessel. The lightening Supervisor will observe all the lightening operations. The terminal will provide oil spill recovery equipment during lightening.

HEALTH: See "Health: All Ports" before first U.S.A port (Albany). Illness Reports made to San Francisco Quarantine Station.

Quarantine and Pratique: Vessels are not required to pass a quarantine inspection. It is necessary that vessels notify their Agents at least 2 days in advance of arrival in San Francisco Bay if sickness or disease is on board. The Agent shall notify Public Health for further action if necessary.

All vessels arriving from foreign ports will require clearance by the following U.S. Government Agencies: Customs House, Immigration Service, Department of Agriculture.

The vessel's Agent should make arrangements for the inspectors to board dockside or at anchorage.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

The Terminal is U.S.C.G. Certified for removal of non-hazardous plastic waste from vessels.

RADIO/VHF: The official language of the terminal is English. Therefore, vessel must have personnel on duty at all times who can communicate in English with the wharf personnel. If at any time proper communication is compromised, the transfer of oil will be stopped per Code of Federal Regulations.

General:

San Francisco has an established advisory traffic service. The Vessel Traffic Centre, radio call "San Francisco VTS" monitors VHF-FM Channels 13 and 16, and uses Channels 13, 12, 18A and 22A.

Note: The VTS is currently considering replacing Channel 13 VHF with Channel 14 VHF as its main working frequency. Channel 12 VHF is the working frequency for the Offshore Vessel Movement Reporting System (OVMRS).

Federal Communication Regulations require that at any time VHF radio is in operation, Channel 16 must be monitored (156.8 MHz distress and calling frequency).

The U.S. Coast Guard requires all vessels anchored in San Francisco Bay to maintain a radio listening watch on VHF-FM Channel 13 (156.65 MHz) when the wind is 25 knots or greater. Any ship not equipped with Channel 13 shall maintain the listening watch on Channel 16 (156.8 MHz). This radio watch must be maintained by a person who can speak English.

The 2-3 MHz radio telephone call letters for the San Francisco Bay area are KLH.

Richmond Long Wharf (radio call "WRS 943 Richmond Long Wharf") is equipped with VHF radio, manned 24 hours, on Channel 10 (156.5 MHz).

Chevron Shipping office hours are 0800 hrs. – 1645 hrs., 7 days a week. If vessel needs to contact Chevron Shipping while in San Francisco Bay, call them on the following 2 channels during regular office hours.

1. KCE-372 "Chevron Shipping".
2. Channel 10 (156.5 MHz).

While vessel is at anchor in San Francisco Bay, it should maintain normal listening watches on VHF Channel 10.

ETA Requirements:

The Master of a vessel bound for the San Francisco Bay is required to provide Chevron Shipping (via Fax to Chevron Richmond Long Wharf, Tel: (510) 242-3159) with the following information as soon as possible before arrival, *but not later than* 2 days for tank vessels, and not later than 12 hours for barges prior to arrival at Richmond Long Wharf.

The following 25 items must be provided in the Pre-Arrival Report:

1. (a) Name of vessel/barge (full name).
   (b) Flag of Registry.
2. (a) Last port of call prior to arrival at San Francisco Bay.
   (b) Previous cargo.
3. When vessel was last at Chevron Richmond Long Wharf.
4. (a) Specific ETA 72, 48 and 24 hours prior to arrival.
   (b) Identify whether based on San Francisco Pilot Station or alongside the Richmond Long Wharf.
5. (a) Is the vessel/barge calling at other terminals in the San Francisco Bay area?
   (b) Please identify terminal and any timing constraints associated with Richmond Long Wharf or these other terminals.
6. Cargo trade and quantities to load and/or discharge at Chevron Richmond.
7. Draft on arrival (in feet/inches).
8. Maximum draft and trim expected during transfer operation.
9. Quantity and nature of slops, dirty ballast to be transferred at Richmond Long Wharf and any contamination thereof by chemical additives. (Note: The Chevron Richmond Refinery operations require that any slop discharge at the Long Wharf be avoided or, if this is not possible, minimised to the fullest extent).
10. Any repairs that could delay commencement of cargo transfer.
11. Any special pre-load or discharge procedures (i.e. flush prior to load) or delays (i.e. vessel U.S. Coast Guard inspections).
12. Any specific load/discharge sequence required.
13. Distance from vessel/barge bow to the centre of the cargo manifold area.
14. Manifold details, including size and type (steel, cast iron, annealed iron) of cargo and bunker connections. (Note: The use of cast iron connections are not allowed at the Chevron Richmond Long Wharf).
15. (a) Does the vessel require bunkers?
    (b) If so, type and quantity in net barrels and equivalent metric tons.
16. Does the vessel require potable water?
17. (a) Is the vessel/barge equipped with a Vapour Recovery system?
    (b) If so, type and size of connections.
    (c) Is system certified by the U.S. Coast Guard?
    (d) Where is the connection located with regard to the cargo manifold? Note: Maximum system pressure on arrival at Chevron Richmond not to exceed 15 psia.
18. (a) If vessel is discharging, will there be a need to ballast into cargo tanks which last contained crude, motor gasoline, aviation gasoline or any other Class A cargo?
    (b) If so, how much ballast and how many hours to ballast.
19. Are there any anticipated special operations which the vessel/barge must perform at the Chevron Richmond Long Wharf (i.e. crude oil washing, tank cleaning, personnel to/from the vessel, load lube oils, load stores, etc.)?
20. Is the tug "Chevron Richmond" needed to assist in docking and/or undocking?
21. Any defect of hull, machinery, piping, valves, or other equipment which may affect the safe manoeuvrability of the tank vessel or barge; or constitute a hazard to public health and safety and/or the environment.
22. Any other information pertinent to mooring and cargo transfer operations.
23. Does the vessel/barge have a valid "California State Certificate of Financial Responsibility" on board? (Note: Vessels/barges which do not have this Certificate may not call at the Chevron Richmond Long Wharf).
24. Has the vessel met Oil Spill Prevention and Response and Oil Pollution Act 1990? (i.e. Does the vessel have a written Oil Spill Response Plan with a list of qualified contractors?). If not, vessel is not allowed at the Long Wharf.
25. All tank vessels are required to have a cellular phone on board while berthing at Richmond Long Wharf as an alternate communication system. What is your cellular phone number?

NOTE: Chevron will not be responsible for delays associated with non-compliance of these regulations.

Wharf Communication: The Richmond Wharves are equipped with a positive and dedicated ship-to-terminal radio communication system. On arrival, you will be provided with one radio (walkie-talkie). It must be with the English speaking person on duty at all times; the radio will be tested at regular intervals. You will be instructed in the proper use of this radio during the Cargo Pre-Transfer Conference. If the radio is not returned, we will levy a charge of $3,500 each.

TUGS: 1×4,000 h.p. and 1×1,800 h.p.

BERTHING: Berthing of a deep draft tanker should be timed to allow the ship to remain alongside at her arrival draft through the next low water.

If cargo transfer is delayed and it's determined that the allowable berth draft limit (BADL) will be exceeded, the vessel shall be ordered to make preparations to sail 6 hours before BADL will be reached, making all tug and pilot arrangements (costs will be determined based on the responsibility for the berth delay).

Vessels shall be required to depart the berth based on safe tidal and current conditions, but always before manoeuvering area draft limit (MADL) is reached.

The Wharf Controller and Agent will set berth assignment prior to vessel's arrival. If a berth is not available at the time of arrival, the Agent will instruct vessel to proceed to anchor (as directed by the Captain of the Port) and maintain radio contact with Richmond Long Wharf by VHF Channel 10. At least 3 hours before vessel's assigned docking time, contact Richmond Long Wharf to confirm docking time. At that time, the Wharf will advise the inbound vessel of expected vessel traffic at the Long Wharf. The Wharf will also advise the inbound vessel of any changes once the vessel has made initial contact. Inbound vessels will typically have priority over departing vessels. If an outbound vessel is restricted to a particular sailing time, due to draft and tide, and inbound vessel can safely lose time outside the Bay or safely pro to anchor, the Wharf will request that the outbound vessel has pr If there is a decision to be made regarding holding a vessel along it will be made by the Onshift Wharfmaster. At one hour before ves assigned docking time, recontact Richmond Long Wharf to esta with the terminal what channel the Pilot will be using to moor ve The terminal has available the following VHF Channels: 65A, 13, 7A and 18A. While mooring or unmooring, the terminal's internal procedures require that vessel-to-terminal communications established before vessel is 150 ft. from wharf, and then mainta throughout the event. Vessels are cautioned to check with SF Bay on other vessel movements in the area that are not controllable by Richmond Long Wharf, for instance, vessels proceeding ou Richmond Inner Harbour which may also intend to use Southam Shoal Channel.

To avoid dangerous meeting and passing situations in manoeuvring area and Southampton Shoal Channel, departing ves must be clear of channel before the next arriving vessel can enter channel, and vice versa.

Berths are assigned according to:
Time of arrival.
Product(s) to be transferred.
Size of ship.
Loaded draft.
Tide and weather conditions.
Availability of dock crews.

No fees are charged for berthing at Chevron piers for normal ca transfer. However, wharfage fees are charged for ships which ca undue delay or expense. You will be notified when this occurs.

Recommended Docking Practices: The guidelines here must be st adhered to. Prior Terminal Management approval is required for exceptions. For more information about positioning the vessel, see " Section".

The terminal require the use of adequately powered tugboats w docking at the wharves. Chevron Shipping Company has two tugs can be hired, provided arrangements are made prior to vessel's arr

(a) In order to ensure maximum safety while berthing and unbert ships at Long Wharf, the following minimum tug assistanc required:

Vessel Size	*Mooring* (No. of Tugs)	*Unmooring* (No. of Tugs
Up to 50,000 d.w.t.	1 large and 1 medium	1 large and 1 medium
50,001 to 80,000 d.w.t.	2 large and 1 medium	2 large
80,001 to 180,000 d.w.t.	3 large	2 large and 1 medium
Over 180,000 d.w.t.	4 large	3 large

Medium tug is 1,750 h.p. to 3,999 h.p.
Large tug is 4,000 h.p. or greater.
A 1,000 h.p. bow thruster is equivalent of a medium tug.

(b) Vessels should always stem the tide when docking.
(c) Steep-angle approaches should be avoided.
(d) In view of the strong tidal currents at the wharf, make sure ves is moored securely. Check on the number of lines and their stren and condition. Pay special attention to the fore and aft leads.
(e) Mooring lines shall be kept taut at all times during trans operations, and those lines not on mooring winches must be ma fast on the mooring bitts. *Under no circumstances will moor lines be made fast to winch drums (gipsy heads).*
(f) An all wire mooring arrangement is the safest and most desira A minimum amount of mooring lines leading in the same direct will not be mixed (See "Plan"). This is an unsafe practice creates a false sense of security owing to the difference in elastic The only exception would be when additional lines are utili above the minimum requirements.

For barges less than 100,000 barrels, an all synthetic moor arrangement can be used, subject to the approval of Term Management.

The required minimum number of mooring lines are:
Barges less than 250 ft. in length = 6 mooring lines.
Barges greater than 250 ft. in length = 8 mooring lines.
Ships less than 80,000 d.w.t. = 9 wire mooring lines 11 synthetic mooring lines.
Ships greater than 80,000 d.w.t. = 10 wire mooring lines 12 synthetic mooring lines.

These are the minimum requirements. Under severe weather tidal conditions, additional mooring lines are recommended.

(g) Winch brakes must be on, mooring lines in good condition, mooring lines of adequate size are required as set forth regulatory agencies. This will insure that the vessel will rem within the envelope of the arms and/or hoses, and will not br away due to sudden changes in wind or sea conditions or surging caused by passing vessels.

Vessels should employ mooring lines that provide 75% of rated breaking strength (i.e. lines must be in good condition). eye of each mooring line should be led to a quick-release moor hook. This allows the vessel to depart quickly in an emerge Permission should be obtained from Terminal representative mooring line is to be led to a bollard. The number of lines led bollard should be restricted to an absolute minimum. Lines bollards must all be released first when unmooring. Wires wi be led to bollards.

(h) Be advised, vessels departing from Richmond Long Wharf drafts of 38 ft. or over will generally not be taken from the under strong ebb tide conditions. Vessels are advised to con with the Pilot's Association on their particular situation.

ose Handling and Mooring Lines: Wharf crews are on duty ntinuously to handle oil hoses/arms and mooring lines. *However, they ll not handle mooring lines and hoses on board vessels; this is the essel's responsibility.* There must be a Wharf Observer aboard the essel when connecting or disconnecting Chicksans or hoses.

nchors: Anchors are not to be used after vessel is secured.

angway: Rig your gangway properly and safely with handrails and equate illumination. If vessel does not have a gangway, the pier has me available in limited sizes. However, the Company cannot be liable r the manner in which the ship's crew rigs the gangway. Berths No. 1 nd No. 4 have permanently installed gangways.

hip Movement: Make sure your deck watch stays continually alert for essel movement off-spot. Vessel should be kept against the fender at l times. If the vessel moves off the fender or 7 ft. in either direction long the wharf, stop all cargo transfer operations immediately and isconnect the hoses or arms. Do not resume operations until the ituation is corrected. The Terminal requires a tug to move the vessel nd hold it off the fenders while moving the vessel parallel to the wharf.

il Wharves: There is one pier that accommodates oil transfers. It is ommonly referred to as Richmond Long Wharf.

ng Wharf: Richmond Long Wharf, a "T"-head pier, has an overall ngth of 3,396 ft. It consists of concrete and wooden piles and a oncrete superstructure connected to the shore, 4,200 ft. away by a iled causeway. The fender-to-fender width is 132.5 ft.

Berths 1, 2 and 3 deck level is 15.5 ft. above MLLW. Berth No. 4 deck vel is 25 ft. above MLLW.

There are 4 deep water berths on the West side. Berth No. 1 is 950 ft. ng with a project depth of 50 ft. at MLLW. Berth No. 2 is 650 ft. long ith a project depth of 40 ft. at MLLW. Berth No. 3 is 700 ft. long with a project depth of 40 ft. at MLLW. Berth No. 4 is 1,100 ft. long with a roject depth of 50 ft. at MLLW. They are numbered 1 through 4 from South to North. The fender-to-fender width of the Wharf is 132.5 ft.

There are two inner Berths (No. 9 and No. 11). They are used primarily r barge loading or discharging. Project water depth is 20 ft. at MLLW.

OTE: Specific barge size and towboat restrictions may pertain to arges arriving and departing the barge berths. Consult the Wharf ontroller for specifics.

Silting is a continuous problem at all berths. Consult the Wharf ontroller or the Wharfmaster for updated drafts.

OSES: *Cargo Hoses:*

a) Before transfer, inspect cargo loading hoses or arms to see that they are in good condition, *fully bolted*, and properly connected. All hoses must be marked showing the service for which the hose is designated, date of last hydrotest, and a maximum allowable working pressure of at least 275 psi.

b) The hoses must be supported at not more than 12 ft. intervals with a bridle or mat to minimise kinks or chafing. They must not be bent to a radius less than 12 times their diameter. Do not use single slings when taking aboard or supporting during transfer.

c) The hose or arm-to-riser connections must have drip pans of adequate size installed under them.

d) When cargo transfer has concluded, each hose/arm is to be drained via the drain valve and flanged *before* being removed from the vessel.

The Terminal Head Operator or his/her delegate is to be aboard vessel to oversee the connecting and disconnecting of the loading arms and also to alert crew members when passing the arms.

apour Hoses: Vapour hoses as required for Vapour Recovery operation will be provided by the Terminal. Vapour hoses will be distinctly marked with painted red/yellow/red bands and will be labelled. Their flange will have a unique bolt hole configuration to prevent cross connection to a cargo system. The flange sizes are 10 in. at Berths No. 2 and 3, and 8 in. and Berths No. 4 and 9.

Vapour hoses will require a purge with nitrogen before and after loading operations. This purge will be done by Terminal Operators.

OADING/UNLOADING: Berth No. 2 is fitted with 4 in., 6 in, and 8 in. hoses for cargo transfer. Berth No. 1 has two 12 in. and two 16 in. Chicksan loading arms. Berths No. 3 has two 8 in. and four 12 in. Chicksan arms. Berth No. 4 has two 12 in. and three 16 in. Chicksan arms. Do not reduce Chicksan loading arm flange size by more than 4 in. unless approved by Terminal Management. Berths No. 9 and 11 are fitted with 4 in., 6 in. and 8 in. loading risers for cargo transfer.

OTE: All terminal flange facings are carbon steel ANSI 150 lbs. rating.

No cast iron is allowed outside of (and including) the first valve on the vessel's cargo or bunker system.

Berth vessels so that manifolds are positioned within the horizontal and vertical limits of the hoses or Chicksan arms as directed by Terminal Person-in-Charge (TPIC) spotting vessel.

Cargo Transfer:

a) Pre-Transfer Declaration of Inspection – Before cargo transfer begins, the TPIC will board vessel. The TPIC will discuss with Master and officers the safe transfer of cargo. He will also review the Declaration of Inspection with Master and sign it with Master when all items are understood and agreed upon.

b) Inspection During Cargo Transfer – A Terminal representative will also visit the ship during cargo transfer. With the approval of Deck Watch, he will check to ensure that safe working practices are being observed by both ship and wharf.

c) Minimum Cargo-Handling Crew – When transferring cargo or ballast, the officer-in-charge of cargo transfer must have at least two assistants: one to maintain watch on the open-deck cargo transfer manifolds; the other to assist in handling valves, tank gauging, or shutdowns of transfer pumps in case of emergency. Other crew members may be needed depending on the size and complexity of ship transfer system. These requirements will be developed at the pre-cargo-transfer conference. When loading ship's bunkers and lubes, the Master and Chief Engineer will assure the terminal that this transfer will be handled in a similar manner.

(d) Both vessel and Terminal representatives shall conduct a regular inspection of the dock area and the water area around the ship prior to and during the transfer operations.

(e) Vessel shall not deposit any form of hazardous waste on the Wharf.

Loading Rates: Several products can be loaded at each berth. Loading rates depend on a multitude of situations. These will be discussed at the pre-cargo-transfer conference.

Unloading Rates: Unloading rates also depend on many things – vessel's pumps, the size and availability of terminal lines and tanks, refinery operations, etc. The pre-cargo-transfer conference will develop the estimated unloading and deballasting rates and procedures.

To expedite cargo transfer, it may be necessary to use booster pumps. To eliminate hazards to this equipment, notify the Berth Operator 15 minutes ahead of time whenever you are going to: Stop or change any cargo transfer rate, strip any tanks, switch tanks, begin or stop Crude Oil Wash (COW).

Maximum Temperature and Pressure Limits: The terminal cargo-handling system is designed to comply with the 150 lbs. ANSI flange rating. For example: 275 psig at 100°F, 240 psig at 200°F, etc. Special restrictions apply for aromatic and other hazardous stocks. These will be explained during the pre-cargo-transfer conference.

Tank Gauges: To ensure proper handling of each cargo, the terminal requires vessels to be gauged every *two* hours and matched with shore-tank gauges. Transfer operations will shut down immediately if:

— the transfer rate is over 1,000 b.p.h. and there is a discrepancy in the tank's gauges that amounts to more than 20% of that transfer rate.

OR

— the transfer rate is under 1,000 b.p.h. and there is a discrepancy in the tank's gauges that amounts to more than 30% of that transfer rate.

For example:

Vessel arrived with 120,000 bbls. of crude. First 2 hour gauge at 1010 hrs. Estimated rate 7,000 b.p.h.

	Ship	Shore	Difference
1000 hrs.	14,241	13,996	245
1200 hrs.	28,435	25,643	2,792

As the estimated transfer rate is 7,000 bbls./hr., the allowable difference would be 1,400 bbls. The 245 bbls. difference at 1000 hrs. is OK and transfer should continue. The 1200 hrs. gauge of 2,792 bbls. difference is out of tolerance and the transfer should be discontinued until discrepancy can be resolved.

NOTE: For those equipped with IGS, obtain the 2 hour gauge from the automatic gauging system. Do not breach IGS.

Allow approximately 2 hours for shore and vessel cargo reconciliation after transfer is complete.

BALLAST: No dirty ballast will be discharged overboard while vessels are moored at Richmond Long Wharf.

If vessel has a clean dedicated ballast system and Terminal Management approves and a segregated ballast form is filled out, vessel may be able to discharge clean ballast to local waters.

Tank Flushes: Product for use in flushing vessel's tanks is available on request, but must be arranged for at least 48 hours in advance through Chevron Supply and Distribution or Chevon International Oil Company. The flush material will be provided for a $250 handling fee plus a reprocessing fee for each barrel which will vary depending on the exact flush stock requested. The exact reprocessing fee can be obtained by contacting Supply and Distribution.

POLLUTION:

NOTICE TO SHIPS
WHILE IN SAN FRANCISCO BAY WATERS
TO SHERMAN ISLAND

EXCESSIVE SMOKE

Section 3110 of Regulations 2 of the Bay Area Air Pollution Control District prohibits the emission of smoke as dark or darker than Ringlemann 1 for more than 3 minutes in one hour.

BOILER TUBE BLOWING

Boiler tubes must not be blown in a manner that results in soot being deposited on shore in such quantities as to create a nuisance. Blowing of tubes anywhere within San Francisco, San Pablo, and Suisun Bays, or in the San Joaquin River within Contra Costa County, must be kept to a minimum. Every reasonable effort must be made to reduce the number of occasions of such in-port soot blowing.

California Health and Safety Code, Section 24360, provides that a person shall not discharge from any source whatsoever such quantities of air contaminant or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health, or safety of any such persons or the public or which cause or have a natural tendency to cause injury or damage to business or property.

Persons responsible for violations of District Law and regulations are subject to a penalty of up to $25,000 for each day's violation. This may be assessed against any person responsible including the officers of the ship, the Owners, the Operators, and may be secured by a lien against the ship itself. These persons may also be subject to abatement orders and contempt of court.

GOOD NEIGHBOUR NOISE POLICY

When ships or barges are suspected of being too noisy during the course of their operations, the following procedure should be followed:

1. The Wharfmaster shall initiate action when any noisy vessel arrives at Richmond Long Wharf for discharge. The Wharfmaster will requst the CFRE (Chevron Environmental Field Representative) to go to the Point Richmond "hill area" and report on any noise observation.
2. If the noise is excessive in the judgement of the Wharfmaster and CFRE, it may be necessary to make adjustments to the rate, number of pumps, etc., in order to moderate noise to a satisfactory level. In Chevron's efforts to maintain an effective "Good Neighbour Policy", if a vessel is found to be creating a noise nuisance, it may be ultimately necessary to secure cargo operations until daylight hours.

While docking and undocking, no excessive noise should be created.

OIL INSPECTIONS: To control product quality, the terminal has several requirements for sampling and gauging the oil as it is being transferred. These requirements will be explained during pre-cargo transfer conferences. Outside inspection service is provided by the following independent companies:

Caleb Brett U.S.A. Inc., 4108 Lakeside Drive, Richmond, California 94806. Tel: (510) 222-0877. Fax: (510) 222-0930. Telex: 184231.

S.G.S. Inspection, 435 Valley View, El Sobrante, California 94803. Tel: (510) 236-3007. Domestic TWX (910) 382-6013. Fax: (510) 223-0956.

MEDICAL: No facilities at wharves. Richmond Refinery has a direct line to the regional ambulance. Emergency medical technicians (EMTs) will respond to provide basic life support, first aid and escort the ambulance to the Wharf.

Non-emergency medical services must be arranged through the Agent.

Brookside Hospital. Tel: (510) 235-7000.
Regional Ambulance Service (ground). Tel: (510) 234-3242.
Air Ambulance International Inc. Tel: (800) 982-5806.
California Aviation Service Inc. Tel: (415) 584-9045.

FRESH WATER: Potable water can be provided to vessels at the Long Wharf. Arrangements to load potable water must be made prior to arrival by contacting the Wharf Coordinator. The Wharf Coordinator will advise the vessel's Agent of current hook-up fees and rates. Loading rates and forms will be fully explained at the Pre-Transfer Conference. The Wharf will make all connections dockside, and will control all valves associated with the water transfer.

FUEL: Many grades of bunkers, diesel and lubricating oils are available in bulk or drum quantities. Agents should order them from (1) Chevron U.S.A., Supply and Distribution (call (415) 944-6200), or (2) Chevron International (call (415) 944-6292), at least 48 hours before vessel arrives, to avoid delaying the vessel.

To take on bunkers and diesel, vessels must be able to connect to terminal's 4 in., 6 in. and 8 in. hoses in Berth No. 2, connect to 8 in. Chicksan in Berth No. 3, to 12 in. Chicksans in Berths No. 1 and 4 without a reduction of more than 6 in. Bunker barges are not allowed to bunker vessels while at Chevron's wharf.

PROVISIONS: Provisions and stores are available through ship's Agent. However, they will be loaded only when the loading does not interfere with cargo or ballast transfer. No hydrocarbons, paints, detergents or other polluting materials will be allowed to go aboard the vessel by means of slings or cargo nets. Such stores must be hand carried on board. The vessel may use its own gear for handling other types of stores. However, forklifts, cranes and trucks are not available for this operation. Stores will not be handled by wharf personnel, and will not be allowed on the wharf until the vessel arrives.

REPAIRS: There are some major repair facilities located in the San Francisco Bay Area. The Agent can probably make arrangements for use of their services.

Repairs at the terminal are not permitted unless it is absolutely necessary in order to move the vessel. Any repair work that would necessitate hot work must have approval from Refinery Management and U.S.C.G. No repairs will be allowed that would delay cargo transfer or lengthen the transfer time.

REPATRIATION: Facilities exist for repatriating of crew by sea or air. Make the arrangements through ship's Agent, and notify the terminal management.

TIME: Local time: Pacific Standard Time GMT is minus 8 hours. (Note: From the first Sunday in April to the last Sunday in October, this is modified by use of Daylight Time which is GMT minus 7 hours).

All communications should refer to local time.

TELEPHONES: Blue Courtesy telephones are spaced adequately along the dock. These telephones can be used to call this partial list of commonly used numbers within the Refinery:

Wharf Control Room (PAD) (24 hrs. coverage)	242-4494
Wharf Master	242-4388
Wharf Coordinator	242-4387
Head Operator	242-2190
Terminal Superintendent	242-2314
Wharf Bus	6-6880

There are 3 public telephones on the Long Wharf for outside calls, 2 between Berths No. 1 and 2, and one at the lower level of the Wharf Office Building.

STORING: See "Prelims".

1. Vessels cannot be stored by barge while at docks; however, they can be stored by small trucks.
2. Storing by truck requires the truck to be cleared by operations and towed into location. No paint or hydrocarbon may be lifted by net over local waters. This is described in the "Provisions".
3. Trucks can come alongside vessel (within 50 ft. of vessel).
4. There are no forklifts available at the terminal and the rental of one requires the rental of a "spark approved" forklift. Arrangements must be made with the Wharf Master.
5. All customs rules and regulations are enforced.
6. Local riggers can be employed to help get stores aboard vessel, but the vessel must make arrangements with ships Agents, and all storing of vessels must be approved by Wharf Master.

Also see "Provisions".

SHORE LEAVE: In order to permit vessel's crew to exit and enter Refinery, 2 copies of the vessel's Crew List with anticipated chan must be given to the Terminal Person-in-Charge (TPIC) during the Transfer Conference.

Walking on the causeway is not permitted. Bicycle riding is not allo on the causeway. Chevron Shipping Company provides bus service the wharf to shore and from there, ship's personnel can connect local taxi or bus service nearby (For transit system information out the Refinery call (510) 232-5665).

To call for the Long Wharf bus, dial 6-6880, and talk to the bus dr using the courtesy telephones that are adequately spaced along face of the Wharf identified by a blue sign.

No animals or pets are allowed on wharf or wharf bus.

No smoking in the bus, on the wharf, or the approach to the wha

No ship's commercial passengers are ever allowed to board or lea a ship at the wharf.

The Blood Alcohol Concentration (BAC) cut-off level for all employe contractors, and visitors who require access to the Refinery is 0.0 This is recognised as the level at which impairment of judgment coordination appear and is the level established under Federal Law the U.S. Coast Guard. Therefore, crew members returning from sh leave must comply with the law and Refinery policy, and *will be den* entry through Refinery gates if they are 0.04% BAC or above. Chevron's policy that any person attempting access to the Richmo Refinery, including all marine personnel/seafarers returning to th vessel, who appear in any way to be under the influence of alcohol be detained at the gate. The specifics of Refinery alcohol policy wil discussed during the Pre-Transfer Conference.

GARBAGE DISPOSAL: Please follow the United States Departmen Agriculture (USDA) and Animal and Plant Health Inspection (APH requirements to dispose of plastic waste (See Marpol Annex-V). T Terminal is U.S.C.G. certified for the removal of non-hazardous pla waste from vessels.

GENERAL:

Transportation of Alcoholic Beverages: The Refinery regulations st that no alcoholic beverages are allowed in the Refinery.

The Refinery recognises that under certain conditions it is necessa for alcoholic beverages to be transported for certain vessels and th crews. For these specific cases, the following permit system should used.

Parties requesting to make deliveries of alcoholic beverages to t Wharf should be requested to do so at the Main Gate. At that time, th will be issued a permit to transport the beverages.

Please also refer to Chevron's policy on Blood Alcohol Concentra (BAC) (See "Shore Leave").

Tides and Currents: The maximum tidal range is approximately 9 ft. a the mean range is 4.2 ft.

Tidal currents in the wharf area can be very strong. They genera run in a North'ly and South'ly direction.

Winds: Winds of varying strength may come from any quarter. T normal wind, however, is from the N.W. in Summer, and S.W. in Win

Visibility: The visibility in this area of San Francisco Bay is generally to excellent, with occasional late evening fog in the Summer lasting u noon the following day. In the Winter, morning or tule fogs frequen occur. The Winter fogs are generally more dense than those of Summ

Weather: The local weather is usually moderate, with avera temperatures ranging between 40°F and 85°F.

The (NOAA) National Weather Service VHF-FM Radio Station, KE 49, provides mariners with continuous FM broadcasts of weat observations on 162.55 MHz.

Navigation: Master is required to notify the U.S. Coast Guard Capt of the Port at least 24 hours before arriving in the Bay. Master will sati this requirement automatically if he reports in accordance with the U Coast Guard's voluntary Automated Merchant Vessel Report (AMVE System.

On entering the Bay, follow the traffic-separation scheme shown National Ocean Survey Chart 18649.

Charts and Publications: The following official charts and publicatio are recommended for use when entering San Francisco Bay:

National Ocean Service Charts:

No. 18640 – San Francisco to Point Arena.
No. 18680 – Point Sur to San Francisco.
No. 18645 – Gulf of the Farallones.
No. 18649 – San Francisco Entrance (Vessels drawing over 45 be aware of "Note D" on chart referring to "Deep Dr Route" inbound, North of Harding Rock and Alcat Island).
No. 18650 – Angel Island to Candlestick Point (Anchorage No.
No. 18653 – San Francisco Bay, Angel Is., to Point San Pedro

Pacific Coast of North America and Asia, Tidal Current Tables We Coast of North and South America, published by National Oce Service.

U.S. Coast Pilot No. 7 – Pacific Coast – California, Oreg Washington and Hawaii, published by the National Ocean Service

Current Edition of Operating Manual, S.F. Harbor Advisory Rad published by U.S. Coast Guard.

Light Lists, Volume VI, Pacific Coast and Pacific Islands, publish by U.S. Coast Guard.

Radio Navigational Aid, Pacific and Indian Oceans (Publica No. 117), published by U.S. Hydrographic Office.

SAFETY REGULATIONS:

I. PRINCIPLES:

When a ship is berthed at our wharf, we expect its Master to give priority at all times to safety and efficiency; and to follow all sa regulations generally followed in the marine transport industry, as w as those included here.

All cargo handling operations on the ship are the Mast responsibility. To assist in ship-to-wharf communications, we will prov you with a radio pack set (walkie-talkie), which will enable the pe charge of cargo transfer to communicate with the Berth Operator and Chevron Shipping Office.

The pack set is certified intrinsically safe for use in a hazardous location.

If a vessel disregards any of the following safety regulations, Terminal personnel are authorised to stop cargo transfer operations, and request the vessel to leave its berth. The vessel also has the right to shut down transfer operations if it is felt unsafe to proceed, provided adequate notification is given prior to shutdown.

I. EMERGENCY FACILITIES:

It is the ship's responsibility to keep its firefighting systems in readiness at all times. Likewise the Terminal will keep its firefighting and spill containment equipment in readiness at all times. An international re connection is kept ready at each berth at the wharf.

II. SIGNALS FOR EMERGENCY:

The fire signal at the Terminal is one long blast of the docking whistle, followed by short blasts, indicating berth number where fire has occurred. The oil spill signal is two long blasts followed by the berth in which the spill has occurred (you will be notified if the Terminal requests you to shut down on an oil spill). For any other emergency, such as a man overboard, breaking of lines, etc., sound a series of short blasts on your ship's whistle.

Richmond Refinery has a direct line to the "Regional Ambulance". If an ambulance is required, notify the Berth Operator. Wharf personnel will notify Plant Protection, who will call the "Regional Ambulance" and respond with EMT's (Emergency Medical Technicians) and provide escort for the ambulance and basic life support until the ambulance arrives.

If an emergency occurs on the wharf, your ship will be notified by the Berth Operator and by the terminal whistle. You will be notified if the Terminal wants you to clear the berth. In the event of extreme emergency that necessitates evacuation, Wharf personnel will advise vessel crews of assembly areas and evacuation procedures.

In an emergency situation, stop all cargo transfers immediately and secure valves. In case of fire on the wharf, shut down transfer and prepare to depart.

V. OVERFLOW AND SPILLAGE:

An oil spillage of any kind is considered an extreme emergency. If one occurs, notify the Berth Operator, sound the emergency alarm, and *immediately* stop all cargo transfer operations. Do not resume them until the oil is removed from the surface of the water and from the deck of the vessel; and until any damage is repaired and no further danger exists. All reasonable clean-up and damage costs will be at the ship owner's expense.

If you observe oil from an unknown source, you must shut down, unless you are positive it is not from your ship. In either case, you must notify the Berth Operator immediately.

The Terminal is required by law to notify promptly, the U.S.C.G. Tel: (510) 437-3073, and various other County, State and Federal offices, of any spills, and permit their representatives to investigate the circumstances.

Oil spill clean-up material will be supplied at cost, upon request.

V. MINIMUM NUMBER OF SHIP'S CREW:

See that your crew is large enough to connect hoses and arms safely and to conduct cargo operations safely. The vessel will be maintained in trim, and the engine in a condition that it could leave the pier on short notice (30 minutes or less). The crew aboard will be maintained at sufficient size to disconnect cargo connections, unmoor, and get the vessel away from the dock.

VI. GENERAL:

A. Following regulations must be observed at all times while berthed at Long Wharf:

1. Boiler-tube Blowing — Do not blow boiler tubes and take every precaution to prevent sparks from escaping from the funnel. If vessel safety is at stake, stop transfer operations and move the ship to anchorage before blowing the tubes. In case vessel has boiler trouble, notify the Terminal, who in turn will notify the Air Quality District Control.
2. Cargo Tank Tops:
   (a) Before berthing, all tank tops, ullage plugs, and gauge tapes and sample wells must be closed and dogged down.
   (b) Cargo and bunker tank tops must be kept closed. This also applies to permanent ballast tanks.
3. Cargo Connections, Unused – blank unused cargo and bunker connections. A proper-sized bolt in *every hole* is the minimum requirement.
4. Engines – Keep the engines ready and the vessel trimmed so it can leave the piers under short notice. If the vessel becomes unable to get underway 2 tugs of adequate size will be standing by at all times.
5. Fire Fighting – Keep fire and emergency equipment in readiness. At least 2 uncoiled fire hoses are required at the vessel's manifold area, one forward and one aft. Provide (U.S.C.G. approved) five portable Class BC extinguishers with capacity of not less than 20 pounds, two located forward and two aft or the manifold, one located at the gangway or the accommodation ladder. All fire extinguishers shall be approved by the appropriate authority of the vessel's flag country.
6. Gas Venting:
   (a) Ullage Holes – Keep all ullage or gauge tapes completely closed (not secured) except for intermittent periods needed to ullage or gauge ship's tanks.
   (b) Flame Screens – When open, all ullage ports must be protected by clean, well-fitted flame arrestors of wire-gauge screens: these must be of an approved type and have no defects.
   (c) Vessels equipped with IGS: All breaches of IGS, for any reasons, require the approval of the Superintendent or his assistant.
7. Gas Freeing and Tank Cleaning – Do not gas-free or clean any tanks at berth without prior approval of Terminal Management.
8. Gangways – Tend the gangway and keep it safely rigged, secured and lighted.
9. Mooring Lines – Tend mooring lines to keep them taut and keep the vessel in position. See that tension winches are on manual brake. During ebb tide and East winds, when the ship has a tendency to drift away from the pier, tend the mooring lines with special care.
10. Hatches, watertight doors and portholes – Shall remain closed throughout the vessel while at the wharf.
11. Repairs – While at berth, do not perform any repair work, hot work, or maintenance work without prior approval from the Terminal Management. Hot work will require *written* approval by Terminal Management and U.S.C.G.
12. Radio – At all times in port, keep the radio transmitter and aerials switched off and grounded. Portable radios (walkie-talkies) that are certified intrinsically safe may be used.
13. Sea Suctions and Bilge Valves – See that all ship's sea and overboard discharge valves connected to the cargo system are tightly closed, lashed and sealed in accordance with U.S. Coast Guard Regulation 33 CFR 155. All engine room bilge overboard valves shall be tightly closed, lashed and sealed.

    The seals are *not* to be broken while berthed except in the presence of the Wharf Head Operator or in case of emergency.
14. Sewage Discharge – Not allowed.
15. Smoking – Allow smoking on board only in places which the Master has personally approved. There is to be NO SMOKING ON THE WHARF OR WEATHER DECK OF THE VESSEL AT ANY TIME.
16. Stern Discharge Line – Keep the stern discharge line, if any, blanked at all times. All holes to be bolted.
17. Towing Wires – Keep the towing wires (fire wires) for emergency use, lowered to 2.0 m. from the water's surface on the offshore bow and stern, where they can be reached by tugs in case of emergency.
18. When fast in the berth, ship's propeller will not be turned, except by use of jacking gear.

B. Cargo Transfer – Observe the following additional regulations DURING CARGO TRANSFER:

1. Air Intakes and Air Conditioning Units – Close any central air-conditioning or fresh-air intakes which might take in gas. Close all intakes within a combined total of 100 ft. vertically and horizontally of cargo tank openings and venting points. External window-type air-conditioning units that face the cargo transfer area must be kept disconnected.
2. Communication – Ship/Shore – Station a responsible member of the crew on the loading deck by the transfer connections to maintain communications or remain in visual contact with the Berth Operator. The ship shall advise the Operator when changes in rates are required, using radio pack sets or voice contact.
3. Passageway hatches to open weather decks be kept secured except for momentary passage.
4. Electric Lights and Cables – Use only vapour-proof electric lights of an approved type, on the open deck. Disconnect portable electrical equipment on the open deck unless certified for use in hazardous areas.
5. Galley Fires – Light no galley fires unless you can first assure the terminal that they present no hazard to the cargo transfer.
6. Hand Torches (Flashlights) – See that hand torches used during cargo transfer are of an approved type, certified as safe in hazardous locations.
7. Hoses:
   (a) Before transfer, inspect cargo-loading hoses or arms to see that they are in good condition, *fully bolted,* and properly connected. All hoses must be marked, showing the service for which the hose is designated, date of last hydrotest, and a maximum allowable working pressure of at least 275 p.s.i.
   (b) The hoses must be supported at not more than 12 ft. intervals with a bridle or mat to minimise kinks or chafing. They must not be bent to a radius less than 12 times their diameter. Do not use single slings when taking aboard or supporting during transfer.
   (c) The hose or arm-to-riser connections must have drip pans of adequate size installed under them.
   (d) When cargo transfer has concluded, each hose/arm is to be drained via the drain valve and blank-flanged *before* being removed from the vessel. The Terminal Head Operator is to be aboard the vessel to oversee the connecting and disconnecting of the loading arms and, also, to alert crew members when passing the arms.
8. Scuppers – All deck scuppers must be plugged and cemented oil tight or sealed with a Coast Guard approved device. Do not remove the plugs until ship has departed, except when necessary to drain off rain water. In such cases, supervise the draining closely and replace the plugs immediately. Install splash boards (on dock side) over scuppers. Cement is to be supplied by the ship.
9. Special Stock Hazards:
   (a) Static-Ignition Hazards – Some kinds of stock require special precautions because of the static charge they accumulate. Their handling will also be fully discussed during pre-cargo transfer inspection. No overall loading is permitted.
   (b) Hydrogen-Sulfide Hazards – Some kinds of crude may contain dissolved hydrogen-sulfide or mercaptans in concentrations which would cause the gases vented during tanker ballasting to be hazardous or odorous. Do not ballast or load into cargo tanks that might contain H_2S or mercaptan vapours, unless the tanks have been passed for loading by the Wharfmaster. The vessel must proceed to sea for clean-up prior to loadback if the Wharfmaster deems the tanks unsuitable for loadback.

(c) Aromatic-Stock Hazards – Special precautions are required for toxic cargoes such as aromatics. It is recommended that Masters review the instructions by Owners/Charterers about toxic chemical hazards.

10. Valve Shut-off – Many new tankers have motor-operated valves, operated from a central location. Never operate these valves to close off against full oil-delivery rates unless the valve closure action takes at least 90 secs. Closure times less than 90 secs. may result in surge and hammer of sufficient force to rupture the loading arm/hoses.

11. Ventilators – Keep ventilators suitably trimmed with regard to tank vents and prevailing wind conditions to prevent entry of flammable vapours.

VII. VAPOUR RECOVERY:

As of July 1, 1991, in order to comply with Regulation 8, Rule 44-301 of the BAAQMD, Vapour Recovery operations are required when loading Organic Liquids into vessel tanks. Vapour Recovery will also then be required when loading any product (or ballast water) into vessel's tanks which previously last contained Organic Liquids (and therefore contain vapours from Organic Liquids). Definition of "Organic Liquids" (per BAAQMD Rule 8-44-204) is as follows – all gasoline, gasoline blending stocks, aviation gas and aviation fuel (JP-4 type) and crude oil).

BAAQMD also requires (Rules 8-44-303 and 304) that all vessels associated with the loading of Organic Liquids requiring Vapour Recovery maintain their equipment (all hatches, pressure relief valves, connections, gauging ports and vents) leak free and gas tight. In order to comply with this Rule, certification that vessels meet these requirements will be required during the loading event (leak detection monitoring per E.P.A. reference Method 21). Failure to satisfy compliance requirements during loading will require that the vessel's owner or operator file an "Emergency Variance" with the BAAQMD. Certification must be given to the Terminal (CUSA) before departure of vessel, and certifying process must be done during loading, before 20% completion of cargo loading.

Facilities will consist of a vapour connecting header through vacuum pumps located on the wharf, and a thermal oxidiser located off-site of the wharf. Vapour Recovery operational details will be discussed during the Pre-Transfer Conference.

In addition, the Terminal has certain regulations designed to eliminate obnoxious odours. Your vessel may, therefore, be required to follow special procedures before tank cleaning, loading, or ballasting. If in spite of precautions, your vessel does cause such odours, your loading or unloading operations may be stopped.

VIII. INERT GAS SYSTEM (IGS):

Terminal Guidelines for Vessel Inert Gas System (IGS):

1. The following guidelines supplement Richmond's Terminal Manual.
2. Ship's Agents are requested to inform their principals and/or ship's Masters of the content of these guidelines, particularly of the pre-arrival information requested of the Master. A copy of the guidelines shall also be provided to the Master on arrival.
3. Nothing contained in these guidelines relieves the Master of his responsibilities. The Terminal takes no responsibility for the safe condition and/or operation of the vessel, for which the Master remains fully responsible.
4. *Communications:*

4.1 The Master shall inform the Terminal, as soon as possible, of any event or situation which may be the cause of concern for the safe and/or efficient operation of the vessel at the Terminal (e.g. equipment malfunction or breakdown, hull leakage, grounding, collision, structural damage, inadequacy of officers and/or crew regarding certification, experience of manning level, etc.). Such notification is in addition to, and does not relieve the Master of his obligation, to notify Government and/or Harbour Authorities, if so required by existing laws or regulations.

4.2 As part of the pre-arrival information supplied by the Master at the request of the Terminal, the Master will confirm the following conditions are met by the vessel's IGS. The vessel will *not be berthed* unless it complies with all conditions listed below:

(a) The IGS is fully operational and can deliver inert gas with an oxygen content below 5%.

(b) The cargo control room, IGS analyser and alarm are operational. The Terminal will require vessel to retain a marine chemist to confirm readings, if these are found inoperable.

(c) Each tank will be maintained positively pressured and below 8% oxygen during all port time.

(d) All tank openings will be closed and gas tight, and all tanks have closed gauging systems.

(e) IGS will *not* be breached, and tanks will not be opened for inspection, unless mutually agreed to by both the Master and Terminal Managers.

5. *Inert Gas System Guidelines:*

5.1 All vessels, which are equipped with IGS, shall keep the IGS operational at all times during berthing, while at berth, and during unberthing, and all cargo and slop tanks shall be kept in an inerted condition. IGS may be breached on individual tanks for inspection or measurement only by mutual agreement of the Master and Terminal Manager.

As part of the Pre-Transfer Conference and Declaration of Inspection, the Master shall provide the Terminal with a signed declaration that the IGS is operational, that the cargo and slop tanks are inerted, and that the IGS will be kept in operation, as necessary, to maintain all cargo and slop tanks inerted.

5.2 The Master shall permit the Terminal Representativ check:

(a) The vessel oxygen analyser readings to monitor th oxygen content of the inert gas being delivered b IGS contains less than 5% oxygen.

(b) The vessel oxygen analyser readings to monitor th oxygen content is maintained below 8% in the cargo slop tanks.

(c) The IGS pressure readings to monitor that the cargo slop tanks are maintained positively pressured.

5.3 *Inert Gas System Failure:*

5.3.1 In the event that the IGS is or becomes inoperative, an unable to maintain a positive pressure and/or the oxy content at or below 8% by volume in the cargo and slop ta the following action shall be taken:

(a) If the vessel arrives with an inoperative IGS or the I becomes inoperative before berthing, the vessel shal be berthed until the IGS is repaired, and the Ma warrants in writing that the cargo and slop tanks h been checked and found to be inerted.

(b) If the IGS becomes inoperative after the vessel h berthed, then the Master shall not start or s immediately stop all cargo/ballast operations, and ta immediate action to prevent any air being drawn into t cargo and slop tanks. Cargo/ballast operations shall commence or resume until the IGS has been repai and the Master warrants in writing that the cargo a slop tanks have been checked and found to be inert The vessel shall not leave the berth until the IGS h been repaired, if the Terminal so requires.

(c) Vessels Loading Organic Liquid:
In case a vessel declares that their IGS becom inoperable, and cannot be repaired in a time fra acceptable to Terminal Management, the vessel w have to go to anchor to make repairs. When repairs a completed, and IGS is operational, the vessel sho contact the Richmond Long Wharf to reschedule berthing plan.

5.3.3 During any necessary re-inerting of a tank following breakdown and repair of the inert gas system, or during t initial inerting of a non-gas free tank, no dipping, ullag sampling or other equipment should be inserted, until it h been established that the tank is in an inert condition. If t necessary to introduce a gas sampling system into the ta for this purpose, there shall be a wait of 30 minutes af stopping the injection of inert gas before insertion of t sampling system. Metallic components of the sampl system shall be securely earthed.

5.3.4 The attention of the Master is directed to the requiremen Regulation 11(c) of Chapter 1 of the 1978 SOLAS Protoc to advise the Authorities in the event of the IGS hav become inoperative. The Master shall confirm to the Termi that such requirement has been fulfilled.

5.3.5 All damages and expenses, and all time lost by the vess because of the vessel IGS being or becoming inoperative the tanks not being inerted as required, will be for vesse account.

AUTHORITY: Chevron, U.S.A., P.O.Box 1272, Richmond, CA 948 0627, U.S.A. *Tel:* (510) 242-4630. *FAX:* (510) 242-32 *Cables:* Chevronship Sanfrancisco and Chevronship Richmo *Contact:* Fred Modugno. P.E. Jacobson, Wharf Termi Superintendent.

(B) OTHER TERMINALS AT RICHMOND

BERTHING: *Levin-Richmond Bulk Commodity Wharf:*
Owners: Levin-Richmond Terminal Co.
Operated by: Levin-Richmond Terminal Co.
Use: Receipt and shipment of various dry-bulk commodities and sc metal.
Water Depth: 35 ft. – 36 ft.
Mechanical handling facilities: On wharf; 4×50 ton electric, travelli full portal gantry cranes, each with 100 ft. boom and 2×45 ton elec travelling full portal gantry cranes, each with 118 ft. boom.
Dimensions: Length of face 600 ft.
Remarks: 50,000 sq.ft. warehouse. Railroad on premises.

Santa Fe Sugar Dock:
Owned and operated by: Atchison, Topeka and Santa Fe Railway C
Use: Presently not in operation, but the railroad should be conta for further use.
Dimensions: Length of face 545 ft., lower end 51 ft.; depth alongs at MLLW 24 ft.

Richmond Terminal No. 3:
Owners: City of Richmond.
Operated by: Metropolitan California Stevedore Co.
Use: Receipt and shipment of containerised and breakbulk carg in all trades.
Dimensions: Length of face 1,009 ft.; depth alongside at MLLW 3
Mechanical handling facilities: Two rail-mounted dock cranes and bridge cranes. Semi-automated operation.
Remarks: Area of container terminal – 16 acres plus a 40,000 s enclosed warehouse.

chmond Terminal No. 4 Wharf:
Owners: City of Richmond.
Operated by: Modesto Tallow Co., Paktank Corp. and Pacific olasses Co., Ltd.
Use: Bulk Liquids.
Dimensions: Length of face 1,047 ft.; South side 175 ft.; North side 00 ft.; depth alongside at MLLW 32 ft. – 50 ft.

chmond Terminal No. 5:
Owner: City of Richmond.
Use: Available for tug, barge and vessel lay-ups.
Dimensions: Two finger piers, each 550 ft. long; Pier No. 1, East side-pth 13 ft. and West side-depth 30 ft. Pier No. 2 East side-depth 16 ft. d West side-depth 12 ft., and is leased to Marin Tug & Barge Co. Pier No. 2 only).

Pt. Potrero *Marine Terminal – Terminal No. 7:*
Owner: City of Richmond.
Operated by: Pasha Maritime Services.
Use: Import service and delivery of foreign automobiles.
Dimensions: Length of face 1,615 ft.; depth alongside at MLLW 35 ft.; sable berthing space with dolphin 900 ft.
Mechanical handling facilities: Mobile handling equipment available.

ichmond Terminal No. 6:
Owner: City of Richmond.
Operated by: Various Lessees.
Use: Five shipyard basins available for lay-berthing, fleet mooring, y-up and project consideration.
Dimensions: No. 1, 4 and 5: 575 ft.×100 ft., 84 ft. gate. – Depth 15 ft. LLW.
o. 2: 748 ft.×100 ft., 84 ft. gate. – Depth 26 ft. MLLW.
o. 3: 587 ft.×100 ft., 84 ft. gate. – Depth 26 ft. MLLW.

ANKERS: *Atlantic Richfield Tanker Dock:*
Owned and operated by: Atlantic Richfield Co.
Use: Receipt and occasional shipment of petroleum products; unkering vessels.
Dimensions: Length of face approx. 250 ft.; lower and upper sides 0 ft. each; depth alongside at MLLW 35 ft.

tlantic Richfield Barge Dock:
Owned and operated by: Atlantic Richfield Co.
Use: Receipt and shipment of petroleum products by barge; bunkering essels.
Dimensions: Length of face 150 ft.; depth alongside at MLLW 34 ft.

ichmond Terminal No. 1 Wharf:
Owners: City of Richmond.
Operated by: Petromark Inc.
Use: Receipt and shipment of petroleum products, chemicals and etrochemicals.
Dimensions: Length of face 557 ft.; depth alongside at MLLW 35 ft.

ichmond Terminal No. 2 Liquid Cargo Wharf:
Owners: City of Richmond.
Operated by: Richmond Terminal Agency for California Oils Co.
Use: Receipt and shipment of vegetable oils, chemicals and etrochemicals.
Dimensions: Berthing length 720 ft.; depth alongside at MLLW 35 ft.

exaco Wharf:
Owners: Texaco Inc.
Operated by: Texaco Inc.
Use: Receipt and shipment of petroleum products.
Number of Berths: One.
Water Depth: 35 ft.
Dimensions: Length of face 600 ft.

ime Oil Company Wharf:
Owned and operated by: Time Oil Co.
Use: Receipt and shipment of petroleum products.
Number of Berths: One.
Water Depth: 35 ft.
Special Remarks: 3×10 in. pipelines extend to 25 steel storage tanks n rear; total capacity of 618,000 barrels.

nion Oil Co. Tanker Dock:
Owned and operated by: Union Oil Co. of California (also services nitank).
Use: Receipt and occasional shipment of petroleum products; unkering vessels.
Dimensions: Length of face 225 ft.; lower end 45 ft.; upper end 45 ft.; epth alongside at MLLW 35 ft.
Mechanical Handling Facilities: Hose handling at wharf is by ship's ear and small tractor crane.

nion Oil Co. Barge Dock:
Owned and operated by: Union Oil Company of California.
Use: Shipment and occasional receipt of petroleum products; unkering vessels.
Dimensions: Length of face 150 ft. (approx.); lower end 45 ft.; depth longside at MLLW 35 ft.
Mechanical Handling Facilities: Hose handling at wharf is by ship's ear and small tractor crane.
Remarks: Wharf and Tanker Docks are spaced about 230 ft. apart; ogether they provide 1 large tanker berth.

SURVEYORS: Surveyors are available from various San Francisco Bay rea companies and organisations.

EMERGENCY CO-ORDINATION CENTRE: The Emergency Co-ordination Center for the Port of Richmond is the U.S. Coast Guard, San Francisco, California. CA. Tel: (415) 556-2103.

BANKS:

Bank of America, Richmond Main Office, 261 Harbour Way South, Richmond, California. Tel: (510) 841-4443. Telex: TWX (San Francisco) 910 372 7720.

Central Bank, Civic Center Office, 2705 Macdonald Avenue, Richmond, California. Tel: (510) 233-5710. Telex: TWX (Oakland) TLX 17-1329.

Crocker National Bank, 3900 Macdonald Avenue, Richmond, California. Tel: (510) 235-6458.

The Mechanics Bank, Civic Center Office, 22nd and Macdonald Avenue, Richmond, California. Tel: (510) 222-0340. Telex: TWX 910 382 8167.

Wells Fargo Bank, 1221 Macdonald Avenue, Richmond, California, Tel: (510) 232-3435. Telex: TLX 34-0284 (San Francisco-International).

STORING: See "Prelims".

1. Yes.	4. Yes.
2. Yes.	5. Normal U.S. Customs Regulations apply.
3. Yes.	6. Yes.

AUTHORITY: City of Richmond, Port of Richmond, 2600 Barrett Avenue, P.O.Box 4046, Richmond, California 94804. *Tel:* (510) 215-4000. *FAX:* (510) 233-3105. *Contact:* Michael R. Powers, Port Director.

RICHMOND, Virginia: 37.32 N. 77.25 W. (See Plan)

LOCATION: On the James River, 90 miles from Chesapeake Bay.
DOCUMENTS: See "Hampton Roads".
PILOTAGE: Entrance through Hampton Roads. Virginia Pilots Assn. original contact same as for Norfolk, Virginia. Pilots will arrange for change of Pilots to proceed up the James River.
ANCHORAGE: Hampton Roads Anchorage, also river anchorage approximately 40 miles up river, shown as "Upper Brandon" on charts.
RESTRICTIONS: Vessels up to 255 ft. LOA may transit at night from Hopewell to Port of Richmond.
James River Dimensions:

Hampton Roads to Hopewell – 300 ft. wide, 25 ft. depth.
Hopewell to Port of Richmond – 200 ft. wide, 25 ft. depth.

Standard operations for vessels destined to Richmond: Earliest departure from Newport News 5.5 hours prior to sunrise; latest departure from Newport News 7 hours before sunset.

From Richmond to sea: Earliest departure from Richmond 30 minutes before sunrise; latest departure from Richmond 2.5 hours before sunset.
MAX. SIZE: Maximum length (daytime): Container ships 559 ft. LOA and breakbulk ships 564 ft. LOA. Maximum draft 22 ft. Depth of channel 25 ft. MLW. Tide range: 3 ft. 5 in.
HEALTH: See "Health: All ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: See "Hampton Roads".
TUGS: Not needed for berthing unless vessel is to be turned around. Tug available from Blaha Towing, Inc. on reasonable notice.
BERTHING: Vessels berth alongside wharf 1,250 ft. long. Depth 25 ft. at MLW.

Turning Basin: 600 ft. at widest point, 1,600 ft. length.
CRANES: M-250 Manitowoc; 4600 Manitowoc; 4100 W Manitowoc; 350 tons capacity.
BRIDGES: 3 bridges across the James River between Hampton Roads and the Port of Richmond. No specific time or notice required. Air draft 145 ft.
STEVEDORES: Meehan Overseas Terminal Ltd., 5000 Deepwater Terminal Road, Richmond, Virginia 23234. Tel: (804) 275-9248. Fax: (804) 275-7461.
MEDICAL: Vessels cleared by U.S. Health Officials at Hampton Roads before proceeding up river.
DENSITY: 1000.
FRESH WATER: Available at pier.
FUEL: Bunkers available from Ocean Shipping Services, Inc., 9900 Saybrook Court, Richmond, Virginia 23236. Tel: (804) 320-5022.
CONSULS: No consuls in Richmond, handled through Hampton Roads or Washington, D.C. if needed.
REPAIRS: Only minor repairs, no shipyards.
GANGWAY/DECK WATCHMEN: None required, unless crew detained by U.S. Immigration.
OPENING/CLOSING HATCHES: On bulk vessels, usually opened and closed by ship's crew, also steel hatches handled by ship's crew, sometimes determined by terms of Charter.
CERTIFICATES:

Ship's Register.	Tonnage tax receipts.
Load Line Certificate.	Certificate of nationality.
Safety Certificate.	Passenger Certificate.

CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes (1 carton for 2/3 days) if further allowance is needed Customs Officer will return on request of Master. Wine and Spirit, 1 bottle per officer, Customs Officer will return on request of Master.
REPATRIATION: Handled through Norfolk, Virginia.
AIRPORT: Approximately 10 miles from port, regular airline service.
TIME: Eastern Standard Time, GMT minus 5 hours. Daylight saving time from first Sunday in April to last Sunday in October.
HOLIDAYS: January 1st, January 15th (Martin Luther King Day), Good Friday, May 30th, July 4th, Labour Day (1st Monday in September), Thanksgiving Day, Christmas Day.
POLICE/AMBULANCE/FIRE: Police Tel: (804) 780-5100. Ambulance Tel: (804) 355-9300. Fire Tel: (804) 780-6640. Emergency telephone number for all services is 911.
TELEPHONES: No arrangements for placing aboard vessels.

SHORE LEAVE: Allowed. Proper papers should be available.
IDENTIFICATION CARDS: Immigration landing permit required.
GARBAGE DISPOSAL: A collection service using dumpsters is available through Meehan Overseas Terminal Ltd., for terminal operator, Tel: (804) 275-9248 and Fax: (804) 275-7461. Drums or skips are not provided on board or alongside vessels for this service.
WASTE OIL DISPOSAL: A collection service is available through the Port of Richmond, Tel: (804) 743-7678 and Fax: (804) 271-1524. There are no shore tanks, barges, tanker trucks or special berths for this service.
SEAMAN'S CLUBS: Rev. G.C. Harbuck, Jr., of the Catalytic Language Missionary provides services for seafarers. The address of the Catalytic Language Missionary is 1913 Grove Avenue, Richmond, Virginia 23220; Tel: (804) 355-0225, (804) 743-1502.

Meehan Overseas Terminal Ltd. (the terminal operator) provides international telephone service for seafarers in their Shipping and Receiving Office on port.
CURRENCY: The name of the local currency is the U.S.Dollar. No currency exchange facilities are available in the port. Foreign currency may be exchanged at the Crestar Bank, 919 E. Main Street, Richmond, Virginia 23219. Tel: (804) 782-5689.
DEVELOPMENTS: The Port of Richmond is in the process of implementing an $8.8 million Master Development Plan, which includes a 315 ft. wharf extension, major site improvements to maximise container handling, storage and gate operations, construction of a new maintenance building, stormwater detention pond, rehabilitation of the vehicle storage building and paving of over 13 acres of container storage area. The project should be complete by the end of Summer 1995.
AUTHORITY: Port of Richmond, 5000 Deepwater Terminal Road, Richmond, Virginia 23234. *Tel:* (804) 743-7678. *FAX:* (804) 271-1524. *Contact:* Martin J. Moynihan, Executive Director.
Terminal Operator: Meehan Overseas Terminal Ltd., 5000 Deepwater Terminal Road, Richmond, Virginia 23234. *Tel:* (804) 275-9248. *FAX:* (804) 275-7461.

RIVERHEAD, Long Is., New York: 41.00 N. 72.39 W.

(See Plan)

LOCATION: The fixed Offshore Tanker Berth is situated 1.2 miles offshore from the North shore of Long Island in Long Island Sound, 4 miles 257° True from the beacon on Mattituck Inlet Breakwater and 12.7 miles 178.5° True from Falkner Island Lighthouse. The geographical position of the centre point of the Operating Platform is in Lat. 41° 00′ 01″ N., Long. 72° 38′ 50″ W. The platform has 4 navigation lights situated on each corner of the structure flashing every second. A similar navigation light is also situated on each of the East and West mooring dolphins.
DOCUMENTS: See "New York".

Terminal will provide "Declaration of Inspection" Form which must be completed before cargo transfer begins.
PILOTAGE: Pilotage must be arranged by the vessel or vessel's Agent. Vessels arriving from sea with a draft of 40 ft. or less will pick up the pilot 2 miles South of Point Judith Buoy No. 2 (normally found at Lat. 41° 19.3′ N., Long. 71° 28.5′ W.).

Vessels proceeding to Riverhead from the New York Harbour will normally embark a Pilot at anchor or at a berth in New York.

The Pilot Associations serving the Riverhead area are:

Interport Pilots Associates, Inc.,
Post Office Box 312,
Atlantic Highlands.
New Jersey 07716.
Tel: 201-291-1310.
Cables: Port Pilots – Atlantic Highlands, New Jersey.

Northeast Marine Pilots, Inc.,
243 Spring Street,
Newport,
Rhode Island 02840.
Tel: 401-847-9050 (weekdays), 401-331-4824 (nights, weekends and holidays)
Cables: RIS Pilots Providence.

Sandy Hook Pilots
201 Edgewater Street,
Staten Island,
New York 10305.
Tel: 718-448-3900.

The Pilot will act as Docking Master when berthing vessels alongside the Tosco Corporation Platform.

The Pilot is required to remain aboard the vessel (for Tosco's account), on standby, while the vessel is moored at the offshore platform.
ANCHORAGES: Vessels awaiting berth will normally anchor North of the Offshore Platform. Vessels drawing more than 50 ft. may wish to anchor in deeper water Northwest of the platform. Pilots are familiar with the best anchoring areas. Holding ground is good, and a scope of 90 fathoms (6 shackles) of chain is considered adequate.
RESTRICTIONS: Generally, vessels are moored on any stage of the tide and at night when weather conditions permit.
MAX. SIZE: The maximum size vessel which can be received in the North Berth is 225,000 d.w.t., 1,150 ft. LOA and 62 ft. draft.

The maximum vessel size which can be received in the South Berth is 42,000 d.w.t., 600 ft. LOA and 42 ft. draft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
COMMUNICATIONS: Telephone at Riverhead, station to station: Dial (516) 284-2000. Cable Address "Tosco Corporation Riverhead New York". Radio I.T.T. Amagansett. TWX No. 96-1415, TWX No. 510-224-6443 or 510-226-7837.

Use of the vessel's main radio equipment while at the platfo expressly prohibited. If a tanker's main radio telegraph must be te following repairs, arrangements must be made to stop the transfe cargo during the tests.

Wireless messages are most expeditiously received if transmitted "RCA Chatham".
VHF: Communications with the Terminal may be conducted by V Channels No. 16 and 19A; with the platform on Channels No. 16 a 19A; and the utility boat on Channels No. 13, 16, 19A, 12, 6 and 2 Channel No. 16 is monitored by all stations when manned. A priv frequency radio is provided to the Person-in-Charge of the vessel du oil transfer operations.

VHF Marine Operators use VHF Channels: Riverhead (N.Y.) Mar Operator 28; New London and New Bedford Marine Operators 2 Bridgeport Marine Operator 24; to place land calls.
TUGS: Tug assistance for docking is required, and will be arranged the vessel's Agent. Normally, 2 or 3 tugs will be used for docking a one tug for undocking at the Riverhead Tanker Platform, subject to t agreement of the Pilot and Master. Tugs are usually arranged throu Red Star Towing Co., based in New Haven, Connecticut (because the shorter running time from that port).

Tugs normally based in New Haven are:

Newport (1,800 s.h.p., 20 ton B.P.)	Single Screw
New Haven (1,800 s.h.p. 17 ton B.P.)	Twin Screw

Call Red Star Towing Co. on (212) 536-3800.

Tugs must be ordered at least 24 hours in advance of the schedu docking time.

Red Star has additional horsepower available, if given adequa notice, including: Stanford (3,000 s.h.p., 32 L.T. B.P.), Crusader (4,0 s.h.p., 47 L.T. B.P.).

Other tugs are available from New York Harbour, or from t Providence Steamboat Co., Providence, Rhode Island, on (401) 3 1930, which has 3,000 h.p. tugs available.
BERTHING: Vessels calling at the Offshore Platform or pier are moor at any time. The tidal current periods are substantially the same as t Race. Strong winds from the North and Northwest are experienc during the Winter and Spring. Tidal currents during maximum ebb a flood may reach 3 knots. Both docking and undocking operations m be delayed due to adverse weather conditions.

The mean range of the tide is 5.4 ft.

A terminal working crew will board arriving vessels from a 60 ft. ut boat on approach to the mooring platform. This crew will prov assistance and information to the vessel's Master and the line handl crews. The crew carries private-frequency radios for communication w the platform in positioning and mooring the ship.

The designated Person-in-Charge for Tosco Corporation will recei and sign the Notice of Readiness and complete all paperwork necessa for the transfer of cargo. Two representatives of the terminal will boa each tanker as it approaches the platform. They will provide ra communications with the platform and terminal, and advice a assistance while mooring the ship.

North Berth: Vessels berthed during flood tide will moor starboa side to and during the ebb tide current will moor port side to. Forwa and stern spring lines are secured to breasting dolphins and bow a stern lines are made fast to mooring dolphins located to the East a to the West of the platform structure. Terminal Foreman boards vess to provide communications and assistance during mooring operatio

South Berth: Vessels berthed during flood tide current will moor p side to and during the ebb tide current will moor starboard side t Forward and stern spring lines are secured to the breasting dolphins the South Berth. Bow and stern lines are made fast to the moor dolphins located to the East and West of the platform structure. Brea lines are secured to the North breasting dolphins.

Two mooring buoys are situated South of the mooring facility whi were formerly used for mooring vessels in the North Berth. Moor buoys will be used at the discretion of the Docking Master (Pi and/or Tosco's Marine Supervisor.

Masters will note that platform is situated in an open roadstead a that all mooring equipment must be in proper working order and in goo condition. If, in the opinion of the Pilot (Docking Master) or Tosc Marine Supervisor, the vessel's mooring equipment is inadequate, t vessel will not be permitted to remain in the berth.

Vessels must be equipped with 12 manila or better mooring lines o not less than 8 in. circumference and not less than 90 fathoms lengt

Vessels having wire moorings secured on warping winches with bra are acceptable. Warping winches must be adequate to handle moor lines under heavy strain. Efficient stopper lines must be readily availa to transfer mooring lines from winch to bitts without loss of tension. T Docking Master (Pilot) will assist the Master in the berthing of the vess and supervise the mooring and unmooring operations.

No gangways are used at this terminal. Crew must use ship's ladd for launch service. Crew are forbidden to go on to the Platform, exce on ship's business.
BERTHING FACILITIES: *North Berth:* The distance between the Nor Breasting Dolphins is 294 ft., centre to centre. The depth of water in t North Berth is 64 ft. at low tide. Spring lines from forward and aft a secured on to quick-release hooks situated on the North corners of ea of the North Breasting Dolphins. Vessels moor heading either East o West and can normally be moored at any stage of the tide. Moor dolphins located East and West approximately 350 ft. from the cen of the platform provide the mooring points for bow and stern lines fr the vessel. The mooring dolphins have 4 quick-release hooks each f the North Berth, and 2 quick-release hooks each for the South Be These mooring hooks are provided with hydraulic releasing mechanis which can be operated remotely from the mooring platform during ves departure. Two mooring buoys are situated South of the moori dolphins to provide securing points for extra bow and stern lines fr very large vessels or in cases where anticipated severe weat conditions indicate the need for additional lines.

South Berth: The distance between the South Berth Breasting Dolphins is 160 ft., centre to centre. Spring lines from forward and aft are secured to bollards situated on the South Breasting Dolphins. Bow and stern lines are secured to the mooring dolphins described for the North Berth, breast lines to the South bollards or the mooring hooks on the lower decks of the North Breasting Dolphins. Depth of water 45 ft. at MLW

Operating Platform: The Operating Platform is 100 ft. long by 45 ft. wide.

The East Building contains 2 diesel powered 100 KW. generators, either of which will supply sufficient power to drive the deepwell Fire Pump rated at 750 g.p.m. at 120 p.s.i. The other generator will supply power to the hydraulic system for the operation of the loading/unloading (L/U) arms, the electric mooring capstans and air compressor, as well as illumination of the structure, including floodlighting and other electrical devices. A diesel powered 15 KW. alternator is available for normal power requirements such as charging emergency lighting system batteries, navigation aid batteries and normal illumination.

The West building contains quarters for personnel, office space for recordkeeping, radio and telephone communication equipment, and emergency and other control equipment. The quarters and control room are situated in the North half of the building and South half of the building is available for storage of emergency equipment, i.e. sorbent boom, life jackets, etc.

There are 4 hydraulically operated L/U arms, 2×12 in. and 2×16 in., situated at the North end of the Operating Platform. At the South end of the platform 2×12 in. L/U arms are situated to accommodate the South Berth. Connections can be made to 8 in., 10 in., 12 in., 14 in. and 16 in. 150 p.s.i. A.N.S.I. manifold flanges. Connections cannot be made directly to valve flanges (spool pieces must be provided). Adjacent connections cannot be made to flanges less than 6 ft. apart. The L/U arms are connected to the platform manifold which is designed to handle all products to or from either berth and is connected to the 2×24 in. submarine pipelines leading to the shore facility.

Approximately 1,200 ft. of 26 in. oil containment boom and 2,000 ft. of 36 in. containment boom is stored on lower level of Northeast and Northwest Breasting Dolphins. reasting Dolphins. The boom is stored in a manner so that it may be safely and effectively deployed in the event of an accidental discharge of petrolem into Long Island Sound.

Terminal Transfer Piping: Vessels discharging cargo at the offshore platform should understand that they are discharging to an oil storage terminal approximately 1.5 miles distant from the dock and at an elevation of 150 ft. above sea level. The pipeline is 24 in. in diameter. The static head pressure generated by this pipeline arrangement is about 56 p.s.i.

Booster Pump Operation: Booster pumps are available to assist with the discharge of vessel's cargo. However, the Person-in-Charge of the vessel must realise that it is necessary for the ship to generate sufficient discharge pressure (minimum of 75 p.s.i.) and volume (minimum of 7,000 bbls./hr.), at the booster pump inlet, to start moving the product in the pipeline and to permit the booster pump to be engaged. Each booster pump will normally move 10,000 barrels per hour. The normal start-up procedure when discharging at Tosco Corporation docks is as follows:

(a) following agreement to begin transfer, the shore opens the platform manifold valves;
(b) the vessel will start its cargo pumps and increase pump speed until a discharge pressure of about 60 p.s.i. is obtained at the top of the pump room;
(c) the ship opens its manifold valves;
(d) ship pump's speed is increased until a discharge pressure of 100 p.s.i. is obtained;
(e) the pumpman on the ship is stationed at the pump controls and the shore is requested to start the booster pumps;
(f) as the booster pumps are started, ship personnel adjust their pumps as necessary to prevent engaging the overspeed trip;
(g) the ship adds pumps and increases pump speed as necessary to maintain desired discharge pressure.

Rapid fluctuations in the discharge pressure of the ship will cause the booster pumps to trip-out. To avoid this, speed adjustments to the ship's pumps should be made gradually. Booster pumps are set to trip-out at a low pressure of 75 p.s.i. and, therefore, can provide no assistance to the ship for stripping cargo ashore.

After all cargo tanks have drained and the pumps have lost suction, the discharge of cargo will be declared finished. With the agreement between the Ship's Officer and the Platform Operator, the oil transfer valves on the Operating Platform will be closed. All product remaining in the unloading arms will be drained back into the vessel. If the vessel's pipeline system does not allow the complete draining of the unloading arm, then arrangments must be made to drain the arm into a container or via a drain hose into a cargo tank. *No product will be permitted to drain out on to the open deck of the vessel.* After the arms have been completely drained, they may be disconnected and the ends blanked off to prevent any drippage of oil.

The discharge pressure at the rail shall be a minimum of 100 p.s.i. (maximum 125 p.s.i.) or the vessel's pumping rate shall be a minimum of 10,000 bbls./hr.

LOADING/DISCHARGING:

Discharging: Tankers are expected to achieve an unassisted discharge rate of 10,000 barrels per hour. Ships discharging at less than 10,000 barrels per hour will be subject to charges for the extra platform time used.

High Pour Petroleum: High pour petroleum must be discharged at 4,500 barrels per hour or more. If the discharge rate falls below 4,500 barrels per hour for more than 2 consecutive hours, the vessel will be instructed to stop discharge of cargo and leave the platform. If the submarine line must be displaced from shore to vessel due to low discharge rate, ship will be responsible for all expenses due to this procedure. Laytime will stop and wharfage will commence.

No. 6 oils, or other viscous products shall be heated, before discharge, to at least 120°F (49°C), or at least 30°F (17°C) above the pour point of the product, whichever temperature is higher. (For example: Oil with a pour point of 75°F must be heated to 120°F or higher. Oil with a pour point of 100°F must be heated to 130°F or higher).

A "viscous" oil is one which has a Saybolt Furol Reading greater than 25 seconds at 122° F. (This requirement is dependent, to a degree, on the pour point, discharge temperature, viscosity, and average discharge rate. The terminal reserves the right to order any vessel to stop discharging at any time terminal operations require.)

Loading: Tankers can be loaded at rates up to 30,000 barrels per hour at the request of the vessel and with the agreement of the terminal.

BALLAST: No ballast disposal facilities. Long Island Sound is inland water and United States Anti-Pollution Regulations rigidly enforced. No bilge water, oil-contaminated water, garbage or any waste matter which may pollute sea water is to be discharged overboard while vessel within Long Island Sound and approaches.

Ballast suction valves must be sealed with a numbered seal on arrival. Terminal personnel will inspect seals before and after cargo transfer.

MEDICAL: A full-service hospital is available in Riverhead for treatment of medical emergencies. This is Central Suffolk Hospital located at the traffic circle/intersection of Roanoke Avenue (Route 73) and Route 58, Riverhead, about 4 miles from the Tosco Terminal.

Emergency transportation to this hospital can be obtained by dialling 911 and indicating to the dispatcher the location of the medical emergency, for instance: "on the ship at the Tosco Corporation's Riverhead Terminal on Sound Shore Road".

DENSITY: Flood tide density 1025. Ebb tide density 1020.

STORES/FRESH WATER: No fresh water facilities. Stores should be ordered through the ship's Agent. For delivery of stores at anchor, or alongside the platform, Miller Launch. Tel: (516) 473-0132.

FUEL: Bunkers *may* be available by special arrangement *if* pipelines are in black-oil service.

Ship's bunkers should be ordered through the Agent, from the regular supplier for delivery, by barge, at anchor. Bunkering of ships is not permitted while alongside Tosco Corporation Docks. Eckloff Marine (212) 442-1112 and Standard Marine Services, Inc. (212) 888-1818 will perform bunkering services.

CONSULS: All Consuls offices located in New York City.

REPAIRS: No repair facilities are available. Vessel must remain in sailing readiness at all times while moored at the platform facilities.

DRY DOCKS: At New York Harbour.

SURVEYORS: *Inspection Companies:*

Caleb Brett – New Jersey. Tel: (201) 925-8282.
Independent Petro. Insp. Tel: (201) 925-4960.
S.G.S. Control Services. Tel: (201) 541-7200.
Saybolt. Tel: (201) 245-3100.

Surveyors:

American Bureau of Shipping, 65 Broadway, NY, NY 10006. Tel: (212) 440-0300.

Bureau Veritas, 17 Battery Pl. N., NY, NY 10004. Tel: (212) 442-2317.

Det Norske Veritas, 616 Palisade Avenue, Englewood Cliffs, NJ. Tel: (212) 868-6595.

Lloyd's Register of Shipping, 17 Battery Pl., NY, NY 10004. Tel: (212) 425-8050.

Panama Bureau of Shipping, 104 E. 40 St., NY, NY 10016. Tel: (212) 867-4760.

QUARANTINE, CUSTOMS AND IMMIGRATION: New York City is the quarantine, customs, immigration and agricultural quarantine port of entry for Tosco. Officials are stationed in New York City. Arrangements for inspections of vessels arriving from foreign ports must be made by ship's Agent in advance, not less than 24 hours before arrival on Monday through Friday, and 48 hours on Saturday or Sunday. Vessels arriving from foreign ports are reminded to provide 24 hours' pre-arrival notice to the U.S. Coast Guard, Captain of the Port, New Haven, Connecticut.

Officials will board vessels in the anchorage prior to arrival, within the vicinity of the offshore platform.

Customs Officers: Customs officers will board all vessels arriving from a foreign port, or U.S. flag vessels arriving with foreign cargo. The Customs Officer must be the first person aboard the ship (with the exception of the Pilot). He will require the close assistance of the ship's cargo officer and the public inspector, for the prompt completion of his duties. Agents are requested to order U.S. Customs Inspectors for a time *2 hours before* the vessel's ETA at the terminal.

For questions concerning Customs business, the Regional Office should be contacted on (212) 466-4407 during business hours, otherwise the Communications Office on (212) 466-5472 should be contacted.

Immigration: An Immigration Officer will normally board vessels arriving from foreign ports. Until clearance is obtained from the Immigration Officer, no crew members may leave the ship.

For questions concerning Immigration matters, contact the District Office on (212) 264-5886.

Coast Guard Inspections: Coast Guard Officers may board tankers or barges at any time for the purpose of making inspections necessary to enforce the laws of the United States.

The Riverhead Terminal is within the jurisdiction of the Captain of the Port, New Haven, Connecticut, on (203) 773-2464.

A Regional Office is maintained at 1190 Old Town Road, Coram, NY.11726. Tel: (516) 732-0326.

CUSTOMS ALLOWANCES: Tobacco, wine and/or spirit allowance: Same as permitted in New York Harbour.

REPATRIATION: Crew members departing vessels from the Tosco Terminal may obtain transportation to domestic or foreign destinations (i.e. to an from either of the major international airports: J.F. Kennedy International Airport or LaGuardia Airport), by one of several methods.

The Riverhead Station of the Long Island Rail Road is located 10 minutes from the terminal by taxi and has services for both railway and bus.

Another method is limousine service. The following are limousine companies serving this area:

Long Island Airport Limousine. Tel: (516) 582-4077.
Winston Limousine. Tel: (516) 563-1323.
Transport Limousine of L.I. Tel: (516) 567-5100

AIRPORT: New York Airports, 80 miles distant. Islip Mac Arthur Airport, 35 miles distant.

POLICE/AMBULANCE/FIRE: Terminal attends Police/Ambulance and Fire services.

State Police Tel: 727-2727, Police Tel: 911 (Emergencies only). Fire Tel: 0 (to report fire, otherwise 727-2750). Ambulance Tel: 911 or 298-4016.

EMERGENCY CO-ORDINATION CENTRE: United States Coast Guard at New Haven, Connecticut. Tel: (203) 773-2464; and the United States Coast Guard National Response Centre. Tel: (800) 424-8802 (toll free number).

BANKS: European American Bank, located at 209 West Main Street, Riverhead, New York, NY 11901. Tel: (516) 727-7082.

STORING: Bunkers must be taken at anchor. Stores can be loaded during transfer.

Trucks cannot proceed alongside the berth, but by launch only.

Fork lift trucks cannot be used to handle stores.

Customs Regulations regarding storing are not known by this terminal.

Local Riggers can be employed to assist with storing.

TELEPHONES: A coin telephone is located in the platform office. Tel: (516) 727-9549.

SHIP SUPPLY SERVICE: *Launch Service:* Launch service must be arranged for by the vessel's Agent, and can be obtained from: J. & H. Launch Service, Port Jefferson, New York. Tel: (516) 331-5336.

The launches operate on VHF Channels 8 or 13.

Riverhead: Launch service must be provided for the transportation to and from the offshore platform of boarding officials, ship's personnel, repair personnel and ship's stores. The launch service must be maintained for the duration of the vessel's stay at Riverhead.

The terminal's workboat will assist in the mooring of the vessel and the connection of L/U arms, and shall at all times render the general servicing of the platform operation. It must remain at or near the platform during petroleum transfer operations in the event of any emergency.

In the event of an oil spill, J & H Launch Service will assist in the deployment of the spill containment boom. Their launch crew and Tosco's marine personnel have been trained to implement the appropriate response to a spill in accordance with Tosco's Facility Response Plan.

SHORE LEAVE: Shore leave permissible by arrangement with local launch service.

IDENTIFICATION CARDS: Issued by Immigration Officer.

GARBAGE DISPOSAL: *Ship Generated Garbage Reception Facilities:* United States laws prohibit the dumping of any garbage, trash, refuse or debris overboard while within U.S. navigable waters. Procedures for the reception and disposal of garbage received from vessels at Tosco Corporation's Riverhead and Port Jefferson facilities are in compliance with 33 CFR Parts 151, 158 Annex V of MARPOL, the International Convention for the Prevention of Pollution from Ships, and the Animal and Plant Health Inspection Service (APHIS) Regulations 7 CFR 330.400 and 9 CFR 94.5.

General Procedures: Both foreign and domestic vessels are received at Tosco's Terminals. Tosco's policy is to take the most conservative approach to the disposal of garbage received from vessels. Tosco will assume no liability associated with these wastes. A vessel desiring to tender any garbage must give the Terminal at least 24 hours notice, and state the volume and approximate weight of the refuse. No chemicals or flammable materials will be accepted for disposal.

1. All garbage and any medical or infectious wastes generated from foreign vessels, or any vessel arriving from a foreign port, will be incinerated in accordance with APHIS approved procedures.
2. Segregated of regulated wastes (i.e. medical or infectious wastes or plastics) from general domestic ship generated garbage shall be the sole responsibility and obligation of the vessel.

Foreign Vessels: (Including U.S. vessels holding foreign stores).

Packaging: Any vessel requesting garbage disposal will be provided with 4 mil polyethylene bags and fibre drums with securable rings from Miller Environmental Group (MEG). All garbage shall be double bagged and the exterior bag will be tagged indicating vessel's name and date. Bags will then be placed in sealable drums which are pre-labelled with EPA-DOT required insignia.

Handling: Subject to the approval of the U.S. Customs Inspector, MEG launch personnel will receive and inspect each drum generated from the ship. If the drum is properly sealed, the ship's name and date will then be written on the outside of each drum with weather-proof marker. The number of drums, total weight, ship's name, date and location will be completed on the Bill of Lading, with one copy presented to the ship's officer and the remaining two copies intact for tracking with the drums.

Transportation: Properly packaged drums will be placed in secure storage in Tosco's Terminal. MEG will contact Medi-Waste Ltd., 44 Field Street, West Babylon, New York (Tel: 516-249-3131), for pick-up and transportation to their incinerator. *Incineration will take place within 4 days of receipt of the garbage.* The final Bill of Lading and all invoicing for this service will be for the account of the vessel and will be forwarded to the ship's Agent by MPC for payment.

WASTE OIL DISPOSAL: *Oily Waste Reception Facilities:* In accordance with requirements of the International Convention for the Prevention of Pollution from Ships (MARPOL 73/78) and with United States Coast Guard Regulations 33 CFR Part 158, Tosco Corporation will provide oily waste reception facilities at its Riverhead and Port Jefferson Terminals. Both Terminals have received Letters of Adequacy from the U.S. Coast Guard, COTP, New Haven.

The established capacity for oily waste reception at each facility is ten metric tons (3,360 gallons) per day. The oily waste is limited to sludge from on-board fuel, lubricating oil processing equipment and oily bilge water. Vessels visiting the Riverhead offshore platform will be required to transfer the oily waste to a licensed waste hauler at anchorage. T service will be provided at Riverhead between April 30th to Octob only, weather permitting. Ballast water *will not* be received in Tosc Riverhead or Port Jefferson facilities.

Vessels requesting the disposal of oily waste at Tosco's Termi must request this service 24 hours in advance. The U.S. Environme Protection Agency (EPA) and the N.Y.S. Department of Environme Conservation require that any transfer of oily waste be carried transport trucks approved and licensed by the state. A Hazardous Wa Manifest must accompany the transport truck, and must identify generator of the waste to be disposed. The generator's U.S. E identification number, name and registry of the vessel *must* be sta It is essential that you register with the U.S. EPA and obtain a genera identificication number, if you wish to dispose of oily waste at Tosc facilities.

Payment for the cost of transportation and disposal of the oily wa shall be borne by the vessel's owner or its Agent. For ten metric t of oily waste, the cost may range from $ 3,000 to more than $ 25,0 The cost will depend upon the method of disposal of the waste determined at the waste disposal site by laboratory analysis and a indication of toxic content.

Before acceptance by the waste hauler of any oily waste, Tosco w require satisfactory proof of ability to pay and assurance of payment to, but not limited to, $ 25,000. Tosco will also require indemnifica against any liability arising from the transfer, transportation and/or t disposition of the oily waste.

SEAMAN'S CLUBS: Seamen's Church Institute, 241 Water Stre New York, New York 10038.

WEATHER AND TIDE: Strong winds from North and N.W. experienc during Winter and Spring. Tide during maximum ebb and flood of reaches 3.5 knots to 4 knots velocity.

ROCHESTER, New York: 43.17 N. 77.36 W. (See Pla

Refer to "St. Lawrence Seaway" for important general information. See "General" below.

PILOTAGE: Not necessary.

ANCHORAGE: No anchorage available within harbour limits.

RESTRICTIONS: Permit for non-emergency docking must be obtaine 2 weeks in advance by mail or telephone request.

MAX. SIZE: Channel depth 20 ft. (LW). All depths in channel alongside wharves should be checked carefully against the late recorded elevated or lake level. This may vary from month to mon Entrance width 300 ft., turning basin depth 20 ft., 600 ft. in width.

HEALTH: See "Health: All Ports" before first U.S.A. port (Alban Illness Reports made to New York Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Rochester Coast Guard Station.

TUGS: Not available.

BERTHING: Entrance piers are parallel to each other, and about 450 apart. The West Pier is 3,036 ft. long and the East Pier 2,699 ft. lo Fog horn and beacon on West Pier, East pierhead lighted. Rad beacon. Port Authority Terminal located on West bank of Genesee Riv at end of Lake Pier. Has a quay wall of about 1,400 ft. in length. Dep of water alongside quay wall uncertain, estimated at between 10 ft. a 16 ft. Charlotte Docks located about 2 miles upstream from mouth river on West bank.

CRANES: Not available, except through private arrangements.

BRIDGES: New York Central Railroad swing bridge near mouth of th river and upstream from Port Authority Terminal. Traffic lift bridge abo 0.25 mile upstream from railroad bridge.

STEVEDORES: Vessel to make own arrangements.

DENSITY: Fresh water.

FRESH WATER: Available at Port Authority Dock only.

FUEL: Vessel to make own arrangements.

CONSULS: None.

REPAIRS: Minor only.

REPATRIATION: Can be arranged.

AIRPORT: Approximately 10 miles from port.

POLICE/AMBULANCE/FIRE: Police, Ambulance and Fire Tel: 911.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Required.

GARBAGE DISPOSAL: By special arrangement only. Contact Was Management of New York. Tel: (716) 254-3500.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

GENERAL: Rochester, New York, no longer operates a commerci port. The facilities are available only for tour and cruise boats to ta on and discharge passengers, and by commercial vessels in the ca of an extreme emergency.

It should be stressed that emergency docking is completely th Master's responsibility. The City of Rochester and the Department Recreation and Community Services assume no liability for any ves docking under emergency conditions at the former Port of Rochest

AUTHORITY: City of Rochester, Department of Parks, Recreation a Human Services, Office of the Director, 400 Dewey Avenue, Roches New York 14613, U.S.A.. *Tel:* (716) 428-6755. *FAX:* (716) 428-6 *Contact:* Director of Recreation.

SACRAMENTO, California: 38.32 N. 121.30 W. (See Plan)

DOCUMENTS: See "San Francisco".
PILOTAGE: Pilots board vessel in San Francisco Bay. (Also see "San Francisco").
RESTRICTIONS: *Ship Channel:* Distance Fort Point to Sacramento, 79 nautical miles (146 km.). Bottom width in river reach 300 ft. (91.4 m.). Bottom width in channel reach 200 ft. (61.0 m.). Min. depth at MLLW 30 ft. (9.1 m.).
Harbour: Area 60 acres (24.3 hectare). Min. depth at MLLW 30 ft. (9.1 m.). Tidal variation 5 ft. (1.5 m.) average.
MAX. SIZE: 800 ft. LOA and 106 ft. beam, 30 ft. deep at MLLW.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to San Francisco Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: KBA 386, 156.9 MHz (24 hours).
TUGS: Join vessel at Light 76 (turning basin).
BERTHING: Anchor – ships will have at least 1 anchor ready to let go in case of emergency, when docking or undocking. Anchor will be raised immediately upon ship being made fast to wharf.

Insurance lines are required on off-shore side, fore and aft, immediately after ship is made fast to wharf.

A cargo net shall be securely placed under gangways. Save-all nets shall be rigged abreast of holds at which general cargo is being handled.

Rat guards, at least 3 ft. in diameter, shall be placed on all mooring lines immediately after docking, and shall be maintained in place until ship's departure.

Pier 1:
Owned and operated by: Port of Sacramento.
Use: Bulk-loading rice facility.
Construction: Concrete with timber fender piles, length 600 ft. (182.9 m.).
Water depth: 32 ft. (9.8 m).
Storage capacity: 22,000 tons; 8 silos at 2,200 tons each; 6 silos at 470 tons each; 6 silos at 270 tons each.
Mechanical handling facilities: 3 loading spouts dockside, conveyor system to storage facility.
Loading rate: 600 t.p.h.

Wharf 2:
Owned and operated by: Port of Sacramento.
Use: General cargo.
Construction: Concrete with timber fender piles; apron width 60 ft. (18.3 m.); length 600 ft. (182.9).
Water depth: 30 ft. (9.1 m.).
Transit sheds: One, 86,400 sq. ft.

Pier 5:
Owned by: Port of Sacramento.
Operated by: Cargill of California, Inc., as a public utility.
Use: Bulk-grain facility.
Construction: Concrete and steel silos; concrete with timber fender piles; length 600 ft. (182.9 m.).
Water depth: 32 ft. (9.8 m.).
Storage capacity; 1,250,000 bushels (30,000 tons); 17 concrete silos; total capacity 500,000 bushels; 6 steel silos; total capacity 750,000 bushels. Two dry bulk storage domes of 9,000 tons storage each.
Mechanical handling facilities: Bulk ship loader (600 t.p.h.), conveyor belt system connects bulk storage/rail/truck.

Wharf 6:
Owned and operated by: Port of Sacramento.
Use: General cargo and containers.
Construction: Concrete with timber fender piles; length 600 ft. (182.9 m.); apron 60 ft. (18.3 m.).
Water depth: 30 ft. (9.1 m.).
Remarks: 6 acres of open wharf; 70,000 sq. ft. off dock warehouse.
Wharves 7-8:
Owned and operated by : Port of Sacramento.
Use: Bulk material facility and general cargo.
Construction: Concrete with timber fender piles; apron 60 ft. (18.3 m.), length 600 ft. (182.9 m.).
Water depth: 30 ft. (9.1 m.).
Storage capacity: Covered 200,000 tons, open 750,000 tons.
Mechanical handling facilities: Conveyor-belt system from truck to storage, from ship to storage; from storage to ship, or from storage to truck.
Loading rate: 600 t.p.h.
Transit shed: 86,400 sq. ft. Bagging facilities for bulk cargoes.
STEVEDORES: Same as San Francisco. Port stevedores for bulk cargo.
MEDICAL: All normal medical facilities available.
DENSITY: Full fresh.
FRESH WATER: Available at all berths.
FUEL: All grades available with 24 hours notice. Delivered by barge.
CONSULS: Nearest at San Francisco.
REPAIRS: Limited repair facilities available.
GANGWAY/DECK WATCHMEN: Each ship shall have a security detail in readiness on board at all times it is in port. The security detail shall perform tasks of an emergency nature and shall have information concerning cargoes aboard in case of need for fire fighting purposes.
OPENING/CLOSING HATCHES: Opening/closing hatches is stevedore work while docked in port.
REPATRIATION: Can be arranged through local Agent.
AIRPORT: 16 miles from port and served by regular airlines.
TIME: GMT minus 8 hours.
HOLIDAYS: Only days not worked are 4th and 5th July, Labour Day, Christmas Eve and Day, New Year's Eve and Day.
POLICE/AMBULANCE/FIRE: Tel: 371-8000. Extensions 252 and 228.
TELEPHONES: Telephones are available.
SHORE LEAVE: Crew members allowed ashore subject to Immigration clearance.
GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany). Service available. Charges are man-hour rates to supply and remove double plastic bag lined 4.5 cu.ft. boxes for incineration plus per box incineration cost of $30 plus 25%. 24 hour notice must be given for garbage service. Contact Tel: (916) 371-8000, ext.280. Collection scheduled as needed.
WASTE OIL DISPOSAL: Not available.
SEAMAN'S CLUBS: None.
CURRENCY: U.S.Dollar (U.S.$).
IDENTIFICATION CARDS: A pass signed by the Master or his designated officer will be required for crew members, passengers and their personal property to leave the port's fenced area. Property may be subject to physical inspection before leaving the fenced area.
REGULATIONS: Ships will not blow boiler tubes while in port. Bilge water or oil will not be discharged into harbour. Accidents will be reported immediately to the Terminal Superintendent. Splash boards will be placed over disposal vent-pipe openings on inboard side of vessel.

Garbage – United States and California State laws make it unlawful to dispose of ship's garbage except in approved ways. Garbage retained on board must be kept in tightly closed containers.

Smoking – Smoking prohibited in and around cargo compartments, and on open decks except that it may be permitted in marked areas under sheltered portion of weather decks on offshore side. Smoking prohibited on wharfs and piers except in marked areas. Smoking prohibited on or near ship while it is bunkering.

Welding/Burning – Welding or burning will not be done until written approval is obtained from the Terminal Superintendent and the Fire Marshal. All requirements of both the Superintendent and Marshal will be strictly adhered to.

Fire Signal – Upon detection of a fire, regardless of location or size, the alarm of fire will be sounded. The alarm shall be sounded by telephone and/or whistle or siren blasts. 5 each, 5 second blasts repeated as necessary.
DEVELOPMENTS: Deep water channel dredging project to minimum 35 ft. by 1995.
AUTHORITY: Port of Sacramento, P.O.Box 815, World Trade Centre, West Sacramento, California 95691. *Tel:* (916) 371-8000. *FAX:* (916) 372-4802. *Contact:* Michael Vernon, Director.

SALEM, Massachusetts: 42.31 N. 70.53 W. (See Plan)

SHIPMASTER'S REPORT: August 1986.

DOCUMENTS: See "Boston".
PILOTAGE: Cape Ann Pilots Association (serves Gloucester and Salem). Pilot on VHF Channels 16 and 12. Pilot boards about 1 mile South of Eastern Light Buoy No. 2.
ANCHORAGES: About 2 miles S.W. of Eastern Point.
RESTRICTIONS: Salem Channel 150 ft. in width only, therefore large vessels berth or unberth in daylight hours only.
MAX. SIZE: Length 700 ft. (approx.). Breadth 110 ft. (approx.) and draft 34 ft. (salt water).
TUGS: Available from Boston.
BERTHING: New England Power Company (NEPCO) operates Salem Terminal Wharf to supply Salem Harbour Station with coal and fuel oil.

No cranes available, coal is discharged from "self-unloading vessels" only.
TANKERS: 2 arms (Chicksan-type), 12 in. diameter. Discharging rate: 7,000 bbls. each. Length of wharf (incl. dolphin) 250 m. (approx.) dredged to 34 ft. at LW.
DENSITY: 1022 – 1025.
AIRPORT: See "Boston", about 45 minutes. Cost U.S.$50 by van.
TELEPHONES: Not placed on board, however communication with Agents via VHF possible.
GENERAL: Port is served by 1 or 2 colliers a week, and about 3 tankers a month.

NEPCO Representative acts as Loading Master. Linesman are provided from the power station.

REPORT: From Tanker Operator:
Port Approaches: The RDF stations at Cape Cod, Boston Buoy 'B' and Eastern Point are useful navigation aids. The rocky shore lines provides a good target for position fixing by radar. Fathometer readings should not be relied on for position fixing purposes, since bottom contours are erratic. Fishing boat traffic in Massachusetts Bay is heavy especially near Gloucester. It should be noted that the small fishing vessels in this area sometimes display working and running lights that could be mistaken for reguar range lights. During the Summer months, the yacht traffic is considerable. Most yachts reportedly show up poorly on the radar screen.
Channel Transit and Berthing: Loaded tank vessels enter with a rising tide. The Pilot and Agent should be consulted with regard to the actual water depths available in the channel during the intended period of transit.

The transit from the pilot boarding area to the terminal is about 10 miles. Salem Sound is entered via the Salem Channel between Bakers Island and Little Misery Island, leading Westwards for 3 miles thence Southwestward through a dreged section to the turning basin off the berth. The channel is well marked with buoys and range lights.

Shallow vessels and tows crossing the channel may be met. During Summer months, Salem Sound is crowded with pleasure craft. Coast Guard patrol boats must sometimes be utlised to clear a path.

The tugs usually join the ship before entering the inner dredged channel Buoy No. 16. The ship is berth port side to, which requires a starboard turn of approximately 130° before landing.

During normal weather conditions, 10 mooring lines are considered to be the minimum acceptable.

Weather: Gales occur year round. The severest storms occur during the Winter months. Rain or snow associated with these storms, at times, reduce visibility to zero for extended periods. During the Winter months, freezing spray may be experienced.

Fog presents a problem year round, being heaviest during late Spring and early Summer. It is not advisable to enter or leave in thick weather.

REPORT: August 1994.

The offshore mooring dolphin has incurred extensive damage, and use for stern lines should be discontinued.

Stern lines will be run to a bollard ashore, approximately 100 yards (300 ft.) from stern of vessel, acting more as an after breast line (See "Plan").

Vessel will also be breasted off by 2×10 ft. diamater Yokohama fenders whilst repairs to the dock are being conducted.

AUTHORITY: *Operator:* Northeast Petroleum, 72 Cherry Hill Drive, (P.O.Box 1090), Beverly, MA 01915-0790, U.S.A. *Tel:* (508) 524-1552. *Telex:* 949409. *Contact:* Bruce Young, Port Captain.

SAN DIEGO, California: 32.41 N. 117.07 W. (See Plan)

PORT LIMITS: The seaward boundaries of the Port of San Diego at which a vessel is considered to be an "arrived vessel" is that time when the vessel is boarded by a Port Pilot at Sea Buoy No. 1 and (subject to charter party terms) lay time commences when Notification of Readiness is tendered at berth.

DOCUMENTS:

Crew Lists.
Passenger Lists.
Customs Documents.
Manifests.
Stores Lists.
Crew Curio Declaration List.

If the vessel arrives from foreign direct, 3 copies each of the above documents are required.

If the vessel movements are between U.S. ports, 2 copies each of the above documents are required.

Health Documents. Arrival from Foreign Direct, 1 copy only. All crew members should be in possession of valid vaccination certificates.

Manifests. Arrival from Foreign Direct, 1 copy of Travellers Manifest which remains with vessel, and 3 copies each of U.S. Customs Inward Foreign Manifest. Bills of Lading, ship's papers carried aboard vessel varies with steamship companies.

PILOTAGE: Compulsory. The San Diego Pilots do not maintain Pilots on station. Service is rendered according to ETA received from vessel. If any vessel's arrival or departure is delayed over 1 hour, an additional charge will be made. Telegraphic address of pilot station – radio ETA to "Pilots", San Diego. Advance notice of ETA required – 24 hours prior to arrival of vessel with amendments 2 hours prior to arrival. Pilot boat is 54 ft. in length, painted white. The exact area where Pilot boards the vessel is No. 1 sea buoy. Pilot on VHF Channels 16 and 12 (Tel: (619) 233-7814).

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: All radio messages go through the Los Angeles station for relay.

TIME: Local time GMT minus 8 hours. Daylight Saving Time becom effective the first Sunday in April and continues to the last Sunda October.

HOLIDAYS: Recognised holidays are: New Year's Day; Linco Birthday; Washington's Birthday; Memorial Day, Independence Labour Day, Columbus Day, Veteran's Day, Thanksgiving Statewide Election Day, Christmas Day, or any other legal holiday may be proclaimed by State or National Authority; when a holiday on a Sunday, the following Monday shall be observed as a holida

POLICE/AMBULANCE/FIRE: Non-Emergency Police Teleph Number is 236-6566. All other emergencies (including parame Tel: 911.

EMERGENCY CO-ORDINATION CENTRE: Local maritime emerge co-ordination is handled by the U.S. Coast Guard, San Diego Reg 2710 North Harbor Drive, San Diego, CA 92101. Tel: (619) 557-

TELEPHONES: Arrangements exist for placing telephones on bo No charge for hooking up.

SERVICES: Tank-cleaning equipment. Facilities for tank washi Compass and radar adjustments, etc.

BANKS: Full banking services for both domestic and internati transactions are available locally.

STORING: Storing and provisioning may be accomplished at dock or via barge by prior arrangement. Trucks and forklifts may be alongside and riggers are available by arrangement with representative Agent. U.S. Customs Agents will board on arrival seal all bonded items. Otherwise, normal procedures concer controlled items will be observed by the vendor.

SHORE LEAVE: Permitted.

IDENTIFICATION CARDS: U.S. Immigration requires complet Form I-95, U.S. Coast Guard requires landing permits.

GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany).

Domestic garbage (Non-APHIS Controlled): Numerous companies available through local agent. Volume, charges, and collection times vary.

International (APHIS/MARPOL V Controlled): Pacific Treatment Environmental Services, 1452 N.Johnson Avenue, El Cajon, CA 92020. Tel: (619) 441-1818. Volume, charges, and collection variable as required or scheduled.

WASTE OIL DISPOSAL: Available through agent. For MARPOL I controlled substances: Pacific Treatment Environmental Services, 1452 N.Johnson Avenue, El Cajon, CA 92020. Tel: (619) 441-1818. Volume, charges and collection variable as required or scheduled.

SEAMAN'S CLUBS: None.

CURRENCY: U.S.Dollar (U.S.$).

AUTHORITY: Port of San Diego, P.O. Box 488, 3165 Pacific Highway, San Diego, California 92112. *Tel:* (619) 686-6340. *Telex:* 695-456. *Cables:* Sun Harbor San Diego. *FAX:* (619) 234-3965. *Contact:* Don L. Nay, Port Director. Stanley R. Westover, Manager, Marine Operations.

SAN FRANCISCO, California: 37.48 N. 122.25 W.

(See Plan)

DOCUMENTS:

General Declaration (arrival) on Customs Form 1301.

Cargo Manifest (Customs Form 1302). One original copy indicating all the cargo on board, used for making formal entry. One copy listing all cargo on board, to be used by the Customs Inspector. One copy indicating cargo for this port only.

2 copies of Crew's Effects Declaration on Customs Form 1304.

2 copies of Ship's Stores Declaration on Customs Form 1303.

2 copies Passenger List (Form I-418).

2 copies Crew List (Form I-418).

1 copy "Oil Pollution Certificate", issued in Washington D.C.

Customs Boarding Officer will also examine Ship's Register and Load Line Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours of arrival from abroad, or 24 hours of arrival from a U.S. port:

(a) Health Pratique.

(b) Master's Oath (Customs Form 1300).

(c) U.S. Certificates of Payment of Tonnage Tax (Customs Form 1002).

(d) Certified Crew List (U.S. vessels only).

Radio *Officer's Report:* April 1991.

Crew List: Get the Crew List (Form I-418) visaed at the last port before the USA. Be sure to insert in column 4, date, city and country of birth column 5 and place of issue and the authority issuing passport.

Arrival USA: Prepare for every crew member a Crewman's Landing Permit (Form I-95A). If they still have one it is only valid if they are still on the same ship.

Immigration: Hand over all Crew Landing Permits (Form I-95A) and passports. Every crew member must present himself to the Immigration Officer. Immigration will issue a form to be retained on board.

Customs broker:

2 copies Master's Oath (Form 1300).

2 copies Crew Lists (Form I-418).

2 copies Crew Effects Declaration (Form 1304).

2 copies Ship's Stores (Form 1303).

2 copies General Declaration (Form 1301).

Agriculture: Will board the ship and probabaly seal meat and vegetable storerooms. Agriculture will issue a Form 288, which must be presented at next U.S. Port. The seal may not be broken.

Customs: Customs will not board the ship.

Departure: A "Traveller" will be issued.

PILOTAGE: Pilotage in and around Golden Gate Region is performed by the San Francisco Bar Pilots who provide service from sea to all ports within the regions, including the Ports of Sacramento and Stockton.

The San Francisco Bar Pilots' Association, maintains a sea station 12 miles outside the Golden Gate, in the vicinity of the large navigation buoy for vessels arriving and leaving the area.

On station around-the-clock. Pilot boats are equipped with VHF radio-telephone, and maintain continuous watch for ship traffic and operate co-operatively with the Marine Exchange Communication Centre and lookout station. The Bar Pilots also carry portable VHF radios.

Some 8,500 ships are piloted annually into and out of the port complex, through the Golden Gate and the 2,000 ft. wide, 55 ft. deep main ship channel across the sand bar about 9 miles outside the Gate.

Considerable Summer fog is experienced on the pilot grounds. In Winter months radiation or tule fogs frequently occur. The tidal prism of hundreds of square miles of inland waters cause unusually swift and changing currents in the area. Pilotage for San Francisco Bar and entrance is compulsory and available 24 hours a day. The pilot boat is at a station 3 miles outside Main ship Bar Channel about 14 miles from San Francisco, VHF Channels 18A and 10 for radio contact. Vessels with a draft of 42 ft. or more are requested to arrive at the pilot station for the inward passage about one hour before high water at the Golden Gate Bridge.

ANCHORAGES: Several anchorages available in San Francisco Bay for any type of vessel up to 50 ft. draft.

The well-protected bay affords excellent shelter and anchorage in all weather. The Captain of the Port (Coast Guard) will assign an anchorage to a vessel upon request. In San Francisco and San Pablo Bays, there are a large number of anchorages available for naval, quarantine, general and explosives.

The specific anchorages available include:

1. *General Anchorage*

(a) No. 5 – found just South of the Richmond-San Rafael Bridge, has no limitations.

(b) No. 9 – found in the South Bay, also has no limitations.

2. *Temporary Anchorage*

(a) No. 7 – found off Treasure Island, has a 12 hour limit. A ship cannot lighter nor bunker at this mooring.

No. 8 – same as No. 7 but has a 6 hour limit.

3. *Explosive Anchorage*

No. 12 – is normally not activated.

No. 13 – found off Larkspur, this mooring is activated only as the need arises.

No. 14 – found in the South Bay, this mooring is always activated.

4. *Naval Anchorage*

No. 10 and No. 21 are the most frequently utilised.

RESTRICTIONS: The San Francisco Bay region is the first on the West Coast to have sea lanes established by the Coast Guard for greater safety in its ocean approaches. Use of the lanes is not mandatory, but is strongly recommended to reduce chance of ship collisions in congested approach and departure areas. The lanes are not intended to supercede or alter applicable rules of the road.

The lanes begin within 6 miles of the San Francisco Lightship, with each lane inbound and outbound separated by a buffer zone. The headings are: North lane outbound, 305°; North lane inbound 120°, main line outbound, 247°; main line inbound, 058.5°; Southern lane outbound, 169°; Southern lane inbound 343°.

The size of the bay and the narrowness of the Golden Gate cause tricky and sometimes difficult tidal and current conditions. The flood current sets into all parts of the bay and causes swirls as far East as Alcatraz and Angel Islands. At the San Francisco-Oakland Bay Bridgethere are large current eddies near the foundation piers which may require care to maintain proper course.

The Bar Channel is dredged to 55 ft. MLLW by the U.S. Army Corps of Engineers. Entrance channels to the various ports are dredged to 35 ft., with the exceptions of Sacramento, Stockton and Redwood City, which are 30 ft. Stockton, however, is approved for a 6 ft. deepening, and study of similar deepening for Redwood City is being completed.

MAX. SIZE: The max. permissible draft for tankers at the oil installation is 35 ft., for regular freighters and passenger ships at the San Francisco piers is 40 ft. No restrictions on length or berth. The best time to dock with max. draft is at a rising tide.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to San Francisco Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Radio station via RCA – Radio Corporation of America – Station KPH ITT – World Communications – Station KFS.

Safe and efficient navigation for all bay vessel traffic is maintained through a Ship Location and Reporting Service operated by the Marine Exchange. U.S. Coast Guard Vessel Traffic Service on Yerba Buena Island and at Port Bonita maintains 24 hour radar surveillance of all traffic from Golden Gate on the West (with 32 mile capacity beyond) to Oakland on the East, Dumbarton Bridge on the South and Port San Pablo on the North. Vessel Movement Reporting System (VMRS) extends beyond Port San Pablo all the way to the Ports of Stockton and Sacramento. Coast Guard urgently requests that all vessels as specified below, moving anywhere within the VMRS (including all area under radar surveillance), tune to Channel 13 (156.65 MHz., VHF FM): All ships of 300 gross tons and over, passenger ferries for hire over 100 gross tons, and tugs with tows of barges or dredging rigs of over 26 ft. length.

Coast Guard Regulations: Foreign tankers should give 72 hours' advance notice of arrival to ensure that U.S.C.G. has enough time to check the vessel's records for compliance or outstanding violations and to arrange for any onboard inspections required. Failure to provide 72 hours' notice may delay the commencement of cargo transfer while awaiting the required U.S.C.G. inspections. Letter of Compliance inspections must still be arranged through Washington D.C. The statutory notification remains at 24 hours. This notice applies only to the San Francisco Bay area. Any vessel required to have an inert gas system must have its tanks inerted at all times unless they are gas free.

VHF: VTS in operation. Call sign "San Francisco Vessel Traffic Centre", operates on Channels 16, 13, 12 and 18A.

TUGS: Tugs available and normally join the vessel when approaching their pier. Tug's lines are always used, with no extra charge.

BERTHING: No restriction on berthing other than draft limitation and preferable at slack water.

Pier	*No. of Berths*	*Length (ft.)*	*Depth (ft.)*	*Remarks*

Alameda: (See Plan). (Not part of the Port of San Francisco). Alameda, an island and city across the Inner Harbour channel from Oakland, is the home of Encinal Terminals, the largest privately owned and operated steamship terminal in the United States. There are 6 berths for vessels at Encinal.

Berths 1, 2, 3 and 4: Used for general cargo and bulk liquids. Total berthing length 2,125 ft. Depth 31 ft. to 33 ft.

Berth 5: Used for general cargo. Length 750 ft. Depth 35 ft. Berth equipped with Paceco crane.

Berth 6: Used for receipt and shipment of bulk liquids. Depth 30 ft. Facility has tank storage of 12 million gallons.

Operator: Encinal Terminals, 1521 Buena Vista Avenue, P.O.Box 2453, Alameda, CA. 94501. Tel: (415) 523-8800. Telex: TWX (910) 366-7174.

CONTAINER/BULK HANDLING FACILITIES:

San Francisco Container Terminal - (SFCT) South: (formerly Pier 94/96).
Container Ship Terminal.
Cargo Way.
Steamship Lines: Central American Container Line, Chilean Line, Grancolombiana Line, Evergreen Line, Navicana Line, Transportacion Maritima Mexicana, Zim Container Service.
Assigned to: Stevedoring Services of America.
Dimensions: Total terminal area is 76 acres. Outer apron is 2,456 ft.
Number of berths: Three at 40 ft. MLLW alongside and a design load of 800 p.s.f.
Special Facilities: The ondock Intermodal Container Transfer Facility accommodates up to 20 rail cars on a single switch. Port packers used for yard operations. Elevated control tower with radio and PA communications systems. A maintenance and repair building of 24,000 sq. ft. is sprinklered and has a 5-ton capacity overhead bridge crane. Other buildings include an administration building (14,000 sq. ft.) and gate house/terminal office building (2,475 sq. ft.). 135×240 volt and 32×480 volt reefer outlets.
Lift equipment: 2×30 ton Paceco cranes, and 2×30 ton Starporter cranes, rail mounted. The spreaders can be expanded in order to afford easy accommodation of both 20 ft. and 40 ft. containers. Each crane has a 50 ft. gauge with an outreach of 115 ft., backreach of 30 ft. and an 88 ft. clear hoist above HW (to be upgraded to 103.5 ft. clear hoist above HW). The Paceco can load and off-load containers thwartships. There is also 1×25 ton P&H mobile crane.
Connections: Trucks via Cargo Way; Southern Pacific Railroad tracks. San Francisco Belt RR.

San Francisco Container Terminal - (SFCT) North:
(formerly Pier 80)
Combination Terminal - Container/Ro-Ro/Unitised Break Bulk.
Foot of Army and Marin Streets.
Construction: Concrete pilings, concrete deck.
Steamship Lines: Blue Star Line, Ciamar, ELMA, Maruba, Mitsui OSK Line, National Shipping Corporation of Philippines, Nedlloyd Lines, Norsul, South Pacific Interline, South Seas Steamship.
Assigned to: Metropolitan California Stevedore Company.
Dimension: Total terminal area is 68.5 acres. The face measures 1,296 ft. North measures 1,138 ft. and South measures 2,657 ft.
Berths: Four at 40 ft. MLLW alongside.
Special facilities: 2 steel-framed transit sheds totaling 396,000 sq. ft., 273×220 volt and 36×480 volt reefer outlets and Container Freight Station accommodations. The van yard is fully lighted and completely fenced for security.
Lift equipment: 1×30 ton and 3×40 ton Paceco Cranes, and 1×30 ton Starporter Crane, rail mounted. All cranes can accommodate 20 ft. and 40 ft. containers. Each crane has a 34 ft. gauge and an 88 ft. clear hoist above high water. (2 New Paceco cranes have a clear hoist of 9 above HW). Cranes can load and off-load containers thwartship.
Connections: Via Army Street or Marin Street; SP Railroad tracks.

Pier 70-72: Automobile Terminal.
Foot of 23rd Street.
Construction: Timber pile, timber deck.
Dimensions: The total terminal area is 24.5 acres. The face measu 723 ft.
Berths: Two at 40 ft. MLLW alongside.
Special facilities: 22 acres of open storage for car-loading, unloadi and processing.
Connections: Via Third Street, East on 20th Street.

Pier 50: Combination Terminal.
Container/Ro-Ro/Unitized Breakbulk.
Foot of Mission Rock Street.
Construction: Concrete piles, concrete deck.
Steamship Lines: Various.
Dimensions: Total terminal area is 20.8 acres. The face measu 1,000 ft. North measures 1,480 ft. and South measures 1,100 ft. a 582 ft.
Berths: Four at 35 ft. MLLW alongside.
Special facilities: This pier offers 8 acres of open storage, 4 transit she totaling 274,000 sq. ft. and reefer outlets.
Connections: Via Mission Rock Street; Santa Fe Railroad tracks.

Pier 27 – 29: Newsprint/General Cargo/Containers.
Foot of Lombard Street.
Assigned to: Marine Terminals Corp.
Construction: Concrete piles, concrete deck.
Steamship lines: B.C. Forest Products, Papua New Guinea Line, S Bergesen, Star Bulk Shipping, Atlantic Cargo Services and Scann Sc
Dimension: The face measures 206 ft., North measures 750 ft. a South measures 1,340 ft.
Berths: Three at 35 ft. MLLW alongside.
Special facilities: Piers 27-29 are integrated piers connected by 117,000-sq. ft. bulkhead and 2.5 acres of open storage space. It a offers 601,700 sq. ft of transit shed space.
Connections: Via Embarcadero; Belt Railroad tracks.

Pier 92: Bulk Liquids Terminal
Cargo Way.
Assigned to: Baker Commodities (Bulk Liquids) and California Stevedo and Ballast (Fishmeal).
Construction: Concrete piles and deck, timber apron.
Dimensions: The face measures 702 ft. and 166 ft. This facility also ha a transit shed measuring 57,270 sq. ft.
Special Facilities: 10 acres of open storage space for automobile automobile detailing and repair centre, bulk oil processing and stora equipment, and heated and cooled pipelines connecting pier with t storage tanks.
Berths: One with 38 ft. MLLW alongside.
Connections: Via Cargo Way from Third Street; Southern Pac Railroad/S.F. Belt

STEVEDORES: Stevedores orders must be placed 1000 hrs. for ni gangs and day gangs. 2×8 hour shifts 7 days a week. Sunday a Sunday night gangs must also be ordered on Saturday 1000 hrs.
MEDICAL: Medical, and all hospital facilities available. No advan notice required.
TANKERS: All major oil companies have their own oil discharging pi which are outside the jurisdiction of the Port Authority. Reducing piec are available. The max. drafts are 35 ft. Tankers arriving with a grea draft are partly discharged in the bay before docking.
Davis Point: Union Oil Co. Oleum Refinery Wharf, depth up to 38 MLW.
Martinez: Shell Oil Co. Wharf, depth alongside 30 ft. – 42 ft. ML
Phillips Petroleum Co. Amorco Wharf, 2 berths, depth 30 ft. – 42 ft. ML
Phillips Petroleum Co. Avon Wharf, depth alongside 35 ft. ML
Urich Oil Co. depth alongside 35 ft.
Ozol: Oil Wharf, depth alongside 39 ft. MLW.
Hercules; Sequoia Ref. Corp. Terminals, depth 35 ft. MLW.
DENSITY: Average density in the bay is 1016.
FRESH WATER: Available at all piers, rate 25 t.p.h. – 50 t.p.h.
FUEL: Fuel available by barge or at the oil companies own pier. Spe blends require some advance notice.
FIRE PRECAUTIONS: Any special instructions are given to the Mas upon docking.
CONSULS: All Maritime countries represented at San Francisco.
REPAIRS: The major yards in the Golden Gate region have b equipped machine-shop facilities capable of handling virtually any j welding, heavy plate construction, turning, boring, facing, grindi milling and rolling.

The larger yards also have facilities for pipe, sheet metal, electri carpentry, painting, rigging, machining and boiler work.

Southwest Marine, Westwinds, Service Engineering, SFW Co Todd and Triple "A" Repair are all located in San Francisco and prov berth space for all types of ship repairs at plant and at any location the San Francisco Bay area.

DRY DOCKS: San Francisco Shipyard has 3 floating dry docks, 1 w 22,000 tons capacity and 654 ft. long, 1 of 11,400 tons capacity a 542 ft. long, and 1 of 6,500 tons capacity and 450 ft. long. With a rec completed pier, its tie-up and outfitting space totals 4,271 ft.

Continental Maritime - New floating dock, carrying capacity 22,0 tons, LOA-664 ft., length over blocks 579 ft. clear draft over blo 34.5 ft., clear width for docking 138 ft. Dock will accept vessels u 70,000 d.w.t.

Williamette Iron and Steel Company's yard in Richmond has 5 conc graving docks. 4 of these docks can each accommodate a vessel 60 long with 83 ft. beam, and 1 dock can handle a vessel 750 ft. × 8

Tonnage capacity is limited only by the above dimensio Williamette's facilities include 1,500 ft. of concrete outfitting pier fo the-water repairs. The graving docks are served by 4 gantry cranes of 60 ton capacity and 2 of 45 ton capacity, and the outfitting pier by 3×45 ton cranes. Williamette has fully equipped shops for repair and conversion work, and mobile units for out-of-yard work at all Bay piers.

Hunters Point Naval Shipyard: (Triple A Machine Shop) Under lease from the U.S. Navy, graving docks and repair facilities available to all types of ships. Triple A operates 3 graving docks: (No. 4) 200 ft. beam×1,100 ft. length and 50 ft. depth; (No. 3) 150 ft.×1,000 ft. and 39 ft. depth; (No. 2) 100 ft.×800 ft. and 27 ft. depth, 17 repair berths can serve ships of any length. 12 gantry cranes of 50 ton capacity serve graving docks and repair berths. 50 ft. depth channel from Golden Gate to Hunters Point; unique to West side of San Francisco Bay.

GANGWAY/DECK WATCHMEN: Not required but this service available at Master's request.

OPENING/CLOSING HATCHES: Normally done by stevedores. But crew may open and close before arrival at the dock or after departure.

CUSTOMS ALLOWANCES: Each crew member may land free of duty and/or taxes articles acquired abroad not exceeding $10 in value, plus 50 cigars or 300 cigarettes or 3 lb. of smoking tobacco, and not over 1 quart of alcoholic beverages.

REPATRIATION: All facilities for crew changes by sea, air or land.

AIRPORT: Distance about 10 miles South of San Francisco and is served by most domestic and international passenger airlines plus 20 international air cargo carriers..

TIME: GMT minus 8 hours. Summertime from first Sunday in April till last Sunday in October – GMT minus 7 hours.

HOLIDAYS: New Year's Day; Lincoln's Birthday (February 12th); Washington's Birthday (February 22nd); Good Friday (afternoon); Memorial Day (May 30th); Independence Day (July 4th); Labour Day (1st Monday in September); Admission Day (Calif. only Sept. 9th); Columbus Day (October 12th); Veteran's Day (November 11th); Election Day (1st Tuesday after the first Monday in November); Thanksgiving Day (last Thursday in November); Christmas Day.

When any of the holidays fall on Sunday, the holiday will be observed on Monday.

On a holiday the longshoremen are working at the overtime rate (time and a half) except on the following days when no work will be performed:

1. New Year's Day;
2. Bloody Thursday (July 5th, memory of 3 longshoremen killed during the 1936 strike);
3. Labour Day;
4. Thanksgiving Day;
5. Christmas Day.

POLICE/FIRE/AMBULANCE: Dial 911 or Police Tel: 533-0123; Fire Tel: 861-8020; Ambulance Tel: 695-6600.

TELEPHONES: On some piers telephone connections to ships are available, no extra cost for this service.

SHORE LEAVE: Crew members are allowed to go ashore after passing U.S. Immigration at first U.S. Port.

IDENTIFICATION CARDS: Standard U.S. Immigration Forms I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95, issued for the same vessel.

GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany).

This service can be arranged using skips or pick-up trucks alongside. Collection by appointment. Contact Golden Gate Disposal Co. Tel: (415) 621-3840.

WASTE OIL DISPOSAL: Pick-up by tanker truck or barge at most berths. 24 hour service. H & H Ship Service Co. Tel: (415) 543-4835.

SEAMAN'S CLUBS: Apostleship of the Sea, 399 Fremont Street, San Francisco, CA 94105. Tel: (415) 421-7845.

Den Norske Fjomannskirke (Norwegian), 2454 Hyde Street, San Francisco, CA 94109. Tel: (415) 775-6566.

Golden Gate Christian Reformed Church (Chinese), 378 18th Avenue, San Francisco, CA 94121. Tel: (415) 751-2242.

Scandinavian Seaman's Mission, 2128 15th Street, San Francisco, CA 94114. Tel: (415) 861-8499.

CURRENCY: U.S.Dollar (U.S.$).

GENERAL: Vessels arrival has to be reported to the U.S. Coast Guard 24 hours prior arrival by Agent.

DEVELOPMENTS: The channel over the bar has been deepened to 55 ft. A new channel will be cut 600 ft. wide and 45 ft. deep (at low water), through the upper bay and the channel through San Pablo and Suisun Bays will be deepened to 45 ft. Manoeuvring areas near Richmond and the refinery terminals will be widened. The Stockton Deep Water Channel will be deepened to 35 ft. and the channel alignment improved.

Improvements to Pier 35 – Passenger Terminal: Improvements to the passenger boarding and unloading facilities at Pier 35, including a new Customs area have been completed.

Pier 35 is the major steamship passenger facility in the Bay Area and the point of disembarkation for tens of thousands of cruise passengers who look forward to San Francisco as a port of call or destination.

The area involved contains a 200,000 sq. ft. passenger processing facility on the first floor with a 10,000 sq. ft. visitor waiting area on the second floor.

Expansion of Rail Capabilities to Pier 94-96: New track construction, as well as reconstruction of existing track, from the Terminal to Southern Pacific's mainline track has been designed to allow unit train access onto the Container Terminal.

The Container Terminal is composed of Piers 94-96. This 65 acre three-berth facility is serviced by 4 rail-mounted cranes and represents a $45 million capital investment. An additional 75 acres of expansion area lies adjacent to the Pier.

Direct rail access to this terminal will position San Francisco as a competitive intermodal port offering direct land-bridge and mini-bridge services through Port facilities. By being able to move containers directly from ship to rail, carriers will have the advantages of reduced costs, better control of containers and less damage.

San Francisco will be the first port in California with this capability.

AUTHORITY: Port of San Francisco, Ferry Building, San Francisco, California 94111. *Tel:* (415) 274-0400. *Telex:* 275940 PSF UR. *FAX:* (415) 274-0528. *Cables:* Sfportcomm. *Contact:* Dennis P. Bouey, Executive Director. Roger Peters, Director - Cargo Services. Charles Mitchell, Chief Wharfinger.

SAVANNAH, Georgia: 32.02 N. 81.07 W. (See Plan)

DOCUMENTS:

3 Crew Lists.
3 Stores Lists.
3 Curio Lists.
3 Manifests.
3 Passenger Lists.

These documents required in order to enter vessel at U.S. Customs.

Direct Foreign Arrival – Quarantine Pratique issued by Public Health Service representative; Cargo on Customs Form 1302, in duplicate with Abstract Manifest of Savannah only cargo; Crew List on Form I – 418, in triplicate; Passenger List on Form I – 418, or other acceptable form, in triplicate; Crew Curio List, in triplicate, with Crew Declaration on Customs Form 1304, or Crew List on Form I–418, in triplicate, with numbers of attached Forms 5129 endorsed thereon for American vessels, List of Sea Stores and Ship's Stores Customs Form 1303, in triplicate; for American vessels, Repair Declaration on Customs Form 226; for American vessels, Certified Crew List; Clearance from Last Foreign Port, if one issued.

Coastwise arrival with Residue Foreign Cargo or Passengers – Form 1301, "Permit to Proceed", in duplicate; Travelling Manifest; Abstract Manifest, in duplicate, of cargo to be discharged in Savannah; Stores List, in duplicate; Crew List, in duplicate; Crew Purchase List, in duplicate, and any Crew Declarations on Customs form 5123 for Savannah for American vessels; Passenger List, in duplicate.

PILOTAGE: Savannah Pilots' Association, 550 E. York, Savannah, Georgia, 31401 (telegraphic); Pilot required all vessels; ETA 24 hours advance notice, change ETA 8 hours; VHF Channel 16 (monitored at all times), 18, 12, 13 – Radio telephone 2182 and 2738 kHz. Pilot boards vessel 1 mile outside Fairway Buoy.

SHIP CHANNEL: Project depth and widths are as follows: Sea buoy to jetties 40 ft. depth×600 ft. width; New Channel Range through Upper Flats Range 38 ft. depth×500 ft. width; The Bight Channel 38 ft. depth×600 ft. width; Fort Jackson Range to Wreck Channel 38 ft. depth×500 ft. width; City Front Channel to Kings Island Channel 38 ft. depth×400 ft. width; Whitehall Channel 35 ft. depth×400 ft. width.

ANCHORAGES: Outside Fairway Buoy, North and N.E. of Fairway Buoy; no anchorages in river.

RESTRICTIONS: 31 ft. at any time; over 31 ft. on incoming tide, no restrictions day or night.

MAX. SIZE: Abbreviation OT: Ocean Terminal. Vessels berthing at OT 14 – 15 – 16 – 17 (slip 1). Vessels 550 ft. to 600 ft. on slack water; vessels less than 550 ft. any time to Berths 14 and 17; vessels docking or undocking at OT 15 – 16, with vessels in OT Berths 14 and 17, can be docked or undocked during slack water.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Vessels route ETA cables to Agents, etc., via Radio Lantana.

TUGS: Tugs join vessels at city front for berths above city; for berths below city, tugs usually meet vessels in vicinity of Fort Jackson or well below berth. Tugs' lines used at all times.

BERTHING: The Georgia Ports Authority operates 12 general cargo berths, 2 tanker berths, 5 container berths and 1 dry bulk cargo berth.

CRANES: *Ocean Terminal:* One 175 short ton gantry crane, one 100 short ton gantry crane, two 50 short ton gantry cranes, one 30 short ton gantry crane, one 100 ton mobile crane, one 30 ton mobile crane. *Garden City Terminal:* Two 35 short ton gantry cranes, one 100 ton mobile crane, one 30 ton mobile crane. Garden City Terminal (container port) – 9×45 short ton container cranes, 9×45 short ton rubber tyred bridge cranes. Other cranes, floating and mobile, are available from various private contractors.

BULK CARGO FACILITIES: Located at the Georgia Ports Authority's Garden City Terminal are 1 dry bulk cargo berth (loading). This facility is suited for the handling of various ores, grains, peanuts, meals and fertiliser materials. The storage at this facility consists of silos for the storage of grain and grain type products as well as flat floor storage for these various other materials.

Colonial Terminals: Kaoline/mineral bulk terminal. Handling rate 800 t.p.h. 12×109 cu.ft. Silos for kaoline. Minerals stored in 8×73,000 cu.ft. storage bays.

SPECIALISED CARGO HANDLING FACILITIES: Located at Container Port, on the up-river end of Berth 60, is a stern Ro-Ro ramp which is situated as to allow a vessel to utilise the Ro-Ro ramp and container cranes at the same time. Accommodating side and quarter ramps also available. At the Garden City Terminal there is a modern cold storage facility. The refrigerated space consists of 3 rooms of approximately 68,000 sq. ft.

BRIDGES: *Eugene Talmadge Memorial Bridge:* 135 ft. vertical clearance for 400 ft. at MHW. Distance between fender uprights – 600 ft.

Also see "Developments".

MEDICAL: Agent should be advised as far in advance as practicable for required medical attention. U.S. Public Health Clinic in Savannah, also other extensive medical facilities. Standard information required as to inoculations, vaccinations, etc.

TANKERS: Standard requirements on diameters of load/discharge lines. No facilities for slop (residue) discharge facilities except American Oil Company. A.P.I. of local types of oil is 36 gravity marine diesel fuel. 8 tanker berths in port, max. drafts range from 32 ft. – 38 ft.

DENSITY: Average density of water at 20° Centigrade in channels of Savannah Harbour are:

		High Water	*Low Water*
Savannah River Entrance			
	Surface	1.0196	1.0090
	Bottom	1.0196	1.0181
Port Area			
	Surface	1.0022	0.99915
	Bottom	1.0120	1.0075

FRESH WATER: Available at all terminals.

FUEL: Marine gas oil (No. 2 Fuel). Marine diesel oil (No. 4 Fuel Oil). All Intermediate grades from Intermediate 30 (=30 centistokes at 50°C) to Intermediate 420 (=420 centistokes at 50°C) Bunker fuel oil (No. 6 Fuel). Advance notice of 24 hours required.

FIRE PRECAUTIONS: No special fire precautions. All tanker berths have water and fire extinguishers on dock. Fire fighting equipment on dock. Fire fighting equipment on tugs.

CONSULS:

Savannah: Brazil (912) 234-2266. Dominican Republic (912) 234-2266. France (912) 236-2491. Germany (912) 236-8165. Italy (912) 232-5581. Sweden (912) 238-2301.

Atlanta: East Coast Maritime Services, Inc. (404) 252-3990. INA Loss Control Services (404) 292-2363. Marine Associates, Inc. (404) 448-2593.

GANGWAY/DECK WATCHMEN: Garden City and Ocean Terminals of Georgia Ports Authority, East Coast Terminal Company and Georgia Kaolin International require that a watchman, or someone in authority, will be aboard any vessel tied to their facilities at all times.

CERTIFICATES: See "Documents". Current Registry Papers, Load Line Certificates, Certificates of Inspection, etc., are required.

CUSTOMS ALLOWANCES: Tobacco, a crew member may take ashore 50 cigars, 300 cigarettes, or 2 kilos of smoking tobacco, or a proportionate amount of each. An appropriate amount of tobacco products may be held out of bond for use of passengers and crew members while aboard ship when in port. Wine and/or Spirit, a crew member may take ashore one litre of alcoholic beverages for his own use. Container should be opened, that is the seal should be broken. An appropriate amount of wine and/or spirits may be held out of bond for consumption by passengers and crew while aboard ship when in port.

CARGO GEAR: Certified in accordance with U.S. Department of Labor Regulations. Supplied by stevedores.

REPATRIATION: Responsibility of Owner's Agents. Can be arranged to all points.

AIRPORT: Savannah International Airport regularly served by Delta Airlines, Inc. with 7 scheduled flights daily; Eastern Airlines with 5 flights daily; Piedmont Air with 4 flights daily.

TIME: Savannah maintains Romeo or Eastern Standard Time, GMT minus 5 hours, from 0200 hrs. the last Sunday in October, to 0200 hrs. the first Sunday in April. Quebec or Eastern Daylight Saving Time, GMT minus 4 hours maintained from April to October.

HOLIDAYS: New Year's Day (January 1st); Martin Luther King's Birthday (January 15th); Lincoln's Birthday (February 12th); George Washington's Birthday (third Monday in February); Teddy Gleason's Birthday (March 17th); Memorial Day (Last Monday in May); Independence Day (July 4th); Labour Day (First Monday in September); Columbus Day (second Monday in October); Armistice Day (November 11th); Thanksgiving Day (Fourth Thursday in November); Christmas Eve (December 24th); Christmas Day (December 25th); New Years Eve (December 31st); Good Friday; one National Election Day annually.

No work will be performed on New Year's Day, Independence Day, Labour Day, and Christmas Day.

POLICE/AMBULANCE/FIRE: Police: (Emergency only) Tel: 91 Police, City: Tel: 232-4141 and 233-9321. County Police: Tel: 352-77 Ambulance: Chatham County Emergency Medical Service: Medsta Tel: 355-7515; Fire: (Emergency only) Tel: 911; City: Tel: 232-5121.

TELEPHONES: G.P.A., Garden City and G.P.A., Ocean Termina telephones on board can be provided through local Agents. S.C. Terminal – not available to ship (phones on dock).

STORING: See "Prelims".

1. Yes	4. Yes
2. Yes	5. Usual U.S. Customs Regulations
3. Yes	6. Yes

SHORE LEAVE: Crew members are allowed ashore provided they a not detainees.

IDENTIFICATION CARDS: Identification required by crew membe coming ashore. U.S. Immigration & Naturalisation Service issues landi permit, I-94, to any passenger; and I-95, to any crew member of a forei vessel who is not considered a security risk. This form must be in ma possession any time he is ashore.

DELAYS: With reasonable advanced notice of ETA no delay anticipa in berthing, loading, discharging or bunkering.

DEVELOPMENTS: Container Berth No. 6 under construction.

New bridge constructed close seaward of Talmadge Bridge w clearance of 186 ft. at H.W.

Channel to be dredged to 42 ft. (from 38 ft.).

Channel has been widened from 400 ft. to 500 ft.

SHIPMASTER'S REPORT: August, 1980.

Pilotage: Because of difficulties with the port crane and large sto programme we elected to berth starboard side alongside this call.

The Pilot will only undertake this on the flood (since vessel is invar deep, berthing will only be done on the flood in any case) but becau of a delay we were off the berth very nearly at slack water. The P carried out the manoeuvre in the most reassuringly competent manner and I would not hesistate to do the same again if necesary; only with a Pilot prepared to carry out the manoeuvre.

Vessel is swung downriver off the container berth, about 4 cables below the berth.

When landed on starboard side to, it is just possible to plumb the berth with the crane by making the connection to the after crossover.

Discharge: Straightforward; some slight initial delay. Capable of receiving cargo at over 1,000 t.p.h. Our rate 810 t.p.h. overall.

Connection 12 in. 150 ASA. No VRL.

Density 1000 this call.

Storage capacity about 50,000 cu.m. Storage plant only for filling road and rail tankers.

U.S.C.G.: Deck inspection before commencing. Vessel was congratulated on her 'very high standard of equipment and personnel'. Monitoring detail on board throughout. Scuppers unplugged, please.

They are aware of the draft problem at LW and boarded immediately on berthing.

General: Lloyd's Surveyor easily available.

Bunkered lube oils whilst discharging with U.S.C.G. approval.

Can touch up ship's side from quay.

Movements allowed at night, dependent on draft/tide.

Chandler: Southern Marine: Poor service this time despite our cables. This is in contrast to excellent service last time. These services are entirely at the mercy of ship representative.

SHIPMASTER'S REPORT: October, 1980 (updated 1984).

Approach: From East: The coast between Sandy Point to Isle of Palms near Charleston shows up at 40 miles and South of Hunting Island near Port Royal Sound at 35 miles, on radar. Port Royal Channel gives a good radar echo at 15 miles. Soundings give little indication of position until fairly close inshore. Savannah light was observed at 28 miles.

D/F stations at Tybee and Charleston are useful if nothing else is available.

Anchorage: Pilots advise anchoring to N.E. of Savannah Light Beacon. Good holding ground without obstructing arriving and departing traffic.

Arrival Procedure: ETA through Agents.

For deep draft ships proceeding to Ammonia Berth No. 61 about 5 miles above town, Pilot will board between 3 hours to 1.5 hours before HW.

Under 31 ft. can berth/sail any state of tide day or night. Berthing day or night.

Can berth either side to, the generally accepted side to is port side. However, if taking stores try for starboard side as the crane plumbs better, plus the Chicksan arm is in the way of trucks.

For starboard side to, arrive well in time for earliest Pilot boarding time.

The problem is the berth has a reported 36 ft. at LW (actually by lead line we found (Oct. '80) a minimum of 33 ft. 9 in. reduced to datum along the dock face). Therefore before LW you have to pump out about 2,000 tonnes, any delay can be important.

Pilots: Board from large cutter between Savannah Light and Whistle Buoy.

Give plenty of notice as cutter might be lying up-river at pilot station. Based at Cockspur Island in the ship channel. Call "Savannah Pilots".

Pilot ladder must be 8 ft. above water. Side dependent on wind. Berthing Pilot joins from tug using own ladder at Kings Island.

On departure from berth, Pilot requires 1.5 hours notice.

VHF: "Alpha" Channels used frequently.

U.S.C.G. uses 22A, Pilots use 18A, tugs use 19A. Otherwise use 16, 12 and 13.

Channel: The maximum draft of vessels has been 39 ft. with a 6 ft. tide. Normal maximum 37 ft. This can only take place on the flood so as to be on the berth at slack water.

Channel is narrow, less than Houston Ship Canal. Constant dredging is required. From Whistle Buoy to berth is about 3 hours.

Vessel is swung in Argyll Turning Basin off the container quay. 24 hour navigation is undertaken.

From soundings from Savannah Light Beacon to Berth No. 61 proceeding inwards 3 hours before Savannah HW (2.5 m.) a minimum of 1.6 m. under keel was found with draft 11.15 m.

Berth: Depth: See "Plan". Minimum depth reduced to datum found to be 33 ft. 9 in. along jetty face.

Berth No. 61: Owned by G.P.A. and leased to Occidental.

Concrete jetty on piles with centre section connected by roadway to shore, and mooring dolphins either end connected to jetty by catwalk. Length of centre section 266 m. Good fendering.

The upriver dolphin is not used due to damage. Can turn gangway out before arrival.

Pilot with the aid of powerful tugs swings vessel in very competent manner at Argyll Turning Basin.

Density: 1001 to 1002.

Moorings: Basic 3, 2, 2, each end. Forward headlines (3) go to Ro-Ro dock and breastlines to dolphin with springs to main jetty. Due to damage the upriver dolphin cannot be used so all stern and breast lines go to Grain Berth No. 62.

Springs out first, last in. Mooring boat used. Port Authority mooring gang require 4 hours notice.

Tugs: Atlantic Towing Company and Crescent Towing and Salvage Company of Savannah, Inc. based along town water front. Several large and powerful tugs. Two used, one each end, American style, tie up with own lines alongside. One and a half hours notice required.

U.S.C.G.: Very co-operative. Although Agent will try to get them to board in river for pre-inspecton, they board at dock. Carry out Check List and inspection before cargo allowed to be worked. Takes about 30 minutes.

One U.S.C.G. rating on board at all times (8 hour shifts). Strict on pollution.

The U.S.C.G. do not seem to mind which way round the ship is berthed. Scuppers to be plugged.

Discharge: Into mobile Chicksan (as berth only leased). After manifold if starboard side too. Maximum rate about 1,200 t.p.h. but generally nearer 900 t.p.h. to 1,000 t.p.h. Connection 12 in. 150 ASA. No vapour return line. Shore tank capacity 45,000 tonnes, which fills rail and road tankers. Takes about 45 minutes to connect/disconnect. Shore labour assist. Shore personnel always in attendance. Manager very helpful.

In light ship condition we had 18 m. air draft which did not create any difficulties.

General: Lloyd's Surveyor easily obtainable from Jacksonville. Fresh water from jetty, require 6 hours notice, especially at weekends.

Lube oils whilst discharging with U.S.C.G. permission. Stores lorry able to get close alongside ship.

Ship's crane (if starboard side to) will just plumb after end of jetty.

Liferaft service (Beaufort) at Southern Ship Supply – 24 hour service.

Shoreline infested with rats, snakes and big spiders.

Chandler: Southern Ship Service, good fresh produce.

Town: About 5 miles away. Can telephone for taxi – free of charge local calls, from hut at grain berth about 100 yards from gangway.

Airport 6 miles South of town centre with regular flights to Atlanta International, etc.

SHIPMASTER'S REPORT: August 1990.

Charts: B.A.Charts No. 2807 and 2865.

Approaches: New exploration towers around 80° 10′ W., about 45 miles offshore give a guide.

Coastline low, first indications on radar at 30 miles.

Savannah Light good, but Racon not operating (Pilots report that it rarely does).

About 30 miles East of the Gulf Stream axis, a Southerly set of about 1 knot was found.

Pilots: Pilot boards from large fast blue hulled cutter named 'Georgia' or smaller cutter called 'Savannah' at Fairway Buoy. Pilot will advise height of ladder, dependent on cutter.

Pilot Station at Cockspur Island inside breakwater at Lat. 32° 02.05′ N., Long. 80° 54.20′ W. Just West of the Pilot Station is a U.S.C.G. base.

Usual East Coast U.S.A. practice, tug master actually berths and unberths vessels.

Pilotage to Ammonia Berth (No.61) at Garden City is about 2.5 hours.

VHF: Pilots generally use Channel 14.

Anchorage: North of Savannah Light Tower, exposed.

Entry: For gas carriers no night transit inward or outward, unless totally gas-free, between 1600 hrs. (last pilot boarding time) and 0700 hrs. (first pilot boarding time).

U.S.C.G. do not escort vessel, unlike some other U.S. ports.

Channel: The range light at Fort Scriven is conspicuous. Pilots report 33 ft. maximum draft any state of tide, or 39 ft. H.W. to Berth No.61, above this berth to Port Wentworth 20 ft. at L.W. Maximum length 1,000 ft.

Actually found 36 ft. (reduced to M.L.W.S.) as minimum depth to Berth No.61. Least depth about 1 mile seaward of Talmadge Bridge.

New Bridge nearly completed, just seaward of Talmadge Bridge. Completion due early 1991. Vertical clearance MHW – 185 ft. When commissioned, the old bridge will be removed.

Tugs: 9 tugs up to 4,000 i.h.p. available from Atlantic Towing (now under new name) and Crescent. Two tugs and tug's lines generally used. Tugs join just upriver of bridge.

Berth: Ammonia Berth is Berth No.61 at Garden City, just above container quays. Berth is able to take up to 75,000 cu.m. gas carriers, but restricted due to river draft.

Always port side too, head upriver. Vessel swings in adjacent turning basin on departure.

Concrete dock with reasonable fendering. Mooring dolphin either end of dock connected by catwalk.

Mooring leads good (2, 2, 2), if bollards on adjoining docks used. No mooring boat, using wires as head or stern lines takes a long time.

Cargo: Mobile Chicksan which plugs into quay (12 in. 150 ASA coupling). It can take a long time to disconnect, if Chicksan diesel power plant fails to operate, which it is prone to.

Discharge to 45,000 tonne tank behind Soya Bean Silo. Actual pumping distance is about 0.5 miles.

Sometimes VRL from shore used (out of commission this visit).

Fast pumping at around 850 t.p.h. at maximum B.P. of 6.8 kg. (100 p.s.i.), back pressure generally less.

Only NH3 handled, terminal likes product cold - no warmer than −32°C.

Surveyors (Saybolt) prompt and read draft when vessel berths.

Terminal representative onboard throughout discharge, in Cargo Control Room with UHF set.

U.S.C.G. very attentive and always board vessels on arrival.

Pipework checked for soft patches – leaks, if any found, vessel will nearly always be refused permission to discharge.

Facilities: Fresh water available on jetty. Good pressure, no charge.

Stores trucks allowed alongside forward up to Chicksan position.

Bunkers by barge during discharge.

Public telephones near Soya Bean Silo office, or Agent leaves his mobile on board.

Local airport very near at hand with frequent flights to Atlanta International.

Chandler – We obtained some bonded stores from Southern Marine Supplies. Prices high compared with Tampa, and range limited.

AUTHORITY: Georgia Ports Authority and East Coast Terminal. Savannah Port Authority.

The Savannah Port Authority does not operate terminals; however, is engaged in port and industrial development for the City of Savannah and Chatham County, Georgia. Harbour Regulations, pier and bulkhead lines, etc., come under the jurisdiction of this organisation.

Georgia Ports Authority, P.O.Box 2406, Savannah, Georgia 31402. *Tel:* (912) 964-3811. *Telex:* 804782 and TWX 810-784-5634. *Cables:* Gaports. *FAX:* (912) 966-3615. *Contact:* George E. Nichols, Executive Director.

SEARSPORT, Maine: 44.28 N. 68.56 W. (See Plan)

LOCATION: The Port of Searsport is located on Penobscot Bay, approximately 112 road miles East of Portland, and 20 miles from Bangor.

DOCUMENTS:
Clearance from Last Port.
2 copies of Form 1300 (Master's Oath).
2 copies of Form 1301 (General Declaration).
3 copies of Form 1302 (Inward Foreign Cargo Manifest).
NOTE: Form 1302 will only be accepted.
2 copies of Form 1303 (Ship's Stores Declaration)
(Including Narcotic Medicines).
Form 1374 Outward Foreign Manifest.
2 copies of Form 1304 (Crew Effects Declaration).
2 copies of I-418 (Crew List).

Also available: Vessel Register, Safety Equipment Certificate, Load Line Certificate, Certificate of Financial Responsibility, (Oil Pollution), and U.S. Tonnage Tax Receipts.

PILOTAGE: Ship's agent notifies Pilot approximately 48 hours in advance of arrival, correcting at 24 hours. Pilot's boat called on Channel 16.

Vessels from South and West, Pilot boards at Monhegan Island (Buoy 14M). Vessels from East, Pilot boards at Matinicus (Buoy 2WB). The pilot station is located on Matinicus Rock Island. Pilot boards at Wooden Ball Light Bell Buoy "2WB." Lat. 43° 49′ N., Long. 68° 50′ W.

The pilot boat is a fishing boat with a white hull showing the international signals.

Pilot signal: 3 long and 2 short on ship's whistle.
Radio contact: VHF Channel 16 (156.8 MHz).

36 and 24 hours ETA requested, cable "Penbay – Belfast/Maine", via Chatham Radio.

ANCHORAGES: No restrictions on anchoring.

RESTRICTIONS: No restrictions at night. Deep draft vessels brought in only on high water. Draft in concurrence with docks, 32 ft. low water. 10 ft. rise in tide – approach to Searsport 35 ft. – Bay 60 ft. limit.

MAX. SIZE: Size of vessel restricted to 38 ft. draft in harbour area. No outside installations at the port yet.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Tugs in Searsport Harbour use Channels 16 and 13. Vessels arriving Searsport go through radio station at Chatham, Mass., RCA installation, SSB station or a VHF public correspondence station.

TUGS: Penobscot Bay Towing Co., Marshall Wharf, Belfast, Maine 04915. Tel. (207) 338-3000. 24-hour service. Requested that orders for tugboat service be given during normal business hours, 24 hours in advance.

Tugs: "Patrick McAllister", 1,200 h.p.
"Brian F", diesel 1,200 h.p.
"Roderick McAllister", diesel 1,200 h.p.
"Bronx", diesel 1,800 h.p.

Radio: Ship to ship, VHF Channels 16-13-10.
Sea Pilots dock ship with tug's assistance.

BERTHING: Draft conditions govern arrival and departures.

Bangor and Aroostock Pier: Length 800 ft., width 100 ft. Depth alongside (East side) 34 ft., (West side) 30 ft.

This pier handles a wide variety of cargoes including petroleum, forest and agricultural products, such as newsprint, tapioca, long logs, dimension lumber, potatoes, etc.

Cargoes can be off-loaded or loaded directly from or to railroad cars or trucks. There are 4 warehouses on the facility available for import or export cargoes.

C. H. Sprague Dock: Length 614 ft., depth alongside East side 33.6 ft.

This facility has and can handle many bulk cargoes, including salt, coal, gypsum, potash, bauxite, liquid chemicals, and Bunker C petroleum. There are 3 towers for discharge of bulk cargoes.

Turning basin off docks, depth 34.5 ft. and 1,200 ft. width.

STEVEDORES:

Weekdays:
Order gangs by 1700 hrs. for following day 0800 start.
Order gangs by 0900 hrs. for same day 1300 start.
Order gangs by 1300 hrs. for same day 1800 start.

Weekends:
Order gangs by Saturday 1200 hrs. for a Sunday 0800 start.
Order gangs by Saturday 1200 hrs. for a Monday 0800 start.

MEDICAL: No advance notice required by Agent. 1 hospital, Waldo County, which takes bed patients.

TANKERS: 2 berths at Searsport – 2 for No. 6 oil and 1 for light oil and gas. 2×8 in. hoses. 34 ft. LW.

DENSITY: Average density 1024.

FRESH WATER: Available by tug for boilers only at rate of tug hire at anchorage. Drinking water available at piers.

FUEL: No. 6 oil at C. H. Sprague Dock. Light oils delivered by tank truck at dock.

FIRE PRECAUTIONS: At certain oil piers information given to Shipmaster upon arrival at pier. Ample fire protection, salt-water lines, sprinkler system on pier, local fire department.

CONSULS:
French: Dr. Paul O. Proudian, 776 Main Street, Westbrook, Maine.
Finnish; Frank W. Bjorklund, 163 Main Street, Norway, Maine.
Italian: Dr. Domenica A. Santoro, 43 Deering Street, Portland, Maine.
Norwegian: Allan Kjos-Hansen, 30 Mayer Road, Portland, Maine, Vice-Consul.
Panamanian: Mary Navarro de Carrillo, Lafayette Town House, Portland, Maine.
Swedish: Martin Johnson, Vice Consul, 443 Congress St., Portland, Maine.

REPAIRS: All types of machinery repairs.

DRY DOCKS: None.

GANGWAY/DECK WATCHMEN: Not required.

OPENING/CLOSING HATCHES: Ship's crew may open hatch a longshoremen boarded ship.

CERTIFICATES:
Load Line Certificate.
Certificate of Foreign Clearance.
Ship's Safety Certificate.
U.S. tonnage Tax Certificate of previous trip if have them.
Radio Operator Licence.

CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes per man. W and/or Spirit allowance 1 bottle per person.

CARGO GEAR: No additional cargo gear necessary.

REPATRIATION: Arrangements must be made with Agent in advan by telegram.

AIRPORT: Bangor International Airport, 30 miles, Delta, United Airline

HOLIDAYS: New Year's Day; Washington's Birthday; Patriot's Da Memorial Day; Independence Day; Labour Day; Thanksgiving Da Christmas Day and Veteran's Day. Possible to get gangs to work days except on Labor Day and Christmas.

POLICE/AMBULANCE/FIRE: Police Tel: 548-6372; Ambulan Tel: 548-2900; Fire Tel: 548-2900.

TELEPHONE: Arrangements can be made to have phone put on sh but most docks have pay phones.

IDENTIFICATION CARDS: Form I-95 must be filled out on arriv unless seamen has had a prior one made out for a previous arrival same ship (on plastic card).

DEVELOPMENTS: Directly across from the Port of Searsport lies Sea Island. A major new cargo facility and industrial park will be construct Emphasis will be directed toward potential user groups, equipme assembly and manufacturing, plus a full spectrum of forest produc storage and shipment.

This development will feature modern container-handling facilities an breakbulk handling capability.

SEATTLE, Washington: 47.36 N. 122.20 W. (See Pla

PORT LIMITS: Port of Seattle limits are co-extensive with t boundaries of King County in which Seattle is situated. A vessel h "arrived" when it has tied-up to a berth.

DOCUMENTS (on arrival from foreign):
Clearance from Last Foreign Port.
2 Crew Lists on Form. I-418.
2 Passenger Lists on Form I-418 (if applicable).
Passenger Declarations if applicable.
2 Stores Lists.
2 Crew Purchase (curio) Lists.
2 Manifests of Cargo for discharge on CF1302.

If first arrival port on an inward voyage, must also have 2 sets Manifests of complete cargo on 1302, one for Customs at this port a the other for use as a "Travelling Manifest" to go forward to oth discharge ports.

(A) – For U.S. Public Health Quarantine Boarding Officer: "Quarant
Declaration" on Form PHS.43. (Only required if boarding on arr
is necessary) see "Health" before first U.S.A. port.
(B) – For U.S. Dept. of Agriculture Boarding Officer: "Shipmast
Declaration and Warning Notice" on Form AIQ.43.
(C) – For U.S. Immigration Boarding Officer:
Crew List on Form I-418 visaed by U.S. Consul abroad.
Passenger List on Form I-418.
Attachment to Passenger List on Form I-92.
Form I-94 for each passenger.
Form I-95 or ID Card (Form 184) for each crewman. (These are usable for multiple entries, but for seamen on first trip to United Sta a new Form. I-95 must be ready for presentation on arrival.)
(D) – For U.S. Customs Boarding Officer and Agent or Broker:
3 copies Crew List (Form I-418).
3 copies Cargo Manifest on Form 1302.*
3 copies Stores List – Form 1303.*
3 copies Crew Purchases or Curio List (Form 1304).*
3 Passenger Lists on Form I-418.
For U.S. Ships – Declaration re foreign repairs on Form 3415.
For U.S. Ships – Certified Crew List from last U.S. port before g
foreign.

*At subsequent U.S. ports of call 2 copies required of extracts Ca Manifests of cargo for the port concerned, and 2 copies of Lists of St and Curios remaining on board.

PILOTAGE: Compulsory for all vessels except those on coasting trade. Pilots may be obtained from Port Angeles Pilots' Association, Seattle, at short notice. Inward, Pilot boards vessel at pilot station off Port Angeles.

Port Angeles Pilots: Pilotage service furnished to any port or place on Puget Sound and its adjacent inland waters.

Pilot stations are located on Ediz Hook, Port Angeles and Seattle Washington.

Vessels desiring a Pilot should proceed to a position 0.25 miles East of Ediz Hook, where Pilot will board the vessel. If a Northwest wind, sea, or swell exists, vessels are requested to proceed to a position inside and South of Ediz Hook to obtain a lee and facilitate boarding.

In clear weather, vessels should indicate their desire for a Pilot by hoisting the International Code Flag "G" and by blowing the whistle signal of 1 long, 1 short and 1 long blast.

In fog or thick weather, the blowing of this whistle signal will attract the attention of the pilot station and repetition of this signal will assist the pilot boat to locate the vessel.

The pilot station is located 1,200 yards, 277° from Ediz Hook Light. At night, the station will show from a mast, 3 vertical lights, the highest and lowest being red and the middle one green, to indicate that the pilot boat is en route to the ship. The pilot station is equipped with radar to locate and track vessels. The pilot boats, 'Juan de Fuca' and 'Puget Sound' are equipped with radar.

Communications: Vessels may ensure prompt service by advising their ETA, Port Angeles, 24 hours in advance, via radio to station KLB, addressed to Port Angeles Pilots, Seattle, Washington. A vessel may also advise the pilot station, Port Angeles, Washington, addressed to "Pilots Port Angeles" of their ETA, and amended ETA, when subsequent conditions make it necessary. The message is transmitted immediately from KLB to Port Angeles via telephone. The pilot station, Port Angeles, monitors VHF Channels 14 and 16 continuously and transmits on Channel 13.

At the time of passing Cape Flattery, inbound vessels are requested to re-affirm their ETA by calling the pilot station directly, using VHF calling Channel 16 and transmitting on Channel 13.

Channel 14 is for Vessel Traffic System only.

Pilot Ladder Requirements:

1. Please contact pilot boat via voice radio (Channel 13) approximately 30 minutes prior to arrival for desired lee.
2. The ladder must be kept clean and used solely for embarking and disembarking Pilots.
3. Rigging of the ladder, along with embarking and disembarking Pilot, must be under supervision of a licensed officer.
4. The ladder must be made in 1 length and not consist of 2 lengths shackled or lashed together, and should be equipped with spreaders about 10 ft. apart to comply with SOLAS Regulation 17, Chapter 5.
5. The pilot boats have their own lights to illuminate the pilot ladder, but a standby light should be ready for an emergency.
6. The area of the deck where the Pilot boards and leaves must be well lighted and the area must be clear of all obstacles to ensure a safe passage for the Pilot.
7. *No tag lines, pull-up ropes, or trailing lines may be attached to the lower ends of the ladder.*
8. Ladders must be rigged well clear of discharge and water outlets and at a place near midship which affords the best lee for the Pilot. At no time should the ladder be rigged near the stern of the vessel.
9. Means must be provided to allow the Pilot to pass safely onto the ship's deck. Where portable stanchions and bulwark steps are used for this, the portable stanchions must be rigidly attached to the ship's structure and not the steps. The bulwark steps must also be securely fastened.
10. The ladder must be in good condition. The treads must remain horizontal when used and the upper surface must have a rough nonskid quality.
11. Manropes approximately 3 in. manila in circumference, a heaving line and a ring buoy with a self-igniting light must be provided.
12. If your vessel is to take a load of logs, make sure the Agent makes arrangements to have a cat-walk to provide safe passage to and from the ladder.

Accommodation Ladders for Embarking or Disembarking of Pilots:

1. All vessels where the distance from sea level to the point of access of the ship exceeds 9 m. (30 ft.) at any time, should carry on each side an accommodation ladder. The ladder is to be so sited that when in use the lower end of the ladder shall rest firmly against the ship's side under all conditions of roll and heel, clear of all discharges, and within the parallel length of the ship.
2. A conventional pilot ladder should be rigged just abaft the lower platform of the accommodation ladder. The pilot ladder should be secured firmly to the lower platform to allow access between the pilot ladder and accommodation ladder. The pilot ladder should extend at least 2 m. (6 ft.) above the lower platform of the accommodation ladder. Manropes to be provided and rigged alongside the pilot ladder.

ANCHORAGES: Extensive anchorage in Eliott Bay, depths of 90 ft.

RESTRICTIONS: Overhead power cables at Burlington Northern Railroad Bridge with a vertical clearance of 155 ft.

MAX. SIZE: Controlled by depth at berth.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

CRANES: *Terminal 5:* 5×50 ton container cranes.
Terminal 18: 6×45 ton container cranes and 1×50 ton revolving crane.
Terminal 25: 3×45 ton and 1×33 ton container cranes.
Terminal 30: 1×50 ton gantry, 3×50 ton container cranes.
Terminals 37, 42 and 46: 6×45 ton container cranes.
Terminal 115: 1×50 ton gantry crane.

STEVEDORES: 40 local gangs available. Gang requirements must be made known to the contracting stevedore prior to 1100 hrs. on day before vessel plans to dock. Order before 1030 hrs. on Saturday for Saturday afternoon, Sunday, and Monday.

TUGS: Available, 2nd tug normally used.

BERTHING: Over 46 berths for ocean-going vessels. Depths alongside, 10.6 m. – 21 m. MLLW.

Terminal No.	*Total Length* (m.)	*Depth* (m.)	*Remarks*
2	244	12.0	Leased to North Star Forwarding – barge berths.
5	537	13.5	3 container berths.
	166	—	Undeveloped berth (one).
18	1,844	12.0 – 15.0	Container, breakbulk, bulk, Ro-Ro, non-petroleum products. 352 reefer plugs.
25	482	15.0	2 container berths. 120 reefer plugs.
28/30	823	12.0	Container and breakbulk.
			2 container berths and 2 general cargo berths.
37	270	15.2	1 container berth. 186 reefer plugs.
42	290	15.2	1 container berth
46	336	15.2	1 container berth. 217 reefer plugs.
48	585	10.6	
66	436	8.5 – 10.6	3 berths. Passenger ship terminal.
86	130	21.0	Export grain terminal operated by Cargill, inc.
91	3,058	10.66	General cargo, auto import, fruit, frozen meats and seafood. Oil tank farm handles bunker fuel and waste oil products. Chill space 53,802 cu.m. Liquid storage 213,000 barrels.
105	338	12.0	Barge facility.
115	366	12.0	Steel imports, fish and crab processing, general cargo.
	122	4.25	Barge berth.

SPECIALISED HANDLING FACILITIES: Terminals 18 and 20 combined and now designated as Terminal 18. Pipe-lines are available to carry molasses, tallow or other non-petroleum liquid cargo, and has a tank farm for storage.

Terminal 105 – 2 berth, barge operation – Crowley Maritime.

Terminal 115 – 2 berths, capacity, import steel.

Terminal 115 – Jore Corporation Barges, has specialised finger piers, to handle container-to-barge operations.

Terminals 5, 18, 25, 30, 37, 42 and 46 – Container Terminals, equipped with large container cranes and yards to handle van shipments. Depth alongside, Terminals 18 and 25 – 50 ft. Terminals 5, 30, 37 and 46 – 40 ft.

Pier 86 – fully automated, deep water, Grain Terminal. 1 berth, length 600 ft. (Max. LOA 1,400 ft. using dolphins). Depth of water 70 ft. at MLLW. Grain Terminal: capacity 4.2 million bushels, loading rate 3,000 t.p.h. via twin conveyor belts.

DENSITY: Salt water in Outer Port. Fresh water inside Canal Locks.

FRESH WATER: Available at all wharves.

FUEL: Available.

2 copies Crew Manifest (Curio List).
2 copies Stores List.
2 copies Passenger List (Form I-418).
2 copies Crew List (Form I-418).

Customs Boarding Officer will also examine Ship's Register and Loa Line Certificate. In addition, the following documents will be required f formal entry to be made within 48 hours of arrival from abroad, o 24 hours from arrival from a United States port:
Health Pratique.
Master's Oath (Form 1300).
All Foreign clearances.
U.S. Certificates of payment to tonnage tax (Customs Form 1002).
Certified Crew List.

PILOTAGE: Pilots provided by Southwest Alaska Pilots Associatio (See"Homer').

Pilot boards 1.1 miles × 152° from Caines Head Lt. (Lat. 59° 58' N Long. 149° 22' W.).

MAX. SIZE: Harbour depth 35 ft. MLLW.

ANCHORAGE: Suitable anchorage in 30 fathoms depth; available f deep draft vessels at the head of the Bay, South of marked buoy.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illnes Reports made to Seattle Quarantine Station.

RADIO: KWA 346 (AM) Alaska Railroad Dock, frequency monitore 2182 kHz. KWA 364 (SSB) Alaska Railroad Dock frequency monitore 4-6-8-12 Megs.

TUGS: Tug service available. Anderson Tug & Barge (907) 224-550

BERTHING: *Alaska Railroad Corp.:* 24 hour berthing. Berthing perm required. Advance notice of 48 hours requested.

200 ft. by 735 ft. steel and concrete finger pier.

East Side — 450 ft. long with 35 ft. depth of water (10 ft. out fro dock face).

West Side — 600 ft. long with 35 ft. depth of water.

South End — 200 ft. long with 35 ft. depth of water.

(East and West Berths serviced by railroad spurs).

Ro/Ro capability provided through a triple deck, articulating ram along West Berth.

CRANES: East and West Dock Face – 2 gantry cranes. Maximu capacity – 45 short tons, maximum radius – 105 ft. Forklifts ranging u to 35 ton capacity.

Operator: The Alaska Railroad Corp., P.O.Box 95, Seward, Alask 99664. Tel: (907) 224-5550.

BULK HANDLING FACILITIES: *Terminal Specifications:*

Unit Train Unloading	3,000 tonnes*/p.h.
Stacking	
Rail-mounted stacker/reclaimer	1
Stacking capacity per hour	3,000 tonnes
Reclaiming capacity per hour	1,000 tonnes
Shiploading	
Fixed position slewing shiploader	1
Loading capacity per hour	1,000 tonnes
Ship berth	1
Maximum d.w.t.	120,000
Maximum draft (MLLW)	58 ft.
Additional Data	
Seward Coal Terminal Area	33.91 acres
Total conveyor length	6,590 ft.
Stockpile capacity	120,000 tonnes
Annual throughput capacity	3,000,000 tonnes

*1 tonne is equivalent to approximately 2,204 lbs.

Operator: Suneel Alaska Corporation, P.O.Box 1789, Seward, Alask 99664. Tel: (907) 224-3120. Telex: 25353 Suneel Swrd.

City Dock Facilities: City Dock: Located inside Small Boat Harbour. Up t 100 ft. vessels. Depth 15 ft. MLLW.

Fourth Avenue Dock: Up to 300 ft. vessels. Depth 35 ft. at MLL Power available. Mobile cranes to 100 tons.

Seward Marine Industrial Centre: Basin is 660 ft. × 1,200 ft. with dep of 21 ft. at MLLW.

Syncrolift shiplift 300 ft. × 80 ft. with 3,600 ton lift capacity.

Adjacent 100 acre industrial site.

Light cargo dock 300 ft. long with 21 ft. at MLLW.

STEVEDORES: Northern Stevedoring and Handling Corporation sup labour force.

MEDICAL: Fully staffed 30 bed hospital. All medical facilities availab

DENSITY: 1.0248 at Mean High Water.

FRESH WATER: Available at East and West berths. 4 in. water li 67 lb. pressure.

FUEL: Marine Gas Oil available from pipeline at South & West Berth. Marine Diesel Oil available from same pipeline during Summer months only (Maritime Oil, Vancouver, B.C.).
REPAIRS: Radio, radar, welding, machining and light engine repairs can be effected.
DRY DOCKS: Syncrolift available. See "Berthing".
OPENING/CLOSING HATCHES: Handled by crew, if done before berthing ship. By stevedores if tied to dock.
AIRPORT: 1 mile. 1 flight daily to Anchorage.
TIME: Alaska Standard Time.
HOLIDAYS: All holidays are time and one half. Cargo can be worked on all except Christmas, New Year's and Labour Day.
POLICE/FIRE/AMBULANCE: Tel: 911.
IDENTIFICATION CARDS: U.S.C.G. Port Security Card or Seaman's Card required.
AUTHORITY: City of Seward, P.O.Box 167, Seward, Alaska 99664. Tel: (907) 224-2231. *FAX:* (907) 224-3248. *Contact:* Foster Singleton, Harbour Master.

SITKA, Alaska: 57.03 N. 135.20 W. **(See Plan)**

Located on the Western side of Sitka Sound, Baranof Island. Open all year.
DOCUMENTS: See "Anchorage, Alaska".
APPROACHES: 3 natural channels: Western, Middle and Eastern.
PILOTAGE: Pilot pick-up point – close vicinity of Eckholm Light.
ANCHORAGE: Jamestown Bay.
MAX. SIZE: Harbour depth 22 ft. MLLW. Tides: diurnal range – 9.9 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
CUSTOMS: Quarantine, Immigration and Customs, local.
TUGS: 7 tugs 300 h.p. to 1,200 h.p.
BERTHING: 3 wharves.

1. Conway Dock: Berthing length 160 ft., depth 30 ft. MLLW. No cranes, 3 lift-trucks; 10,000 sq. ft. covered shed space; fresh water.
2. Japonski Dock: Government dock for limited commercial use only.
3. Alaska Lumber & Pulp Co.: (Private) Berthing length 700 ft., depth 35 ft. LW. Walking cranes only. Not less than 12 lift-trucks, 30,000 sq. ft. covered shed space; fresh water. (Located at Silver Bay, Sawmill Cove, 4 miles South of Sitka). 30,000 sq. ft. open storage.

STEVEDORES: 3 gangs.
MEDICAL: Sitka Community Hospital and S.E.A.R.H.C. Hospital on Japonski Island.
DRY DOCKS: 1×400 ton floating dock at Jamestown Bay, approximately 3 miles East of Central Sitka.
REPAIRS: Light repairs only.
FRESH WATER: Available.
FUEL: Not available.
TRANSPORTATION: Air and ferry.
GARBAGE DISPOSAL: 350 gallon dumpsters provided alongside. Charge is U.S.$ 35.00 per dumpster.
WASTE OIL DISPOSAL: A 2,000 gallon tank truck is available for collection service. Contact Sitka Sound oil contractor. Tel: 747-6662.
SEAMAN'S CLUBS: None.
AUTHORITY: City and Borough of Sitka, 304 Lake Street, Sitka, Alaska 99835. *Tel:* (907) 747-3439, 747-3294, 747-3245. *FAX:* (907) 747-7403. *Contact:* Brian G. Bergman, Harbour Master.

SKAGWAY, Alaska: 59.27 N. 135.18 W. **(See Plan)**

Located at the Northern end of Lynn Canal, 14 miles North of Haines.
DOCUMENTS: See "Anchorage, Alaska".
APPROACHES: Via Lynn Canal.
PILOTAGE: Pick-up point located in vicinity of Point Retreat.
MAX. SIZE: Harbour depth 30 ft. running out to 300 ft. Tides diurnal range 16.7 ft. Also see "Berthing".
ANCHORAGE: In Lutak Inlet, 14 miles South of Skagway.
HEALTH: See "Health: All ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
CUSTOMS: Quarantine, Customs and Immigration available in Skagway.
TUGS: 2 tugs available at Skagway.
BERTHING: 1. White Pass and Yukon Railroad Dock: Containerised cargo to Vancouver and Whitehorse is the principal use, also used for tankers and cruise ships. 1,240 ft. long, 100 ft. wide; depth at face varies from 20 ft. to 43 ft. No covered storage. Open storage 80,000 sq.ft. 1 fork-lift is available. Containers presently loaded and unloaded with ship's gear. 2 straddle cranes for containers on dock. Deck for 400 lbs. per sq. ft. loading.

2. Skagway Terminal Co.: Ore loading facility. 1,000 ft. berth, fender dolphins, and walkway. 42.5 ft. deep at face. Used for bulk cargo ships and cruise ships. Vehicle ramp available. Adjacent to the berth is a warehouse of 108,000 sq.ft. Also available are 50 acres for open storage. Loading equipment consists of 1 fixed loading spout with a capacity of 1,500 t.p.h.
3. Skagway Terminal Co.: Cruise vessel dock. 960 ft. berth, fender dolphins and walkway (built 1990).
4. State: City joint use ferry pier – barge off-loading facility. Upland storage of 120,000 sq.ft.
5. City of Skagway: Small boat harbour, approx. 100 stalls. Fuel available. Water available in temperate seasons.

STEVEDORES: 3 gangs.
MEDICAL: Medical clinic and one nurse.
REPAIRS: None.
SURVEYORS: Not available locally.
WATER: Available in temperate seasons only.
FUEL: Available at Chevron Dock and small boat harbour.
AIRPORT: One mile from harbour. Scheduled and charter flights available daily. 3,400 ft. paved runway.
POLICE/AMBULANCE/FIRE: Emergency 911. Police Tel: 983-2301. Ambulance Tel: 983-2300. Tel: Fire 983-2300 or 911.
EMERGENCY CO-ORDINATON CENTRE: Skagway Fire Hall,Tel: 983-2300 or 911.
TELEPHONE: Pay phone at top of small boat harbour ramp.
BANKS: National Bank of Alaska, Skagway.
STORING: See "Prelims".
Storing at White Pass Railroad Dock:

1. By truck.
2. No barge storing.
3. Trucks can proceed alongside, except south 400 ft. of dock.
4. Fork lift trucks can be used.
5. Customs perform supervision of loading/unloading of all bonded stores. Customs/Immigration Tel: 983-2325
6. Local riggers are available.

GENERAL: Highways: Klondike Highway open all year round.
AUTHORITY: City of Skagway, P.O.Box 415, Skagway, Alaska 99840. *Tel:* (907) 983-2297. *FAX:* (907) 983-2151. *Contact:* Port Manager or Harbour Master.

SMITHS BLUFF, Texas: 30.00 N. 93.59 W. **(See Plan)**

DOCUMENTS, PILOTAGE, RADIO, etc.: Refer to "Port Arthur".
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Meet vessel in Neches River before arriving at berth. Normally 2 tugs required berthing/unberthing.
BERTHING:
Sun Co.: Distance from sea 47.6 miles, depth at berth 40 ft.
Sun Marine Terminals:
Operators: Sun Marine Terminals, P.O. Box 758, Nederland, Telex: 77-9469. Tel: 409-727-2301.
Type of terminal: Handling crude oil and lub.
Density: Fresh water.
Controlling Depth: From channel to berth – 39 ft. – 40 ft. Actual depth alongside – 40 ft.
Vertical clearance at HW: 136 ft.
Max. length of berth facility: 150 ft.
Max. length of vessel to be moored safely: 900 ft.
Hoses: 4×12 in. (Crude). 6×6 in. (Lub).
Usual Discharge Pumping Capacity: 50,000 bbls.p.h. (Crude). 2,000 bbls.p.h. (Lub).
Usual Discharge Pumping Capacity: 50,000 bbls.p.h.
Ballast Facilities: Deballasting facilities available with prior notification.
Fresh Water: Available on 24 hour basis.
Fuel: Available ex-wharf.
Tugs: Per Pilot's requirements.
Anchorage: Max. draft 39 ft. (2 anchorages).
Report: Sun Marine Terminals is located on the Neches River 47.6 miles from the Sea Buoy. The terminal is owned, operated and used by Sun Company. The controlling depth of the channel and turning basin is 40 ft. The density of the water at this terminal is 1000. The maximum size vessel normally received at this terminal is approximately 76,000 d.w.t. at Berth No. 1 and 130,000 d.w.t. at Berths No. 2, 3, 4 and 5. Vessels are docked and undocked day or night. Vessels are cautioned to keep mooring lines tight and be on alert for passing traffic.

2 tugs are normally used while docking and 1 while undocking. Sabine Towing requests a 3 hour advance notice when ordering tugs.

Vessels are berthed head upstream port side to with a usual arrangement of mooring lines including 3 forward springs and 3 aft springs. Head and stern lines run by launch. Pilots require one-way traffic and daylight navigation for all vessels in excess of 85,000 d.w.tonnes (83,700 LT). 2 lay-berths are provided across the channel. These consist of trenches dredged into the entrances of an unused ox-bow in the river. There are mooring points but most vessels lie to an anchor in the trench.

Sun Marine Terminals provides a gangway.

Fuel and fresh water are available at the terminals.

The terminal is fenced and guarded.

Pollution Control: 4,500 ft. of spill boom launch.

Fire: There are foam nozzles and monitors on the dock.

MEDICAL: All facilities available.
DENSITY: Fresh water.
FRESH WATER: Available ex-wharf.
FUEL: Available ex-wharf.
CONSULS: Nearest at Houston.
REPAIRS/DRY DOCKS: See "Port Arthur".
GANGWAY/DECK WATCHMEN: Not required unless crewmen detained by Immigration.
CUSTOMS ALLOWANCES: 300 cigarettes and 1 quart wine or spirits for each man.
IDENTIFICATION CARDS: Foreign crew only require Immigration Landing Permit.
AUTHORITY: *Operator:* Sun Marine Terminals, P.O.Box 758, Nederland, Texas 77627. *Tel:* (409) 727-2301. *Telex:* 77-9469 Sun NDLN.

SOUTH LOUISIANA, Louisiana:
30.06 N. 90.29 W. **(See Plan)**

LOCATION: The Port of South Louisiana's jurisdiction includes the parishes of St.Charles, St.John the Baptist and St.James, and extends from River Mile 114.9 A.H.P. to River Mile 168.5 A.H.P.

IMTT is located at River Mile 118 A.H.P. (above Head of Passes) on the East bank of the Mississippi River, and is in the port's jurisdiction.

The Chevron facility at Oak Point is in the jurisdiction of the Port of Plaquemines, and is located at River Mile 70 A.H.P. on the West bank of the Mississippi River.

PORT LIMITS: *Port Boundaries:* River Mile 114.9 to 168.5 A.H.P. on the Lower Mississippi River.

ANCHORAGES: See "New Orleans".

RESTRICTIONS: Minimum water depth in main channel is 45 ft.

BERTHING: Please also see Index, as some ports/terminals may also be included in entries at other ports.

General Cargo Terminal:

Globalplex International: P.O.Drawer 559, Reserve, LA.70084. Tel: (504) 536-8300. Fax: (504) 536-8304.

Location: River Mile 138 A.H.P., between New Orleans and Baton Rouge.

Depth alongside: 50 ft.

Maximum crane outreach (from ship fenders):	61 ft.
Height of crane (above low water):	94.34 ft.
Bottom of bucket (at low water): (High water 22 ft.)	79.04 ft.
Transfer capabilities:	Ship to barge or storage. Barge to ship or storage. Storage to ship, barge, rail or truck.
Conveyor System:	42 in. (45°).
From dock to storage:	Heavy duty nylon rubber belt with travel speed of 431 ft. per minute.
Barge loader:	60 in. (45°) nylon rubber belt with travel speed of 431 ft. per minute.
Barge fleeting:	140 barge fleeting area.
Harbour boats:	1,200 h.p., 800 h.p., 2 × 2,600 h.p.
Floating cranes:	Barge mounted crawler, 80 ton 100 ft. boom. Barge mounted 200 ton, Lima with 12 yard bucket.
Rail spar:	24,000 ft. of rail and one yard locomotive.
Weighing scales:	Rail (300,000 lb. capacity). Truck (100,000 lb. capacity). Front end loader scale mounted on IH 80 Hough.
Auxiliary equipment:	International Hough 80 (4 yd. bucket). 3 × 916 cat front end loaders. 931 D-4D cat dozer. Dump trucks. Bobcat 980. Payloaders.

Use: Shipment, receipt and storage of general and dry bulk cargo.

Description: 200 acre intermodal terminal; wharf 454 ft. long; 43 ft. wide; mooring dolphins 754 ft. centre to centre; upstream buoy 1,000 ft. centre to centre; 2×18,000 lb. Peco gantry cranes, capacity 340 tons per hour per crane; 1×80 ton barge-mounted crawler crane; 1×200 ton barge-mounted Lima crane; conveyor system; 300,000 sq.ft. of covered storage facilities, storage racks, pallet conveyor, climate control, rail docks, truck docks, stacking and reclaiming capabilities; 3 concrete silos; water purification plant; waste water treatment plant.

Rail Facilities: Rail spur; served by Illinois Central and Kansas City Southern Railroads.

Truck Facilities: Site is within 7 miles of Interstates 10 and 55, 2 miles from U.S. 61, 25 miles from New Orleans International Airport.

Dry Bulk Terminals: *Port Terminal No. 1:* ADM, Reserve Grain Elevator, P.O.Box AC, Reserve, LA 70084. Tel: (504) 536-1151. Telex: 784013. Fax: (504) 536-1152.
River Mile: 139.2 A.H.P.

Berth 2: 900 ft.
Berth 1A: 750 ft.

2 tanker berths (80,000 d.w.t., 900 ft. LOA downstream, 55,000 d.w.t., 750 ft. LOA upstream) 16 in. and 8 in. loading arms for transfer, transfer rate variable, ballast line 12 in., capacity 20,000 bbls.

Berthing always starboard side to. Requires 2 tugs to assist in berthing. Forward and aft mooring lines handled simultaneously.

Railroads: Illinois Central, Kansas City Southern.

Report: General: The berth at Norco is approximately 126 miles AHP and consists of a single dock constructed of steel pilings and a concrete deck. A continuous fender system of wood-faced steel piles provides continuity between the dock and mooring dolphins.

All cargo is handled through 6×12 in. loading arms with 8 in. reducers. The arms are arranged so as to permit washing of the arms into a slop tank ashore; thus, grade changes may be made without removing the arms.

Cargo Handled and Shore Installations: Various products are handled through a common shoreline including crude, clean products, jet fuel, kerosene and heating oil.

The maximum allowable rail pressure for discharging vessels is 150 p.s.i.

An emergency shutdown system to stop loading is located in the dock office and at the levee in the guard office.

Docking: Docking is normally performed by the River Pilot and is strictly starboard side to. 1×800 h.p. tug is required for both docking and undocking operations.

Vessels should approach the dock with a tug on the port bow, stemming the current, at a maximum angle to the dock of 10° and at a velocity no greater than 5 ft./sec.

Communications: A public telephone located at the head of the dock is available for use by ship personnel.

Gangway: The ship's gangway must be used and should be properly rigged and illuminated.

Bunkers and Fresh Water: Bunkers are not available.

Fresh water is available at Norco.

Ballast/Slop Facilities: Ballast and slop facilities are available. The shore storage/treatment tank has a 150,000 bbls. capacity and is connected to the dock manifold by a 14 in. shore line.

Star Enterprise (Texaco): P.O.Box 37, Convent, LA 70723. Tel: (504) 562-7681. Fax: (504) 562-7681, ext. 200.
River Mile: 168.1 A.H.P.
Depth alongside: 40 ft.
2 Berths: 1 × 810 ft.; 1 × 900 ft.
Railroad: Illinois Central.

TransAmerican Refining Company: 257 Prospect Avenue, Good Hope, LA 70079. Tel: (504) 764-8611.
River Mile: 125 A.H.P.
Depth alongside: 25 ft.
2 Berths: 1 × 423 ft.; 1 × 480 ft.
Railroads: Illinois Central, Kansas City Southern.

Union Carbide Corporation: P.O.Box 50, Hahnville, LA 70057. Tel: (504) 468-4624, 468-4627, 468-4676. Telex: 887739. Fax: (504) 468-4406.
River Mile: 127.3 A.H.P.
Depth alongside: 30 ft.
1 Berth: 725 ft.
Railroad: Union Pacific.

U.S. Department of Energy Strategic Petroleum Reserve: P.O.Box 157, St.James, LA 70086. Tel: (504) 265-3073. Telex: (TWX) 810-951-5393. Fax: (504) 265-3073, ext. 281.
River Mile: 158.7 A.H.P.
Depth alongside: 57 ft.
2 Berths: 940 ft. each.

TANKERS: See "Liquid Bulk Terminals" above.

Report: *Garyville:* The Marathon Dock is located on the right ascending bank of the Mississippi River, Mile 140. It consists of 5 separate berths (each 1,000 ft.) fitted with quick connecting hydraulic Chicksan arms for cargo transfer and quick release hooks on all mooring points. Depth alongside 45 ft.

Each dock is equipped with an emergency stop at the Chicksan arm assembly.

Cargo Handled and Shore Installations: Both docks handle asphalt, No. 6 fuel oil, unleaded gasoline and No. 2 diesel oil. Each dock can effect the transfer of No. 6 fuel oil through 2×16 in. arms, No. 2 diesel oil through 2×16 in. and/or 3×12 in. arms, unleaded gasoline through 2×12 in. arms and asphalt through a 1×16 in. arm. All cargo is transferred to or from storage tanks 1 mile away through 16 in. to 24 in. shore lines.

Docking: The River Pilot normally docks vessels at these berths; docking is strictly starboard side to. Vessels of 600 ft. LOA or greater are required to use 2 tugs for assistance in docking and undocking; smaller vessels may use a single tug.

Approach to the docks is made with the vessel stemming the current at slow speed. Tugs assist in positioning the vessel alongside.

The Marathon Terminal requires that vessels use 2 head wires or synthetic head lines, 3 forward spring lines (wire or synthetic), 2 spring lines aft (wire or synthetic) and 2 stern wires or 3 stern ropes. All mooring points are equipped with quick release hooks.

Communications: Public telephones are available for use by ship's personnel.

Gangway: The vessel's gangway must be used and should be properly rigged and illuminated.

Bunkers and Fresh Water: Bunker C and diesel fuel are available on request; however, no bunker barges are allowed alongside a vessel docked at either berth.

Ballast/Slop Facilities: Ballast and slops can be received by the docks in limited quantities.

SHIPMASTER'S REPORT: February 1979.
Restrictions: Not allowed to take bunkers, lub oils or stores from dock while alongside. Large tankers often require 2 tugs pushing all the time to keep them alongside, especially when river is in flood. This at GATX No. 4.
VHF: Standby on Channel 13 during pilotage and when anchored. Agents normally place walkie-talkie aboard for their direct communication.
Berthing: Always starboard side to. Forward will have 2 backsprings to jetty, 4 headropes, 2 breasts to buoys, lashings not required, same aft. Only one boat used and secures the bow first.
Telephones: Not available at GATX No. 4 but there is one on next jetty upriver.

SHIPMASTER'S REPORT: December 1979 (Updated 1992).
Port: Paulina.
Location: 3 miles up river from Gramercy at St. Elmo Point. River Mile 120.6 A.H.P.
Anchorage: A waiting anchorage is situated 2 miles down river from the elevator at Grand View Reach.
Tugs: Available from Gramercy.
Berth: Peavey Grain Elevator. Depth of water alongside is 45 ft. Loading rate with one spout is 1,000 t.p.h.

The berth is a concrete pier on steel girders with 4 weak fenders. Spring lines are run to the pier, and head and stern lines to dolphins.
Fresh Water: Available from pier, rate 6 t.p.h. (approx.)
Fuel: Not available from quay.
Services: Provisions available from New Orleans, will be delivered by launch from Gramercy as pier can only be reached on foot over a catwalk 700 ft. long including stairs.

SHIPMASTER'S REPORT: March 1991.
Location: Destrehan is an area on the right ascending bank of the Mississippi River about 120 miles above Head of Pass.
St. Charles Elevator: Close above Bunge Elevator. Berth has 7 spouts with loading rate 1,000 t.p.h. A 720 ft. vessel is secured with 3 headlines to a buoy, 3 breastlines and 2 backsprings to the wharf, 3 backsprings, 2 breast ropes which led forward and 2 sternlines to the wharf. A forward facing gangway can reach the wharf, but the ship is fendered off about 3 ft. Minimum airdraft under the spouts may be 42 ft. at highest river stage, increasing as the level falls. Stores can be taken from the wharf only at the forward hatch. Fresh water from the wharf by 1.5 in. hose at 2 t.p.h. – 3 t.p.h. Taxi fare to nearest city is U.S.$25.00 each way. Vessel loaded corn gluten pellets with spout trimming only. This cargo does not run freely and large voids were left, the ship had a 1.5° list on completion, away from wharf. There is a small convenience store with telephones.
Bunge Elevator: The elevator is equipped with 7 spouts, possibly 2,000 t.p.h. Berth is said to be capable of berthing 1,000 ft. ships. Headlines go to buoys.
A.D.M. Buoy Systems: Located between the St. Charles Elevator and the Highway Bridge. There are 2 systems of buoy moorings. These are served by floating elevator "Gemini" which has a rate of 500 t.p.h., with one Buhler arm. Vessel dropped port anchor outside port head buoy, then starboard anchor inside starboard head buoy. 4 or 6 headlines are run to the 3 head buoys according to season. 2 sternlines are run to each buoy aft. The lines to the same buoy must be hove up together, which may require preparation on board. Vessel waited nearly 2 days for corn gluten to settle, and topped up all 7 hatches in 5 hours.

The elevators at AMA, Bunge and St. Charles and the 2 buoy systems are operated by A.D.M.

BERTHING: *Port Stockton Bulk Material Wharf, Berths 12-13:*
Owned by: Stockton Port District.
Operated by: Stockton Port District.
Use: Shipment of dry-bulk commodities, both systems handle t
following: coal, petroleum coke, clay, copper concentrates, fertili
soda ash, sulphur, and other dry bulk commodities; receipt of liq
fertiliser.
Dimensions: Length of face 850 ft.; lower side 13.5 ft., upper s
13.5 ft.; depth alongside at MLLW 40 ft.; usable berthing space 880
Mechanical handling facilities: Two bulk handling systems.
(A) Max. vessel loading rate 1,000 short tons/p.h. Equipped w
shiploader, belt conveyor, 360 degree spout trimmer, bottom drop c
dump (Max. 7.5 cars per hr.) and truck unloader hopper (Max. 30 tru
per hr.) (B) Max. vessel loading rate 4,000 short tons/p.h. Conve
system equipped with a 54 in. belt, rotary car dump, loop railroad
unit train.

Port Stockton Wharf, Berths 10-11:
Owned by: Stockton Port District.
Operated by: Stockton Port District.
Use: Container-handling dock; receipt of molasses, bulk dry car
container cargo and general cargo. Delivery of scrap steel, contai
cargo and general cargo.
Dimensions: Length of face 810.5 ft., lower side 102 ft.; de
alongside at MLLW 35 ft.; usable berthing space 810.5 ft.
Remarks: Face of wharf is in line and continuous with face of Be
9 providing a total of 1,455.5 ft, of berthing. This dock has 5.5 acres
open marshalling area. 2×30 tonne multi-purpose bridge cranes
handling dry bulk, general cargo, containers. 700 ft. of crane r
Construction of loop line R.R. track completed.

Port Stockton General cargo Wharf, Berth 9:
Owned by: Stockton Port District.
Operated by: Stockton Port District.
Use: Receipt and shipment of general cargo and receipt of bulk car
Dimensions: Length of face 645 ft., upper side 75 ft.; depth alongs
at MLLW: Face 37-34 ft., upper side 35 ft.; usable berthing space: Fa
645 ft. upper side 110 ft. with dolphin; width of apron: Face 41.25 f
Mechanical handling facilities: Forklift trucks and other types of car
handling equipment, owned by the Port District and by stevedor
companies, are available as needed.

Port Stockton Wharf No. 8:
Owned by: Stockton Port District.
Operated by : Stockton Port District.
Use: Receipt and shipment of general cargo; Liquid sugar facility a
receipt of molasses. Anhydrous Ammonia also unloaded at this do
through refrigerated pipelines.
Dimensions: Length of 396 ft.×88 ft.; depth alongside MLLW 37-36
usable berthing space 484 ft. with trestle.

Port Stockton Wharf No. 7:
Owned by: Stockton Port District.
Operated by: Stockton Port District.
Use: Receipt and shipment of general cargo.
Dimensions: Length 516 ft. depth alongside MLLW 37-36
usable berthing space 516 ft.; width of apron 31 ft. with trestle.

Port Stockton Wharf No. 6:
Owned by: Stockton Port District.
Operated by: Stockton Port District.
Use: Receipt and shipment of general cargo.
Dimensions: Length 418 ft.; depth alongside MLLW 37-36 ft.; usa
berthing space 329 ft.; width of apron 31 ft.

Port Stockton Wharf No. 5:
Owned by: Stockton Port District.
Operated by: Stockton Port District.
Use: Receipt and shipment of general cargo.
Dimensions: Length of face 428 ft.; depth alongside MLLW 35
usable berthing space 429 ft.; width of apron 31 ft.

Port Stockton Grain Wharf No. 4:
Owned by: Stockton Port District.
Operated by: Stockton Port District.
Use: Receipt and shipment of general cargo, receipt of bulk cargo
Dimensions: Length of face 461 ft.; depth alongside MLLW 35
usable space 462 ft.; width of apron 31 ft.

Port Stockton Wharf No. 3:
Owned by: Stockton Port District.
Operated by: Stockton Port District.
Use: Receipt and shipment of general cargo and receipt of b
cargoes.
Dimensions: Length of face 461 ft.; depth alongside MLLW 35
usable berthing space 461 ft.; width of apron 81 ft.

Dock has 30 ton bridge crane capable of handling general and
cargoes, as well as containers.

Port Stockton Open Wharf No. 2:

Owned by: Stockton Port District.

Operated by: Stockton Port District.

Use: Receipt and shipment of general cargo; shipment of logs, and handling of heavy-lift cargo. Also receipt of bulk cargo.

Dimensions: Length of face 506 ft.; depth alongside MLLW 32-36 ft.; usable berthing space 550 ft.; width of apron: open.

Remarks: Wharf has 39,000 sq. ft. of open storage area and 7 cone shaped buildings for handling inbound bulk cement, with direct belt conveyor from dock to cone buildings, with a capacity of 70,000 short tons to the rear of the dock area. At the Industrial Park approx. 60 acres of open storage area are located South of W. Washington Street; this area can be used for storing or staging import and export cargoes. An additional 45 acres of open storage are located North of W. Washington Street. There is a total of other warehousing with a capacity of 2.7 million sq. ft. of covered storage area comprised of 33 separate units.

Cargo may be transferred from off dock acreage via truck or rail.

This dock also has two Whirley type gantry cranes with a 30 short tons capacity each at 36 ft. offshore reach. Equipped to handle bulk dry materials, containers, heavy lifts, etc.

Continental Elevators Grain Elevator Main Wharf No. 1:

Owned by: Continental Elevators Inc.

Operated by: Continental Grain Co.

Use: Shipment of grain by vessels and by ocean going and inland waterway barges; receipt of grain by self-unloading barges.

Dimensions: Length of face 564 ft., West side 20 ft., East side 20 ft.; depth alongside at MLLW 35-37 ft.; usable berthing space 780 ft.; width of apron, open end 20 ft.

Mechanical Handling Facilities: 2 towers on wharf, each with 13 in. diameter, telescopic, mechanically operated, grain-loading spout; loading rate, 900 short t.p.h. (29,877 bu.) at East tower; 800 short t.p.h. (26,557 bu.) at West tower; combined rate, 900 short tons.

Remarks: Grain gallery connecting towers on wharf has a 30 in., electric-belt conveyor; and gallery extending from East tower to grain elevator has 2×30 in. belt conveyors. Grain elevator capacity 6,000,000 bushels.

BRIDGES: Fixed-span high-level toll bridge across Carquinez Strait, with minimum clearance of 134 ft. above MHHW. Southern Pacific Railroad lift span bridge crosses Suisun Bay 6.5 miles upstream from Carquinez Bridge, with minimum clearance above MHHW of 70 ft. when closed and 135 ft. when open. Horizontal clearance on lift span 291 ft. A third bridge, 22 miles above Southern Pacific bridge, is near Antioch. It has a fixed span bridge with minimum clearance above MHW 135 ft.

STEVEDORES: *General Cargo* – For gang start at 0800 hrs., orders must be placed at 1600 hrs. of previous day; night gangs must be ordered by 1100 hrs. These times pertain to week-day gangs. For weekend gangs, 1100 hrs. Saturday for Saturday night, Sunday morning, Sunday night and Monday morning. Day shifts from 0800 to 1700 hrs. Night shifts 1700 to 0300 hrs. Arrangements can be made for a special third shift from 0300 to 0800 hrs. Rates quoted on request.

Bulk Ore and Grain Cargoes – Orders for gangs must be placed at same time as for general cargo. This operation on 24 hour basis; day shift, 0800 to 1600 hrs., night shift 1600 hrs. to midnight, swing shift, midnight to 0800 hrs. Stop work meeting first Tuesday of each month.

Also see "Radio".

MEDICAL: Arrangements with San Joaquin Medical Society for physicians, surgeons and dentists. 5 hospitals within radius of 6 miles from port. Ambulance service readily available. Telephone number for this service is 948-1334.

FRESH WATER: Available through pipelines.

FUEL: All grades of fuel available with 1 day's advance notice.

CONSULS: See "San Francisco".

REPAIRS: Minor types of repairs carried out.

DRY DOCKS: Nearest dry docks, San Francisco.

GANGWAY/DECK WATCHMEN: Services of watchmen not necessary. Available if requested.

OPENING/CLOSING HATCHES: Hatches may be opened prior arrival and closed after ship sailed from port; any opening or closing of hatches at dockside must be performed by stevedores.

CERTIFICATES: See "San Francisco".

CUSTOMS ALLOWANCES: See "San Francisco".

CARGO GEAR: Safety regulations require strict adherence to max. loading or unloading weight capacity of ship's gear.

REPATRIATION: No facilities in Stockton for effecting crew changes and arranging any necessary repatriations. Special arrangements may be made through Customs.

AIRPORT: Stockton Metropolitan Airport located approx. 6 miles from port. Serviced by Frontier, Air West and PSA.

TIME: Pacific Standard Time, GMT minus 8 hours; Pacific Daylight Time goes into effect on first Sunday of April until last Sunday in October, when clocks are advanced 1 hour.

HOLIDAYS: New Year's Day; Martin Luther King's Birthday; Lincoln's Birthday; Washington's Birthday; Memorial Day; Independence Day; Harry Bridge's Birthday; Labour Day; Admission Day; Columbus Day; Veteran's Day; Thanksgiving Day; Christmas Eve Day; Christmas Day and New Year's Eve Day are all holidays. In addition to above, General Election Day, both State and National, as well as any day proclaimed by Governor of California or President of United States shall be observed as holiday. Work can be arranged for all holidays except New Year's Day, Labour Day, Thanksgiving Day and Christmas Day.

POLICE/AMBULANCE/FIRE: Security Force on duty 24 hours a day and can be reached by dialling extension 222 for any emergency that might arise.

ELECTRIC CURRENT: At wharves where current available for ship's use, it is 110 volt, single phase, 60 cycle for lighting and 440 volt, 3 phase, 60 cycle for power.

SHORE LEAVE: Permitted.

IDENTIFICATION CARDS: Not required.

GARBAGE DISPOSAL: Available.

WASTE OIL DISPOSAL: Available.

SEAMAN'S CLUBS: None.

REGULATIONS: Port of Stockton requests notice of ship's intent to come into port at least 7 days prior to arrival; vessels, who have made prior arrangements, will have precedence over vessels who sail into port without previous notice.

GENERAL: *Railroad Service:* Three transcontinental railroads serve the Port – Santa Fe, Southern Pacific, and Union Pacific with reciprocal switching privileges.

Truck Scales: Public truck scale available, operated by the Port.

AUTHORITY: Port of Stockton, 2201 West Washington Street, Stockton, California 95202. Postal address: P.O.Box 2089, Stockton, California 92501-2089. *Tel:* (209) 946-0246. Toll free outside State of California (800) 344-3213 or 344-3214. *FAX:* (209) 465-7244. *Contact:* Alexander Krygsman, Port Director. Mark Tollini, Manager – Port Operations. Patricia Huff, General Manager – Trade and Property Development.

TACOMA, Washington: 47.14 N. 122.28 W. (See Plan)

DOCUMENTS (on arrival from foreign port):

Ship's document.
Clearance from Last Foreign Port.
2 Crew Lists on Form I-418
2 Passenger Lists on Form I-418 (if applicable)
Passenger Declarations if applicable.
2 Stores Lists.
2 Crew Purchase (curio) Lists.
2 Manifests of Cargo for Discharge on C.F. 1302.

If first arrival port on an inward voyage, must also have 2 sets of Manifests of complete cargo on C.F. 1302, one for Customs at this port and other for use as a "Travelling Manifest" to go forward to other discharge ports.

A – For U.S. Public Health Quarantine Boarding Officer: "Quarantine Declaration" on Form PHS.43.

B – For U.S. Department of Agriculture Boarding Officer: "Shipmaster's Declaration and Warning Notice" on Form A1Q.43.

C – For U.S. Immigration Boarding Officer:
Crew List of Form I-418 visaed by U.S. Consul abroad.
Passenger List on Form I-418.
Attachment to Passenger List on Form I-92.
Form I-94 for each passenger.
Form I-95 of ID Card (Form 184) for each crewmen. (These are re-usable for multiple entries, but for seamen on first trip to United States a new Form. I-95 must be ready for presentation on arrival.)

D – For U.S. Customs Boarding Officer and Agent or Broker:
3 copies Crew List (Form I-418).
3 copies Cargo Manifest on Form 1302.
3 copies Stores List – Form 1303.
3 copies Crew Purchases or Curio List – Form 1304.
3 Passenger Lists on Form I-418.
For U.S. Ships – Declaration re foreign repairs on Form 3415.
For U.S. Ships – Certified Crew List for last U.S. port before going foreign.

* At subsequent U.S. ports of call 2 copies required of extracts Cargo Manifests of cargo for the port concerned, and 2 copies of lists of stores and curios remaining on board.

PILOTAGE: Compulsory for all vessels except those under coasting trade on West coast of the United States, including Alaska and British Columbia. Pilots board off Port Angeles Pilot Station.

ANCHORAGE: The depths as a rule are too great for convenient anchorage, but vessels occasionally anchor under the Northern shore about 1 mile Eastward of Brown's Point. Vessels may anchor in about 18.29 m., 450 yards N.N.W. of the outer end of Puyallup Waterway West Jetty.

City Regulations permit anchorage in any part of the bay outside harbour lines so as not to interfere with vessels arriving or departing from their docks.

MAX. SIZE: Length over 305 m. (centre to centre dimensions of mooring dolphins), draft subject to berth depth.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

VHF: Pilots on Channels 13 and 14.

TUGS: Available, join vessel in Commencement Bay, approx. half way between Brown's Point and the designated Dock. Tug's lines are used and there is a charge for tug's lines.

BERTHING: 32 deep water berths. Water depths: 9.15 m. to 21.34 m. below MLLW.

General Cargo: 161,000 sq.m. warehouse space, 91 hectares of open storage paved, lighted, fenced, serving all piers.

Logs are handled at the Port's Blair Terminal, where special shipments of heavy equipment are also handled. Total terminal area is 12 acres with 2 berths totalling 1,200 ft. (366 m.), depth 35 ft. and 32 acres of backup storage space.

Pierce County Terminal at 147 acres, is used for special cargoes and auto imports. It has 2 berths totalling 1,420 ft. (433 m.) and depth up to 45 ft. 1×54 tonne crane available.

BULK HANDLING FACILITIES: 550 m. pier with 12 m. to 15 m. water depth. Bulk unloading crane with 750 to 1,500 t.p.h. capacity; 150,000 tons capacity alumina storage structure with load-out facility.

Bulk Grain Elevator: Continental Grain: 3 million bushel capacity: loading rate: 2,400 t.p.h.; 137 m. dock with dolphins to 244 m.; 21.34 m. water depth.

CONTAINER HANDLING FACILITIES: *Terminal 3 (Maersk):* A 40-acre container terminal with berthing capacity of 950 ft. (290 m.) and water depth of 45 ft. (13.7 m.) at MLLW. The terminal can accommodate the largest container ships, and is located directly adjacent to the Port's North Intermodal Rail Yard. It serves both rail service and over-the-road carriers by use of chassis space. Available container cranes include 2 post-Panamax cranes rated at 66 short tons and 2 container cranes rated at 55 short tons. Other facilities include 3 on-site truck scales, 260 reefer hook-ups and a 7 lane truck gatehouse.

Terminal 4 (Evergreen): A 33-acre container terminal with 2 berths totalling 1,900 ft. (579 m.) and water depth of 40 ft. (13.7 m.) at MLLW. Located directly adjacent to the Port's North Intermodal Rail Yard. Serves both rail service and over-the-road carriers by use of chassis space. Available container cranes include 2 post-Panamax cranes rated at 66 short tons, 2 container cranes rated at 55 short tons and 2 container cranes rated at 50 short tons. Other facilities include 272 reefer hook-ups and a 7 lane truck gatehouse.

Terminal 7: A 79-acre terminal for containers and general cargo. 4 berths, totalling 2,700 ft. (818 m.). Water depth 40 ft. – 50 ft. (12.2 m. – 15.2 m.). 2 warehouses: One transit warehouse with 96,000 sq.ft. (8,918 sq.m.) and one container freight station with 102,400 sq.ft. (9,512 sq.m.). 3 container cranes (50 and 55 short tons capacity) and 2 Whirley cranes (40 short tons). 1 Peiner multi-purpose bulk unloading crane (40 short tons capacity). 36 reefer hook-ups, 1 rail scale, 1 truck scale, 11 truck stations and 7 rail car doors in the warehouses. Direct shipside rail access.

Terminal 7-D (Husky): A 33-acre container terminal with 1 berth totalling 900 ft. (274 m.) and water depth of 50 ft. (15.2 m.). 3 container cranes (55 and 50 short tons capacity). 4 transtainers and 186 reefer hook-ups. Adjacent to Terminal 2, 7 warehouses and direct access to the Port's North Intermodal Rail Yard. Direct rail access to shipside. Berth operated by Cooper T. Smith Stevedoring and International Transportation Service, Inc.

Sea-Land Terminal: A 115-acre container terminal with 2 berths totalling 1,600 ft. (484 m.) and water depth of 40 ft. (12.2 m.). 5 container cranes, 407 reefer hook-ups and 66 hustler tractors. Facilities include operations control tower, administration offices, maintenance shop, container freight station and additional covered storage.

BRIDGES: The 11th Street Bridge: All ships are required to notify for opening 2 hours in advance. The Puyallup River Bridge on 11th Street has been deactivated. The Blair and Hylebos Bridges have no restrictions. Closed periods apply to the 11th Street Bridge and the hours are as follows: 0645 – 0745 hrs., 1530 – 1730 hrs.

STEVEDORES: Jones-Washington Stevedore Company, Eagle Marine Services Ltd., Maersk Stevedore Co., Husky Stevedore Co. and Stevedoring Services of America (SS of A).

Gang requirements must be made known to contracting stevedore prior to 1100 hrs. on day before the vessel plans to dock. (1030 hrs. on Saturdays for gangs on Saturday p.m., Sunday and Monday.)

Stowage of cargo for discharge or load determines the gang size requirements. Sufficient information for intelligent gang orders is a necessity – i.e. advance cargo plans, unusual size and/or weight, etc.

TANKERS: Loading/discharge lines 8 in. and 10 in. 150 ASA flanged connections. Slop discharge facilities not available. Fresh water available. Coast Guard Regulations strictly enforced.

DENSITY: The average density in the port is 1016.8 at 15°C.

FRESH WATER: Available. Delivers to vessel through portable meter hose.

FUEL: Available. Advance notice required.

Grade	*Viscosity at 122°SSF*
Bunker "C"	165 – 175
PS – 400	112 – 116
Bunker Special	50 – 60
PS – 300	32 – 35

FIRE PRECAUTIONS: Very strict precautions in force.

REPAIRS: The largest repair yard in Tacoma can haul out vessels up to 1,000 tons for all kinds of repairs, including electronics, welding, painting and machining; shafts up to 30 ft. in length are machined here. Another plant does shipbuilding exclusively, but will perform topside repairs if needed. Wreckage and salvage facilities are available. Larger vessels go to Seattle for dry-docking. Minor repairs and services for small craft are available at marinas on the City Waterway and the N.E. shore of Commencement Bay.

GANGWAY/DECK WATCHMEN: Watchmen required if detainees are aboard.

OPENING/CLOSING HATCHES: Normally carried out by stevedores. In practice, however, the crew can perform this task while in transit.

CERTIFICATES:
Certificate of Registry.
Certificates for any previous U.S. tonnage tax payments within the past year.
International Load Line Certificate.
Safety Radio Certificate.
Derat Certificate.
Cargo Gear Inspection Certificate.
Certificate of Inspection (U.S. vessels).

CUSTOMS ALLOWANCES: Tobacco and Wine/Spirit: No definite quantities prescribed; reasonable allowance at discretion of Customs Inspector.

TIME: Local time reference is GMT minus 8 hours. In Summertime it is GMT minus 7, or Pacific Daylight Saving Time, starting the first week-end in April and finishing the last week-end in October.

HOLIDAYS: New Year's Day (January 1st) no work; Lincoln's Birthday (February 12th); Washington's Birthday (February 22nd); Memorial Day (May 30th); Independence Day (July 4th) no work; Bloody Thursday (July 5th); no work; Labour Day (September 1st) no work; Columbus Day (Friday after Thanksgiving); Veterans' Day (November 11th); Thanksgiving Day (November 27th) no work; Christmas Day (December 25th) no work.

AIRPORT: Seattle – Tacoma International Airport is 16 miles North fro Port and Tacoma Industrial Airport 8 miles West.

POLICE/AMBULANCE/FIRE: Emergency tel. numbers: Police 593-4911; Fire MA 7-0151; Ambulance 473-1611.

TELEPHONES: Pay telephones available at Piers 4 and 7, Bla Terminal, Pierce County Terminal, Grain Docks 23 and 24. There is n charge for this service.

SHIP SUPPLY SERVICE: Contact: Foss Launch and Tug, 225 East Street, Tacoma, WA. 98421. Tel: (206) 272-0362.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Required.

GARBAGE DISPOSAL: Service undertaken by City of Tacoma Tel: 206-591-5544.

WASTE OIL DISPOSAL:
Chemical Processors. Tel: 206-243-6776.
Clean Care. Tel: 206-627-3925.
Northwest Enviro Service. Tel: 206-622-1090.

SEAMAN'S CLUBS: Tacoma Seamen's Centre, 1225 E. Alexande Avenue, 98421. Tel: 206-272-0716.

AUTHORITY: Port of Tacoma, P.O.Box 1837, Tacoma, Washingto 98401-1837. *Tel:* (206) 383-5841 or Seattle (206) 838-0142. *FAX:* (20 593-4570. *Contact:* Rod Koon, Director – Port Relations.

TAMPA, Florida: 27.57 N. 82.28 W. **(See Plan**

DOCUMENTS:
Passports and Seamen's Books.
Vaccination Certificate for each Seaman.
Certified Crew List: must be on American Form and certified b American Consular office at foreign country from which departed
Crew List.
Ship's Register.
Load Line Certificate.
Certificate of Financial Responsibility (Oil Pollution Certificate).
U.S. Customs requires Inward Foreign Manifest (original an 3 copies). This must describe cargo which is to be discharged th port and/or any other port in vessel's itinerary. It must show:
  Vessel's name and flag.
  Master's name.
  Last foreign port of departure.
  Net registered tons of vessel.
  When and where vessel built.
  Consigned to Agent.
  Bill of Lading Number.
  Marks and numbers (on cargo).
  Complete description of merchandise.
  Weight in kilos or pounds.
  Port of loading.
  Port of discharge.
Stores Lists (original and 3 copies).
Crew Curio List (original and 3 copies).
Narcotics List (original and 3 copies).
*Dangerous Cargo List (original and 3 copies). This should be fille out even if nothing dangerous aboard.

Health officials will board vessel first. Bills of Lading not needed f Customs purposes.

PILOTAGE: Compulsory for all foreign vessels and U.S. vessels und register in the foreign trade. Pilotage is optional for U.S. coastwis vessels drawing over 7 ft. that have on board a Pilot licensed by th Federal government. Pilots board vessels day or night. Vessels enter by Egmont Channel are boarded between the Tampa Bay Ligh Whistle Buoy "T" (Lat. 27° 35.3′ N., Long. 83° 00.7′ W.) and Egmo Channel Lighted Bell Buoy No. 2 (Lat. 27° 35.4′ N., Long. 82° 59.0′ W Vessels entering by S.W. Channel are usually boarded between S.W Channel Buoy No. 2 and Lighted Bell Buoy No. 3, or if desired, at th lighted bell buoy off the entrance to the channel.

Tampa Bay Pilots serve Tampa Bay. Tampa Bay Pilots ha 2 launches, *"Manatee"* and *"Tampa Bay Pilot"*, each with a black h and white deckhouse with the word "Pilot" on either side. Pi Association monitors VHF-FM Channels 10 (156.50 MHz), 1 (156.60 MHz), and 16 (156.80 MHz) continuously; call-sign, Tampa B Pilots. Pilot Association's boats are equipped with VHF-FM Channels 1 12 and 16 and use Channel 10, 12 and 11 as working frequency. A pilot boats fly the International Code flag "H". For boarding, Pilo request that vessels maintain a speed of 6 knots or less and have th pilot ladder rigged 6 ft. above the water. Vessels are requested to gi a 24-hour and a 3-hour advance notice of their time of arrival. Leng beam and max. draft of the vessel should be provided with the fi notification. Vessels are normally not moved in dense fog, and du strong North/South winds vessels are boarded inside Egmont Key. I February 1990, the deepest draft entering Tampa Bay was 33 ft. 6 i Pilots can be obtained by radiotelegraph (cable address: "Tampilot") o telephone (813-248 3732) through the Tampa Marine Operator, o through ships' Agents.

Pilots for St. Petersburg and Port Manatee can be obtained throu the Tampa Bay Pilots.

Tampa Bay Pilots – Recommended Navigational Guidelines for Vessels in Tampa Bay (Dated July 1991).

Port Manatee	Vessels with a draft of 27 ft. or less – *Anytime*. 27 ft. to 33 ft. 06 in. – Slack water, high or low. Over 33 ft. 06 in. – Slack water, maximum of 34 ft. plus tide level. Weak and variable tides will be considered in lieu of slack water
Big Bend	Vessels with draft of 33 ft. 06 in. or less – *Anytime*.
East Tampa	Vessels with draft of 30 ft. plus tide level – *Anytime*. Vessel with LOA of 650 ft. may dock at Cargill provided that no other vessels are in the Turnaround area.
Ports of Tampa (including Port Sutton, East Bay and Tampa)	Vessels with draft of 33 ft. 06 in. plus tide level – *Anytime*. Certain berths may have other draft limitations. Please consult Marine Advisory Council Safety Guidelines or contact pilot office for specific requirements. Sparkman Channel requires one-way traffic and vessels with draft restriction of 34 ft. 06 in. plus tide level to a *Maximum* of 35 ft. 06 in.
G - Cut	Vessel draft restriction of 31 ft. 09 in. – *Anytime* to maximum 33 ft. One-way traffic and tug assistance may be required.
Port Tampa	Vessels with draft of 25 ft. or less – *Anytime*. 25 ft. to 32 ft. 06 in. – Slack water. 33 ft. 06 in. – High slack water. Vessel size restricted to 750 ft. LOA. Vessels will be passed only upon agreement of Pilot and Master.
Weedon Island (Florida Power)	Vessels with draft of 29 ft. or less – *Anytime*. of over 29 ft. – less than 1.0 knot current. Maximum allowable draft at berth is 29 ft. plus tide level.
Rattlesnake Bayou	Vessels with draft of 12 ft. or less – *Anytime*. Vessels to Misener Marine with draft of 14 ft. plus tide level – *Anytime*.
Bayboro Harbor	Vessels with draft of 19 ft. or less – *Anytime*. 19 ft. to 21 ft. – High slack water.
Gadsden Anchorage	Vessels of greater than 675 ft. LOA or 27 ft. draft may not anchor in Gadsden.
Dead ships, Panamax and Larger Vessels	No restrictions other than above harbour restrictions. Vessel movements are also subject to restrictions by U.S. Coast Guard and the weather. These recommendations are guidelines only and are not intended to tell anyone how to load out a vessel.
Tampa Bay	Vessels with draft of 38 ft. 06 in. plus tide level – *Anytime* to a maximum allowable draft of 40 ft. 06 in.

Recommendations are subject to change. Greater restrictions may be defined by the Captain of the Port and/or the Safety Guidelines Committee.

ANCHORAGES: Vessels with good ground tackle can anchor anywhere outside Egmont Bar in depths of 35 ft. to 50 ft. Inside anchorages Southward of Mullet Key in depths of 30 ft. to 35 ft.; and S.W. of Gadsden Point in depths of 29 ft. to 36 ft.

Explosives and quarantine anchorages East of Mullet Key and South of Interbay Peninsula.

(1) Explosives Anchorage, East of Mullet Key. A rectangular area in Tampa Bay, approximately 4,459 yd. long and 1,419 yd. wide, beginning at Lat. 27° 38′ 30″ N., Long. 82° 39′ 09″ W., and extending N.E. to Lat. 27° 39′ 48″ N., Long. 82° 37′ 15″ W.; thence S.E. to Lat. 27° 39′ 17″ N., Long. 82° 36′ 46″ W.; thence S.E. to Lat. 27° 37′ 52″ N., Long. 82° 38′ 38″ W.; thence N.W. to point of beginning. Anchorage is used by vessels awaiting loading or unloading at Port Tampa where duration of anchorage will exceed 72 hours.

(2) Temporary Explosives Anchorage, South of Interbay Peninsula. Beginning at a point bearing 107°, 1,750 yd. from Cut F Range Front Light; thence to a point bearing 125°, 2,050 yd., from Cut F Range Front Light; thence to a point bearing 180°, 1,725 yd., from Cut F Range Front Light; thence to a point bearing 222°, 2,180 yd., from Cut F Range Front Light; thence to a point bearing 251°, 1,540 yd., from Cut F Range Front Light; and thence to the point of beginning. Anchorage is used for vessels engaged in loading explosives when duration of the anchorage is less than 72 hours.

(3) Temporary explosives anchorage off Port Tampa. A circular area with a radius of 200 yd. with the point at Lat. 27° 50′ 22″ N., Long. 82° 34′ 15″ W.

(4) Quarantine anchorage. S.E. of the temporary explosives anchorage, beginning at a point bearing 097° true, 4,370 yd., from Cut F Range Front Light; thence to a point bearing 113° 30′, 5,370 yd., from Cut F Range Front Light; thence to a point bearing 161° 30′, 3,770 yd., from Cut F Range Front Light; thence to a point bearing 163° 30′, 2,070 yd., from Cut F Range Front Light; thence to the point of beginning.

RESTRICTIONS: Draft recommendation is 33 ft. 6 in. No tidal restrictions with exception of loaded vessels into Port Tampa.

43 ft. harbour deepening project is completed, however only Berths No. 31 and No. 220 can accommodate over 33 ft. 06 in. (Call T.P.A. Operations for soundings).

Existing Channels:

Name of Channel	Width (ft.)	Length (naut. miles)	Depth MLW (ft.)
Egmont Channel	700	3.9	45
Mullet Key Channel	600	2.9	43
Tampa Bay Channel Cuts A-F	500	13.6	43
Gadsden Point Cut	500	3.1	43
Hillsborough Bay Cut A & C	500	6.6	43
Hillsborough Bay Cut D	400	1.0	41
Seddon Channel	300	1.1	28
Garrison Channel	275	0.4	34
Ybor Channel	400	0.9	34
Sparkman Channel	400	1.2	34
East Bay Channel and Turning Basin	2,700	1.5	43
Port Tampa Channel	400	7.3	34
Port Sutton Channel	280	1.0	34
Alafia River Channel	200	3.4	32

MAX. SIZE: Max. draft 38 ft. 6 in. MLW. No limit on length and breadth. Air draft 175 ft. MHW. Skyway Bridge clearance.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

VESSEL TRAFFIC ADVISORY SYSTEM: The Tampa Port Authority provides a voluntary navigational aid to vessels transiting the bay. The VTAS can be reached by calling WHX362 on VHF Channel 12.

TUGS: Positions are:

Main port area – right past Beacon No. 35
Port Sutton & East Bay – Beacon No. 29
Port Tampa – Cut "K"
East Tampa – Beacon No. 16

Tug's lines only.

BERTHING:

Container Facilities: Containers are handled at several general cargo terminals, but no specialised container facilities are currently in place.

Facilities available for smaller vessels.

Operator	*Depth*	*Berthing Space*	*Product Handled*
Paktank Florida, Inc.	12 ft.	500 ft.	Grain fertiliser, materials, potash, caustic soda, salt.

Also see "General Cargo Facilities", "Specialised General Cargo Facilities" and "Dry Bulk Facilities".

Also see "Developments".

BRIDGES: The Sunshine Skyway Bridge spans lower Tampa Bay. Navigational clearance of 800 ft. Max. vertical clearance of 175 ft.

STEVEDORES: Stevedoring gangs must be ordered approximately 24 hours in advance (before 1700 hrs. on day before needed).

MEDICAL: Advance notice for medical attention not required, but is preferable.

TANKERS: Also see "Developments".

*Can load longer vessels by shifting during operation.

Shipmaster's Report: Bulk phosphates are loaded in Port Sutton (one berth) and in the East Bay (two berths: Rockport owned by CSX and Easte Associated Terminal).

Loading rates: about 1,000 t.p.h. at Port Sutton;
about 3,000 t.p.h. at the two berths in East Bay area.

Trimming: The loading elevators are not equipped with trimming devices. Most cargoes can be trimmed by bulldozers. The bulldozer weig 5 long tons, and is placed on board with ship's gear. The IMC elevators at Port Sutton and the SCL elevator (Rockport) use shore gear to pla the bulldozer on board. A minimum of 8 ft. to 7.5 ft. headroom under the coaming is required for bulldozer trimming.

Topping-off: Topping-off to 41 ft. draft can be arranged at T.P.A. Berth No. 31.

DRY BULK FACILITIES: (continued)

Operator	*Location*	*Depth*	*Berthing Space*	*Handling Equipment*	*Storage*	*Product Handled*
Cargill Inc. (Port Authority Berth No. 256)	North 19th St.	33 ft.	700 ft.	Marine leg for unloading 30,000 bushels/p.h., and spout loader-rate of 600 tons	Capacity of elevator is 1,000,000 bushels; 8,000 ton bulk warehouse; 4,800 ton bulk warehouse.	Grain and dry bul agriculture produ
Lafarge	Hookers Point	34 ft.	820 ft.	Belt material handling system capable of receiving 4,000 short t.p.h. of cement or 1,500 short t.p.h. of gypsum, 3 electric travelling bridge cranes equipped with 2.5 and 3 cu.yd. grab buckets.	800×100 gypsum storage shed; 215,000 barrel holding tanks for fuel storage (for plant consumption) 220,000 ton capacity open storage.	Gypsum rock, cement
Ideal Basic Industries, Inc.	Port Sutton	34 ft.	1,038 ft.	2×8 in. pipelines to storage. 4×12 in. pipelines to storage.	8 silos with 190,000 barrel capacity. 3 bins with 5,640 ton capacity.	Cement
Tampa Bulk Services	Port Tampa	34 ft.	700 ft.	Belt elevator from storage to loading spout. Rate of discharge 500 t.p.h. Direct transfer from rail cars to vessels at 200 net t.p.h.	Silo capacity of 10,000 net tons.	Citrus pellets and other dry bulk products.
National Gypsum Co.	Port Tampa	33 ft.	950 ft.	Receiving hopper and conveyor–unloading rate of 2,000 net t.p.h.	Open area approx. 10 acres.	Gypsum rock
Pakhoed Florida, Inc.	Pendola Pt., Port Sutton	31 ft.	700 ft.	Dock crane with 80 ft. boom with unloading rate of 400 t.p.h. Loading tower with rate of 1,200 t.p.h.	Building 125 ft.×700 ft. with storage capacity of 50,000 tons. 4 silos with 8,000 ton capacity.	Potash, phosphat products.
Tampa Electric Co.	Big Bend	35 ft.	788 ft.	200 ft. high travelling tower-conveyors system with unloading rate of 4,000 t.p.h.	24 acres	Coal
Tampa Electric Co.	Port Sutton Electric Co.	33 ft.	450 ft.	2 electric travelling unloading towers equipped with straight-line boom, and receiving hopper-combined unloading capacity of 1,600 t.p.h.	Exact size unknown	Coal
Ideal	Port Sutton	34 ft.	—			Cement
Dravo Basic Metals (Port Authority No. 220)	Hookers Point	39 ft.	900 ft.	Conveyor. 2 radical stackers.		Building constru aggregates and materials.

FUEL: All grades and types available, including all types of blended fuel and Bunker "C". 24 hour notice required. All types of lube-oil available with delivery in bulk or drums – 24 hours' notice is required. Major oil companies (i.e. Shell, Amoco Oil, Texaco, Gulf, Chevron, Central Oil, etc.) represented in Tampa. Delivery ex-pipeline, barge or truck.

FIRE PRECAUTIONS: No specific precautions other than usual.

CONSULS: The following countries are represented in Tampa:

Colombia
Denmark
Finland
Germany
Honduras
Italy
Mexico
Norway
Panama
Sweden

REPAIRS: All types are possible.

DRY DOCKS: Graving dock: 900 ft. long × 150 ft. wide, 21 ft. from MLW to top of keel blocks; 525 ft. long on bottom × 80 ft. wide, and depth over keel blocks 16-18 ft. at MHW.

Dry dock: 200 ft. long × 65 ft. wide. There are 2 other dry docks besides those listed above.

GANGWAY/DECK WATCHMEN: Watchmen not necessary, but available when required.

OPENING/CLOSING HATCHES: Longshoremen open and close hatches.

CERTIFICATES:

Documentation Papers.
Load Line Certificate.
Certificate of Safety at Sea (when carrying passengers).
Certificate of Safety Equipment.

CUSTOMS ALLOWANCES: Tobacco, 2 packs of cigarettes per day per man; wine and/or Spirit, no set amount. Each boarding officer has different views (i.e. German and Scandinavian vessels allowed 2 bottles of beer per day per man). Allowances made within reasonable bounds at Master's discretion subject to boarding officer's approval.

CARGO GEAR: No local special safety requirements. Longshoremen and U.S. Department of Labor requirements are uniform over the U.S.

REPATRIATION: No foreign crew pools in Tampa (located in New Orleans, San Francisco and New York), but crew changes can be made when Master radios requirements to Agent who arranges with local Consul or through crew pool in nearest city named above for applicable country (if no Consul is available in Tampa). American crew pools for all unions in Tampa.

Repatriation available via Tampa International Airport and is handled by Consul or Master.

AIRPORT: Tampa International Airport served by regular airlines and located approximately 15 miles from main port area; 5 miles from Port Tampa and 16 miles from East Tampa.

TIME: Tampa normally on Eastern Standard Time (GMT minus 5 hours) with Daylight Saving Time in effect from first Sunday in April till last Sunday in October.

HOLIDAYS: New Year's Day, January 1st; Martin Luther King's Birthday, 3rd Monday in January; George Washington's Birthday, 3rd Monday in February; Good Friday; Memorial Day, Last Monday in May; Independence Day, July 4th; Labour Day, 1st Monday in September; Armistice Day, November 11th; Thanksgiving Day, 4th Thursday in November; Christmas Eve, December 24th; Christmas Day, December 25th; New Year's Eve, December 31st.

When any of above holidays fall on Sunday, they will be observed on Monday following. Work on these holidays is by special arrangement only.

POLICE/AMBULANCE/FIRE: Dial 911.

TELEPHONES: Installation of telephone aboard can be arranged by agent.

SERVICES: Compass adjustments available; radio direction finder; radar repairs; tank cleaning.

SHIP SUPPLY SERVICE: Captain Riley F. Bryan, Sea Taxi, P.O.Box 46618, Pass-A-Grille, Florida. Tel: (813) 381-3999.

Suncoast Helicopters, 4111 W. Columbus Drive, Tampa, Florida 33607. Tel: (813) 872-6625.

A. P. St. Philip, Inc., 1305 Shoreline Drive, Tampa, Florida 33605. Tel: (813) 248-1123.

SHORE LEAVE: Immigration Authorities grant Clearance after examination of Passport or bona fide seaman's papers.

IDENTIFICATION CARDS: Passports required.

GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany). Garbage disposal is available through the ship's agent. Charges are usually based on tonnage.

Disposall, Inc., 3702 East 7th Avenue, Tampa, FL 33605. Tel: (813) 247-2446.

International Ship Supply, Inc., 2923 North B Street, Tampa, FL 33609. Tel: (813) 651-9840.

UETA, 223 S. 12th Avenue, Tampa, FL 33605. Tel: (813) 223-9155.

Browning-Ferris Ind., 11500 43rd Street North, Pinellas Park, FL 34622-4925. Tel: (813) 572-6800.

WASTE OIL DISPOSAL: Service is available using various local contractors. Ship's agent will usually arrange this on being informed of ship's requirements.

SEAMAN'S CLUBS: No Seaman's club. However, Rev. Ray Mungo runs the Seamen's Ministry and takes care of many of the seamen's needs. He handles international telephone calls, bank runs, trips to Disney World, Busch Gardens and other amusement parks, books, clothing, etc. He also provides church services. His details are:

Reverend Ray Mungo, 1516 Port Avenue, Tampa, FL 33605. Tel: (813) 247-5237.

CURRENCY: U.S.Dollar (U.S.$).

DELAYS: Delay can be expected in loading phosphate rock (1 or 2 days), and same delay applicable for berthing at elevators. Some delay possible in general cargo loading or unloading.

DEVELOPMENTS: Main harbour channel has been deepend to 43 ft. New general cargo berth has been constructed which can structurally accommodate container cranes. This new berth is part of an expansive general cargo complex, which includes Berth No. 202, an 86,000 sq.ft. warehouse, and the recent addition of 52 reefer plugs and 6 acres of heavy paved area for containers. The Port has also recently constructed a dedicated liquid bulk terminal, primarily for the receipt of orange juice concentrate. The Port's huge dockside cold storage facility, Harborside Refrigerated Services, has undergone expansion that bring their total chill and freezer space to 176,000 sq. ft.

Construction of Berth No. 219, a 400 ft. heavy duty wharf to be initially used to handle scrap metal exports, has been completed.

In 1987, the Port constructed its second cruise terminal, a 17,000 sq. ft. facility designed to accommodate the port's growing cruise trade. Planning continues for the eventual development of a major downtown cruise terminal complex.

SHIPMASTER'S REPORT: July 1990 (Updated 1992).

Charts: B.A. Charts No. 3847 and 3848.

Approach: Low lying coastline. Radar picks up 'Sarasota' to South of Tampa Bay at 30 miles.

Anchorage: The Fairway Anchorage is North of Buoy No.1 (45 ft.). Various anchorages inside Tampa Bay with depths up to 30 ft.U.S.C.G. only allow vessels to remain a maximum of 48 hours.

Pilot: Boards at Fairway Buoy from fast black hulled cutter. Pilot Station at 'Egmont Key' South of main ship channel. Call Pilot Station on VHF Channels 16 and 12.

One Pilot takes vessel to berth and docks ship.

Outwards Pilot disembarks at Buoy No.14.

Pilot requires 2 hours notice inwards and outwards.

Channel: The maximum channel draft at present is 39 ft. L.W., even though some berths and channels have well over 40 ft. Patches still require maintenance dredging to 40 ft.

Gas Tankers (Foreign flag) of any size, daylight transit only in loaded condition. Complete passage must be in daylight, but if in ballast 24 hour berthing allowed. Gas tankers allowed to shift berth in loaded condition throughout 24 hours, but only if in Port Sutton Channel.

Oil and chemical carriers over 106 ft. LOA transit daylight only in loaded condition.

Sunshine Skyway Bridge near bay entrance consists of new bridge with vertical clearance of 175 ft. above MHW.

Tugs: 8 tugs in operation, up to 6,000 i.h.p., including 2 'Tractor' tugs.

Generally tie up "American Style" alongside with tug's lines, except 'Tractor' tugs which are on short line.

Tugs generally immediately available in emergency, otherwise require 2 hours notice.

Cancellation without payment, as long as tug has not left its berth.

Two tugs used when loaded, and one tug when in ballast.

Berth: Gas (Ammonia) carriers can discharge at 3 berths, IMC and Seminole in Port Sutton Cut and Royster off 'Cut D'.

IMC: North side of Port Sutton Channel (27°54.25′ N., 82° 22.80′ W.). Jetty set out from Port Sutton Channel. Fendering dolphins each end of jetty.

Berth can take up to 70,000 cu.m. gas tankers. Limiting factor is draft. Presently maximum is 35 ft. plus tide. Fendering good, mooring arrangement good, 3, 2, 2 each end, starboard side alongside, head out. Ship's gangway used. Two public telephones near at hand at dock office.

Fresh water at good pressure. Connection at Chicksan, for which there is a charge.

Seminole: North side of Port Sutton Channel near entrance (27° 54.25′ N., 82° 25.50′ W.). Facility formerly owned by Grace, but sold in 1988.

Jetty set out from Port Sutton Channel. Outlying fender dolphins each end.

Berth can also be used for caustic soda and scrap metal. The Caustic Soda Jetty to the East of the Ammonia Jetty has no fendering, so take care when berthing.

Scrap metal ships often use same berth to load from facility to East of Ammonia Jetty. Check with Agent that dock bottom is clear of scrap before berthing. Apart from above, fendering fair. Berth can take up to 70,000 cu.m. gas carriers with limiting draft of 35 ft. plus tide.

Vessels berth starboard side alongside, head out. Shore gangway used. Nearest public telephone is at IMC to East. Master is permitted to use Seminole office telephone in working hours. Fresh water at good pressure. Connection at Chicksan, no charge.

Royster: Vessels can berth either side of finger pier at Hooker's Point, opposite Peter O.Knight Airport.

About 50,000 cu.m. gas carriers maximum size. Also used for other oil products and chemicals. Position: 27° 55.15′ N., 82° 26.60′ W., North side No. 227, port side too, South side No. 226, starboard side too. Ship's gangway used at both berths. One public telephone near base of jetty. Fresh water near Chicksan, charged.

Lay-By Berth No. 31, Pendola Point: If awaiting discharge berth, a berth attached to a cement silo can be used at South Entrance to Port Sutton Channel at Pendola Point (27° 54.2′ N., 82° 26.0′ W.) with 38 ft. plus tide alongside. Jetty with outlying mooring dolphins. Mooring leads at bow not good. Port side alongside, head out. Ship's gangway used. No fresh water, no telephone. Berth very isolated.

Discharge: IMC: Terminal requires product to be at −32.2°C. or colder. Tank pressures 49.2 mb. although not rigidly enforced.

Average discharge rate is 760 t.p.h., with approximately 6.5 kg./sq.cm. at ship's manifold, equates to 4 pumps.

One 20,000 cu.m. tank for NH3.

Chicksan 10 in. 150 ASA.

Necessary to cease discharge for passing traffic.

Surveyors: Saybolt and Thornton. Saybolt Surveyor may read draft before boarding. Thornton Surveyor uses different Density Tables from ship.

Seminole: Permitted pressure approximately 7.5 kg./sq.cm. at manifold, average discharge rate 535 t.p.h. using 3 pumps.

Necessary to cease discharge for passing traffic.

Chicksan 6 in. 150 ASA.

1×20,000 cu.m. and 1×12,000 cu.m. storage tank immediately adjacent.

Surveyor (Saybolt) reads draft before boarding. Arm drained to shore on completion.
Royster: Average discharge rate 980 t.p.h., equates to 6 pumps.

12 in. 150 ASA Chicksan which can swing either side of pier.

Stores: We used Florida Ship Supply who were helpful, and prices reasonable. Can use midship derrick at all berths, and aft derricks at Royster.

Repairs: Tampa International Ship Repair for repairs. Tampa Electric Motor Co. 'TEMCO' for electric motors repairs.

General: Tampa/St.Petersburg International Airport about 30 minutes from Port Sutton, to N.W. of city centre.

Plenty of shopping malls plus entertainment, such as Busch Gardens and Disney World, near at hand.

SHIPMASTER'S REPORT: October 1991.

Pilotage: Tampa Tri-County Pilots have discontinued service.

For pilot call Tampa Bay Pilots on VHF Channels 10 and 12. The pilot boards and disembarks between Buoys No. 9 and 10 (original entrance to the channel before being extended in 1984). This pilot also berths and unberths the vessel.

There is no longer any restriction on gas carriers, they may now berth and unberth throughout 24 hours.

If the weather is poor (strong Northerly winds), the pilot may embark and disembark near Buoy No. 20, but this depends on the vessel and the Master.

Channel: The Egmont Channel has a projected depth of 50 ft., but is liable to constant shoaling. The distance from the Fairway Buoy to Port Sutton is 41 miles. The maximum permitted draft in October 1991 to Tampa was 40 ft. 06 in. on a rising tide, but this was only to certain berths.

When there is a strong Northerly wind, a heavy swell can form over the Egmont Channel, thereby causing deep draft vessels to bottom.

Anchorage: See B.A. Chart No. 3847. There is no shelter in this anchorage.

Bridges: The old Sunshine Bridge (shown on B.A. Chart No. 3847 as the operating bridge) to the West of the new bridge is finally being demolished and contractors machinery and plant are working on the old spans. The piers for the bridge will be removed to a depth of 42 ft. adjacent to the shipping channel and below small craft draft outside the shipping channel.

Tugs: For vessels proceeding to Port Sutton Channel and berths further North, the tugs join at Beacons No. 25/26.

Tugs are supplied by St. Phillip Towing Co., who operate numerous old tugs and a new tractor type called the "Kingsman Eagle". If the "Kingsman Eagle" is used the charges are double that of the older tugs.

Normally 2 tugs and tug's lines are used.

Berthing: Chemical parcel tankers berth at Boliden Chemical Co. on the South side of Port Sutton Channel (27° 52.2′ N., 82° 24.8′ W.), where the depth reported by the pilots is 31 ft. The berth is a typical tanker 'T' jetty with Chicksan arms and hoses. The berth can accept parcel tankers up to 40,000 d.w.t. The berth is made of a 20 m. 'T' head with breasting dolphins at each end. Vessels generally berth head in, starboard side to. Ship's brow gangway required.

There is a berth at the Western end of Port Sutton Cut at Pendola Point (27° 54.2′ N., 82° 26.0′ W.) which has been dredged to 45 ft. and is used for topping-off bulk carriers loading phosphate.

Cargo: Sulphuric acid discharge: There are 2×6 in. shore hoses for discharge of sulphuric acid to the nearby shore tanks. Sulphuric acid can be accepted at up to 1,000 tonnes/hr.

A shore radio is provided and co-operation with the shore is good.

Ship's air line is required on completion to blow the manifold and line ashore. It is best to have connection ready for ship's own manifold.

Caustic and asphalt also handled at this berth.

Loading Master has a Cellnet telephone which the Master can use for local calls.

Density: 1017.

Fresh Water: Fresh water is available from a stand pipe on the jetty (no meter) at about 20 tonnes/hr. Ship's hoses are used and the rate is lower during the night.

Supplies: There are numerous ship chandlers in the port. We found Florida Ship Supply (Telex No. 52422) very good on our numerous visits to the port. For bonded stores we used Bonnani (Telex No. 6732315).

Storing: Trucks can back-up to within 15 m. of the ship's side.

Telephones: There are 2 telephones on the jetty at the end of Port Sutton Dock which is about 0.25 miles from the berth. The agent will also rent a portable Cellnet telephone to the vessel.

AUTHORITY: Tampa Port Authority, George B. Howell Maritime Centre, 811 Wynkoop Road, (P.O.Box 2192), Tampa, Florida 33601. *Tel:* (813) 248-1924. *FAX:* (813) 247-2352. *Contact:* Joseph L. Valenti, Port Director. Steven L. Fidler, Operations Director.

TEXAS CITY, Texas: 29.22 N. 94.53 W. (See Plan)

DOCUMENTS, PILOTAGE, etc., refer to "Galveston".

RESTRICTIONS: Controlling depth in entrance channel 40 ft. Otherwise restricted by depth available at berth. Vessels enter day and night.

Industrial canal deepened from 34 ft. to 40 ft., in 1981.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Available if required.

BERTHING:

Report: *AMOCO:*

General: The Amoco Terminal at Texas City consists of Berths No. 3 33 and 34 barge dock, 32, 37, 38, 40 and 41 (Berths No. 40 and 4 also used by T.C.T. and Marathon). Distance from the sea buoy to these berths is 15 miles.

Mooring and Berth: Pilot services for the Texas City port are provide by the Galveston Pilot Association.

Products handled at Berths No. 31 and 32 include gasoline, distilla anhydrous ammonia, crude and also ballast and slops. Anyhdrou ammonia is handled through 1 stainless steel arm, 6 in. flange connection and maximum pumping pressure of 35 p.s.i. All othe products are handled through 8 in. lines with flanged connections Maximum pumping pressure on all products is 100 p.s.i.

Berths No. 40 and 41 handle the discharge of crude only. Both berth have 2 loading arms. All lines are 12 in. and are quick disconnect-typ connections. Maximum pumping pressure is 150 p.s.i. There are n facilities for handling ballast or slops at these berths.

A minimum of 2 tugs are required for docking and undocking However, the Master of the vessel and the Docking Master ma determine actual tug requirements for their vessel based on vesse manoeuvrability and weather conditions.

The normal mooring arrangement at Berths No. 31 and 32 is starboar side to. Port side mooring is done after turning the vessel in the turnin basin. 2 head lines, 2 forward breast lines, 2 spring lines, 2 stern lines 2 aft breast lines and 2 aft spring lines are sufficient for mooring mos vessels. Line handlers are supplied by Texas City Boatman Co. and Amato Linehandlers. This terminal does not furnish a gangway t vessels.

ARCO:

General: The ARCO facility is located toward the North end and o the West side of the Texas City Turning Basin. Berths No. 11 and 1 are the 2 berths at this terminal. The area around these berths is dredge to 40 ft.

The ship dock is a concrete and steel finger pier permitting vesse to moor on either side. 2 vessels are the maximum that may b discharged at one time. There is no provision to load vessels at th facility and no facilites for dry cargo handling.

Mooring and Berth: Water depth is the factor that limits the size o fully loaded vessels that call at the facility. Lightered or partially loade vessels of greater size can be accommodated. Distance from the bo of a vessel to the centre of its manifold cannot exceed 468 ft. and fro the centre of its manifold to the stern of the vessel cannot exceed 500 f Vessels will be docked bow in unless prior arrangement has been mad with facility operators to permit bow out mooring. Should the vessel b moored bow out, the bow/manifold restrictions become 500 ft. and th stern/manifold distance 468 ft.

The pilotage of vessels to Texas City is performed by the Galvesto Texas City Pilots. This terminal does not make arrangements for Pilot

9 mooring structures are installed at each berth and several lines ca be secured on each. A boat is required to reach some structures. Th ship's Agent will be responsible for arranging mooring and unmoorin line handlers. The handlers will be under the orders of the Ship's Office regarding the handling of each individual line and location of the shor end. The facility has Regulations concerning the minimum number o lines and the type of lines used.

They are:

Vessels less than 525 ft. LOA:

- 2 head lines
- 2 forward breast lines
- 2 forward spring lines
- 2 aft spring lines
- 2 aft breast lines
- 2 stern lines

Mixed moorings not encouraged or allowed.

Vessels greater than 525 ft. LOA:

- 3 head lines
- 3 forward breast lines
- 3 forward spring lines
- 3 aft spring lines
- 3 aft breast lines
- 3 stern lines

Vessel's mooring lines must be kept taut and secure at all times the vessel moves more than 4 ft. away from the dock or 4 ft. in eith direction along the dock, all cargo transfer operations must be stopp immediately, and the proper manifold valves must be closed. Operati must not resume until the condition has been corrected.

Facility will provide gangway. Vessel's crew must attach gangwa the vessel and furnish/install safety net under gangway. If it is necess to use vessel's gangway, facility's crew will help position gangway o dock platform.

Aluminium gangways with rotating platforms and feathering treads are provided. The shipboard end is designed to attach to the vessel's gunwhale or over the ship's rail.

Crude is the only cargo handled at this berth. All lines are 16 in. and have hydraulic connections. Maximum pumping pressure is at 175 p.s.i. There are no facilities for ballast or slops at this terminal.

Municipal Docks No. 16, 18 and 20:

General: Municipal Docks No. 16, 18 and 20 are located adjacent to the Texas City Harbour turning basin.

Dock No. 16 has a 140 ft. face, 283 ft. with dolphins; 40 ft. depth alongside, deck height of 14 ft. This dock is used for receipt of crude oil and shipment of petroleum products, chemicals and petrochemicals.

Dock No. 18 has an 88 ft. face, 320 ft. with dolphins; 34 ft. depth alongside, deck height of 14 ft. This dock is used for receipt of crude oil. Dock No. 20 has a 98 ft. face, 284 ft. with dolphins; 32 ft. depth alongside, deck height of 14 ft. This dock is used for receipt of crude oil and shipment of petroleum products.

Mooring and Berth: Tug requirements are determined according to vessel size, Master's requirements and recommendations of the Docking Master doing the docking.

The normal berthing manoeuvre into Dock No. 16 consists of a turn of 140° to port from the Texas City Turning Basin. The berth is on the starboard hand of the basin about 1,500 ft. from the turning basin entrance. Vessels tie up either port or starboard side to manila or polypropylene lines are normally used, but wire is permissible. No gangway is provided at this berth.

Vessels destined to Berth No. 18, enter the turning basin from the Texas City Channel. Berth No. 18 is at a right angle to the turning basin approximately 2,000 ft. from the entrance to the turning basin. Vessels normally turn in the turning basin in order to back into the berth. Normal side to dock is the port side. Berth No. 18 is the first berth on the North side of the municipal dock basin. No gangway is available at this dock.

Vessels destined to Berth No. 20 enter the turning basin from the Texas City Channel. Berth No. 20 is also at a right angle to the turning basin approximately 2,500 ft. from the entrance to the turning basin. Vessels turn bow first into this dock area from the turning basin for a port side docking. Manila or polypropylene lines are used. This is the poorest of the 3 docks. Adequacy of mooring facilities is marginal, physical condition of the dock is poor, but acceptable. Dock equipment is fair, but acceptable. No gangway is provided at this berth.

Products handled by Berth No. 16 are all handled through 8 in. lines with flanged connections at pumping pressures between 20 p.s.i. and 125 p.s.i. Ballast and slops are handled through 8 in. lines with a maximum pumping pressure of 100 p.s.i.

At Berth No. 18 crude oil is discharged through 2×8 in. lines with flanged connections. Maximum pumping pressure is 125 p.s.i. Facilities for ballast and slops are available.

Products handled by Berth No. 20 are all handled through 8 in. lines with flanged connections at pumping pressures between 30 p.s.i. and 125 p.s.i. Ballast and slops are handled through 8 in. lines with a maximum pumping pressure of 100 p.s.i.

MEDICAL: All medical assistance available.

DENSITY: Brackish.

FRESH WATER: Available at all wharves except Union Carbide.

FUEL: Bunker "C" available to tankers loading/discharging. All grades available by barge from Houston.

CONSULS: See "Houston".

GANGWAY/DECK WATCHMEN: Required only if crewmen detained by Immigration.

CUSTOMS ALLOWANCES: Each man 300 cigarettes or 100 cigars or 1 lb. tobacco. 1 qt. wine/spirits.

TIME: Central Standard Time GMT minus 6 hours. Daylight saving time effective from April to October.

SHORE LEAVE: No restrictions unless detained by Immigration.

GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany).

A garbage collection service is available through Browning-Ferris Industries. Tel: 1-800-637-7339.

WASTE OIL DISPOSAL: Collection of waste oil is available through Malone Company, Texas City. Tel: (409) 945-3301 or 938-1791. This company is licensed by the State to receive and transport hazardous material for disposal.

SEAMAN'S CLUBS: At Galveston and Houston.

SHIPMASTER'S REPORT: February, 1979.

Restrictions: Vessels on maximum draft must be clear of Texas City Channel before dark. There is no sailing or berthing during darkness for maximum draft vessels.

For large vessels it is necessary to ballast during discharge otherwise shore connections become too high.

VHF: Channel 13 from sea and Channel 14 for berthing.

Tugs: Usually 4-6 tugs for vessels on maximum draft.

Tankers: Large tankers dock at Docks 40 & 41 usually starboard side to. On either dock it is not easy loading stores from the dock. 2×12 in. connections.

Customs Allowance: All souvenirs to be collected (items intended as presents) and sealed.

Repatriation: As with all U.S. ports must make out Form I-408 – application to pay off or discharge alien crewman.

Airport: At Houston.

Telephone: Pay telephone at bottom of gangway.

General: Will require ship's gangway abaft of manifold if bottom of gangway is more than 115.5 ft. (35.20 m.) abaft after manifold with a freeboard of 23 ft. or more.

AUTHORITY: Texas City Terminal Railway Co., P.O.Box 591, Texas City, Texas 77592-0591, U.S.A. *Tel:* General Office (409) 945-4461. Harbour Master (409) 945-5011. *FAX:* (409) 948-9160, 945-8479. *Contact:* K.L. De Maet, President and General Manager. J. Gilder, Harbour Master.

TOLEDO, Ohio: 41.42 N. 83.28 W. (See Plan)

Refer to "St. Lawrence Seaway" for important general information.

PILOTAGE: By Seaway Pilots.

RESTRICTIONS: Navigation season from mid-March to end-December, approx. The port is connected to Lake Erie by an entrance channel, depth 27 ft. Vessel's size restricted by Seaway locks.

MAX. SIZE: 730 ft. length; 26 ft. draft. Height restriction of 104 ft. above water-line which applies to grain berths only.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Chicago Quarantine Station.

RADIO: Master must give at least 24 hours' notice to Commander 9th Coast Guard District, Cleveland, Ohio, of the vessel's ETA at Snell Lock. Also, at least 24 hours' notice of ETA at first U.S. discharge port is required. Toledo Port can be contacted through Lorain, Ohio or Port Colborne, Ontario.

TUGS: Available. Not compulsory, but sometimes necessary in bad weather.

The Great Lakes Towing Company, 1800 Terminal Tower, 50 Public Square, Cleveland, Ohio 44113-2274. Tel: (800) 321-3663 and (216) 621-4854. Fax: (216) 621-7616.

BERTHING:

CSX Coal Dock: 2,000 ft. long, 26 ft. depth alongside.
Torco Dock: 1,200 ft. long, 26 ft. depth alongside.
Heidtman Steel Corporation: 23 ft. depth alongside.
Countrymark Cooperative, Inc. Terminals: 27 ft. depth alongside.
Cargill, Inc. Elevator: 27 ft. depth alongside.
Port Authority Facility: 4,100 ft. long, 27 ft. depth alongside.
Anderson Elevator: 27 ft. depth alongside.

CRANES: Located at Port Authority Facility No. 1 – electric gantry cranes 72.5 and 110 tons. Four 25-ton gantry cranes.

CARGO HANDLING FACILITIES: 2 grain elevators at Toledo load vessels at 50,000 b.p.h. There are 3 coal-loading machines, each of which can dump 1×100-ton car per minute, also 1 machine which dumps 2 cars simultaneously, for a max. of 6,000 t.p.h.

Iron pellets are received at new Torco Dock from self-unloading lake vessels. Storage Capacity 800,000 tons.

Liquids handled include petroleum products, industrial molasses, trichlorethylene and perchlorethylene.

UNALASKA (Dutch Harbor), Alaska: 53.54 N. 166.30 W. (See Plan)

DOCUMENTS:

Customs:

Master's Oath (1300).
General Declaration (1301).
Cargo Declaration (1302).
Ship's Stores Declaration (1301).
Crew Effects Declaration (1303).
Clearance from Last Port.

Immigration:

Immigration Documentation (I-418).
Crew/Passenger List.
Landing Permit (I-95).
Visaed Crew List for Shore Leave (Supplied by Immigration).
Passport and (or) Seamens' Book.

PILOTAGE: Compulsory. To avoid a delay in obtaining a Pilot, the Owner, Master or Agent of a ship bound for Unalaska/Dutch Harbor must make prior arrangements at least 12 hours before entering port. The following information must be included:

1. Name/Call Sign of vessel.
2. Nationality.
3. Length, draft and g.r.t.

Pilot Boarding Station:

Lat. 53′ 55′ 00″ N., Long. 166° 29′ 00″ W. 1 mile (1.61 km.) East of Ulakta Head. Pilots, tugboats, Harbour Master and shipping Agents standby on VHF Channel 16 (156.8 MHz).

Berthing:

(a) Pilot – Compulsory. Shifting of and EDT requires 1 hour advance notification.
(b) Berths arranged by Agent in advance.
(c) 1 small tug available annually. Circumstances may arise when other tugs are available for ship assistance.
(d) Lineman – Arranged through ship's Agent.
(e) Boatmen – Arranged through ship's Agent.

ANCHORAGE:

Outer Anchorage: Lat. 53° 54′ 00″ N. to Lat. 53° 55′ 00″ N. at Long. 166° 27′ 00″ W., Rocky, Depth 12 fathoms.

Inner Anchorages: Domestic and other vessels which have cleared customs.

1. Dutch Harbor: Lat. 53° 54′ 00″ N., Long. 166° 31′ 20″ W., mud, depth 18 fathoms.
2. Iliuliuk Bay: Lat. 53° 52′ 40″ N., Long. 166° 31′ 10″ W., mud, depth 14 fathoms.
3. Captain's Bay: Lat. 53° 52′ 00″ N., Long. 166° 33′ 33″ W., mud, depth 15 fathoms.
4. Nateekin Bay: Lat. 53° 53′ 00″ N., Long. 166° 37′ 00″ W., mud, depth 17 fathoms.
5. Broad Bay:
   (a) Lat. 53° 55′ 05″ N., Long. 166° 36′ 30″ W.
   (b) Lat. 53° 56′ 05″ N., Long. 166° 36′ 30″ W.

Must check with the U.S. Coast Guard and the Alaska Department of Fish and Game prior to anchoring or placing an oil rig at these locations. More locations may be forthcoming.

Note: When anchoring in Dutch Harbor, no vessel may anchor in the glide path to the airport.

MAX. SIZE: No restrictions except draft at various facilities and through the East Channel 24 ft., Rocky Bottom at MLLW.

RADIO:

(a) Department of Public Safety, Harbour Master, Pilots, Tugs, Shipping Agents and National Marine Fisheries Observer Transfer Station standby on Marine VHF Channel 16. 4125 A kHz.
(b) Alaska Department of Fish and Game and the Alaska Department of Fish and Wildlife, (State Troopers) standby on Marine VHF Channels 6 and 16. 4125 A kHz.
(c) Marine Operator calls vessels on Marine VHF Channel 16 and receives all radio traffic on VHF Channel 28.
(d) All other traffic stands by on Marine VHF Channel 6.

TUGS: Padilla Tug Co. and Dunlap Towing.

Boatmen:

Victory Services – VHF Channel 78.
Ballyhoo Services – VHF Channel 16.

BERTHING:

VALDEZ MARINE TERMINAL, Alaska:

61.05 N. 146.24 W. **(See Plan)**

OPERATORS: Alyeska Pipeline Service Company.
The terminal does not provide any tug, launch or pilotage assistance for the berthing or unberthing of tankers calling at the terminal. These services, as well as any other tanker services, must be arranged separately by tanker owners.
LOCATION: The Trans-Alaska Pipeline Valdez Marine Terminal is situated on the Southern shore of Port Valdez.
Port Valdez is a natural deep-water fjord located at the N.E. part of Prince William Sound which provides access from the Gulf of Alaska. Port Valdez is about 12 miles long and 2.5 miles wide, is surrounded by steeply rising mountains, and remains ice free throughout the year. The approach to Port Valdez is by way of Valdez Arm, a deep-water channel with a minimum width of approximately 3,000 ft.
The overland approach to the site, which is close to the mouth of the Lowe river, is by road about 6 miles long connecting the terminal with the Richardson Highway. The town of Valdez is 14 miles from the terminal by this route. The distance by boat across to Port Valdez is approx. 2.5 miles.
The terminal operates 24 hours per day, 7 days per week, throughout the year.
The administrative offices will normally be open between 0800 and 1630 hrs., Monday through Friday. The office telephone number is (907) 835-6620.
DOCUMENTS:
Certificate of Financial Responsibility.
SOLAS Safety Equipment.
SOLAS Safety Construction, or for U.S. documented vessels: U.S. Coast Guard Certificate of Inspection.
SOLAS Radiotelegraphy Certificate.
Crew Lists.
Derat Certificate.
Clearance from Last Port.
Oil Record Book.
Prince William Sound Spill Prevention and Response Plan.
Ballast Water Survey Form (BWSF) to be completed on arrival.
PILOTAGE: The Pilot boards off Blight Reef (See "Valdez"). Arrangements to be made by vessel's Agent.
ARRIVAL ADVICE: Masters of vessels bound for the terminal must advise the terminal as follows:
Last Port ETA: Tankers en route to the terminal, upon departure from their last port of call prior to Valdez, will send a telegram or telex to Alyeska Pipeline Service Company, Valdez, Alaska, Telex No. 0023-62806129, 0023-62890691, 0023-62880291 (Answerback: Alyeska Valz), advising the estimated Alaskan local time and date of arrival.
72-hour ETA: Not less than 72 hours, unless transit time is less than 72 hours, prior to arrival at Cape Hinchinbrook, tankers will send a telex or telegram to Alyeska Pipeline Service Company providing the terminal with the following information:

a. ETA at Cape Hinchinbrook.
b. Quantity of ballast to be pumped ashore and grade of last cargo.
c. Quantity of oil to be loaded.
d. Distance from the bow to cargo manifolds.
e. Size, number and type of cargo connections.
(d.–e.) At first call to Terminal. Not necessary on subsequent voyages.
f. Amount of provisions and stores to be loaded.

Final ETA: Tankers will send a final ETA, 24 hours in advance of their arrival. This 24 hour ETA shall be as accurate as possible and tankers will notify the terminal whenever the arrival time changes by more than 3 hours.
Notice of Arrival: After entering the Coast Guard's Prince William Sound Vessel Traffic Service, vessels ready to commence loading or deballasting should give immediate notice to the terminal. This notice is extremely important as it can affect berthing priority.
Coastguard Notification: Terminal will advise USCG at Valdez of all ETAs received.
AMVER Participation: The Notice of Arrival requirement to be given to the U.S. Coast Guard Captain of the Port in Valdez, Alaska, can be met if vessels participate in the Automated Mutual-assistance Vessel Rescue System (AMVER). Participation in AMVER will also make the Coast Guard's Prince William Sound Vessel Traffic Service aware of the tankers that will be entering the service.
Initial Radio Contact: Ship-to-shore radio telephone calls can be made to the terminal, (907)-835-2261, 24 hours a day by normal commercial Channels.
RADIO: All times are GMT – following information produced as a "guide" and subject to change.

VHF: The Alyeska Pipeline Service Company operates a VHF – FM base station in Valdez, Alaska under the call sign "WAB – 952". This base station is maintained for the purpose of transacting company business with either inbound or outbound vessels and is open 24 hours a day. (Transmit/receive range of this station is limited to Port Valdez.) The official language for all communications shall be English.

Channel	*Frequency*	*Use*	*At*
10	156.500 MHz	Intership and Ship to Coast Guard	A – B – C
16	156.800 MHz	Distress – Safety and Calling	A – B – C
	A –	Contingency Management Centre	
	B –	Oil Contingency Warehouse	
	C –	Operational Control Centre	

The VHF – FM marine radio system utilised by the terminal is compatible with the Prince William Sound Vessel Traffic Service which is operated by the U.S. Coast Guard in Valdez, Alaska. The USCG Vessel Traffic Service will have VHF – FM radio-telephone coverage extending beyond Cape Hinchinbrook and including Prince William Sound, Valdez Arm, and Port Valdez. The tugs available at the terminal will also be equipped with VHF – FM transceivers.

TUGS: 2×7,000 h.p. and 1×9,000 h.p. twin-screw tugs and 2×300 h.p., single-screw mooring launches are on standby at the terminal to provide oil spill containment, cleanup and contingency services and fire fighting services as required by the terminal. The tugs are equipped with telescoping fire monitors and will be capable of providing 3,500 g.p.m. of foam or fire water at 150 p.s.i.g. at an elevation 70 ft. above the tug's waterline. The tugs are equipped with VHF-FM radio-telephone communication equipment. Should tankers desire to contact the tugs, the tugs may be reached by calling on Channel 16 (156.80 MHz).

The tugs and mooring launches are available to provide berthing and unberthing services to tankers calling at the terminal.

BERTHING: Also see "Berthing Facilities" on Pages 2351 and 2352.

Berth Priority: Berth priority and berthing order will be determined by the Terminal Marine Manager, who will use the general guideline of assigning tankers and berths in the order by which tankers enter the Prince William Sound Vessel Traffic Service and are in all respects ready to discharge ballast or load.

Procedures: Tugs will be dispatched by the Marine Shift Supervisor to meet inbound tankers and to assist in berthing at the nominated berth. The Master shall remain solely responsible, on behalf of his owners, for the safety and the proper navigation of his vessel. Manoeuvring power must be available on the main engines during berthing operations. The positioning of the tanker's loading manifold in relation to the metal loading arms has to be carried out to a proper alignment, as required by the berth operator.

Maximum Allowable Berthing Velocities: The following table gives the designed maximum allowable berthing velocities for Berths No. 1, 3, 4, and 5. The velocities are given in inches per second for the various size tankers in the 40% ballast condition:

	Berth No. 1	Berths No. 3, 4 and 5
85,000 d.w.t.	9 in./sec.	12 in./sec.
120,000 d.w.t.	8 in./sec.	11 in./sec.
265,000 d.w.t.	—	7 in./sec.

Note: (a) 1 knot=20.2 in./sec.
(b) Velocities are given for a line normal (perpendicular) to the axis of the dock or the berthing dolphins.

Mooring Hooks and Mooring Capstans: Each berthing dolphin and each mooring dolphin will be equipped with a mooring capstan and either 2 or 3 quick-release mooring hooks. Berthing dolphins will have double quick-release hooks, and the mooring dolphins will have triple hooks.

The recommended mooring line arrangement diagrams included in the "Plans" show the location of these double and triple hooks. Since Berth No. 1 has no berthing dolphins, the 4 double quick-release hooks are located on the loading dock.

These mooring hooks are designed to service 1 mooring line per hook. Thus, no more than 3 lines should be led to any mooring dolphin nor should more than 2 lines be led to any berthing dolphin. These mooring hooks may be released locally.

Each mooring capstan will be mounted on, and form an integral part of, the associated double or triple quick-release mooring hook. This will provide a mooring capstan to assist in securing mooring lines at every berthing dolphin, mooring dolphin, and on the floating berth loading dock.

These mooring capstans are designed to give a minimum running pull of 2,000 kg. (4400 lb.) at a rate of 30 m. (98.4 ft.) per minute. The capstan will be positioned at a height sufficient to prevent mooring lines and messengers from becoming snarled on the quick-release hooks.

Mooring launches will be used to assist the tanker in running mooring lines to the mooring dolphins at each berth.

The terminal will provide suitable messengers for heaving in mooring lines from the launches.

Mooring Lines: Mooring arrangements shall be satisfactory to the Marine Superintendent. All critical moorings shall be of similar size and elasticity. Ropes of different material from those used to moor the ship may be used for positioning the vessel but shall not count as part of the final moorings. It is required that in ships of 90,000 d.w.t. and greater all final moorings shall be wire rope. Nylon tails may be used if fitted to all moorings. Ships should be outfitted with sufficient moorings of similar material for normal moorings. Ropes of different material may be used in emergency.

Moorings While Alongside Berth: Tankers must at all times remain adequately secured alongside the berth. Moorings must be kept at an even tension, avoiding a slack line or varying tensioning situation. Should such a situation arise and not be immediately rectified by the ship's crew after communication with the deck officer, the berth operator will suspend any transfer operation. All vessels fitted with tension winches should apply brakes once the tanker is moored and shall not leave winches in the self-tensioning position.

Emergency Towing Wires: While at a loading berth, tankers will provide emergency towing wires positioned at both the offshore bow and stern. The wires shall be in good condition, have an eye in each end, and be of adequate strength to move the vessel off the dock. The outboard eye shall be maintained at water level, and slack aboard ship shall be secured with small pieces of fibre line.

Mooring Line Arrangement Diagrams: (See "Plans"). The recommended mooring line arrangement diagrams are provided in the "Plans" as guidelines to acquaint the tanker Master with the general mooring line arrangement for the loading berths at the terminal. These arrangements are indicative of the minimum suggested number of lines and do not preclude the Master from using additional lines.

TANKER REQUIREMENTS: *General:* Certain requirements of governmental agencies are in effect at the terminal in order to minimise the chances for a pollution incident. These requirements apply to all tankers calling at the terminal.

Operations at the terminal are primarily aimed toward the safe loading of tankers and the prevention of collisions and groundings of vessels that call at the terminal. These aims will be met by insisting upon and utilising conventionally constructed tank vessels manned by skilled crews, use of positive vessel traffic control within Prince William Sound and Port Valdez, and use of all traffic advisory and communications services in West Coast ports. The purpose of the following requirements for tankers calling at the terminal is to materially enhance tanker load and discharge operations and to increase the safety of navigation that the danger of pollution from oil spills is substantially reduced.

Safe Navigation: Tankers will observe the rules and directions issu by the U.S. Coast Guard as operator of the Prince William Sound Ves Traffic Service. These rules and directions will pertain to communica check points, ETAs, traffic lane separation, anchorages, one-way tra speed, etc.

In addition to the normal instruments used in celestial navigation a piloting (sextant, pelorus, etc.), the following electronic devices mus aboard and in good working order:

a. Fathometer/Depth Sounder.
b. Loran C Receiver.
c. Two Independent Radar Systems. (10 cm. and 3 cm.).
d. Radio Direction Finder.

All vessels must have a qualified Pilot aboard for the transit of Pri William Sound and Port Valdez.

Communications: Tankers calling at the terminal will be required to ha the following communications equipment aboard and in good opera condition:

a. VHF – FM radio-telephone with sufficient Channels and speak to comply with the Prince William Sound Vessel Traffic Service opera rules and the Bridge-to-Bridge Radiotelephone Act.
b. Radiotelegraph.
c. Portable UHF transceiver will be supplied by the terminal.
d. Single sideband radio.

The portable UHF transceiver shall have at least five Channels wh are tuned to the berth frequencies listed.

Additional Equipment: Tankers calling at the terminal will be requ to have the following additional equipment:

a. Tankers must carry standard 6 in. hose sufficient to make at le 50 ft. in length for emergency lightering purposes.

b. Accommodation ladders and Jacob's ladders must be of suffic integrity and free from ice and snow to permit safe embarking a disembarking by the Pilot.

c. Mooring lines must be of sufficient size, strength, and quanti permit safe mooring of the vessel.

d. Manifold reducers, connectors, and extensions must be made steel. Cast iron reducers will not be permitted.

e. Tankers which call at the terminal will be required to retai solid waste refuse aboard the vessel, or use a suitable sewage treatme plant before discharge.

f. All ullage caps will remain closed during loading except du gauging or sampling.

g. Prince William Sound emergency towing cable package.

Operational Requirements: The following procedural and operatio requirements are listed in order to make tanker Owners and Maste aware of some additional safety and anti-pollution measures in effec the terminal. These requirements will be restated in the sectio pertaining to the pre-loading inspection and cargo loading.

a. No repairs to radars shall be made while a vessel is moored the loading berth unless authorised by the Terminal Marine Supervis

b. The tanker's main CW wireless set must be de-energized a switched off while alongside the loading berth.

c. Tank tops shall remain closed during loading operatio Petroleum vapours shall be vented through mast risers or stand pi at an appropriate height above the main deck.

d. Ship's crew will assist with connecting and disconnecting load arms to and from the vessel's cargo transfer manifold. Assurance t the arms are secured properly without damage shall be observed du pre-loading inspection. However, as a convenience the shore crew aid the ship's crew in connecting loading arms to the ship's manifold the shore crew will be more familiar with the shoreside fac connection.

e. All sea valves connected to the cargo piping system shal sealed in the closed position prior to loading oil.

f. Prior to commencement of loading operations, a joint inspec of the vessel and a pre-transfer conference will be held by the Term Marine Supervisor and the tanker officer in charge.

g. No repairs that would result in immobilisation of the vessel s be carried out while alongside of the loading berths unless the Term Marine Supervisor specifically authorises such work.

PRE-LOADING INSPECTION: *Pre-transfer conference and joint saf inspection:* Prior to the discharging of ballast from cargo tanks or load of oil, a pre-transfer conference and a joint safety inspection wil conducted by the Terminal Marine Supervisor and a responsible d officer aboard the tanker who will be in charge of bulk liquid trans aboard the tanker.

The purpose of the pre-transfer conference and the joint saf inspection is to insure that both the terminal and the tanker are sui and ready for safe loading and handling of oil.

The Check List is designed to meet the following requirements:

a. Section 4.4 of the International Oil Tanker and Terminal Saf Guide which relates to the agreed procedures and safety checks p to the commencement of cargo loading.

b. Title 46, U.S. Code of Federal Regulations, Section 35.3 relating to a Declaration of Inspection for Tank Vessels.

c. Title 33, U.S. Code of Federal Regulations, Section 156. relating to a Declaration of Inspection prior to the transfer of bulk l cargo from a shore facility to a large vessel.

The Check List is to be taken aboard the tanker by the Terminal Ma Supervisor and shall be used during the pre-transfer conference the joint safety inspection of the tank vessel to insure compliance applicable regulations and safety standards. Columns are provide the Check List for the Terminal Marine Supervisor and the tanker pe in-charge to initial, indicating that the requirements have been met. original of the check list shall remain aboard the tanker, and a copy s be returned to the Terminal Marine Supervisor for subsequent de to the berth operator.

Terminal personnel are authorised to suspend oil transfer operations if any of the safety rules listed or on the check list are not observed, or if any other danger is believed to exist.

The Master of the tanker or his representative has the right to shut down loading operations in the event he feels shore operations are unsafe.

During the pre-transfer conference, the Terminal Marine Supervisor shall provide the responsible ship's officer with a printed sheet detailing description and location of the fire-fighting system and the other emergency systems at the terminal in general and at the berth to which the tanker is moored in particular. The Terminal Marine Supervisor shall also advise the vessel if any unusual or dangerous weather conditions are forecast or expected.

As the shifts on the berth change, the relieving Terminal Marine Supervisor and berth operator shall assure themselves that all conditions pertinent to their responsibilities are as previously agreed to, and shall sign the copy of the Declaration of Inspection. The relieving officer aboard the tanker shall assure himself that the original conditions still exist and shall sign the original of the Declaration of Inspection aboard the tanker. These relieving personnel will then become the person-in-charge of the transfer operation for the terminal and the tanker respectively.

BALLAST: *Ballast Quantities:* The terminal is to be informed of the approximate quantities of segregated clean and dirty ballast in the Master's pre-arrival message. This message should also state where the ballast was shipped and the grade of last cargo.

Ballast Reception Facilities: The terminal facilities will include three 430,000-barrel ballast reception tanks. Discharge of dirty ballast will be by way of the four 12 in. loading arms (Chicksans) on Berth No. 1 and the four 16 in. loading arms on Berths No. 3, 4 and 5. These loading arms connect to 20 in. lines at the berths and lead into a 42 in. line connecting each berth to the ballast reception tanks. Although the shore lines are insulated, they are not heat traced and there are no booster pumps to assist in the discharge of dirty ballast.

No. 5 Berth is situated approx. 1.25 miles from the reception tanks and has a possible head of 150 ft. Max. pressure 40 p.s.i. (approx.).

In the event of any stripping problems, it is recommended that tanks containing unpumpable ballast be stripped internally to the slop tank and that the Load-on-top procedures be adopted.

Segregated Ballast: Only segregated ballast will be permitted to be discharged overboard. Segregated ballast is defined as ballast water that is introduced into a tank which is completely separated from the cargo oil and the oil fuel system and which is permanently allocated to the carriage of ballast. The deck log book must record all times of ballast discharge and when pumps are started or stopped. This log must also indicate whether or not the segregated ballast is being dropped in the initial stages to sea level. A close watch must be maintained on the overside discharge, with a deck floodlight or portable explosion-proof light being trained on the discharge during hours of darkness. If there are any indications of discolouration or sheen, discharge must be suspended and an investigation must be carried out. If there is any doubt as to the quality of the segregated ballast, all discharge will be made into the shore reception facilities.

Dirty Ballast: All ballast contained in any compartment or tank used for the carriage of oil will be classed as dirty no matter how clean the ballast may appear to be. No ballast carried in cargo tanks may be discharged at sea or in port.

After the connection of the loading arms has been completed and the suitable valves between the arms and the ballast reception have been opened, permission to commence discharge will be given to the responsible tanker officer by the berth operator who will have received approval from the Operations Control Centre (OCC).

Contact between the tanker and the terminal will be by means of the UHF radio that will be placed on board by the Supervisor. As during all transfer operations, there will be a continuous watch near the ship's manifold. In the event of an emergency on the berth, pressing of the emergency alarm will activate the valve closing mechanism.

On hearing this signal, the Crew member at the manifold must stop the ship's ballast pumps to avoid damage by pumping against a closed valve system ashore. (See "Emergency Procedures"). On commencing discharge of dirty ballast and at frequent intervals during the discharge, a watch will be kept on the area around the sea valves even though the sea valves have been inspected during the initial safety checks and a seal has been placed on them by the inspecting Terminal Marine Supervisor. Any indications of any oily sheen will necessitate a shutdown of the discharge pumps and an investigation to be carried out before any further ballast can be discharged. Thirty minutes before completion of discharge, the responsible tanker officer will inform the berth operator who will in turn advise the OCC and the duty Terminal Marine Supervisor.

On completion of the discharge and after pumps have been stopped, the loading arm(s) used for dirty ballast discharge must be drained back into the slop tank. On vessels with an inert gas system, gauging will be taken by way of the deck purge pipes to determine that tanks are empty. It is not intended that vessels will depressure cargo tanks for visual inspections, nor should tank lids be opened on any compartment that is not gas free.

All safety regulations applicable during the loading of oil will also apply during the discharge of ballast.

Governmental Ballast Discharge Requirements:

State of Alaska: The State of Alaska requires that the Master of a vessel scheduled to take on any petroleum product or cargo, complete and sign the State of Alaska Department of Environmental Conservation Ballast Water Discharge Certificate Affidavit. To support this affidavit, the Master must be prepared to produce both deck and engine room log books and a legible copy of that portion of the Oil Record Book relevant to the sea passage from last discharge port to the terminal.

Federal Requirements: Prior to loading oil on any vessel, the terminal is required by the United States Department of the Interior to obtain from the Master of the vessel a legible copy of that part of the Oil Record Book that pertains to the voyage of the vessel to the terminal from the vessel's last oil discharge port. This legible copy shall be certified under oath by the Master as being true and correct. If the vessel is not required to maintain an Oil Record Book or similar records, the Master of the vessel is required to provide the terminal with an affidavit, duly sworn to and signed, stating any and all facts bearing upon any discharge of oil or oily water from the vessel during its voyage to the terminal from its last oil discharge port.

Should the Master be unable to comply with the preceding requirement or if it appears from the Oil Record Book or other documentation that a vessel has discharged oil or oily water during its voyage to the terminal, the terminal is required to promptly notify the Department of the Interior's representative, the Authorised Officer. Tankers discharging ballast water or other oily mixtures may be subject to penalties.

OIL CHARACTERISTICS: The predominent oil to be available at the terminal is currently North Slope Crude Oil. The following preliminary characteristics of North Slope Crude Oil are given to acquaint the Master and the cargo officers of tankers that will call at the terminal with the general properties of the cargo they will load.

Specific Gravity: 0.8933 at 60°F.

API Gravity: 27.0° API.

Pour Point: + 15°F.

Viscosity: 73.5 SSU at 100°F., 169 SSU at 60°F.

Reid Vapour Pressure: 4.0-4.5 lbs.

Sulphur Content: 0.94 per cent by weight.

Waxing: 85-117°F. (begins to precipitate). 50-55°F. (bulk of wax begins to come out of solution).

Mercaptan Sulphur: approx. 14 parts per million.

Loading temperature: approx. 100°F.

Dissolved H_2S: less than 0.2 parts per million.

LOADING FACILITIES: *General:* All loading operations will be accomplished in accordance with the joint inspection pre-transfer conference. Loading operations cannot commence until the vessel has complied with all State of Alaska and Federal Requirements and all required documentation has been provided.

Crew Responsibilities: Ship's crews will be responsible for assisting with handling the loading arms on board the tanker, furnishing and making the adaptor connections, removing blind flanges, and guiding the loading arms (Chicksans) to the appropriate manifold connections. However, as a convenience, the shore crew will aid the ship's crew in connecting loading arms to the ship's manifold as the shore crew will be more familiar with the shoreside facility connection. The Chicksan loading arms and couplings are hydraulically controlled by the berth operator who will be in constant voice communication with the individual responsible for the connection by means of the UHF portable radio that will be supplied to all vessels by the Supervisor.

If required, the terminal will supply 10 in. – 16 in. reducers at Berth No. 1 and 12 in. – 16 in. at Berths No. 3, 4 and 5.

Check List Requirements: After the Terminal Marine Supervisor is satisfied that all the safety requirements have been complied with, permission will be given to commence loading. All operations in connection with starting of loading, switching of tanks, and topping off will be the responsibility of the responsible ship's officers.

Before the maximum pressure or loading rates agreed to at the pre-transfer conference are reached, slow loading will be started and the responsible ship's officer will ensure that the cargo is flowing to designated tanks, thus ensuring that all block valves separating lines are open. On completion of this check and after advising the berth operator, the pressure/rate will be increased to the maximum previously agreed by the Master, or the officer in charge.

A responsible member of the crew will remain near the manifold within sight of the berth operator. This is in addition to the officer on cargo watch who, at frequent intervals, will check the state of loading with the berth operator by means of the UHF radio. This officer will also advise the berth operator when changes in the loading rate are required.

The rate of flow into the tanker can be observed on the large digital readout situated by the berth operator's control position.

Loading Suspension: Terminal: Terminal personnel will suspend loading operations if any safety rules are not followed, or if terminal personnel supervising loading operations believe any other danger exists, providing adequate notice is given to the responsible ship's officer.

Tanker: The Master is required to shut down loading if he feels that shore operations are unsafe, provided adequate advance notice is given to berth personnel.

Emergency Shutdown: In the event of an emergency (See "Emergency Procedures") the following types of shutdown could occur:

(1) "Danger" shutdown.
  (a) All berth block valves close.
  (b) Metering upstream block valves close.
  (c) Berth control valves close – one for each loading arm (in 5, 5.5, 6.0, and 6.5 seconds, respectively, to prevent surge to line).
(2) Fire shutdown
  (a) The preceding valve closures plus fire alarm and start fire pumps.
(3) Emergency shutdown, one per arm, closes control valve only.
(4) Low vapour pressure on any crude tank – initiates (1) preceding.

Pushbuttons for (1) preceding are located in berth area plus one on berth operator's alarm panel.

Pushbuttons for (2) 1 on roadway; 1 on roadway at land; 1 in Power Distribution Cabinet (PDC); 1 in Berth Operator Control (BOC) alarm panel; 1 in loading arm area.

Pushbutton for (3) 1 local at each valve.

Topping Off: Near the end of loading when topping off, the responsible ship's officer will request the gradual reduction of loading rate for topping off operations. This reduction will be achieved by the berth operator slowly closing the berth loading valves. The berth operator will progressively reduce the opening of the berth control valves and will take loading arms out of service, until the point when all berth control valves and block valves are finally closed, when advised by the ship's officer "Shut Down" or "Finished Loading". The loading arms will then be drained into a ship's tank.

Disconnecting: On being satisfied that loading arms and ship's manifold are empty, the order will be given from the responsible ship's officer to the berth operator to uncouple the quick release couplings.

During the period of disconnecting, the USCG Vessel Traffic Control Centre at Valdez will have been advised. Tugs will be on standby, and providing that there are no other ship movements that would interfere with sailing, the "Early Departure System" will be carried out. The actual Bill of Lading figures will be sent to the master by W/T or Telex after departure.

COMPLETION/DEPARTURE PROCEDURE: *Topping-Off:* As the tanker begins the topping off stage, the responsible ship's officer shall notify the berth operator who will in turn keep the OCC informed as the cargo loading rate is reduced. When the ship's officer estimates approximately one hour remains in the loading process, he shall notify the berth operator.

Tug Assistance: After being notified by the tanker that one hour remains in the loading sequence, the berth operator shall notify the OCC and the Terminal Marine Supervisor. The OCC shall continue to monitor the topping off process and the Terminal Marine Supervisor shall place the vessel's pre-arranged tugs on standby. The tugs shall be alongside the vessel after all loading arms have been disconnected and before any mooring lines are let go.

U.S. Coast Guard Vessel Traffic Service: The departure of tankers from the terminal shall be in accordance with the published standard operating procedures for the Prince William Sound Vessel Traffic Service. The Coast Guard Operations Centre located in Valdez shall be the directing authority for the operation of the vessel traffic service. The Terminal Marine Supervisor will notify the USCG-VTS one hour prior to the completion of loading and again when loading is complete. When the Terminal Marine Supervisor notifies the USCG-VTS that loading is complete, he will verify the tanker's status to enter the Vessel Traffic Service and will check on any inbound vessel traffic.

SAFETY: After the tanker is secured, the Terminal Marine Supervisor will board the tanker to contact the Master or his representative to:
- provide information on terminal safety regulations.
- agree on designated smoking areas
- advise ship's personnel on "Work Permit" and "Hot Work Permit" procedures.
- present ship/shore Safety Check List.
- present printed sheet describing terminal emergency procedures and fire fighting capabilities.

The following are **some** of the safety requirements.

Warning Signs, Lights, and Signals – Upon arrival at the terminal, a tanker shall display the following notice at the gangway:

WARNING
NO OPEN LIGHTS
NO SMOKING
NO VISITORS

During transfer of oil, and when in the non-gas free condition a red signal (flag by day and electric lantern at night) shall be displayed so that it is visible from all sides.

Blowing tubes – Funnel uptakes and boiler tubes will not be blown while a tanker is berthed at the terminal.

Use of Tools – No chipping or other operation likely to produce sparks will be allowed in any designated hazardous area. The Terminal Marine Supervisor and the responsible ship's officer shall both be satisfied that there is no such activity on the vessel or on the facility.

Flashlights, Hand Torches, Lanterns – Only self-contained battery powered flashlights, hand torches, lamps and lanterns, approved by USCG will be permitted to be used aboard the vessel or on the berths.

Main Engine – While berthed at the terminal, the tanker's main engines, steering machinery, and other essential manoeuvring equipment shall be maintained on standby status to permit the tanker to move from the berth on short notice.

Communications Equipment – A tanker's main transmitter shall be turned off and the main transmitting aerials shall be grounded whenever a tanker is alongside a loading berth at the terminal.

VHF-FM radiotelephone equipment, both portable and fixed, may be used as long as the equipment is permanently installed or intrinsically safe, conforms to FCC marine requirements, USCG requirements, and operates with a power and output of 1 watt or less.

The preceding requirements do not mean that essential servicing of ship's radio equipment cannot take place while alongside a berth. However, suitable arrangements for insuring safety during this work shall be made between the tanker and the terminal, including the securing of an appropriate work permit.

Operating and servicing of radar equipment aboard a tanker berthed at the terminal shall be agreed to by the Terminal Marine Superintendent or Marine Supervisor and shall be the subject of an appropriate work permit. *Vessels Alongside* – Unauthorised craft shall be prohibited from securing to a berth at which a tanker is moored.

No craft shall come alongside a tanker while the tanker is handling crude oil or deballasting without the permission of the Terminal Marine Superintendent who shall instruct personnel aboard the craft that smoking, naked light, and galley fire regulations must be observed.

Designated Smoking Areas: Smoking shall be strictly prohibited within an area enclosing all tanker berths and loading docks and on board any tanker while at a berth, except.
- (a) in buildings or other shore locations specifically approved for smoking and with such approval notices posted.
- (b) on board a tanker in places specified by the Master, and agreed to by the Terminal Marine Supervisor.

Places designated for smoking shall not be outside of any of the accommodation areas. Special precautions shall be taken during conditions that may suggest danger; in particular, conditions of no wind or any indication of unusually high gas concentrations.

The Master is responsible for insuring that all on board are informed of the selected places for smoking and for posting suitable notices.

Only safety matches are permitted in approved smoking areas. The use of lighters is prohibited.

Galley Fires and Cooking Appliances – Galley burners are t adjusted to insure efficient combustion and to prevent galley stack and sparks from incandescent soot. Flues are to be cleaned at reg intervals. When bottled gas equipment is used, the gas shall contai additive which will give it a distinctive odour. Sufficient fire extinguis shall always be provided near the galley. Oily rags and fat shall no allowed to accumulate, and the exhaust fan ventilators shall be k clean.

While a tanker is at a berth, the use of galley stoves and other coo appliances with non-immersed elements such as electric hot-plates a toasters shall be permitted provided that the Terminal Marine Superv agrees that no hazard exists and that such use is in the galley, in t pantry, or in designated smoking areas.

Work Permits – If repairs are to be carried out on a tanker alongsid berth at the terminal, the responsible ship's officer must discuss a obtain agreement from the Terminal Marine Supervisor on the de of the work to be done. Certain types of repairs will be the subjec written work permits which shall be completed by the responsible sh officer and authorised by the Terminal Marine Supervisor at the tim the pre-loading inspection Check List. These types of repairs inc but are not limited to:
- (a) Repairs to main engine, steering machinery, or ot manoeuvring equipment which might immobilise the tanke
- (b) Repairs to tanker's radiotelephone or communicati equipment.
- (c) Repairs to radar equipment.
- (d) Repairs to galley equipment and cooking appliances.

Hot Work Permits – Any hot work done at the terminal, either on t berth or aboard a tanker moored to a berth must be approved by t U.S. Coast Guard Captain of the Port, Western Alaska. This appr will be in the form of a signed Hot Work Permit, issued by the U Coastguard.

EMERGENCY PROCEDURES: Fire: The signal for a fire aboar tanker moored at the terminal shall be 5 prolonged blasts of the sh whistle or siren supplemented by a continuous sounding of the sh general alarm. In the event of a fire within the terminal, the tanker sh be notified by the berth operator and, in addition, the terminal fire al will also be sounded.

The initial action required of tankers in the event of a fire within t terminal is to prepare for a shutdown of all loading and ballast wa discharge arms. This shutdown will be initiated by the terminal and t by the tanker. In case a shutdown does occur, loading and bal discharge will not be commenced again until the all clear notification h been received from the Terminal Marine Supervisor.

In the event of a fire aboard the tanker or on the loading berth, t initial actions will consist of shutting down all transfer operations. T standby tug, followed by the other tugs, will be dispatched by the OC to the appropriate berth and the fire water pump shall be starte necessary, the tanker will be towed off the berth by tugs, using t emergency tow wires. Each berth is equipped with an independent f water system which includes a 2,000-gallon-per-minute pump an liquid foam system. Each berth is also equipped with the following f fighting equipment:
- (a) 2 fixed foam monitors.
- (b) 2 fixed firewater monitors.
- (c) 5 fire hydrants.
- (d) 3 hose reels.
- (e) 1 shore to ship firewater connection including 75 ft 2.5 in. hose.

Each berth also has the capability to be interconnected with the ta or with fire trucks to provide increased fire-fighting capacity. The fo system is designed for coverage of fire on the berths only and is r normally interconnected for use by shipboard firefighters in the even a fire.

Note: Regardless of any assistance the terminal may render, vess at the berth are expected to put their own emergency procedures i effect whenever required.

Man Overboard: In the event of a man overboard from a tan moored at the berth, rescue efforts will be implemented immediat and the Berth Operator shall be advised by UHF radio. The Term Marine Supervisor shall also be notified by the Berth Operator. T standby tug and mooring boat shall be advised by the Berth Oper and shall get underway immediately to attempt the rescue.

Life rings will be in position around the loading berth and also on t berthing and mooring dolphins. In case of a man overboard, the med authorities will also be alerted by the Berth Operator.

Oil Spills: The notification requirements for an oil spill are delinea by Federal Law. The Federal Water Pollution Control Act (FWP requires persons in charge of vessels (among others) to notify t appropriate federal agency whenever an oil spill enters navigable wa or the adjoining shoreline. The appropriate agency designated to rec these reports is the U.S. Coast Guard which can be contacted Channel 16, VHF-FM.

Notification of an oil spill shall be passed by the tanker to the be operator who in turn shall inform the Terminal Marine Supervisor.

The terminal will call other agencies that are required to be noti

The terminal will provide any available containment and clea assistance for any oil spill at the terminal. The terminal will activa oil spill response procedures upon notification of an oil spill and s utilise all available personnel, equipment, and resources to limit a minimise pollution.

CHARTS/PUBLICATIONS: The following official charts and publica are recommended for study when planning a voyage to Valdez, Ala and the Terminal:

(a) National Ocean Survey Charts:

Chart Number		*Title*
Old System	*New System*	
8500	531	Gulf of Alaska – Strait of Juan de Fuc Kodiak Island
8502	16013	Cape St. Elias to Shumagain Islands

Chart Number *Old System*	*New System*	*Title*
8551	16700	Prince William Sound
8520	16709	Prince William Sound – Eastern Entrance
8519	16708	Prince William Sound – Port Fidalgo & Valdez Arm, Valdez.

(b) Nautical Chart Catalogue No. 3 – Alaska

(c) United States Coast Pilot No. 9, Cape Spencer to Beaufort Sea (1964) with current supplement.

(d) Tides Tables, West Coast, North and South America (current year).

(e) Tidal Current Tables, Pacific Coast of North America and Asia (current year).

(f) United States Coast Guard Light List, Vol. III, Pacific Coast and Pacific Islands (current year).

(g) Weekly Notice to Mariners published by Defense Mapping Agency Hydrographic Center (DMAHC).

(h) Local Notice to Mariners issued by Commander, Seventeenth Coast Guard District, Juneau, Alaska.

(i) Radio Navigational Aids, Pacific and Indian Oceans (Publication No. 117B), published by U.S. Hydrographic Office.

WEATHER: *Wind:* The mountains which surround Port Valdez tend to constrain the flow of air to either an Easterly or Westerly direction. At Valdez Narrows, the predominant directions are Northerly and Southerly. Jackson Point experiences stronger winds than Valdez Airport; however, light winds (less than 13 m.p.h.) occur about 85 per cent of the time. The prevailing wind directions are S.W. from May through September and N.E. from October through April. The N.E. Winter winds reach gale force but usually do not prevail for long periods. The site is well protected from Southwesterly winds but is fully exposed to the Northeasterlies and to winds coming off Mineral Creek, directly North of the facility, approx. 2.5 miles away across Port Valdez.

The occurrence of winds with speed greater than 19 m.p.h. from any direction is less than 7 per cent throughout the year.

A wind chill factor chart is presented for use in conducting operations during Winter seasons. As indicated, combinations of low temperatures and high winds combine to provide extremely low equivalent temperatures. Outdoor operations under these conditions should be closely supervised to insure that personnel and crewmen do not suffer from exposure or frostbite.

Precipitation: Precipitation is abundant during all seasons with the majority falling during the months July through November. Valdez has an average annual precipitation of 62.37 in. with a mean total of 244.5 in. of snow per year. Greatest snowfall in a 24-hour period was 43 in. in February 1928. Precipitation of an amount in excess of 0.01 in. occurs an average of 170 days per year. Estimate 1 in. rain = 12-15 in. snow.

Temperature: The mean monthly annual temperature is 35.7°F. with recorded extremes of +87°F. (June 1953) and −28°F. (February 1947). The month of January is the coldest with a mean daily minimum of 11° F. and a mean daily maximum of 26°F. The month of July is the warmest with a mean daily minimum and maximum of 45.2°F. and 60.1°F., respectively.

Visibility: Snow or snow with fog are the major causes of reduced visibility during Winter months. At the Valdez Airport, visibilities of 1 mile or less occur 3.7 per cent of the time, annually. Visibilities greater than 5 miles occur 85 per cent of the time.

Tides: The tide at Port Valdez has a diurnal range of 12 ft. and a mean range of 9.7 ft.

Waves: The port is surrounded by mountains and is well protected from the open sea and the wave action within the port is limited to wind-generated waves which are constrained by the fetch available. The maximum calculated wave height is 9.4 ft. from the East with a period of 4.3 seconds. Waves in the order of 6 ft. could occur from the N.W. quarter. An important exception to this is a Tsunami or seismically generated wave which can be far in excess of the heights quoted above. Investigations in 1968 showed mean wave heights 3 ft. to 6 ft. in Winter (independent occurence 0.7 per cent of time) and 2 ft. to 3 ft. in Summer (0.1 per cent of time). Berths at the terminal are designed to withstand waves of 12 ft. with a vessel alongside and 20 ft. when vacant.

Ice: Valdez is an ice-free port as far as tanker operation is concerned. Light ice forms along the banks and in the small boat harbour at Valdez, but this has not interfered with small-boat operations.

Currents: It appears that surface currents measured during calm wind conditions in Port Valdez often oscillate with the tide, moving generally in and out of the port with maximum speeds of 0.5 knot. The Easterly (flooding) surface current during a falling tide may or may not persist throughout the year. Although Volume 9 of the U.S. Coast Pilot for Alaskan waters describes the current in Port Valdez as "too weak and variable to be predicted", measurements of surface current speeds typically show maximums of 0.5 to 1.0 knot.

It is requested that inbound tankers keep the OCC advised of weather conditions in the Gulf of Alaska, Prince William Sound, Valdez Arm, and Valdez Narrows in order that accurate information may be passed to outbound tankers.

VISITORS: Access to the terminal is limited to terminal personnel, authorised governmental personnel and authorised visitors with valid reasons for entry onto the terminal site.

Visitors to the Valdez Marine Terminal are requested to make arrangements through the Administrative Office in advance of their arrival at the Terminal. Authorised visitors shall be met at the main gate, which provides the only land access to the Terminal and is located at the East end of the Terminal site, and shall be escorted through the Terminal area. All persons passing through the main gate shall sign in and out with the guard. Any visitor who arrives at the main gate outside normal working hours of the Administrative Office and who has not made prior arrangements shall be turned away and requested to contact the Administrative Office during normal working hours.

The guard at the main gate shall ask any visitor desiring to meet a tanker crewman to wait at the gate until the vessel is called and arrangements have been made to meet the visitor.

Small boats and other vessel traffic will not be permitted to dock at the terminal site without the approval of the Terminal Marine Supervisor. Only taxicabs with valid passes will be permitted to enter the Terminal site, and any private or commercial vehicles that are permitted in the terminal area will be subject to inspection on entering and departing.

SHORE LEAVE: If tanker personnel return to the Valdez Marine Terminal site in such a condition that they might require assistance to insure their safe return to the ship, they shall remain at the main gate until the guard grants them admittance. Should an escort be required, it will be provided by vessel personnel.

All tanker personnel transiting the Terminal area will be required to carry their United States Merchant Mariner's Document (USMMD) and company identification of tanker owner for identification. These documents shall be presented to the guard at the main gate whenever tanker personnel enter or leave the Terminal site. Should a crewman present himself without these documents, he will be detained and the Master will be called to resolve the matter.

TIME: Alaska Standard Time (150th West meridian) for a zone description of +9(ZD9). Local time is modified from the first Sunday in April to the last Sunday in October by the use of Daylight Saving Time for a zone description of +8 (ZD 8) for Alaska Daylight Saving Time. This time is 1 hour behind that in Seattle and California and 4 hours behind New York.

To avoid confusion, all communications regarding sailing times, sailing dates, arrival times, arrival dates, etc. are to be quoted in Alaska Local Time.

FRESH WATER: Only in cases of extreme emergency can potable water be supplied and in a very limited quantity.

FUEL: Not available.

POLLUTION: U.S. Federal Pollution Prevention Regulations and Federal Water Pollution Control Act to be strictly observed.

TELEPHONES: Pay telephones will be located in the vicinity of each loading berth for the use of ship's personnel.

Telephones will not be placed aboard tankships calling at the terminal.

AGENCY: Alyeska Pipeline Service Company will not act as Agent for tankers calling at the Valdez Marine Terminal. Any requirements for such services as ship chandler, etc. must be obtained through the Owner's appointed ship's Agent. For security, the Valdez Marine Terminal must be notified of the appointed Agent.

AUTHORITY: Alyeska Pipeline Service Company, Valdez Marine Terminal, P.O.Box 300, Valdez, Alaska 99686. *Tel:* (907) 835-6620. *Telex:* 0023-62880291. *FAX:* (907) 835-6078. *Contact:* Captain T.F. Plummer, Marine Operations Manager/Port Captain.

BERTHING FACILITIES: The major ship loading facilities include four independent loading berths, numbered 1, 3, 4 and 5. Berth No. 1 is a floating berth whereas Berths No. 3, 4 and 5 are fixed structures.

	Berth No. 1 See Note 1	*Berth No. 3* See Notes 1 and 2	*Berth No. 4* See Notes 1 and 2	*Berth No. 5* See Notes 1 and 2

2	—	6 ft. 9 in.	6 ft. 9 in.	6 ft. 9 in.
3	—	6 ft. 9 in.	6 ft. 9 in.	6 ft. 9 in.
4	—	6 ft. 9 in.	6 ft. 9 in.	6 ft. 9 in.
Quick Disconnect Coupling (QDC) Size (in.)	12	16	16	16
Manifold Size Range Acceptable to QDC (in.)	10 to 16	12 to 16	12 to 16	12 to 16

Note: (1) Although all berths are designed to handle vessels in the 16,000 d.w.t. size, loading arm size requires ship's manifolds to b minimum of 10 in. in diameter. Normally, vessels less than 45,000 d.w.t. will be handled at Berth No. 1.

(2) Because of mooring dolphin limitations, vessels of more than 180,000 d.w.t. would be acceptable only if their deck machinery a mooring leads allowed an efficient bow and stern mooring line pattern. In addition to this requirement, distance from bow to mani and prevailing weather conditions would have to be considered before berthing of such vessels would be authorised.

VANCOUVER, Washington: 45.36 N. 122.40 W.

(See Plan)

DOCUMENTS: 3 copies of each of the following:
- Cargo Manifest.
- Stores List.
- Crew Cargo List.
- Crew List.

One copy of following:
- Clearance from last Port.
- Tonnage Tax Certificate.
- Copy of Vessel register and itinerary of vessel port by port.

PILOTAGE: See "General-Pilotage" before first U.S.A. port (Albany).

ANCHORAGES: Only designated anchorages on U.S. Coast and Geodetic Charts are at Tongue Point (Astoria), Oreg. 2 in number and designated on Chart 6151 Columbia River, Pacific Ocean to Harrington Point, as 1 Lower Tongue Point and 2 Upper Tongue Point. Additional locations on Columbia and Willamette Rivers where safe anchorages can be made upon advice of Columbia River Pilots. Anchorage in Vancouver harbour by permission of Harbour Master.

RESTRICTIONS: No restrictions on night entry. State of tide and draft restrictions not applicable to vessels drawing less than 40 ft.

MAX. SIZE: No restrictions length and breadth. Depth at Columbia River entry 48 ft. River channel to Vancouver maintained at 45 ft. by 600 ft. Seasonal tidal effect up to 3 ft. at Vancouver.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.

RADIO: Route ETA cables through KBLITT Seattle, Wash.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Normally join vessel at designated berth. Tug lines used at no charge.

BERTHING: No special requirements for berthing and no special arrival times required except under particular circumstances.

13 berths. Total length 9,206 ft. with mooring. Ro/Ro facilities available.

BULK HANDLING FACILITIES: The grain terminal, owned by the Port and operated by the United Grain Corporation, has about 1,000 ft. (305 m.) of dock available. The 7 vessel spouts load 1 vessel at a time at a combined loading rate of 40,000 bushels per hour. The grain terminal can off-load at 18,000 bushels per hour, and they have a storage capacity for 5,000,000 bushels, dry bulk facility with 50,000 ton capacity covered storage. Bottom dump pit and top unload for gondola railcars. Mineral concentrations such as copper concentrate, quartz silica and zinc concentrate. Covered conveyor to special dry bulk dock.

EQUIPMENT: The Port of Vancouver has 3 Whirley cranes, 1 of which is rated at 65 short tons at 60 ft. (18 m.) and 15 short tons at 130 ft. (40 m.) the other 2 Whirley cranes have a capacity of 34 short tons at 60 ft. (18 m.) and 10 short tons at 130 ft. (40 m.). These 3 travelling gantry or Whirley cranes operate on parallel tracks on the face of the dock in conjunction with the double direct transfer tracks.

Bulk materials make up a sizeable portion of the Port's traffic, and consequently, large crane buckets are available for handling these cargoes. In addition, the Port has a special crane bucket for the successful handling of zirconium – a very fine sand material considered a "problem" commodity for efficient and waste-free handling.

The Port maintains a full complement of support equipment. They have 42 lift trucks with 2 – 3.5 ton capacities, 9 lift trucks with 7.5 – 15 ton capacities, 1 lift truck with a 26 ton capacity, along with various straddle-carriers, conveyors, front-end loaders, jitneys – and a range of special attachments and gear for all their equipment (such as prong-lifts for steel coils, grabs and squeezers for paper rolls, push-pull slip sheets for bag goods, cartons and boxes) to handle any special situations or problem with which they might be confronted.

STEVEDORES: Allocation for gangs Mondays through Saturday must be confirmed at 1100 hrs. to the longshore hiring hall. Allocation for gangs Sunday and Monday are made at 1100 hrs. Saturday for both day and night gangs. Same procedure applies to allocation of night gangs, but night gangs may be cancelled by 1400 hrs. afternoon of night gangs are to work.

Marine Terminal Corporation manages Berths No. 8 and 9.

MEDICAL: Any type of medical treatment can be provided and hosp facilities available.

TANKERS: 1 berth. 3 × 6 in. pipelines to 33 tanks. Storage capac 682,800 bbls.

DENSITY: Fresh water at all times.

FRESH WATER: Available at all berths delivered through pier-si connections.

FUEL: Viscosity grades of B and lower. No advance notice requi Barging essential.

FIRE PRECAUTIONS: Port fire precautions respecting tankers a administered by U.S. Coast Guard, which enforces shipboa regulations under Code of Federal Regulations, Part 46, Sub-part Sections 20 to 40; Police Harbour Patrol, which controls p movements, boards vessels to warn Master regarding harbo regulations, including spilling of oil, etc.; and Fire Marshal, who exercis jurisdiction regarding fire regulations at shoreside facilities serv tankers.

CONSULS:

Austria
Belgium
Costa Rica
Denmark
Dominican Republic
El Salvador
Finland
France
Germany
Great Britain
Iceland
Italy
Japan
Lebanon
Mexico
Netherlands
Norway
Panama
Peru
Sweden
Venezuela

REPAIRS: All types of deck and engine repairs possible.

DRY DOCKS: See "Portland, Oregon".

GANGWAY/DECK WATCHMEN: Services at option of vessel Own Agent and available through private firms.

OPENING/CLOSING HATCHES: While ship is at dock, opening a closing hatches is work of longshoremen. Ship may open or close o hatches while under way.

CERTIFICATES: Registered tonnage certificate.

CUSTOMS ALLOWANCES: Tobacco, reasonable quantity. Wine a or Spirit, reasonable quantity.

CARGO GEAR: Valid cargo gear certificate required, acceptable to U Bureau of Labor Standards.

REPATRIATION: Any arrangements possible for crew changes or ot repatriation.

AIRPORT: Airport 10 miles from town, served by 7 regularly schedu airlines with direct service and/or connections domestically and wor wide.

TIME: GMT minus 8 hours. Daylight saving time becomes effec annually on first Sunday in April through last Saturday in October.

HOLIDAYS: Following holidays are recognised: *New Year's D Lincoln's Birthday (Feb. 12th); Washington's Birthday (Feb. 22 Memorial Day (May 30th); *Independence Day (July 4th); *Labour D (1st Monday in September); Columbus Day (Oct. 12th); Veteran's D (Nov. 11th); Thanksgiving Day; *Christmas Day (Dec. 25th); Statew Election Days. Other legal holidays may be proclaimed by Stat national authority. When holiday falls on Sunday, following Mon observed as holiday. Longshore work performed on any of above-lis days is at overtime, which is one-and-a-half time rate. Days mark are stop-work days, viz., no ships will be worked. This also applie July 5th, which observed locally on unilateral basis.

POLICE/AMBULANCE/FIRE: Police Tel: 693-2555; Fire Tel: 693-14 Ambulance provided by several private firms, but can be obta through police or fire number.

SERVICES: All services available such as compass adjusting, ma minor repairs either with work barges or at ship repair berths; lay be available; charts available from private companies; all chand supplies available.

SHORE LEAVE: Crew members permitted ashore except where ve has made first arrival from Communist-controlled port.

IDENTIFICATION CARDS: Immigration Dept. requires Forms No and No. 31 (Repatriation). Changes can be effected at any Consulate and are honoured here.

GARBAGE/WASTE OIL DISPOSAL: See "Agriculture" before U.S.A. port (Albany).

Vessels requiring discharge of oily waste or garbage at the Po Vancouver shall inquire of the Port's Operations Department fo names of oily waste or garbage contractors. The vessel shall arrange directly with such oily waste or garbage hauler(s) for such services and equipment. Payment of charges for these services and equipment provided by such oily waste or garbage hauler shall be made directly to the oily waste or garbage hauler by the vessel, it's agent, owner, charterer, or any other party responsible for such payment of charges by the vessel.

The oily waste or garbage haulers are independent contractors and are not agents or employees of the Port of Vancouver, and as such the Port of Vancouver shall not be liable for any act, omission, or negligence of any such oily waste or garbage hauler. Rates and charges assessed against vessels by the Port of Vancouver for use of its facilities or services do not include this service or insurance coverage for any potential liability of any oily waste or garbage hauler permitted by the Port of Vancouver. The discharge by a vessel of oily waste or garbage at the Port of Vancouver shall be allowed only in accordance with the terms of this item and applicable Federal, State and Local regulations.

List of Haulers for Marpol V Compliance:

SEAMAN'S CLUBS: Fort Vancouver Seamen's Center, 712 West Evergreen Boulevard, P.O.Box 1102, Vancouver, Washington 98666.
AUTHORITY: Port of Vancouver – U.S.A., P.O.Box 1180, 3103 Lower River Road, Vancouver, Washington 98666. *Tel:* (206) 693-3611 or (503) 289-8824. *FAX:* (503) 285-6091. *Contact:* Byron H. Hanke, Executive Director. Walt Morey, Director of Technical Services.

WHITTIER, Alaska: 60.47 N. 148.40 W.

SHIPMASTER'S REPORT: October 1980. (Updated 1988).

GENERAL: Whittier is a small port in position Lat. 60° 47′ N., Long. 148° 40′ W. The population in October 1984 was 250. There are 2 hotels, 3 grocery stores, a school and a post office. The port was constructed between 1941 to 1943. It was developed as a main supply depot for the storage of oil for the Anchorage area and also as a transhipment port for produce from other areas in the United States. There is regular barge traffic from Seattle and other West coast ports with ammunition, food, merchandise and motor cars. All these are carried aboard flat top railway wagons which can be loaded or discharged at any state of the tide. The port is operated by the Alaska Railroad system and there is no shore gear of any kind. Whittier is surrounded by very high mountains and there is no road or footpath in or out. There is a very short landing strip suitable for small aircraft but the normal communication is by rail which goes under the mountains in two long tunnels. The journey takes about 1.5 hours and the timetable is frequent in the Summer when a lot of people visit Whittier for boating and fishing or to get the ferry to Valdez. During Winter however the service is about four times a week, weather permitting.
APPROACHES: *Recommended Route to Whittier Pilot:* British Charts BA. 3363 and 3364.

When Smith Island bears 256°×8 miles, vessels should leave the traffic zone and steer 277° passing 1.5 miles South of Naked Island and 1.2 miles North of Point Eleanor. Then alter course to 281° passing 1 mile South of Mears Point. After passing Mears Point, steer 350° through Ferry Passage and alter to 280° off Point Culrose Light to the pilot station. It is not locally recommended to pass North of Perry Island through the Dutch Group.
PILOTAGE: Pilotage is operated by the Southwest Alaska Pilots' Association who have an office in Valdez, telephone number (907) 835 – 2134. They also have an office in Homer, telephone (907) 235 – 8783. Both stations maintain a continuous watch on Channels 10 and 16.

In theory, Pilots embark at Hinchinbrook Entrance. This has not been the practice however, for the last year or so, due to the long sea passage for the small pilot boat and the severe weather sometimes encountered in this area. Pilots normally embark at Blight Reef near Glacier Island. The pilot boat is stationed at Rocky Point some 10 miles away. The normal pilot boat is "Bering" which is a 63 ft. long trawler, capable of 10 knots, with a blue hull and white house. A newer boat is also in attendance. This is a 43 ft. glass fibre boat called "Bernhof" capable of 20 knots. She has a white hull.

No vessel may enter Prince William Sound through the Hinchinbrook Entrance without permission from the Coast Guard at the Valdez Traffic Control Centre on Channel 13 or 16. Large vessels may only transit Prince William Sound in daylight hours.

If permission is obtained, vessels may proceed direct to the pilot station at Whittier, 1 mile South of Point Pigot. See "Approaches".
ANCHORAGE: Anchorage off Whittier may be obtained in 12 fathoms at Pigot Bay (Lat. 60° 50.4′ N., Long. 148° 22.0′ E.).
BERTHS/FACILITIES: The 2 railway berths are only for barges carrying flat top railway cars on which all cargo is carried. The Delong Pier is used for oil tankers. The length of the wharf is 140 m. and the maximum length of ship is about 170 m. The minimum depth alongside is 48 ft. at the West end and 80 ft. at the East end.

Tankers normally berth port side alongside. In October 1980 there was one tug "Avenger" in attendance being 2,000 h.p. A shore gangway is supplied. All manifold connections are 6 in. The ship must supply all reducers. 2 lines are used for kerosene. Jet fuel, Mogas and diesel are imported. The distance to the shore tanks is 1.5 miles. All products are pumped from the storage area to Anchorage. Bunkers are not available for large ships. Provisions and supplies can be purchased in Anchorage and shipped down by rail. There is a small clinic with a physician's assistant. The nearest doctor or dentist is in Anchorage. In an emergency there is an ambulance which can run on the road or rails.
GENERAL:
Weather: The winds are very strong and variable. It is very wet in Summer and has an extremely high snowfall in the Winter months. The port is completely ice free the whole year round.
Formalities: All the usual American forms apply. Customs, Immigration and Coast Guard all come from Anchorage as there are no officials at Whittier.
Joining/Leaving: Crew may sign on and off at all times. During Winter Whittier is often cut off by snow.
Accommodation: Pilot and Agent stayed aboard throughout our 36 hour stay which proved very convenient for clearance and paperwork.
Agent: North Star Terminal & Stevedoring Company, Anchorage, Alaska 95510. Cable: "Norstevco Anchorage". Telex: 26471.
AUTHORITY: Whittier Harbour Commission, P.O.Box 608, Whittier, Alaska 99693. *Tel:* (907) 472-2201. *FAX:* (907) 472-2404. *Contact:* Port Director/Harbour Master.

WILMINGTON, Delaware: 39.45 N. 75.30 W. (See Plan)

DOCUMENTS: Handled through local Agents.
PILOTAGE: Compulsory.

Delaware Bay and River Pilots Association. Tel: 1-215-922-7164.
Christina River Pilots. Tel: 1-302-652-1666.
Also see "Philadelphia".

ANCHORAGE: At Cherry Island.
RESTRICTIONS: The Delaware River has a channel depth of 12.0 m. to Fairless. Christina River, on which the Port of Wilmington is located, has a channel depth of 11.5 m.
MAX. SIZE: Length unlimited, breadth unlimited, draft 38 ft. MLW tide range 5.5 ft.
Chesapeake/Delaware Canal: Max. LOA 760 ft. Max. draft 35 ft. (FW) (Max. draft 27 ft. in report dated January 1990). Height of mast 133 ft. Max. beam 170 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: U.S. Coast Guard, Gloucester, N.J.
TUGS: Towage available from Wilmington Tug and Launch Co. Tel: (302) 652-1666.
VHF: Channels 16 and 14.
BERTHING: 4,600 ft. marginal wharf (8 berths) with depth 38 ft. 20 – 100 ton crane capacity. 400 – 600 t.p.h. bulk unloader. Covered bulk storage of 472,000 sq.ft. Dockside freezer capacity of 1,050,000 cu.ft. at present.

Two multi-purpose bulk/container cranes available, capacity 40 tons, outreach 115 ft.

Roll-on/Roll-off cargoes handled.

MEDICAL: Hospital and medical facilities available in the city of Wilmington (7 km.).
TANKERS: One berth of 1,000 ft. length with depth 35 ft.
DENSITY: Fresh water port. Normal 12 hour tides.
FRESH WATER: Hose connection from dock.
FUEL: All grades available from B.P. or Chevron.
CONSULS: All Consuls are located in Philadelphia, Pa.
REPAIRS: Possible.

DRY DOCKS: Major repairs and dry dock facilities – Penn Ship Yard, Chester, Pa. Tel: (215) 499-2000.
GANGWAY/DECK WATCHMEN: Required.
OPENING/CLOSING HATCHES: Optional.
REPATRIATION: Facilities are available and arranged by Agent.
AIRPORT: Philadelphia International Airport (20 km.), Wilmington Airport (8 km.), regular service.
TIME: U.S. Eastern Standard (GMT minus 5 hours) and Daylight Time, from first Sunday in April till last Sunday in October.
POLICE/AMBULANCE/FIRE: Police, Ambulance, Fire, Tel: 302-654-5151.
TELEPHONES: Dock-side pay phones.
SERVICES: All services available.
SHORE LEAVE: Allowed unless restricted by Immigration.
IDENTIFICATION CARDS: See "New York".
DEVELOPMENTS: Additional land has been acquired and one new berth along the marginal wharf is being planned.
AUTHORITY: Port of Wilmington, Delaware, P.O.Box 1191, Wilmington, Delaware 19899. *Tel:* (302) 571-4600. *Telex:* TWX 510-666-2181. *FAX:* (302) 571-4646. *Contact:* Edward A. Wolf, Port Director. John B. O'Donnell, Director of Trade Development. John H. Doherty, Deputy Port Director.

WILMINGTON, North Carolina: 34.14 N. 77.57 W. **(See Plan)**

PORT LIMITS: A ship is considered an "arrived vessel" upon arrival at Buoy 2CF.
DOCUMENTS:

- 3 copies Cargo Manifest (Forms 1302), the original showing all cargo on board, and 2 copies showing only cargo for this port.
- 3 copies Crew Manifest (Curio List) (Customs Form 1304).
- 3 copies Stores List (Customs Form 1303).
- 3 copies Passenger List (Form I-418).
- 3 copies Crew List (Form. I-418).

Customs Boarding Officer will also examine Ship's Register and Load Line Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours from arrival from a United States port:

- Master's Oath (Customs Form 1300).
- All foreign clearances.
- U.S. Certificates of payment of tonnage tax (Customs Form 1002).
- Certified Crew List.
- Oil Pollution Certificate.
- General Declaration (Customs Form 1301).
- Load Line Certificate.
- Safety Equipment Certificate.

APPROACHES: The port terminal at Wilmington is located on the East bank of Cape Fear River, approximately 26 miles from the sea buoy at the mouth of the river. Wilmington is 150 miles S.W. of Cape Hatteras and 26 miles North of Cape Fear.
PILOTAGE: Pilots board vessels at Buoy "2CF" off the mouth of the Cape Fear River. Masters should notify local Agents by radio of their ETA at Buoy "2CF" in order that the Pilots may be on station in advance of arrival. Additionally, Masters may communicate with Pilots by radio telephone on 2738 frequency and by VHF Channel 18A. Pilots remain on board until harbour limits of Wilmington, where docking Masters normally board vessels for purposes of docking.
ANCHORAGE: Vessels awaiting Pilots normally anchor in area off Buoy "2CF". There is no safe anchorage in the port of Wilmington for large vessels to be accommodated. Small vessels can be accommodated for brief periods in anchorage basin, although it is necessary to swing with the tide in order to avoid blocking channel.
RESTRICTIONS: The approach channel and basins adjacent to the port are maintained at a depth of 38 ft. MLW.
MAX. SIZE: No limits on length, breadth, and draft limit is present channel project depth of 38 ft. Master should communicate with local Agent regarding stage of tide for passage of vessels drawing 34 ft. or above.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: 3 towing companies operate at Wilmington.
BERTHING: A continuous marginal wharf, 6,940 ft. long. Docking at any hour, day and night.
SPECIALISED CARGO HANDLING FACILITIES: State Port Terminal: Fully equipped to serve cellular type container ships, for bulk handling; equipped with 6 yard rehandler buckets, receiving hoppers, and paved open storage areas, 2×45 ton, 1×115 ton, 3×40 ton and 2×50 ton container cranes, 1×140 ton mobile crane and 1×225 ton gantry crane; 1 berth with tank farm for handling liquid chemicals. 99×480 volt electrical outlets for refrigerated containers (70 additional outlets planned).

Almont Shipping Company: 3 berths, open and covered bulk storage, 2×25 ton cranes and 1×85 ton derrick. No facilities for LPG carriers.
TANKERS: 10 tanker berths with drafts from 30 ft. to 40 ft. MLW. Night berthing at all berths. Fresh water available.
FRESH WATER: Available from shore connections at rates up to 50 t.p.h.
FUEL: Bunker "C" and diesel fuels available locally.
FIRE PRECAUTIONS: Normal precautions observed.
REPAIRS: Minor ship repairs available.
DRY DOCKS: 1×1,000 ton lift floating dry dock.
AIRPORT: New Hanover Country Airport, 7 miles from N.C. State P Terminal. Served by U.S. Air and American Eagle.
TIME: Eastern Standard Time, GMT minus 5 hours. Daylight Sa Time from first Sunday in April till last Sunday in October.
IDENTIFICATION CARDS: Standard U.S. Immigration Forms I-95 to made up for each crew member on arrival. Not necessary for crew m already holding Form I-95, issued for the same vessel.
GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. p (Albany).

The Port of Wilmington is a USDA-approved handler of internatio garbage, whereby drums are provided to the vessel for collection garbage and subsequent incineration.
WASTE OIL DISPOSAL: The Port of Wilmington has a MARPO approved contractor on retainer available to handle this service for t account of the vessel. Direct contact should be made to High R Services. Tel: (919) 371-2325.
SEAMAN'S CLUBS: International Seamen's Service, P.O.Box 4 Wilmington, N.C. 28402. Tel: (919) 762-3792. Facilities include cha and chaplain, bibles, telephone service, books, table tennis, bicyc and free refreshments.
AUTHORITY: North Carolina State Port Authority, 2202 Bur Boulevard, P.O.Box 9002, Wilmington, North Carolina 28402. *Tel:* (9 763-1621. *FAX:* (910) 763-6440, 343-1042. *Contact:* Port Director Director of Operations.

WRANGELL, Alaska: 56.28 N. 132.22 W. **(See Pla**

Located on Wrangell Island. Open all year.
DOCUMENTS: See "Anchorage, Alaska".
PILOTAGE: (From sea via Dixon Entrance up Clarence Strait to Gua Island.) Under pilotage from Guard Island.
ANCHORAGE: Good anchorage N.E. of Woronofski Island 22 fathoms of water.
MAX. SIZE: Harbour depth 32 ft. MLLW. Tides: mean range 13.7 diurnal range 16.1 ft. Also see "Berthing".
HEALTH: See "Health: All Ports" before first U.S.A. port (Alban Illness Reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
CUSTOMS: Immigration, Guard Island or local Customs Offi Quarantine and Customs, local.
TUGS: 9 tugs up to 1,800 h.p. available with sufficient notice.
BERTHING: 4 wharves.

1. Wrangell Lumber Co. Dock: Berthing length 320 ft., 150 ft. wi depth South end 32 ft. North end 40 ft. LW. Height of pier from zero t 23.5 ft. Crane – 1 mobile, 8 ton, 6 lift-trucks. No shed space. 3 ac open storage.
2. Alaska Wood Products: Berthing length 300 ft., 50 ft. wi Depth at LW 32 ft. Height of pier from zero tide 23 ft. No shed spac
3. Port of Wrangell Wharf: 35 ft. depth at both ends. Fresh wa available. Lift trucks on rental from local private firms. Dock face 40 with additional mooring dolphins for a total overall length of 700 ft.
4. Barge: Transfer bridge facilities, 17 ft. wide, capable of up 70 tons (140,000 lbs.).

STEVEDORES: 4 gangs available.
MEDICAL: Small but new hospital.
WATER: Available.
FUEL: Small quantities available.
REPAIRS: None.
TRANSPORTATION: Air and ferry.
GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. p (Albany).

Service available. Contact Public Works Office for collection. Tel: (9 874-3904, or the Port Office, Tel: (907) 814-3736.
WASTE OIL DISPOSAL: Not available.
SEAMAN'S CLUBS: Usual local facilities.
AUTHORITY: City of Wrangell, P.O.Box 531, Wrangell, Alaska 99 *Tel:* (907) 874-3736 or 874-2381. *FAX:* (907) 874-3952. *Contact:* D Mork, Harbour Master.

YORKTOWN, Virginia: 37.14 N. 76.30 W. **(See Pla**

OPERATOR'S REPORT:

GENERAL: The Amoco Oil Terminal at Yorktown, Virginia is loca about 3 miles below the York River bridge on the South side of the approximately 38 miles from the Chesapeake Bay Sea Buoy "CB". ordinates of the terminal are Lat. 37° 13′ 37″ N., Long. 75° 26′ 2 A 3,000 ft. finger pier ending with a marginal pier, reaches the deep channel in the river. Tankers supply the refinery with crude intermediate feedstocks which are refined into gasolines, fu liquefied petroleum gas, coke, and liquid sulphur which is distribu barges and tankers.
APPROACHES: *Cautionary Advice:* RDF stations at Chesapeake and Cape Henry provide coverage for position fixing and nume buoys mark the fairways, channels and obstructions. While procee to the pilot station one should be aware of the heavy traffic in this and the ship should stay within the prescribed traffic lane. C consideration should be given to the current, which has a velocity

3.0 knots and higher and which tends to set a vessel out of the channel.

PILOTAGE: Pilots board 1.5 miles N.E. of Cape Henry Light. Vessels should use traffic lanes as outlined on Chart No. 12221 when approaching the pilot area.

U.S. flag should call the Chesapeake Federal pilot boat approximately hour before arrival to arrange Pilot embarkation. Non-U.S. flag vessels should call the Virginia State pilot boat 1 hour before arrival.

ANCHORAGES: *Anchorage and Lightering:* Vessels requiring lightering proceed to Hampton Roads where all lightering operations are conducted. This channel is well marked and presents no difficulties. Upon completion of lightering, the vessel must return to Cape Henry before proceeding to the berth. The bottom of Hampton Roads consists of soft mud and provides good holding ground.

RADIO: ETA messages should be sent to Agent 72, 48 and 24 hours before arrival. Any change in ETA should also be transmitted, as the pilot vessel is not continually on station. Advise draft (brackish water) in first message.

VHF:

Pilots	Channels 6, 11, 13, 16, 19A
Tugs	Channels 9, 10, 12, 13, 16
U.S.C.G.	Channel 16
Marine Operators – Norfolk	Channels 16, 22, 27

BERTHING: The Docking Master boards the vessel from a tug 1 – 2 miles East of the Amoco Dock. 2 tugs are generally used for docking; vessels over 28,000 d.w.t. may require 3 tugs at the Docking Master's discretion. The vessel makes a normal marginal approach to Dock No. 1 with the tugs breasting the vessel alongside and holding it there until secured. Vessels generally dock port side to at Berth No. 1. Berth No. 2 is of new construction and is located 1,122 ft. to the West of Berth No. 1. When docking at Berth No. 2, vessels approach Dock No. 1 on a Southwesterly heading to initially avoid a shoal area located N.N.W. of Berth No. 2. When the vessel is within 550 ft. of Berth No. 2, the approach is made parallel to the dock face until the vessel is off the dock when it is breasted into position port side to by the tugs. Extra caution must be exercised when approaching Dock No. 2 when there is a ship at Dock No. 1. At Dock No. 2, difficulties will be experienced in placing vessel's gangway due to the extremely limited dock space amidships.

No. 2 Tanker Dock is equipped with 2×12 in. Chicksan arms for crude or No. 6 Oil discharge. Weather conditions are carefully monitored by terminal personnel, and vessels are shut down when conditions warrant such action.

FRESH WATER: Available.

FUEL: No fuel available at No. 2 Tanker Dock.

GARBAGE DISPOSAL: A dumpster is provided at the end of the dock.

WASTE OIL DISPOSAL: No service available.

SEAMAN'S CLUBS: None.

OPERATOR: Amoco Oil Company, Yorktown Refinery, P.O.Box 578, Yorktown, Virginia 23690-0578. *Tel:* (804) 898-9700. *FAX:* (804) 898-9636.

NOTES

Please also advise Shipping Guides Ltd.

Uruguay

GENERAL:

REGULATIONS: Increased fines became effective in June 1973 in respect of infringements of the Uruguayan Marine Code. There are approximately 119 Articles to the Marine Code, and Owners and Masters of vessels proceeding to Uruguayan ports are recommended to obtain a copy of the Code (which lists port regulations and amounts of fines for infringements, maximum fine being 760 U.R.) prior to arrival. We understand that copies of the Code, entitled "Reglamento Preventivo y Represivo de Infracciones Maritimas, Fluviales y Portuarias", may be obtained from Centro Navegacion Transatlantica, Colon 1486 p. 3, Montevideo.

Freely translated, we give below some extracts of Port Regulations as specifically applicable to Montevideo, but also to all Uruguayan ports in general:

Articles 1 to 8 cover respectively the reasons for setting up this preventive set of regulations; the definition of what a vessel is in terms of the legislation; the establishment and amount of fines (they may be tripled in the event of repeated offences); the fact that very small vessels may only have imposed 10 per cent of the full fine; the jurisdiction for the regulations covering the whole of the Uruguayan coast and river frontage; the stipulation whereby the General Marine Prefecture must send to the Master of the vessel a statement of the offence immediately it is observed and this in triplicate and to the local Agent for the vessel.

The actual information which the form must contain is delineated. Notification of offences can be made after a vessel has sailed, this being to the local ship's Agent by phone and confirmed within 24 hours in writing. All Masters must give written consent to their local Agent, and the Agent must accept this in writing, empowering the Agent to act in the Master's name in all cases of fine payment. The Authorities may delay the sailing of a vessel if they see fit in connection with any offence. Finally, Article 8 deals with the right to appeal to the General Marine Prefecture against any fine imposed, this having to be done within 10 days dating from day following personal notification of the offence.

Articles 9 to 119 cover the specific offences subject to fine and indicate individually the full fine imposable in local pesos.

An abridged summary of each of the articles is as follows: No anchoring within 900 m. of the illuminated buoy in the port access channel.

Vessels carrying hazardous cargo must hoist flags according to the International Code of Signals.

Vessels with anyone on board with contagious diseases must hoist appropriate flag (letters "QL").

Flag "Q" must be hoisted and maintained in position until Health Authority has given Free Pratique.

All vessels anchoring in the roads, bay or ante-port must take due precautions not to harm or cause damage to other vessels: the fine will be imposed notwithstanding claims for damages from third parties.

Agents of vessels which may wish to anchor in the Roads must obtain prior permission from the Marine Authority, specifying vessel's measurements and the reason. If authorised, the anchorage to be used will be notified.

No anchoring at the docks unless justified, and anchors must be raised immediately the reason for dropping them has gone. There must be no delay on the part of vessels in complying with the Marine Authorities instructions to change berth or anchorage.

No tying up to other vessels without Marine Authority permission; no attachment to berths which have not been allocated and no changing of berth without authorisation.

No anchoring in places not authorised by the Marine Authority, the maximum fine being applied should this have caused damage to third parties.

No small craft to be tied up obstructing gangway or quays. Where this is necessary for embarking crew members, passengers, provisions, etc., the small craft must be removed immediately the operation has been completed.

Small craft must not be tied up to buoys or beacons. Vessels must not tie up at buoys or beacons.

Maximum speed of vessels in docks is 4 knots.

Navigation in channels of access to ports is governed as follows:

Maximum speed 8 knots.

Vessels must always keep to starboard.

Vessels must not overtake each other, but where this is necessary they must conform to the International Colregs.

No anchorage in channels.

No fishing in channels.

Vessels navigating in channels must keep a distance of 1,000 m. from each other.

Vessels must not cross in front of each other in the fore-ports.

All vessels entering or leaving the ante-port or docks, changing berths or anchorages must be assisted by a Pilot and tug, unless specifically given exception to this rule by the Marine Authority.

No vessel must enter port with damage to hull, machinery or rudder unless prior inspected by the Technical Commission of the Mercantile Marine Directorate.

Any vessel springing a leak whilst navigating in the access channel, and which the bilge pumps cannot overcome, must go aground as quickly as possible outside the channel so as to leave the channel open.

In case of fire on board whilst navigating in the access channel, Masters must observe usual procedure and give signals accordingly.

The strict use of semaphore signals within port must be observed.

When vessels enter the docks or remain in them, Masters, owners or Agents must request permission from the Marine Traffic Office, and report to the Office of Pilotage, and proceed in whatever form they may instruct. On leaving the same procedure must be followed.

Masters and owners of vessels must see that their vessels do obstruct or cause harm to port works, beacons, buoys, or semaph and once tied up they must not slacken ropes without permission of Marine Authority except under conditions covered by items 1, 2 an of Article 64 of the Port of Montevideo Marine Regulations.

No vessel to have badly stowed cargo, excess weight, or evidenc lists due to bad trimming of cargo.

Only those lines necessary for tying up to be used. When 2 or m vessels tie up alongside to load or discharge they are all obligate ensure that the handling of their respective cargoes does not prejud the working of the others.

Vessels must take proper precautions when loading or discharg raw material, i.e. sand, bones, ash, coal, etc., by placing suitable pl of wood close together to prevent any such material falling into the wa

No vessel to enter docks with the gangway already rigged.

During unloading operations, no goods to be thrown on to the qu This must be done manually or mechanically.

During discharge operations, cargo must be so positioned on the q as to leave adequate passage for vehicular traffic, i.e. Police, F Brigade, Health Authorities, Customs and Port Officials.

Planks of wood — when planks are used for any operation, they m not be placed in contact with mooring bitts or cables. When work cea all pieces of wood, ladders, small trucks, etc, must be removed fr quay, and those belonging to the ship must be taken on board, th as not to obstruct the public path along the quay.

When cleaning or washing ships tied up at quays, no rubbish, w or cleaning material must be allowed to fall on the quay.

A very serious offence is the throwing into the water of any rubb sewage or other material susceptible to polluting the water.

Very serious offences are the lightening of ships carrying petrol, cr oil, or the like, likewise the washing-out of tanks, except in authoris zones. The fine is based on the area spoiled by the wrongful discha

All ships should have local Agents, otherwise in the case of offen the Master is held responsible and vessels may be detained.

Vessels are responsible to ensure that no damage is made to q installations by the cargo they load or discharge, and must always le berths in a tidy and clean state.

Vessels' auxiliary small craft, launches and the like must not ha over the side of the vessel in port, except during operations of launch and reshipping on board, where such operations are conducted at poi indicated by the Marine Authority. Such small craft may only be us for the purpose and at the times authorised by the Marine Authori

Usual regulations concerning carriage of passengers in vessels a heavy fines are imposable for the carriage of passengers or c members not listed.

Vessels exceeding their navigation limits shown in their Certifica Navigability are subject to fine.

All vessels must be cleared to sail by the Marine Authority.

Vessels must use their proper name and this must be painted o letters of minimum of 15 centimetres height and 8 centimetres w Letters must be white on black or black on light colour.

Masters, Owners and Agents must report any crew offence irregularity on board to the Marine Authority.

Vessels in port must hoist the Uruguayan flag.

N.B. It is recommended that Masters correctly establish the prescrib times for raising and lowering the Uruguayan flag, in order to av fines.

Vessels must have their gangway equipped with handrails, and t gangway must be clearly lit at night.

All lines to shore must have rat-guards fitted.

When there are hazardous goods on board or when such goods a being worked, the vessel must hoist the International Code Signal le "B", and at night show a red light on the bow masthead, must alw have engines in a state of readiness in case of danger, keep two-thi of the crew on board, keep watchmen and firemen available (the num of whom will be determined by the number of holds containing hazardous material), must only work with incandescent lights, and ke a Port Pilot on board if the Marine Authority so directs.

Vessels moored at quays must not move propellers, except under direction of the Marine Authority.

Vessels must not moor in the port access channel. There must be improper use of the International Code Signal. Signal flags must no interspersed with flags of nationality.

If a vessel wishes to dress flags over all, or fly a flag at halfmast to a bereavement on board, the Marine Authority's permission mus first obtained.

The use of whistles, sirens or any other audible signal within the a of the roads, bay, ante-port or docks, for any reason other than justif for navigation is prohibited.

Any vessel anchored, tied up to other vessels or to the shore or qu must show a white light from sunset to sunrise which can be seen a distance of 500 m.

In the access channel to Montevideo, no more than 4 vessels m navigate at one time — 2 entering, 2 leaving.

Maximum speed in the Montevideo ante-port is 6 knots. There m be no anchoring in the Free Zone, reserved for the manoeuvring vessels entering and leaving.

At Montevideo there must be no anchoring along the route lea from the Free Zone to Channel "A", between the quay and the pi the same letter. Also on the route leading from Pier "A" along a li 100 m. to the North of the end of the West Jetty.

No anchoring in any area less than 200 m. from Pier "A" in a s circular coverage, taking as middle point a position half way betw Quay "A" and Pier "A".

All vessels must keep to the right or to the middle when there a other vessels in the vicinity.

International Regulations for the Prevention of Collisions apply, plus the following:

Vessels navigating along the routes established in the anteport or which have to pass directly through the passage between Jetties "A" and "B", must keep to the right when another vessel is coming in the opposite direction.

Vessels which have to cross the North, the South route or directly between Jetties "A" and "B", must ensure that they pass any other vessel at a distance not less than 50 m.

Any vessel navigating under her own power must give way to a vessel under tow by a tug.

Vessels with tugs following routes which cross one another, thereby creating a collision risk, the one passing to the starboard of the other is the vessel which must take the precautionary measures to avoid collision. If, however, the risk persists, the vessel passing to port of the other must also take measures to increase the distance between the two vessels.

No vessels to pass in pairs or in opposite direction between Jetties "A" and "B"; the semaphore signals transmitted by Quay "A" must be observed. If the signal is "vessel entering from the ante-port to the docks", the vessel in the docks, ready to sail, must wait until the incoming vessel has entered.

If the signal is "vessel leaving the docks for the ante-port" the vessel in the foreport, moving towards Jetty "A" to enter the docks, must wait in the free zone, stop engines, keeping to the right, and drop anchor if necessary, until the outgoing vessel is outside and well clear of Jetty "A". The same regulation applies to vessels leaving the River Dock. In this case, the vessel leaving Jetty "A" has priority, coming from Docks I and I the first will wait for the second before starting engines.

All vessels navigating in the same direction in the ante-port must keep a distance of not less than 300 m. from each other stern to bow. They must not pass each other or navigate in pairs.

In the event of offences being incurred whilst an Uruguayan Pilot is on board, at the request of the local ship's Agent, the Marine Authority will determine whether the Pilot is responsible for the offence having occurred, and take measures accordingly.

Vessels which load beyond the appropriate load line will be subject to a fine of 1,000,000 pesos.

DOCUMENTS:

Consular Documents: The Consulate in a foreign port from which merchandise is to be shipped to a Uruguayan port must be presented with the following documents:

(a) Cargo Manifest, original and 3 copies.
(b) Crew List, original and 1 copy.
(c) Passenger List (or no-passenger declaration), original and 1 copy.
(d) Bills of Lading, original and 3 copies.
(e) Commercial Invoice, original and 3 copies.
(f) In the event that the vessel is cleared in-ballast, an in-ballast declaration, original and 1 copy.

One copy of each document is filed at the Consulate, and the following are returned, duly visaed:

1 original Manifest, 1 copy of each Bill of Lading, and 1 copy of the Commercial Invoice, in an envelope addressed to the Customs Administrator of the port of destination.

1 copy of the Manifest, and 1 copy of the Bills of Lading, in an envelope addressed to the National Ports Administration.

1 copy of the Manifest, the original and 2 copies of the Bills of Lading, the original Commercial Invoice, the original Crew List, and the original Passenger List (or no-passenger declaration).

Prior to Arrival:

Notification of Arrival – by Ships' Agents.

(a) Container vessels (minimum load 30 FCL and minimum discharge 30 FCL stipulated) and passenger vessels have berthing priority. Agents must notify the arrival of the vessel 10 days in advance to the National Port Administration (ANP) and confirm ETA 2 days ahead of arrival.
(b) For arrival in Uruguayan ports of all other vessels, agents must notify the ANP 48 hours in advance.

All notifications must be made on special forms from the ANP on request for a berth, presenting original and 6 copies, accompanied by a complete set of cargo manifests in Spanish.

For container vessels, Agents must present lists with details of a complete nature covering the containers to be unloaded in Montevideo (prefix, number, contents, gross weight and tare), whether to be discharged to store or to quay, and final destination in the case of transit.

Request for Port Services:

As has been said in the previous section, the berthing request must be presented to the ANP and acts as advice of arrival.

Each morning at 1000 hrs. the ANP designates berthing crews for vessels for the next 24 hours. In the event of there being no berthing staff available, the ANP appoints a place for waiting berthing in turn in accordance with the order of arrival at the port of Montevideo.

On Arrival:

Type of Document *Basic forms*	*Number and distribution of documents* *Prefectura*	*Customs*	*Im'gration*	*Police*	*Health*	*Agency*	*Total*

(a) Visaed by the Uruguayan Consulate.
(b) For the Postal Service.
(c) The Consulate returns 1 envelope to the Customs Administrator, another to the National Ports Administration (with a copy of Manifests and Bills of Lading), and a third to the agency, with the required visaed documents.

Other Requirements:

The agency must provide a cargo book (tally book) for each port to the National Ports Administration.

Prior to Departure:

24 hours prior to sailing, the vessel must notify the Maritime Prefecture and Migration. Representatives of these agencies must receive a crew list and check any changes. If the vessel carries passengers, the Inspector of the National Migration Administration must prepare a record of a sailing inspection, similar to that required upon the vessel's arrival.

The Maritime Prefecture authorises the clearance of the vessel.

PILOTAGE: Also see "Control". Pilotage is compulsory in all river and port zones, except for vessels coming from the East to ports between La Paloma and Montevideo Roads, or entering Montevideo Roads for no commercial reason. All coastal vessels either Uruguayan or foreign are also exempt.

Pilotage Zones:

1. RIVER PLATE – Comprises zone between imaginary lines in the East from Punta del Este (Uruguay) and Punta Rasa, on Cape San Antonio (Argentina) and on the West between Colonia and San Isidro (Argentina).
2. RIVER URUGUAY – From 56.5 km. of Farallon Channel to Uruguayan ports on the River Uruguay.
3. PORTS – Pilotage zones, comprises limits of each port including its Roads.
4. SBM at Jose Ignacio.

In the River Plate, Pilots presently board to the South of the wreck of the *Calpean Star,* approximately 4.5 km. South and lying 70 m. West of the dredged access channel.

Several of the pairs of buoys are missing, and only the Mid Channel Buoy indicating the entrance to the Access Channel, 5 miles South from the port, and the 2 pairs nearest to the breakwaters are operating.

When taking tankers, the port Pilot usually goes out to the 5-mile mark.

There is no more than 30 ft. in the Access Channel at the moment; dredging is being carried on, but there are only 2 dredgers operating between the channel and the port of Montevideo itself.

The current is across the channel, running at about 1 knot, and changes direction more with the wind than the tide.

Vessels awaiting Pilot should anchor on the West of the channel and South of the *Calpean Star;* there is 24 ft. up to 500 m. West of the channel. The zone to the East of the Access Channel has submarine cables and must therefore be avoided.

Pilots are ordered through the Agent, and have an up to date communications system installed in their office on the 11th floor of Custom Building.

Permanent watch is kept on Channel 16 VHF, and operator speaks English. It is possible to call "Practicos Montevideo" and ask to be connected by phone to the vessel's Agent's office for last minute instructions, etc.

Channel	Frequency	Channel	Frequency
9	156.45	11	156.55
16	156.80		

The port is closed when wind force exceeds 43 knots or, at night 37 knots, or if visibility is less than 1 km., but otherwise vessels can enter or sail at any time.

There is also a Telex machine with 24 hour watch, over which messages can be transmitted to Agents out of office hours, over a weekend, for example. Call sign is DGT 843 Pilot CX. This is particularly useful for vessels sailing late from Buenos Aires, and the Office will pass on the message to the corresponding Agency by phone.

All Pilots carry a "walkie-talkie" and can communicate either with their office, the Port Authority or the Semaphore Station, using Channel 9 for the Port Offices and 11 for the Pilot's Office, 16 being kept for use with vessels.

Ordering of River Pilots for Sailings from Uruguayan River Ports: Although Masters can apply directly for Pilots such applications must be made by telegram addressed to the Practico Mayor Montevideo, it is preferable for them to keep their Montevideo Agent fully informed and leave the latter to order the Pilot.

The opportunity of ordering Pilots at any hour having been discontinued makes it more essential than ever that Montevideo Agents are kept accurately informed regarding expected readiness to sail. Failure to do so will result in unnecessary demurrage being paid to Pilots or delay to the ship concerned.

Pilots for Vessels Proceeding from Sea to a Uruguayan Port on the River Uruguay: A Uruguayan Pilot must be employed to conduct ships from sea to a Uruguayan Port on the River Uruguay.

Vessels must call at Montevideo Roads to embark Pilot and pay the cost of tug to take out Pilot. They can also, alternatively, take an Argentine Pilot at Recalada who will take the vessel to Intersection, where in either case an Argentine River Pilot will board to take the vessel to the Roads of port of destination, where a Uruguayan Port Pilot will come aboard, this being a simpler procedure and all handled by Agents in Buenos Aires (one radio advice).

Vessels from an Argentine Port bound for Uruguayan River Port: Such vessels are normally taken to immediately off port of destination by an Argentine Pilot, but they must be berthed by a Uruguayan Pilot who has to be sent from Montevideo, thus Montevideo Agents must be kept promptly informed of vessel's position to enable them to order a Pilot to berth ship without delay.

Vessels leaving Uruguayan Port for Argentine Ports on the River Parana: Uruguayan River Pilot supplied from Montevideo must be employed for unberthing, and this Pilot takes vessel to the Bravo Channel off Nueva Palmira, where the Argentine River Parana Pilot, who is normally already aboard, takes over.

The Uruguayan Pilot is paid in accordance with tariff to Nueva Palmira plus an unberthing fee and travelling expenses.

HEALTH: In order to be able to enter port and berth without delay, the Authorities accept a radio, cable or telex request, couched in the following terms (messages must be sent in Spanish).

Vessels Arriving from Elsewhere:

Capitan .... solicita libre platica
(here the name of the vessel)
informando proceder de Buenos Aires, siendo su escala anterior ....
(here a port in another previous country which could be Santos,Valparaiso, Capetown, etc.)
ondicion sanitaria buena .... Capitan
(here the name of the Master)

Vessels Arriving from Buenos Aires:

Capitan .... solicita libres platica
(here the name of the vessel)
informando proceder de..
(here a port of origin, say London – Liverpool – San Francisco – Rijeka – Kotka – Tokyo – Oslo, etc.)
siendo su ultimo puerto ....
(here say Santos – Valparaiso – Capetown, etc.)
condicion sanitaria buena .... Capitan
(here the name of the Master)

There have been cases of delay in delivery of radio messages, even though passed on by phone, but the original message must accompany Agent's request for Free Pratique, hence it is advisable to use cable or telex services if possible. Messages must be sent at least 24 hours ahead, and changes in ETA advised.

Although it is possible to take Pratique in Uruguayan River ports, there is frequently delay there, and since vessels must enter Montevideo to pick up the river port Pilot also, it is advisable in these cases to ask for Pratique at Montevideo as above, and the order from Sanitary Authorities granting Free Pratique will be handed to the Pilot to take on board with him.

In no case, however, does the granting of Pratique by radio modify the inspection in port, where the usual commission must be the first to go on board.

Illness On Board: Any private doctor attending a patient on board must immediately inform the Sanitary Inspector should the disease be contagious.

No patient can be landed without the consent of the doctor of the Health Department with the exception of accident cases that require immediate medical attention, and even in those cases the Health Department Doctor must be informed in order to issue a Sanitary Pass for the Hospital where the man was taken to.

If a Master does not report the existence of illness on board he is liable to fines which are double if patients land without the consent of the Sanitary Authorities.

RADIO:

Notice to Mariners:

Official Uruguayan Notices to Mariners are transmitted in Spanish only preceded by the signal TTT, the number of the Notice, letter R, then contents and are repeated for 15 days. Should there be no Notices to transmit, the wording "no hay avisos para navegantes" will be radioed.

Punta Carreta CWF 2768.5 kHz. A3 0.4 kW. at 0003, 1403 and 1903 hrs. (after the weather forecast).

Cerrito CWA on 4346, 8602,12750, 17208.8 kHz. A1 1.5 kW., also on 421.5 kHz. A1 and A2 5 kW. at 0000, 1400 and 1900 hrs. (after the weather forecast).

Montevideo CX 16850 kHz. A3 10 kW. at 1302 hrs. and 1602 hrs. on working days, at 1700 hrs. on Sundays.

Montevideo	CX 6	659 kHz	A3 2.5 kW.
	CX 26	1050	A3 all transmit Notices to Mariners at 1600 hrs.
	CX 38	1290	A3 5 kW.
	CXA 4	6125	A3 10 kW.
	CXA 6	9620	A3 20 kW.
	CXA10	11900	A3 20 kW.

Weather Forecast: A weather forecast is transmitted in Spanish to cover 3 zones. (See "Plans").

Reference AAA 830 is the Coastal area from Lat. 30° S., Long. 50° W. out to Lat. 30° S., Long. 46° W. and down to Lat. 33° 30′ S., Long. 53° W. and Lat. 35° S., Long. 49° W.

AAA 860, River Plate zone from Lat. 33° 30′ S., Long. 57° W. to Lat. 35° S., Long. 49° W. and down to Lat. 35° 30′ S., Long. 57° W. to Lat. 39° S., Long. 53° W.

AAA 870 Coast of Argentina from Lat. 35° 30′ S., Long. 57° W. to Lat. 39° S., Long. 53° W. and down to Lat. 41° S., Long. 62° W.

Details of all 3 zones are transmitted as follows, valid for 24 hours.

CWA on 421.5 kHz. A1 5 kW. at 0001, 1400 and 1900 hrs.

CWF on 2768.5 kHz. A3 0.4 kW. at 0005, 1405 and 1905 hrs. and A1 over 4346 kHz, 8602 kHz, 12750 kHz and 17208 kHz.

Time Signals: Are transmitted from 2 stations in Montevideo at 1 and 2000 hrs. The hour is indicated by 6 dots preceded by a 10 seco dash and a 5 second silence. The last dot indicates the hour.

CX 6 on 650 kHz. A3 25 kW.
CXA 6 9620 kHz. A3 20 kW.

Standard time is GMT minus 3 hours.

Direction Finding: There are 2 radio beacons specially for mari navigation. Both operating on circular sweep from the lighthouses Cape Polonio and Isla de Lobos.

Cape Polonio: Lat. 34° 24′ 00″ S., Long. 53° 47′ 45″ W. freque 295 kHz. A2 range 380 miles, and 500 kHz. A1 A2.

The signal is "P" repeated 3 times in 10 seconds followed 18 dashes in 30 seconds, repeat "P" 3 times and 10 seconds sile total period 1 minute. This is repeated 4 times after 5 minutes silen total 10 minutes.

In good weather transmission must be requested from CWM 2 500 kHz. A1 A2. In fog, there is continuous transmission from the ho

Isla de Lobos: Lat. 35° 01′ 33″ S., Long. 54° 53′ 17″ W. freque 300 kHz. A2 range 380 miles. The signal "L" is repeated 3 times 10 seconds, followed by 18 dashes in 30 seconds, repeat "L" 3 tim silence 10 seconds. Total period 1 minute, repeated 4 times, 5 minutes silence total period 10 minutes.

In good weather this transmission must be requested from CWM on 500 kHz. A1 and A2.

In fog transmission is continuous from 05 minutes in each hour.

There are also the following airbeacons which can be used.

		S.	W.	kHz	
Colonia	COL	34° 27′ 33″	57° 45′ 49″	203	A2 0.075 kW. cont.
Montevideo	CAR	34° 46′ 15″	56° 01′ 28″	380	A2 0.05 kW. cont.

Punta del Este	CB	34° 55′ 00″	54° 55′ 00″	325	A2 occasional only

GENERAL INFORMATION:

River Uruguay

Rises in Brazil, and later separates Argentina and Uruguay. Its ri bank is generally low, wooded and swampy, the left bank high and hi Preparatory work has commenced on a large hydro-electric dam to built at 332 km., above Concordia, which will take some years but contribute to a regularisation of the river, which at present rises and twice every year, with the varying rainfall seasons in its basin, so approximately half the year the water is low, usually from January April and again in August. However, the wind also affects the dept the water as in the River Plate, so that any seasonal forecast impossible. A safe year round draft to Concepcion del Uruguay can taken at 20 ft. 6 in., though vessels from time to time load to 22 ft. 6

The Ministry of Marine publishes fortnightly a bulletin with information on depths of water in the channels, as well as of charg in buoys, lights, etc.

Two new bridges communicating with Argentina now span Uruguay River at Fray Bentos and Paysandu. The bridge at Fray Bent has a clearance of 36 m. over zero, and a main span of 220 m.

CARGO

Movement of Cargo

Once stevedores have come aboard, no cargo, either for the por in transit, may be handled by the crew, as otherwise the vessel wi called on for high extra wages to stevedores. This also affects the lashi of transit cargo on deck.

Stevedores will not work in the rain, except when loading ma earning double wages while doing so. They can also be persuaded handle baggage or mail.

When handling dusty cargo in general, or which gives off ammonia nicotine, or organic emanations, masks must be provided for stevedor use.

Overcarried Cargo

Cargo for Montevideo is often overcarried to Buenos Aires with consequent delays in delivery and expenses for the vessel. Holds sho be carefully inspected as soon as discharge is said to have been finis to avoid possible overcarrying.

Clean Receipt

Agents will advise if they wish to receive any cargo for which a cl receipt cannot clearly be given, otherwise the cargo should be reject Mate's receipts cannot be claused to cover any damage from wetting or other causes which might be sustained after the carg received on ship's tackle.

Bulk cargoes falling or drifting into water or on dock

When handling bulk cargoes vessels must place between the ves and the dock side a wooden scaffolding, with lateral boards, or str canvas to collect all material which is liable to fall into the water o to the Dock during handling. There is a heavy fine for non-complia

This should be remembered when writing charter parties, especi under FIO conditions, as this should be for account of shippe receivers.

Delivery of cargo from vessels

The cargo is discharged direct to Fiscal Warehouses, to lorr lighters or wagons. When the cargo is delivered to Fiscal Wareho receipt for this is given to the vessel's Agents by the Custom Ho official in charge of the Warehouse. If discharged to lighters lighterman obtains receipt from the Custom House official once the ca is received in warehouse. When the cargo is delivered direc Consignees' lorries, the receipt is given by special Custom Ho officials called "Cargo Receivers".

The goods are delivered by the Custom House officials to Consignees against the presentation of the "transferencia" (tra ticket) signed by the Agents of the vessel. The Agents sign "transferencia", extended on stamped paper, against the Original B Lading, which must be legalised by the Uruguayan Consul at the of loading.

The steamship Agents must keep a special register of all "transferencias", and are responsible to the Authorities for keeping this register. Agents must retain Original Bill of Lading for cargo discharged, as it must be shown to the Customs Authorities immediately if demanded.

When the Consignees have not received the original documents and they wish to take delivery of the goods from the Custom House they must present a Bank guarantee, drawn up in accordance with the form approved by the Shipagents Association.

Cargo manifested to this country in transit to other countries without documents for Uruguay may not be re-shipped to other countries without government permission.

Marks on goods imported to Uruguay

By a Decree dated 30th January 1939, the Uruguayan Government decided that:

'Packages entering Bonded Warehouse, excepting those containing provisions or beverages, and excepting also 'Barraca' articles, shall be marked with the gross weight, the nett weight and corresponding measurement, in a clear and legible manner. These marks may be either fire-branded or printed'.

'The 9th August 1939, the Customs Authorities requested that marks and numbers of cases entering Montevideo warehouses should be placed on the extreme ends".

The Customs Authorities have also made known that it is necessary for the packages entering the warehouse to show their weight and measurement in the decimal-metric system.

The inspection of potato cargoes can be effected on board the carrying vessel, and if found in good sanitary condition, can be discharged direct to shore.

Opening and Closing of Hatches

This can be carried out by either crew or stevedores, and hatches must be kept closed when not in use.

Shipments of Meat

These are controlled by the Ministry of Agriculture, whose inspectors check ships' holds before shipment can commence. Holds must be clean and disinfected and temperature controlled to minus 1° to a maximum of plus 1° Celsius for chilled meat, or minus 10° for frozen meat.

Chilled is to be hung on hooks adjustable for height and space and stow of frozen must give a uniform distribution of weight. Alternatively, special cuts are packed and shipped in cartons.

Containers

Use of containers is very limited, since these must be opened up and emptied on the dock alongside, or even on board the vessel. The container itself is considered as part of the vessel's gear, and must be re-shipped without delay.

On rare occasions the Armed Forces have had containers moved out to their barracks.

Consular Dues

All ships arriving at Montevideo must pay Consular dues, with the following exceptions:

Ships that due to a change en route, or by special call of their Agents in Uruguay, during passage, arrive at Montevideo with the sole purpose of receiving orders, as long as no commercial operations are effected.

Ships arriving in distress and which leave port without effecting operations.

Ships arriving for the sole purpose of landing or embarking Pilot.

The Ministry of Foreign Affairs consider bunkering as an operation, therefore ships calling at Montevideo for bunkers must pay Consular dues.

Consular value of the Uruguayan Peso – For the payment of fees abroad, the Executive Power will fix periodically the respective values of the peso, in accordance with exchange fluctuations.

Hours of Attendance at the Uruguayan Consulates – The Office hours of the Consulates will be those fixed by the Government in agreement with the Consuls in each country, endeavouring in each case to have the same working hours as those of the Custom House and other Public Offices of each City. Outside these hours, overtime is charged.

Consular dues on Bills of Lading – When vessels load cargo for Uruguay at ports where there is no Uruguayan Consulate, these dues are collected when the vessel arrives at Montevideo or at any other Uruguayan port. The Agent then recovers these charges from the Consignees.

CREW:

Deserters – Masters and/or Agents must report any deserters when the vessel sails. The Maritime Authorities give intervention to the Police Department, and if the men are located, the Agents must hand them over to the respective Consuls. However, the Agents continue to be responsible before the Authorities for the ultimate repatriation of the men, which must be done at first opportunity.

Vessels are subject to a fine per man. The Agents have also to pay repatriation expenses, in cases where the respective Consuls will not do so.

They must also deposit a guarantee which can be used for repatriation expenses in case the deserter stays in the country for more than 15 days.

Time limit for getting crew members left behind out of the country – According to law, Agents must arrange that such crew members leave the country within 15 days. This period of grace commences as from the date of vessel's departure in respect of deserters and for those disembarked for medical treatment as from date on which they are medically certified as fit for travel.

Upkeep of men left in hospital or temporarily disembarked and traced deserters – The Agents are responsible for the maintenance of men disembarked for medical treatment, or temporarily with a special Immigration permit, and for deserters, until they leave the Country.

Stowaways – Masters of vessels having stowaways on board must report them to the Authorities, stating their name and port of embarkation. The stowaways must be kept on board. If they escape and are found after the vessel sails, Agents will be responsible for their repatriation and upkeep charges until they leave the Country. As with deserters, vessels with stowaways on board are liable to a fine per man if this regulation is not complied with.

Agents must also deposit a guarantee per man, amount to be used for repatriating the stowaway or for conveyance to the port of embarkation.

Landing members of crew – Paying off crew for other than medical assistance is not permitted, but exceptions are granted in special cases. An application must be presented by the Agents to the Immigration Department, and if the permit is granted, a formal declaration is signed by the Master of the vessel, the Agents, the Immigration Inspector and the person wishing to disembark, setting forth length of time he is going to remain in the Country and conditions of departure. The personal documents of the person allowed to land, remain in charge of the Immigration Board.

If any member of the crew is landed for medical treatment or paid off without the corresponding permit, the vessel will be fined.

Gangways and Rat-Guards

A gangway must be placed and ready after a vessel comes alongside the quay, but this must not be presented before coming in to the quay. Authorities will only come aboard by the gangways.

Gangways must also have a lifebuoy with suitable line attached and handy, and a safety net must be placed under the gangway, otherwise shore labour will not board vessels, with consequent delay.

The gangway must also be brightly illuminated at night; an oil lamp is not sufficient.

As soon as vessel is securely moored, regulation size (not less than 80 cm.) rat-guards must be placed on all ropes, wires, fenders, lines and hoses.

Heavy fines are imposed for non-compliance with any of these or other regulations.

Overside Discharges

All overside discharges from latrines, bathrooms, gallery, scuppers, engine room, etc. must be screened or covered when vessel is alongside the quay, as vessels will be fined if the discharge falls on the dock or gangway.

Adjustment of Compasses

Vessels proceeding through Magellan Straits – The disposition issued by the Chilean Shipping Authorities on 13th April 1953, states:

"When a foreign ship arrives at the Magellan Straits and applies for a Pilot, official or private, for navigating the Channels, the Pilot must first check the compass for deviations of more than 5°, and if such deviation has been determined more than 6 months ago, especially in a place with great difference of latitude or different hemisphere, compensation of compass is obligatory when not in true order, and a written declaration to this effect will be made in the pilotage agreement. The Authorities will also send an officer to verify that the compass is in satisfactory condition before entering the Straits".

To avoid probable delays, ships heading for the Straits can make the necessary compensation in the Port of Montevideo or in the ante port whilst waiting for orders for departure. This port is most convenient for this class of compensation because at the present moment there is no magnetic variation and also because it is a quiet harbour with sufficient depth for turning. A compass adjuster may be obtained at any time.

200 Mile Limit and Fishing

Uruguay has declared sovereignty over 200 miles off shore, reserving all fishing and undersea exploitation rights. A number of foreign flag vessels fishing without permits have been seized and heavily fined, their catch and gear being confiscated.

Permits are obtainable, but in no case for vessels over 500 tons gross, to operate within 60 miles from shore, while all activity in territorial waters (200 miles) is forbidden in the months of May and June.

Garbage

Garbage is collected every morning by truck. There is a strict prohibition of dumping anything into the port, and oil tanks must not be cleaned within 30 miles of the coast, and on a falling tide.

Old dunnage should not be dumped or sold, without permission from the Authorities, through Agents.

Ships' Boats

Use of ship's boats is forbidden within the port, unless they are being lowered, with prior permission, for maintenance or exercises.

Fenders

All vessels must have at least 2 large fenders, to keep them 5 ft. or more off the quay. If the vessel has no fenders, or due to deck cargo cannot use them Agents should be warned in advance to rent the necessary equipment and have it ready on arrival.

Dropping Anchor when Berthing

If an anchor is dropped when approaching a dock to berth, to control the vessel as she moves in, it is essential that the anchor should be hove in again once the ship is moored. Port regulations require this and any damage to other craft, real or imaginary, through fouling anchor or chain, would cause considerable trouble.

SYSTEM OF CONTROL CENTRES AND MARITIME INFORMATION (COASTAL STATIONS FP-FT-FW, VHF-FM):

Legal Basis

(a) System of Control and Information of Movement of the Port of Montevideo and its zone of influence made operative on 9/4/75. (Maritime Regulation No. 1).

(b) Control Centre and Information of the Maritime Movement of the Port of Colonia and its zone of influence made operative on 23/9/76. (Maritime Regulation No. 3).

(c) Control Centre and Information of the Maritime Movement of the Port of Nueva Palmira and its zone of influence made operative on 1/10/76. (Maritime Regulation No. 4).

(d) Control Centre and Information of the Maritime Movement of the Port of Punta del Este and its zone of influence made operative on 2/1/77. (Maritime Regulation No. 5).

(e) Control Centre and Information of the Maritime Movement of the Western Coast and its zone of influence made operative on 27/4/78. (Maritime Regulation No. 11).

(f) Control Centre and Information of the Maritime Movement of the Port of La Paloma and its zone of influence made operative on 1/11/78. (Maritime Regulation No. 12).
Note: In all the creations of the Control Centres, due account was taken of Programmes 1.09 and 3.08 corresponding to Law 14.106 and Sub-Programmes: "Maritime Police" and "Direction of Mercantile Marine".

(g) Control and surveillance of fishing vessels in the various fishing areas within the waters in the jurisdiction of the P.N.N. – Sources: Laws Nos. 14.145, 14.521 and 14.106 of the P.N.N. – Programme 1.09. (Maritime Regulation No. 2).

(h) Equipment which fishing vessels under the Uruguayan flag must possess when they operate in the common fishing zone between the Eastern Republic of Uruguay and in the Uruguayan fishing areas proper.
Sources: Maritime Regulation No. 2 of the 23/7/76. Decree of Co-ordination of Punta del Este of 27/1/76 (P.N.N. – P.N.A.). (Maritime Regulation No. 6).

(i) Equipment which vessels and/or craft in the coasting trade, pleasure craft, passenger vessels and working boats must carry where they operate in the Ports of the Republic and Navigate in the River Uruguay. (The zone between International Bridges and the Salto Grande).
Sources: Appendix 18 MAR 2 of the Radio communications regulation of the UIT and the Agreement arising from the meeting between Uruguay and Argentina (Buenos Aires 9/76) in respect of the use of VHF and FM channels and Maritime Regulations No. 1 to 6 of the P.N.N. – (Maritime Regulation No. 7).

(j) Law covering the control of pollution: Sources: Law No. 13.833 of the 29/12/69 and in particular articles 2 and 12 of the said Law. Chapter IX Pollution – (Articles 47 to 52) of the Treaty of the River Plate and its Maritime Frontage and Regulation of 28/10/74 of the Prefecture of the Port of Montevideo (Maritime Regulation No. 8).

(k) Zones for lightening ships and complement of cargo: Sources: Resolutions No. 2 and 4 of the Administrative Commission of the River Plate of dates 30/9/77 and 26/10/77 as laid down in Article 28 of the Treaty of the River Plate and its River Frontage and established transitorially in the Article 88 of the said treaty (Maritime Regulation No. 9).

(l) "LASH" – Type Operations: Sources: Resolution No. 1/2/78 of the Administrative Commission of the River Plate, Chapter IV. Articles 24 and 27 (Port Facilities, lightening operations and complements of cargo) of the Treaty of the River Plate and its maritime frontage (Maritime Regulation No. 10.).

(m) Agreement on the International Regulation for preventing unauthorised boarding.

(n) The Treaty of the River Plate and its Maritime Frontage.

(o) The Statutes of the River Uruguay.

(p) The International Agreement for the Safety of Human Life at Sea – 1974.

(q) Regulation of Radio-communications of the International Union of Telecommunications (UIT) and nomenclatures.

Particulars of the System

1. AIMS OF THE SYSTEM OF CONTROL CENTRES

(a) To effect positive sovereignty over the Area of the System:
  1. Territorial Sea
  2. River Plate
  3. River Uruguay
  4. Merin Lagoon

(b) To offer support to the National Mercantile Navigation and of third parties, complying with the objectives as propounded by the International Maritime Organisation (IMO) and by the International Telecommunications Union (UIT).

(c) To serve as a chain of Control Towers, effecting control and information of Movement of vessels and Port Operations.

(d) To co-ordinate with Public and Private Institutions who operate within the Ports of the Republic, to facilitate and activate port operations, avoiding delays and inconvenience.

2. GENERAL FUNCTIONS

The General functions of the Centre are:

(a) To maintain real and efficient control of the movement of vessels, in the area of application of the system in order:
  1. To prevent collisions between vessels.
  2. To alert the systems of Search and Rescue and/or Salvage in the event of vessels requiring assistance.
  3. To facilitate BYR operations.

(b) To maintain real and orderly control of the operations in the ports to:
  1. To prevent groundings and collisions with obstacles in port works:
  2. To have prepared emergency plans for cases of disasters and maritime accidents within the Ports and International Bridges (River Uruguay).

(c) To maintain up-to-date information concerning the state of the weather, lighting and all other matters contributing to the safety of navigation and operations in the area.

(d) To maintain up-to-date information for Maritime Agencies and/or Owners, providing such information to facilitate and activate port operations to be effected by vessels, obviating delays and inconvenience at all times.

(e) To serve Public and/or Private Institutions who operate in Ports, collecting, classifying, analysing, evaluating disseminating all the necessary information for the fulfilment of port service.

(f) To comply with all other functions which are specified by Mandate and to co-operate with Public Authorities organisations in all matters relating to its functions.

3. CONTROL AND INFORMATION FROM THE CENTRES

The system belongs to the National Navy and is controlled by National Navy Prefecture. It is directed from the Montevideo Co Centre.

(a) Control of Movement of Vessels – Control of vessels navig within the Vessel Movement Areas.

(b) Control of Port Operations – Control of vessels manoeu within the ports of the Republic, including roads and acce channels.

(c) Control of International Bridges – Control of vessels navig in the International Bridges Zone – Gral. Jose Artigas Bridg Paysandu, and Gral. San Martin Bridge at Fray Bentos.

(d) Vessel Movement Service – Maritime Mobile Safety Serv between coastal stations and vessels or between vessels, wh the messages refer solely to vessel movement.

(e) Port Operation Service – Maritime Mobile Service in a port its district, between coastal stations and vessels, where messages refer solely to vessel operations, movement and sa and, in the event of emergency, to safeguarding persons.

4. ZONES OF CONTROL AND INFORMATION OF THE CONTR CENTRE SYSTEM

(a) Port of Montevideo (Deep Sea – Coasting – Fishing).
  1. "Alpha" – Control and information of vessel movement.
  2. "Bravo" – Control and information of port operations.

(b) Port of Buceo (Pleasure Craft).
  1. "Oscar" – Control and information of port operations.

(c) Port of Santiago Vazquez (Pleasure Craft – Coasting).
  1. "Papa" – Control and information of port operations.

(d) Port of La Paloma (Fishing Centre).
  1. "Kilo" – Control and information of movement of vessels.
  2. "Lima" – Control and information of port operations.

(e) Port of Punta del Este (Fishing – Pleasure Craft).
  1. "Golf" – Control and information of vessel movement.
  2. "Hotel" – Control and information of port operations.

(f) Port of Piriapolis.
  1. "Tango" – Control and information of port operations.

(g) Port of Colonia (Passage port to Buenos Aires).
  1. "Charlie" – Control and information of vessel movement.
  2. "Delta" – Control and information of port operations.

(h) Port of Sauce (Coasting).
  1. "Uniform" – Control and information of vessel movement a of port operations.

(i) Port of Nueva Palmira (Deep Sea).
  1. "Echo" – Control and information of movement of vesse
  2. "Foxtrot" – Control and information of port operations.

(j) Port of Carmelo (Pleasure Craft – Coasting).
  1. "Quebec" – Control and information of port operations.

(k) Port of Fray Bentos (Overseas – Navigation – Internatio Bridges).
  1. "India" – Control and information of the movement of vess
  2. "Juliet" – Control and information of port operations.

(l) Puerto Paysandu (Overseas – Navigation – Internatio Bridges).
  1. "Mike" – Control and information of the movement of vess
  2. "November" – Control and information of port operations

(m) Puerto Salto (Coasting – Pleasure Craft – Passages).
  1. "Romeo" – Control and information of the movemen vessels.
  2. "Sierra" – Control and information of port operations.

5. COMMUNICATIONS

All Centres maintain permanent listening on Channel 16 (VHF - F

(a) *Language:* The language used in communication is Spanis Vessels who have difficulty in communicating in Spanish do so in English, and if there are problems in hearing prop they may use the groups of the International Code Signals, Ta of Spelling equivalents and Numbers, or "Q" Code.

(b) *Channels – Frequencies and Usages:* There will be those defined by Appendix 18 Mar 2, of the Radiocommunica Regulations of the International Telecommunications Un published by the General Secretary of the UIT in Geneva and the points agreed in the Uruguay – Argentina Meeting, ca out in the City of Buenos Aires 9/76, use of the VHF Chan (Band 156 – 174 MHz.).

Channel	*Frequencies*	*Usage*
6	156.300 MHz.	Bridge to Bridge.
8	156.400 MHz.	Port Operations.
9	156.450 MHz.	Port Operations.
11	156.550 MHz.	Transmission from the Centres in fulfi of objectives.
13	156.650 MHz.	Transmission from the Centres in fulfi of objectives.
15	156.750 MHz.	Meteorological Bulletins and Warnings Navigators.
16	156.800 MHz.	Calling up and Security.
18	156.900 MHz. Reception	Jose Ignacio Oil Terminal.
	161.500 MHz. Transmission	Jose Ignacio Oil Terminal.

Should problems arise with VHF equipment on vessels (the ra same, out of service, etc.) communications should be effected or on HF with the Safety Coastal Stations of the P.N.N.

The services and frequencies of the Coastal Stations are described in the tables at the end of "Uruguay General" Section.

Vessels who, for some reason or other cannot effect communications by radiotelephone (VHF, HF, MF), should do so by radiotelegraphy through the intermediary of the Coastal Station (open to public correspondence) Cerrito Radio CWA.

Radiotelegrams should be sent in time to the telegraphic address Comopre.

(c) *Listening Out by Vessels:*
1. *All vessels* in Uruguayan judicial waters must maintain permanent listening watch on Channel 16 (VHF – FM) except when they are moored in port. If there are problems on VHF they should listen out on 2182 or 4125 kHz.
2. When a vessel cannot, due to any fault of whatever nature, maintain listening watch on Channel 16, she should pass to Channel 11 or 13, but advise the Control Centre first.
3. In the various zones, the vessels must use as a working channel to communicate with the Zone Centre, the frequency which the Control Centre will indicate to them on Channel 16.
4. In all the ports of the Republic, vessels and/or craft in the coasting trade, pleasure craft (Categories A and B), passenger craft and traffic units (tugs, dredgers, launches, lighters, etc.) must be equipped with a VHF – FM transmitter and receiver for local communications with Port Controls, Appendix 18 Mar 2 of the Radiocommunications Regulations of the International Telecommunications Union.
5. *All vessels or craft* navigating or carrying out operations within 25 miles or more of the coast, must be equipped with a BLU transmitter and receiver (with corresponding frequencies) of 150 watts effective power and A3A and A3J type transmission.

(d) *Services and Frequencies of the FP, FC and FW Dependent on the P.N.N.*

Coastal Station (FC), Station for Port Operation (FP), Station for Service of Vessel Movement (FT), Station which is both for Port Operations and for Service of Vessel Movement (FW).

(e) If in fulfilment of the regulations set out by this System, vessels on calling up the Control Centre cannot obtain a reply, they should immediately make the communication in question to the Director of the System (telegraphic address: Comopre) by radiotelegraphy or radiotelephony via Cerrito Radio (CWA) or Punta Carretas Radio (CWF) respectively.

Communications to Centres:
1. From Vessels in the Zone.
   (a) Position on entering and leaving each Zone of Vessel Movement (Flag, Name, International Call Sign, Where From, Where Bound, Latitude, Longitude, Course, Speed and Maximum Draft).
   (b) ETA at next port.
   (c) Problems with characteristic aspects during navigation.
   (d) If anchoring or raising anchor at any point in the Control Zone of Vessel Movement, it is necessary to ask for authorisation when this is done within Port Operation Zones, and also whenever any manoeuvre is intended to be carried out, and this authorisation expiring within twenty (20) minutes from its request.
   (e) Any damage suffered by the vessel.
   (f) Assistance given to damaged vessels or those in difficulty.
   (g) Any indications of dangerous obstacles to navigation which are not duly indicated by buoys and lights.
   (h) Any serious reduction in visibility.

2. Pilotage:
   (a) Whatever is specified in the General Pilotage Regulations.
   (b) Time of embarkation and/or of disembarkation.
   (c) Request of Master concerning change, mooring, etc.
   (d) Difficulties in pilotage.

3. Concerning the Owner or Agent:
   (a) Monthly list of expected vessels.
   (b) Confirmation of arrival of vessels 24 hours in advance.
   (c) News concerning vessels being delayed or arriving early.
   (d) Information if the vessels are carrying hazardous cargo (explosives or inflammables) 24 hours in advance of arrival, including any such cargo in transit, mentioning:
      (i) The amount and location of such cargo.
      (ii) The correct technical name of the substance (the designation used for transportation purposes), the UNO number (if this is given), classification in the IMDG Code (if this is given), the flash point (if applicable) and quantity.
      (iii) The presence or otherwise on board of a Certificate which is valid showing the ability of the vessel in respect of the cargo which it is carrying (only for hazardous substances carried in bulk);
      (iv) The stowage of hazardous cargo on board, indicating those which have to be unloaded and those which have to remain on board;
      (v) The condition in which the hazardous cargo is and any defect which is known in respect of packages or drums, together with the system of containing and handling of the cargo, of the equipment and instruments used (when hazardous bulk cargo is involved), which may engender excessive risk.
      (vi) Any known defect which may effect considerably the safety of navigation.

(f) *Communications from the Centres:*
1. To vessels (navigating towards Uruguayan Ports).
   (a) The quay at which they will berth.
   (b) The Pilot who will assist the vessel.
   (c) Any information from the Maritime Agent with regard to future operation.
2. To the Pilot:
   (a) Tugs and cable launches who will assist him.
   (b) Defences on the sea wall.
   (c) Bitts which the vessel will use.
3. To the Owner or Agent:
   (a) Position of their vessel.
   (b) ETA.
   (c) Conditions of cargo.
   (d) Time at which the Pilot will go on board.
   (e) Time of berthing.
4. To the Centre Director of the System (Control Centre and Information of the Maritime Movement of the Port of Montevideo) immediately any information is obtained with regard to:
   (a) A BYR incident or any difficulty which is presented to a vessel.
   (b) A deep sea or coasting vessel (data concerning Naval Messages in accordance with the Abbreviated Code).
   (c) A fishing vessel, with the Naval Message data being as follows:
      - Where from, Flag, Name, International Call Sign, Month, Day and Hour of sailing, Position (for Customs Clearance), Month, Day and Hour of Position, Activity (fishing or bound for Port).
      - Arrival, Flag, Name, International Call Sign, Month, Day and Hour of Arrival, Port of Arrival.
      - Fishing or within the Zone, or the Port, Flag, Name, International Call Sign, Position, Month, Day and Hour of Position ETA (if it is within the Zone or the Port).

(5) To the adjacent Control Centre:

When a deep sea or coasting vessel sails from a port controlled by the Control Centre, or when this vessel effects a passage to the Vessel Movement Zone controlled by that Centre, this must be informed to the adjacent Control Centre (according to the course of the vessel) stating ETA and the Zone of Vessel Movement of this adjacent Centre.

Note: The Control Centres will effect communications by Naval Message. These Naval Messages must be sent immediately after receipt from vessels or when such information comes to hand from other sources.

(Naval Messages in this context will have Priority Precedence).

(6) Command of to the Naval Control of Maritime Traffic in Uruguay (Contramu). Immediately on receipt all information specified in item (f) – Number (4).

(g) *Communications from Coastal Stations (Vessel Movements – FT, MF-HF)*
1. To the Centre Director of the System (Control Centre and Information of the Maritime Movement of the Port of Montevideo). Immediately on receipt all information specified in Item (f) Number (4).
2. To the Control Centre with responsibility over the zone to which a message refers.

The same as those quoted in the preceding Number 1.

6. FISHING VESSELS:
   (a) All fishing vessels clearing entry or departure from any national port towards the different Fishing Areas must communicate to the Maritime Authority the following:
      1. On Sailing:
         a. Flag (FL).
         b. Name of Ship (SHP).
         c. International Call Sign (IND).
         d. Port of Departure (DEP).
         e. Month. day and hour of departure (TOD).
         f. Destination (Indicate Fishing Zone and Position) (DST).
         g. Month, day and hour estimated at arriving at the Fishing Zone (ETA Z/P).
      2. On Arrival:
         a. Flag (FL).
         b. Name of Ship (SHP).
         c. International Call Sign (IND).
         d. Port of Arrival (PORT).
         e. Month, day and hour of arrival (ARR).
   (b) All fishing vessels *navigating* must communicate every 6 hours with the Safety Coastal Station of the National Naval Prefecture of the Eastern Republic of Uruguay which is nearest to them (or to which they are listening) giving the following information:
      1. International Call Sign (IND).
      2. Position in Latitude and Longitude (POS).
      3. Month, day and hour of the position (DHPOS).
      4. Port of Destination (DET).
      5. Activity: (Fishing – Coming to Port – Going to Zone) (ACT).
   (c) *Normal Fishing Zones:*
      1. High Seas Zone (Altamar): Zone which is outside the judical waters and within the Common Fishing Area.
      2. Common Fishing Area (ZOCOPES): Art. 73 of the River Plate and Territorial Sea Treaty.
      3. The Zone of the River Plate (RIPLATA).
      4. The coastal Zone of the Atlantic Ocean (COSATLAN): Zone included between our coast on the Atlantic Ocean and a Line 12 miles out.
      5. Zone of the River Uruguay (RIURU).
      6. Zone of the Merin Lagoon (LAMERIN).

(d) Uruguayan Fishing Vessels which are *navigating* in the Common Fishing Area (Uruguay – Argentine) within the Sector of Argentine Jurisdiction are obliged to communicate its position to the Argentine Maritime Authority. Communications will be made on frequency 3860.6 kHz. to the Coastal Safety Station of the Prefecture of the Mar del Plata.

(e) *Note:* Information to be communicated: All the communications as specified in (b).
All fishing vessels must *listen out permanently* on Channel 16 (VHF – FM), except when they are moored in port. If they are at a distance from the coast which prevents a safe communication on VHF, listening must be effected on 2721.5 kHz. Those effecting operations 25 miles or more from the coast, must be equipped with a BLU transmitter and receiver (with the corresponding frequencies) with 150 watts effective power and type of transmission A3A and A3J, and also fishing vessels must be equipped with a receiver on 2721.5 kHz.

(f) Vessels, after prior request to the Control Centre covering them, may pass to Channel 6 or 8, and keep on those *only for the necessary time* for Fishing Manoeuvres, after which they must return to Channel 16, and advise the Centre accordingly.

7. HYDROCARBONS: It is prohibited to pour hydrocarbons or residual matter arising from the washing of tanks, clearing of bilges and ballast in general or any other action capable of having contaminary effects in waters within the territorial sea of Uruguay with the exception of the zone which is:
   (a) Outside the limits of the River Plate.
   (b) Outside 100 miles of the Uruguayan Territorial Waters, i.e. 100 miles out from the Atlantic Ocean coast.
   (c) Outside the Prohibition area for contaminatory action (Article 78 of the River Plate Treaty).

8. ZONES OF OPERATION FOR LIGHTENING AND COMPLEMENT OF CARGO:
The zones of operation for lightening and complement of cargo are as follows:
Zone "A": Between the Parallels of Lat. South 35° 04′ and 35° 08′ and between the Meridians of Long. West 56° 00′ and 56° 02′.
Zone "B": Between the Parallels of Lat. South 35° 30′ and 35° 33′ and between the Meridians of Long. West 56° 30′ and 56° 38′.
Zone "C": Between the Parallels of Lat. South 35° 35′ and 36° 06′ and between the Meridians of Long. West 56° 30′ and 56° 38′.
Zone "D": Between the Parallels of Lat. South 35° 04′ and 35° 06′ and between the Meridians of Long. West 56° 11′ and 56° 16′.

9. OPERATIONS OF LOADING AND UNLOADING "LASH" TYPE VESSELS:
The operation of loading and unloading "LASH" type vessels for the national territory, on the one hand may be effected apart from within the lightening and complement of cargo areas in ports, also in the corresponding roads.

10. TRANSFER OF VESSELS:
The transfer of vessels between roads and lightening areas and for complement of cargo purposes, will be effected under pilotage and tug control using the Port Services from which the barges in question have come.

CONTROL CENTRES:

Control Centre and Information of Maritime Movement of the Port of Colonia.

LOCATION, INTERNATIONAL CALL SIGN, ADDRESS.

(a) The Centre is controlled from the Prefecture of the Port of Colonia, within the free zone of the Port, located in the main building of the free Port zone of Colonia (Latitude 34° 28′ 28″ S., Longitude 57° 57′ 38″ W.).

(b) The call sign of the Control Centre is CWC 23, and for calling up purposes it is possible to use CONTROL COLONIA PREFECTURE.

(c) The Control Centre of the Port of Colonia is located in the Prefecture of the Port of Colonia.
The Prefecture of the Port of Colonia is a dependency of the National Naval Prefecture (2nd Circumscription).
Telephone No. of the Control Centre – 688.
Address – Boulevard Espana 2054 (Department of Colonia).

AREAS OF CONTROL.

(a) The Control Centre and information of Maritime Movement, covers:
   1. Zone "CHARLIE". The area of the River Plate marked by the Meridians which pass through Martin Chico Point (Longitude: 58° 12′ 30″ W.) and Punta Rosario (Longitude: 57° 21′ W.) and the middle line equidistant from both coasts (Law 14.145/74 – "Treaty covering the Limits of the River Plate"), with the exception of the area of water included between the imaginary line which joins San Carlos Point; Lopez West Island; Farallon Island; the Green Buoy of Vierina, Parallel 34° 30′ S., the Meridian which passes through Riachuelo Point Longitude: 57° 43′ 18″ W., and the coast ("DELTA" AREA).
   2. "DELTA" area. Area of the River Plate, limited by the imaginary line which joins San Carlos Point; Lopez West Island, Farallon Island; the Green Buoy of Vienna, Parallel 34° 30′ S., the Meridian which passes through Riachuelo Point Longitude: 57° 43′ 18″ W., and the coast.

(b) The Control Centre and Information of Maritime Movement of the Port of Sauce covers:
   1. "UNIFORM" zone. The area of the River Plate included between Meridians 57° 25′ 48″ W. and 57° 33′ W., the coast and the parallel Latitude: 34° 29′ 18″ S.

COMMUNICATIONS TO THE CENTRE.

(a) From vessels.
   1. In zone "CHARLIE". The Control Centre must be informe when the following points have been passed:
      Punta Rosario
      Puerto Sauce
      Roca Barriles
      Puerto Colonia
      Km. 56.5 (Farallon Island)
      Km. 71.3 (San Pedro Bar)
      Km. 101 (Martin Chico Point)

   In both Zones of Control the communications as designated following tables, must be effected.

(b) From the Director of Hydrographic Studies of the MTOP.
   1. The place assigned for berthing or mooring.
   2. Guard and order tugs (when these exist).

Control Centre and Information of the Maritime Movement of th Port of Fray Bentos

LOCATION, INTERNATIONAL CALL SIGN, ADDRESS.

(a) The Centre is controlled from the Prefecture of the Port of Fra Bentos (Latitude: 30° 06′ 50″ S., Longitude 58° 18′ 27″ W.).

(b) The International Call Sign of the Control Centre and Informatio of the Maritime Movement of the Port of Fray Bentos is CWC 2 When calling up it is possible to use CONTROL FRAY BENTO PREFECTURA.

(c) The Control Centre of the Port of Fray Bentos is located in th Prefecture of Fray Bentos (5th Circumscription P.N.N.).
Telephone No. of the Control Centre is 321.
Address: Luis A. de Herrera 1249 on the corner with 25 d Agosto, Fray Bentos Department of Rio Negro.

CONTROL AREAS.

(a) The Control Centre Information of the Maritime Movement of th Port of Fray Bentos covers:
   1. Zone "INDIA" The area of the River Uruguay marked by th parallel 33° 30′ S. (Punta Amarilla Km. 46) and the paral 32° 50′ S. (Roman Island) navigable areas of the Rio Neg and San Salvador and the middle line equidistant from bo coasts; with the exception of the Port of Fray Bentos and th area of water marked by the port and maritime constructio (zone "JULIET").
   2. Zone "JULIET". The port of Fray Bentos and the areas water marked by the port and maritime constructions.

COMMUNICATIONS TO THE CENTRE.

(a) From vessels:
   1. In zone "INDIA". The Control Centre must be notified dur navigation when the following crossings are made:
      Km. 46 (Punta Amarilla)
      Km. 61 (Riacho Yaguari)
      Km. 83 (Paso Barrizal)
      Puerto Fray Bentos
      International Bridge "General San Martin"
      Km. 122 (Nuevo Berlin)
      Km. 140 (Roman Island)

   In both Areas of Control the designated frequencies are show in following tables.

THE BRIDGE ZONE

All vessels of 100 tons or more gross registered tonnage mu comply with the following instructions:

(a) Navigation day and night in both directions will be made und the bridges by the marked channel, in the central arch, betwe piles 10 and 11 in the Bridge "Libertador General San Marti

(b) It is prohibited to cross or overtake between Km. 100 a Km. 102.5 and for this purpose the following passage priori are established:
   1. Those navigating downstream over those navigat upstream.
   2. Convoys with a tug either pulling or pushing have priority ov all vessels which include those that are navigat downstream.

(c) The vessel or convoy which has to give way will wait outside th limits indicated in point (b). Between those limits it is prohib to anchor for any cause, even though the channel is left free

(d) Between the limits indicated in point (b), speed must be reduc to the minimum compatible with good steering and manoeuv

(e) In the zones included between the limits indicated in point (b is prohibited to effect any form of dredging operation across th whole width of the river.

Control Centre and Information of the Maritime Movement of th Port of La Paloma

LOCATION, INTERNATIONAL CALL SIGN, ADDRESS.

(a) The Centre is controlled from the Prefecture of the Port of Paloma (Position: Latitude 34° 39′ 30″ S. and Longitude 54° 28″ W.).

(b) The International Call Sign of the Control Centre and Informa of the Maritime Movement of the Port of La Paloma is CWC For calling up purposes "CONTROL LA PALO PREFECTURA" may be used.

(c) The Control Centre La Paloma is located in the Prefecture of th Port of La Paloma (8th Circumscription P.N.N.)
Telephone No. of the Control Centre – 16.
Address – Avenida del Navio (Puerto de La Paloma) – Roc

CONTROL ZONES.

(a) The Control Centre and Information of the Maritime Movement of the Port of La Paloma comprises:

(1) Zone "KILO". Zone of the Atlantic Ocean (Territorial Sea) situated between the meridians 50° 50′ and 54° 15′ W., limited by the straight line 128° of the Chuy Lighthouse (lateral maritime limit with the Federal Republic of Brazil – Law 14.163) and to the South by the lateral maritime Argentine–Uruguay limit (Law 14.145/974). – "Treaty of Limits of the River Plate". Art. 70), with exception of the Port of La Paloma, between the coast and an imaginary line which goes between the end of the breakwater towards the Eastern point of the Costa Azul (Zone "LIMA"). Zone "LIMA".

(2) Zone "LIMA". Port of La Paloma, zone situated between the coasts and an imaginary line which goes from the end of the breakwater to the Eastern point of Costa Azul.

COMMUNICATIONS TO THE CENTRE.

(a) From vessels to:

(1) In Zone "KILO" – The Control Centre must be informed during navigation when the following points are crossed:
The Lighthouse Chuy
The Lighthouse Cabo Polonio
The Lighthouse Santa Maria

(2) In Zone "LIMA"
During navigation in the Access Channel and within the Port when the Port jetty small light is passed.

Also, in both control zones the communications shown in the following tables must be effected.

(b) From the Hydrographic MTOP Directorate:
(1) Place assigned for berthing or mooring.
(2) Guard or order tugs (when they exist).

Control Centre and Information of the Maritime Movement of the Port of Montevideo.

LOCATION, INTERNATIONAL CALL SIGN, ADDRESS

(a) The Centre is controlled from the National Naval Prefecture, located on the Floors 11, 12 and 13 of the General Command Tower of the Navy (Customs Building Lat. 34° 54′ 03″ S., Long. 56° 12′ 44″ W.).

(b) The International Call Sign of the Control Centre and Information of the Maritime Movement of the Port of Montevideo is CWC 39. In calling up it is possible to use "CONTROL MONTEVIDEO PREFECTURA".

(c) The Call Sign of the Control Centre of the Port of Buceo is "CONTROL BUCE PREFECTURA".

(d) The Call Sign of the Control Centre of the Port of Santiago Vazquez is CWC 38.
In calling up it is possible to use "CONTROL SANTIAGO VAZQUEZ PREFECTURA".

(e) The Control Centre of the Port of Montevideo is located in the building of the Navy General Command.
Telegraphic Address – "Comopre" (Control Montevideo Prefectura).
Telephones – 95.51.01 – 95.24.77 – 95.62.53.
Telex UY 929
Address – Rambla 25 de Agosto de 1825.

ZONES OF CONTROL.

(a) The Control Centre and Information of the Maritime Movement of the port of Montevideo covers:

(1) Zone "ALFA". Zone of the River Plate situated between the Uruguyan coast and the meridians 55° 30′ and 57° 21′ W., and to the South to the limit of the River Plate with the Argentine Republic (Law 14.145/74 "Treaty of Limits of the River Plate").

With the exception of the areas of water included:
(a) Between the meridians which pass through Punta Sayago and Punta Brava, the coast and the parallel of Latitude 35° 01′ S. (Zone "BRAVO").
(b) Between the meridians 56° 00′ and 56° 09′ W. and the parallel 34° 57′ S. (Zone "OSCAR").
(c) Between the meridians 56° 20′ and 56° 40′ W. and the parallel 34° 56′ S. and the coast (Zone "PAPA").

(2) Zone "BRAVO". Zone of the River Plate included between the meridians which pass through Punta Sayago and Punta Brava, the coast and the parallel of Latitude 35° 01′ S., including the Access Channel to the Port of Montevideo, Foreport, Docks, Channel or Inflammable Cargo Docks (ANCAP).

(b) The Control Centre and Information of the Port of Buceo includes:
(1) Zone "OSCAR". Zone included between the meridians 56° 00′ and 56° 09′ W. and the parallel 34° 57′ S.

(c) The Control Centre and Information of the Maritime Movement of the Port of Santiago Vazquez includes:
(1) Zone "PAPA". Zone included between the meridians 56° 20′ and 56° 40′ W. and the parallel 34° 56′ S. and the coast. It includes the Port, Anchorages and all areas of water.

COMMUNICATIONS FROM THE CENTRE

(a) To the National Administration of Ports (A.N.P.).
(1) Time of arrival of each vessel (ahead of time or delayed).
(2) Movement of tugs.
(3) Information from Masters of vessels on his cargo or changes in his berth.

(b) To the Argentine Naval Prefecture:
(1) ETA of vessels which are going to Argentine Ports or to Coastal Ports.

COMMUNICATIONS TO THE CENTRE.

(a) From the National Ports Administration (A.N.P.)
(1) Designation of berths prior to 1700 hrs. on the previous day.
(2) Tugs and launches for guard and order purposes.
(3) Departures for Deep Sea and Coasting vessels.

(b) From the vessels:
(1) In Zone "ALFA". The Control Centre must be informed during navigation when the following points are passed:
(a) To the West of the Access Channel to the Port of Montevideo.
1. By Middle Channel:
The *Graf Spee*
The Panela Lighthouse
The Uruguayan Banco Ortiz Buoy
The Argentinian Banco Ortiz Buoy
2. By North Channel:
The *Graf Spee*
The Panela Lighthouse
The Jesus Maria Buoy
The Arazati Point
The Puerto Rosario.
(b) To the East of the Access Channel to the Port of Montevideo.
Punta Brava
Isla de Flores
(2) In Zone "BRAVO".
During navigation in the Access Channel:
The Eje Buoy
The Jetty

In both areas of control the communications as designated on the following tables should be effected.

Control Centre and Information of the Maritime Movement of the Port of Nueva Palmira.

LOCATION, INTERNATIONAL CALL SIGN, ADDRESS.

(a) The Control Centre is controlled from the Sub-Prefecture of Nueva Palmira (Position Lat. 33° 52.7′ S., Long. 58° 25.3′ W.).

(b) The International Call Sign of the Control Centre and Information of the Maritime Movement of the Port of Nueva Palmira is CWC 31 and when calling up it is permitted to use "CONTROL NUEVA PALMIRA PREFECTURA".

(c) The Control Centre of the Port of Nueva Palmira is located in the Sub-Prefecture of Nueva Palmira.
The Sub-Prefecture of Nueva Palmira is a dependency of the Prefecture of Colonia (2nd Circumscription P.N.N.).
Telephone No. of the Control Centre – 139.
Address – Port Area – Nueva Palmira – Department of Colonia.

AREAS OF CONTROL

(a) The Control Centre and Information of the Maritime Movement of the Port of Nueva Palmira cover:

(1) Zone "ECHO". Zone of the River Plate and the River Uruguay is marked by the meridian 58° 12.5′ W., (Punta Martin Chico Km. 101) and the parallel 33° 30′ S., (Punta Amarillo Km. 46) and the middle line equidistant from both coasts with the exception of the Port of Nueva Palmira and the area of water limited by the port constructions (zone "FOX-TROT").

(2) Zone "FOX-TROT". The Port of Nueva Palmira and the areas of water limited by the port constructions (official quay, the Bed of the Company Navigen and the Higueritas Dock).

COMMUNICATIONS TO THE CENTRE:

(a) From Vessels:
(1) In zone "ECHO", the Control Centre must be informed during navigation of the following crossings:
Km. 101 (Punta Martin Chico),
Km. 121 (Sola Island).
Puerto Nueva Palmira.
Km. 22 (Punta Arenal Grande).
Km. 46 (Punta Amarilla).

In both Areas of Control, the communications as shown in following tables must be effected.

Control Centre and Information of the Maritime Movement of the Port of Paysandu.

LOCATION, INTERNATIONAL CALL SIGN, ADDRESS.

(a) The Centre is controlled from the Prefecture of the Port of Paysandu, located in the main Customs building (32° 18′ 06″ S., 58° 05′ 08″ W.).

(b) The International Call Sign of the Control Centre and Information of the Maritime Movement of the Port of Paysandu is CWC 32, and when calling up it is possible to use "CONTROL PAYSANDU PREFECTURA".

(c) The Control Centre and Information of the Maritime Movement of the Port of Paysandu is a dependency of the Prefecture of the Port of Paysandu (6th Circumscription P.N.N.).
Telephone No. of the Control Centre – 3099.
Address – Presidente Viera and Avenida Brasil – Paysandu (City).

CONTROL AREAS:

(a) The Control Centre and Information of the Maritime Movement of the Port of Paysandu covers:

(1) Zone "MIKE" The area of the river Uruguay marked by the parallel 32° 50′ S. (Roman Island) and parallel 31° 53′ S. (the mouth of the Malo Stream Km. 257 approximately) and the middle line equidistant from both sides with the exception of the zone included between the parallel 32° 20′ S. (the mouth of the Stream "Sacra") and the parallel 32° 14′ S. and the mouth of the Stream "San Francisco". (Zone "NOVEMBER").

(2) Zone "NOVEMBER". The area of the River Uruguay limited by the parallel 32° 20′ S. which passes through the mouth of the Stream "Sacra" up to parallel 32° 14′ S. which passes through the mouth of the Stream "San Francisco".

COMMUNICATIONS AT THE CENTRE:

(a) From vessels:

(1) In zone "MIKE" – The Control Centre must be notified during navigation when the following crossings are made:

Km. 140 (Roman Island)
Km. 160 (San Javier)
Km. 183 (Concepcion del Uruguay)
Punta "N" Almiron Island
Puerto Paysandu
International Bridge "General Artigas"
Punta Piedras
Arroyo Malo

In both Areas of Control the communications are shown in the following tables.

THE BRIDGE ZONE.

All vessels of 100 tons or more gross registered weight must comply with the following instructions:

(a) Navigation both by day and night in both directions will be made under the bridges by the marked channel, in the central arch, between piles 11 and 12 in the bridge "General Artigas".

(b) It is prohibited to cross or overtake between Km. 208 and 211. For this purpose the following passage priorities are established:

(1) Those navigating downstream over those navigating upstream.

(2) Convoys with a tug either pulling or pushing have priority over all vessels which include those that are navigating downstream.

(c) The vessel or convoy which has to give way will wait outside the limits indicated in point (b). Between those limits it is prohibited to anchor for any cause, even though the channel is left free.

(d) Between the limits indicated in point (b) – speed must be reduced to the minimum compatible with good steering and manoeuvring.

(e) In the zones included between the limits indicated in point (b) – it is prohibited to effect any form of dredging operation across the whole width of the river.

Control Centre and Information of the Maritime Movement of the Port of Punta del Este and Piriapolis.

LOCATION, INTERNATIONAL CALL SIGN, ADDRESS:

(a) The Centre is controlled from the Prefecture of the Port of Punta del Este (Lat. 34° 57′ 48″ S., Long. 54° 57′ 06″ W.).

(b) The International Call Sign of the Control Centre and Information of the Maritime Movement of the Port of Punta del Este is CWC 34.
For calling up purposes it is possible to use "CONTROL PUNTA DEL ESTE PREFECTURA".

(c) The Call Sign of the Control Centre of the Port of Piriapo CWC 33.
For calling up purposes it is possible to use "CONTR PIRIAPOLIS PREFECTURA".

(d) The Control Centre of the Punta del Este is located in Prefectura of the Port of Maldonado (3rd Circumscription P.N.
Telephone No. of the Control Centre – 4.18.84.
Address – Calle 8 and 13 (Department of Maldonado).

(e) The Control Centre of the Port of Piriapolis is located in Su Prefecture of the Port of Piriapolis (3rd Circumscription P.N.
The Sub-Prefecture of Piriapolis is controlled by the Prefectu of Maldonado.
Telephone No. – 18.
Address – Avenida Piria and Calle Maipu (Piriapolis).

ZONES OF CONTROL

(a) The Control Centre and Information of the Maritime Moveme of the Port of Punta del Este covers:

(1) Zone "GOLF". Zone of the River Plate, Atlantic Oce (Territorial Sea) situated between the meridians 55° 30′ a 54° 15′ Longitude West, the imaginary line which joins Punta del Este with Punta Ballena and in the South by continuation of the limit of the River Plate with the Argen Republic and the Territorial Sea (Law 14.185/974 "Treaty the Limits of the River Plate"), with the exception of the ext of water included between meridians which pass throu Punta Iman (55° 16′ 08″ W.) and Punta Raza (55° 14′ 00″ and the meridian of 34° 56′ 30″ S. (Zone "TANGO") Piriapolis.

(2) Zone "HOTEL". The Bay of Maldonado and the Port of Pu del Este.

(a) The Bay of Maldonado: Zone situated between the coa and the imaginary line which joins Punta del Este w Punta Ballena, includes also "Boca Grande" and "Bo Chica".

(b) The Port of Punta del Este: Zone situated between coast and an imaginary line which goes from the en the jetty to a point which limits to the North of the Man Beach. It includes all the mooring areas.

(b) The Control Centre and Information of Maritime Movement of Port of Piriapolis comprises:

(1) Zone "TANGO". Zone of the River Plate included betwe the parallels which pass through Punta Iman (55° 16′ 08″ and Punta Raza (55° 14′ 00″ W.) and the merid 34° 56′ 30″ S.

COMMUNICATIONS TO THE CENTRE

(a) From Vessels

(1) In zone "GOLF". The Control Centre must be informed du navigation when the following points are passed:
The Isla de Lobos (Wolf Island)
The Punta del Este Lighthouse.

(2) In zone "HOTEL". During navigation in the Access Chan and within the Port:
When the Bajo del Monarco Buoy is passed, and
When the Isla de Gorriti Small Lighthouse is passed.
Also within both Control areas the communications indica in the following tables must be effected.

(b) From the Hydrographic Directorate of MTOP.

(1) The place assigned for berthing or mooring.

(2) Guard and order tugs (when they are present).

KEY TO LITERAL AND NUMERICAL REFERENCES USED IN THE COASTAL STATION NOMENCLATURE

(a) To transmit meteorological bulletins in accordance with the requirements of List VI of RR of the UIT. Special services which are offered by the FC, FP, FT and FW of the P.N.N.
(b) To transmit Notices to Mariners in accordance with requirements of List VI of the RR of the UIT. Special services which are offered by the FC, FP, FT and FW of the P.N.N.
(c) To transmit medical advice on request of navigators.
(d) To transmit urgent messages to Mariners immediately on receipt and to repeat them 3 minutes past every hour and at the normal times of transmission of messages to navigators.
(e) To participate in operations of Search and Salvage.
(f) To alert the Centre's Co-ordinator of Search and Salvage.
(g) To direct the system of Control Centres and Information of Maritime Movement and Port Operations. (FP, FT and FW).
(h) Receive meteorological observations (SHIP) made on the high seas by Masters of vessels.
(i) To effect special transmissions relating to hydrographic and maregraphic Information.
(m) To receive reports from fishing vessels (National, Argentine and third nations who are authorised to operate within the area) and to remit them to the Director of the Control Centre System (CONDI) obligatorily in accordance with Maritime Legislation No. 6 P.N.N.
(n) To effect control and facilitate information within the area, receiving reports from vessels navigating within it (obligatory for vessels in accordace with IMP Uruguay).
(o) Effect control and facilitate the supply of information from the port.
(p) Receive by telex or radio requests for pilotage service.
(q) Radiogoniometric Service on VHF (RG).
1. Call up and listening service on a permanent basis and for announcing in advance the intention to transmit.
2. Frequency used for the transmission of meteorological bulletins and Notices to Mariners in accordance with requirements of List VI of the RR of the UIT. Special services offered by FC, FP, FT and FW of the P.N.N. with prior announcement on frequency 156.800 MHz (Channel 16).
3. Frequency used for the transmission of meteorological bulletins and Notices to Mariners in accordance with requirements of List VI of the RR of the UIT. Special services offered by the FC, FP, FT and FW of the P.N.N. with prior announcement on frequency 2182 kHz (Simplex) and 4419.4 kHz (Duplex C.421).
4. Frequency used for the transmission of radiomedical advice on request.
5. Frequency used for operations of Search and Salvage.
6. Frequency used for reports from national fishing vessels.
7. Frequency for Coastal working purposes.
8. Frequency used in common with the Argentine Republic (Naval Prefecture) for the control of fishing vessels of both nations.
9. Provisional working frequency.
10. Working frequency for control and zonal information (Vessel Movement Service).
11. Working frequency for control and Port information (Port Operation Service).
12. Port operation frequency (tugs, traffic launches, tugs and control centres).
13. Duplex frequency Band from 4 to 23 MHz of the Mobile Maritime Service Section 17 REV. RR of the UIT.
CO – Station open exclusively to official correspondence.
CR – Station open to restricted public correspondence.
H24 – Continuous service, day and night.
HX – Intermittent service, day and night or station which has no fixed operating timetable.

SPECIAL SERVICES

Nomenclature of Radiodetermination Stations and Stations which offer Special Services with the P.N.N.

Name of the Station	Symbol	Identity of the Station	Trans-mission frequencies (kHz – MHz)	Type of Trans-mission	(GMT) Hours of Transmission	Service (See key in next column)

Key:
Key to numerical references used in the nomenclature of radio-determination stations and stations which offer special services.
METEOROLOGICAL BULLETIN
(Forecast of weather within the 4 Maritime Areas)

1. SYNOPIS: Inform in clear Spanish text for the 4 Maritime Areas No. 1, 2, 3 and 4 stating:
   (a) General
      1. Name of Station
      2. Validity
      3. Significant Phenomena
      4. Weather Notices
      5. Synoptic Situation
   (b) By Area
      1. General Conditions (Phenomena or general character of the current weather)
      2. Winds (direction and speed)
      3. Sky
      4. Horizontal visibility
      5. Air temperature
      6. Strength of the sea
      7. Wave height
   (c) Reading of radio messages for Coastal Traffic and Radio Messages for local purposes (Notices to Mariners) per area.
2. Messages concerning water height.
3. Offer on request of a vessel, a weather forecast, height of water and local radio messages (Messages to Mariners).
4. The station transmits at any time meteorological safety messages preceded by the Safety signal (SECURITE) and repeat them after periods of silence and during normal transmission periods.
5. Meteorological bulletins, radio notices for coastal traffic (Notices to Mariners) and local Radio notices (Notices to Mariners), announcing the fact previously on frequency 2182 kHz, 4125 kHz Simplex and 4419.4 kHz (C.421) Duplex.
6. Meteorological bulletins, radio messages for coastal traffic (Notices to Mariners) and local Radio messages (Notices to Mariners) announcing the fact previously on Channel 16 (156.800 MHz).
7. For services being offered, listening and working frequencies see Nomenclature of Coastal Stations.
8. Radiogoniometric station on VHF.
   (Station of Radiodetermination which uses the receipt of radio-electric waves to determine the direction of a station or of an object).

COLONIA: 34.28 S. 57.51 W. (See Plan)

LOCATION: Lat. 34° 28′ 28″ S., Long. 57° 50′ 38″ W.

On the River Plate 92 miles from Montevideo and 27 miles in a straight line E.N.E. of the City of Buenos Aires.

DOCUMENTS: Vessels entering the port must provide the following: Machinery, Hull, Safety, Freeboard and Derat Certificates, Stores List, Crew List, List of Passengers or Negative, Cargo Manifest, Declaration of Transport of Inflammables or Explosives, or where not carried a certificate to that effect.

PILOTAGE: No port or river Pilot is required for coasting vessels.

ANCHORAGES: In the Roads with a depth of 10 ft.

In the foreport with a depth of 8 ft., for shallow draft vessels.

RESTRICTIONS: The port will be closed for all vessels when the wind intensity is 70 knots or more. Also all operations are prohibited in the port shelter area.

The port will be closed for vessels of all kinds when the visibility is 500 m. or less due to fog, squalls, etc. Under these conditions vessels are prohibited to carry out any kind of operation within the shelter area.

HEALTH: Inspection is by a Health Doctor, and is carried out jointly with Immigration, Police, Customs, and Naval Prefecture officials.

RADIO: VHF equipment. Operates permanently on Channel 16.

VHF: All communications are carried out by VHF, the call sign being CWC 23 and that for working Control Colonia Prefecture. Channels used are 6, 8, 9, 11, 12, 14, 15, 16, 25, 26, 68, 69.

The Control Centre listens out permanently on Channel 16, whose frequency is 156.800 MHz.

RADAR: Range 16 miles. Does not give service to vessels.

TUGS: There is no tug service.

BERTHING: Union Quay: Running East to West with a length of 178 m., equipped at its two ends with ramps for landing and shipment of cars and lorries.

Coastal Quay: Running North to South, with a length of 111 m.

Ultramar Quay: Running North to South, with a length of 142 m.

These quays are provided with water hydrants and electricity supply points, the Coastal Quay also having a fuel point for operation of tankers.

Warehouses: For general cargo, the National Port Administration has warehouses within the port area.

CRANES: On the Overseas Quay there are two mobile cranes on rails, with 3 tons and 5 tons capacity.

STEVEDORES: There is no permanent service of stevedores, and such requirements must be applied for in advance by the ships' agents at Nueva Palmira.

MEDICAL: 300 m. from the port is the local hospital with a First Aid room and ambulances.

TANKERS: Operate at the Coasting Quay with a watchman and a fireman on board.

FRESH WATER: Supplied by the National Port Administration.

FUEL: Supplied by road tankers.

FIRE PRECAUTIONS: There is a fire fighting pump with a pressu 8 kg./sq.cm.

CONSULS: Argentina and Italy.

REPAIRS: Not possible.

GANGWAY/DECK WATCHMEN: There is a watchmen ser administered by the Prefecture of Colonia.

CUSTOMS ALLOWANCES: Tourists from neighbouring countries m bring in: 5 kilos of food, 1 carton of cigarettes, 1 litre of alcoholic dr

No products derived from meat can be brought into the country (c meats, sausages, etc.), nor any plants or seeds.

REPATRIATION: Only to Buenos Aires.

AIRPORT: Located on Highway 1 linking Colonia with Montevideo, 7 k from Colonia.

TIME: Local time is GMT minus 3 hours.

HOLIDAYS: 1st and 6th January, Carnival, Touriso, 19th April, 1st M 18th May, 19th June, 18th July, 25th August, 12th Octob 2nd November, 25th December.

POLICE/AMBULANCE/FIRE: Police Tel: 2962; Hospital Tel: 2994; F Brigade Tel: 2577; Prefecture 2020.

TELEPHONES: No arrangements for connecting the telephones board vessels, but there are telephone boxes for communications wi and outside the country.

SERVICES: Bureau de Change via a branch of the Banco Repub There is a bus service with international service, working in conjunc with arriving and departing vessels, connecting Colonia with the res the country.

Post Office: 200 m. from the port.

Mooring Gangs: Provided at the request of the ships' Agents by t National Port Administration.

AUTHORITY: See "Montevideo".

FRAY BENTOS: 33.06 S. 58.18 W. (See Pla

LOCATION: Km. 95 River Uruguay. On the right bank of the R Uruguay from seaward 213 miles by river from Montevideo or 145 m from Buenos Aires.

PORT LIMITS: A vessel is considered to have arrived when she lea the channel and goes to the berth.

DOCUMENTS: Same requirements as for the port of Montevideo.

PILOTAGE: Obligatory, except where bilateral national agreeme exist concerning navigation of the River Uruguay, and the Pilot mus taken on board in Montevideo.

ANCHORAGE: Between the channel and the port.

RESTRICTIONS: When the port is closed due to bad weather, also draft depends upon the depths of water in the "El Marques" and "Pu Caballo" passages.

MAX. SIZE: Controlled only by the draft of the vessel and the lengt the berth. Max. draft 26 ft. (FW), water depends upon the river conditi

HEALTH: Same requirements as for Montevideo.

RADIO: The call sign is CWC 25 "Control Fray Bentos Prefectura"

VHF: Port works on the following frequencies:
(a) Channel 16: frequency 156.800 MHz; Usage: Calling-up a safety.
(b) Channel 9: frequency 156.450 MHz; Usage: Port operations
(c) Channel 11: frequency 156.550 MHz; Usage: Central Con broadcasts on safety.
(d) Channel 13: Frequency: 156.650 MHz; Usage: Central Con broadcasts on safety.
(e) Channel 15: frequency: 156.750 MHz; Usage: Meteorolo bulletins and Notices to Mariners.
(f) Channel 17: Usage: P.N.N.: Maritime Safety.
(g) Channel 68: Usage: P.N.N.: Maritime Safety.

Furthermore, on entering the area between Km. 6 and Km. 165 of t River Uruguay, the vessel must communicate to the Fray Ben Prefecture Control:
(a) flag.
(b) name.
(c) destination.
(d) position.
(e) course and speed.
(f) max. draft.

And on leaving this area:
(a) accident or fire occurred on board the vessel.
(b) whether vessel has given assistance to another vessel whi damaged or in difficulties.
(c) whether she has sighted any dangerous object to navigation which is not marked.
(d) any serious reduction in visibility.

RADAR: None.

TUGS: None.

BERTHING: There are two types, quays for deep-sea vessels an coasters, both being of cement and wood.

Type	Deep-sea	Coasting
Length	125 m.	250 m.
Direction	East – West	N.W. – S.E.
Average depth	7 m. – 8 m.	5 m. – 6 m.
Signalling lights	Green light – West side Red light – East side	
Fresh water	2 connections	3 connections
Electricity	1 point A.C., 3-phase 220 V. South side quay in shed 3 points 220 V. D.C. (cranes)	3 points 220 V. (cranes)

Also there is the Anglo Quay with a maximum depth of 26 ft., nor used for meat.

CRANES: There are in the port 3 cranes of 3 tons each and 1 of 5 tons which can move about the port. It is possible to use ship's derricks and more cranes at the same time.

BULK HANDLING FACILITIES: There is a silo with a conveyor belt, having a storage capacity currently of 14,500 tons, and the conveyor has a loading or discharge rate of 100 t.p.h. See "Developments".

SPECIALISED CARGO HANDLING FACILITIES: None.

BRIDGES: None.

STEVEDORES: Can be requested in advance or when the vessel arrives in port. The work is controlled by the following time table: order 0630 hrs., commence work 0700 hrs.; order 1230 hrs., commence work 1300 hrs.; order 1830 hrs., commence work 1900 hrs.

MEDICAL: Doctors and hospital facilities available.

DENSITY: 1000.

FRESH WATER: On the Deep Sea Berth there are 2 connections and on the Coasting Quay there are 3 connections controlled by the ANP. Cost of U.S. $1.20 per 1,000 litres.

FUEL: Not available.

FIRE PRECAUTIONS: Fire Brigade present.

CONSULS: Argentina, others at Montevideo.

REPAIRS: Only minor repairs can be carried out.

DRY DOCKS: None.

SURVEYORS: None.

GANGWAY/DECK WATCHMEN: Same as for the port of Montevideo.

HATCHES: If steel, handled by vessel's crew. If wooden, handled by stevedores.

REPATRIATION: See "Montevideo".

AIRPORT: None, only Montevideo.

TIME: See "Montevideo".

HOLIDAYS: The following dates will be used as national holidays of a traditional character:

1st January; 6th January; Monday and Tuesday of Carnival Week; the 6th week following Carnival, which will be called Tourism Week; 1st May; 2nd November; 25th December.

The following dates will be celebrated as national holidays as they are linked with patriotic exaltation and commemoration.

19th April; 18th May; 19th June; 18th July; 25th August; 12th October.

With regard to the holidays of 1st May, 19th April, 18th May, and 12th October, these will follow the undermentioned plan:

(a) If they occur on Saturday, Sunday or Monday, they will be observed on those dates.

(b) If they occur on Tuesday or Wednesday they will be transferred to the immediately preceding Monday.

(c) If they fall on Thursday or Friday, they will be transferred to the Monday immediately following.

POLICE/AMBULANCE/FIRE: National Prefecture: Tel: 321. Police: Tel: 201. Fire Brigade: Tel. 35. Hospital: Tel: 533.

TELEPHONES: Not possible.

SERVICES: None.

SHORE LEAVE: See "Montevideo".

IDENTIFICATION: Seaman's Book sufficient.

DELAYS: Normally there is no delay.

DEVELOPMENTS: Increase in the storage capacity of the silos of the Ministry of Agriculture and Fisheries by 5,500 tons, and increase of the capacity of the conveyor belt to 400 t.p.h.

AUTHORITY: National Port Administration, Herrera and 25 de Mayo, Fray Bentos, Uruguay.

Also see "Montevideo".

JOSE IGNACIO: 34.54 S. 54.43 W.

SBM: Position Lat. 34° 53′ 43″ S., Long. 54° 42′ 45″ W.

PILOTAGE: Compulsory. Pilot boards at the Fairway Buoy in position Lat. 34° 57′ 14″ S., Long. 54° 40′ 06″ W.

RADIO/VHF: Call sign "Control Punta del Este", Continuous watch on VHF Channel 16. Intership working on Channel 6.

GENERAL: ANCAP have installed a Single Buoy Mooring, 3,600 m. from the shore in 16.8 m. (55 ft.) depth of water. Vessels of 150,000 d.w.t. can be handled and the average rate of discharge of crude oil is 5,000 cu.m./hr.

The shore terminal receives, stores and pumps the crude to the refinery at Montevideo.

A River Pilot must be ordered from Montevideo for securing to the buoy, and he remains aboard until the vessel sails.

Five days before arrival, Agents must request Free Pratique from the Health Authorities in Montevideo, and the Customs, Prefecture and Immigration Officials, from Punta del Este.

AUTHORITY: Prefectura del Puerto de Maldonado, Calle 8 y 13, Punta del Este (Maldonado), Uruguay. *Tel:* 41884, 41967. *Contact:* Port Captain.

MONTEVIDEO: 34.55 S. 56.13 W. (See Plan)

Also see "General" at beginning of Uruguay section.

DOCUMENTS:

Health:

1 Maritime Declaration of Health.
1 List of Passengers Disembarking.
1 List of Crew Members.
1 Derat Certificate.
1 List of Crew International Vaccinations.

Immigration:

1 copy of Crew List.
2 Lists of Passengers Disembarking.
2 copies of List of Passengers in Transit.

Police:

2 copies of List of Passengers Disembarking.
1 copy of Crew List.
2 Lists of Passengers in Transit.

Prefecture:

2 Lists of Passengers in Transit.
1 Visaed copy of List of Passengers with Port of Origin.
2 Non-visaed copies of List of Passengers.
1 Passenger List – or Negative – from all ports visited.
1 Non-visaed Crew List.
1 Cargo Manifest for Montevideo.
1 Manifest for Cargo in Transit.
1 List of Inflammable Cargo or Hazardous Goods – visaed or straight.
1 List of Vessel's Data.

Customs:

1 Visaed Manifest
1 copy of Ballast loaded at each port.
1 Negative discharge statement for each port.
If there is no Consul in previous ports, the last port where there was one.
2 Stores Lists.
2 Lists of Cigarettes and Whisky.
2 Lists of Personal Effects.
3 Lists of Bunkers on Arrival.
1 copy of Passenger List for those disembarking, or negative, and their baggage in the same list (drawn up and signed by the passengers themselves).

Agents:

2 Lists of Passengers Disembarking.
2 Lists of Passengers in Transit.
2 Crew Lists.
2 Stores Lists.
2 Manifests, including Inflammable Cargo.
2 Cargo Plans.

NOTE: The manifest must have a special section with all effects in transit or otherwise, for the free zones of Colonia and Nueva Palmira.

Crew Lists, amended Crew Lists and Inflammable Cargo Lists must be visaed at ports of sailing or loading.

ANTEPORT: The Anteport is to the North of the entrance, between the breakwaters, and has a depth of 33 ft. – 36 ft. Sufficient room for 10 vessels, depending on size.

PORT: The port is formed by the North side of the Montevideo Peninsula and the "Dique de Cintura", a breakwater running parallel to the coast, about 870 m. distant.

It consists of 3 basins, 2 of which are for ocean-going vessels and 1 for river traffic.

Basins 1 and 2 have a depth of 33 ft., and the basin for river traffic 15 ft.

APPROACHES: The Roads of Montevideo consist of the Outer Roads situated to the South of the bay and Inner Roads situated outside the Western breakwater.

Both anchorages are very exposed and vessels are recommended to enter the anteport.

The entrance channel has 36 ft.; the channel to Ancap's wharf (La Teja) 30 ft. 6 in. Basins 1 and 2 have a depth of 31 ft., and the River Traffic Basin, 15 ft. These depths depend on dredging being maintained, but even so vessels often "drag" when on the higher marks; the bottom is fine soft silt.

PILOTAGE:

1. The Pilot must be requested via the Agent 24 hours in advance, giving ETA in the roads by W/T (Cerrito Radio – CWA on frequency of 500 kHz). It is not possible to elect a Pilot for the area of the port of Montevideo, except where the vessel exceeds 10,000 tons.

2. On entering into the system of the Control Centres, communication must be made with them, giving the information laid out in the "Basic Rules of the System of Control and Information of Maritime Movements". See "Control" in General Section before first Uruguay port.

3. By VHF on the Channels stipulated in "Basic Rules of the System of Control and Information of Maritime Movements".

4. Channel 11 must be used to communicate with the pilot vessel. The vessel is a powered craft painted reddish orange, with white deckhouse with the inscription "Practicos". During daylight hours, it flies the pilot flag, HOTEL (white and red), and at night it is necessary to have white and red lights indicating "I have a Pilot on board". Where a vessel does not have VHF, light signals must be used to communicate with the pilots' launch.

Should this launch be out of service, Pilots are transported by tugs of A.N.P. and/or BEYLA.

5. The Pilot will await the vessel near the Axis Buoy located at Lat. 35° 00′ S., Long. 56° 14′ W.

6. In the event of bad weather the vessel must anchor near the Axis Buoy.

7. To take the Pilot on board, the gangway must be positioned on the side which gives most advantage *vis-a-vis* wind and sea.

ANCHORAGE: Vessels may anchor near the Axis Buoy with a draft of 30 ft. at zero tide. The sheltered anchorage is located in the foreport inside the shelter of the breakwaters. To gain access to it, the Pilot must be on board and the permitted draft will be that specified previously.

RESTRICTIONS:

1. The port is closed when winds are up to 60 km.p.h. However, up to 80 km.p.h. the Prefecture may authorise manoeuvres. The port is also closed when there is fog, channel obstruction or any other problem which may make manoeuvring difficult.
2. Vessels will not be handled when there is serious damage to engines, hull or rudder.

MAX. SIZE:

1. The largest vessels operating in the port, are of the LASH type, with dimensions approx. as follows:

Overall length 272.22 m.; Beam 30.48 m.; Draft 28 ft.

2. Tankers which berth at the inflammable dock A.N.C.A.P.:

Overall length: 241.50 m.; Beam 32.33 m.; Draft 28 ft.

With regard to the dimensions of the vessel, the state of the tide and time will be considered, the Pilot will advise the Master of the best measures to adopt.

Report: March 1982.

Max. draft to reach Montevideo safely is 31 ft.

HEALTH: The procedure is as follows:

1. Request the Owner or Agent to obtain Free Pratique which will be done via Cerrito Radio Station – call sign CWA.

In the event of there being any suspected illness or fever on board, the vessel must anchor in the roads to await instructions, at the same time communicating this to her Agent/Owner.

RADIO: Cerrito Radio Station CWA operating on 500 kHz, 421.5 kHz, 4346 kHz, 6434.5 kHz, 8602 kHz, 12750 kHz, 17208.8 kHz and 22563 kHz.

Timetable for broadcasting information to Mariners:

	Frequency	*Times*
Cerrito CWA	4,346 kHz	1100 hrs.
	8,602 kHz	1600 hrs.
	12,750 kHz	2100 hrs.
	16,871 kHz	
Sodre (CX 6) Coastal Station	650 kHz	0900 hrs.
Punta Carreta CWD	2,768 kHz	1103 hrs.
		1603 hrs.
		2103 hrs.

RADAR: Port Radar Control available. Additional coastal radar stations to be installed.

VHF: The Control Centre has a range of 60 miles on VHF. It also effects communications by "Phone-Patch" between the vessel and or Agent or Owner; this, from their office or private address.

All the operations of the Centre of Control and Information of Marine Movement of the Port of Montevideo are set out in the booklet "Basic Rules of the System of Control and Information of Maritime Movements".

On entering waters of port jurisdiction, communication must be made with La Paloma Control, then Punta del Este Control and the Centre of Maritime Control of the National Naval Prefecture.

TUGS: 8 tugs owned by Port Authority, 1×4,000 h.p., 1×1,1950 h.p., 1×1,680 h.p., 1×1,100 h.p. and 4×500–700 h.p. Beyla S.A. (Private) operate 5 tugs of 250 h.p.–750 h.p. Tugs come alongside in the foreport. Lines are to be supplied by the vessel, and this is not optional. In the event that the vessel has no tug cable, this will be supplied by the tug at a cost of approx. U.S. $500 (as per tariff TM/6).

BERTHING: The berth will be allocated by A.N.P. and is to be requested by the Agent. Vessels may berth or unberth at any time of the day or night, except when the port is closed or due to lack of available berths. Generally, there are fenders placed along the berths. In the event that the vessel requires this service, it must be requested in advance via the Agent.

When berthing or unberthing, the gangway must not be in position due to the proximity of the cranes.

Anteport: 7 anchorage berths in 28 ft. depth. However in practice there is rarely room for more than 5 vessels to anchor. Basin No. 1: 7 berths, 28 ft. to 33 ft. depth alongside. Basin No. 2: 4 berths, 28 ft. to 33 ft. depth alongside. La Teja: Ancap Basin with berths for 2 tankers 30 ft. depth in basin and entrance channel.

Berths are allotted by the Port Authorities in the order of arrival of the vessels and according to their category, as follows:

1. Mail vessels.
2. Regular Line vessels carrying immigrants.
3. Cargo vessels.
4. Sailing vessels.

The Authorities allocate the deposit at which vessel must discharge or load.

Port Authorities give preference at Deposit No. 10 to ships operating with refrigerated cargo from this Deposit; and at Deposit No. 11 (Florida Wharf) to tankers discharging to the pipeline situated there. Conditional that they vacate the berth within 2 hours' notice, to permit berthing a preference vessel, other ships may operate at either berth.

Muelle de Escala: On the pier head, formed by the Southern side of the River Traffic Basin, and running Westwards, a quay has been built, known as "Muelle de Escala", 288 m. long, originally constructed for berthing passenger liners and war vessels, but now used as a container terminal.

The berth is very exposed to wind and swell, and Masters are recommended to take every precaution to ensure their vessels are strongly moored and a lookout kept for changes of weather which, locally, are very sudden.

The depth of water alongside depends on dredging, but generally is over 33 ft.

1×40 tonne container gantry crane installed in 1986.

River Traffic Basin: This basin is situated on the Western side of "A". It is 400 m. long and has a passenger landing station on one The opposite side of the basin is used by the Navy.

2 warehouses, called Warehouse "A" and Warehouse "B", have be built on the East side of this basin and are serviced by 3 electric cra

These berths can only be used by light-drafted vessels, as dep water is around 16 ft.

Basin No. 1: This basin is situated between piers "A" and "B", entrance between the "Dique de Cintura" and the pier head "A" is ab 150 m. wide. It encircles a total mooring space of 1,093 linear me and 7 vessels can comfortably berth along the quay walls.

Pier "A" is 382 m. long on the West side; 306 m. on the East si and 50 m. wide at the Northern pier-head.

On this pier 2 brick and concrete warehouses, Nos. 1 and 2, ha been constructed, consisting of a ground floor, 3 storeys and basement.

On the City side of Basin 1, length 493 m., there are 3 br warehouses, numbered 3, 4 and 5, consisting of a ground floor between 17,800 cu.m. and 19,600 cu.m. capacity.

On the Western side of Pier "B" facing Basin No. 1, there are 2 br and concrete warehouses, Nos. 6 and 7, with a ground floor and 1 sto having a capacity of 30,174 and 33,140 cu. m. respectively.

In Basin No. 1, Berths No. 1, 2, 3, 4 and 5 are generally used for discharge and/or loading of liners running to timetable.

Depths alongside vary, as it depends upon dredging.

Basin No. 2: This basin is situated between Pier "B" and the foo Florida Street. The entrance to this basin is also about 150 m. wid has a total mooring space of 722 m. and it can accommodate 4 vess

Pier "B" is 294 m. long on the Western side, 328 m. long on t Eastern side, 148 m. at the Northern pier-head and 13 m. wide on t bend at the Western corner of the pier-head.

At the Northern end of pier-head "B", livestock is embarked. T berth is also used for general cargo operations in times of congest Moorings must be strong and carefully watched as the berth is v exposed to wash of passing vessels.

There are 2 warehouses on this pier, numbered 8 and 9, facing Ba No. 2, built of brick and concrete, with a ground floor and 1 storey a with a capacity of 33,320 cu.m. each. Warehouse 11 has 3 cold stor rooms with a total capacity of 26,000 cu.m. for storage of frozen me chicken and fish products at −30°C.

Depths of water alongside vary, depending upon intensity of dredg but are generally 28 ft. to 30 ft.

Coasting Quay Wall: From Florida Street to Mole F, which is the end the Port, and over a distance of 1,900 m., there is a quay used coastal craft, and on part of which a fish-receiving and industrial plant is being opened; depth in this zone is 15 ft.

A floating dock is also anchored in the N.E. part of this section.

Basin For Inflammables "La Teja". (Also see "Tankers".)

On the North side of the Bay, the National Administration of Alco Cement and Fuels, known as A.N.C.A.P., has a basin with conc walls for the discharge of tankers arriving with oil to their consignme This basin is known as the "Darsena de Inflamables", and has 1 be for tankers on the North side in 30 ft. 6 in. and for liquid gas discha on the Southern side, max. draft 22 ft., while on the West or land s there is a berth for coastal vessels. Width of the basin here is 147 which is the same as the entrance, while the South berth is 248.75 long. On the North berth the jetty protrudes 34 m., and is 96 m. lon

Vessels berth bows to shore, and on leaving turn immediately out the basin, if draft is less than 22 ft., otherwise they must reverse b down the narrow access channel.

The North berth has separate lines for Crude, 10 in. and 12 maximum pressure 105 lbs. Fuel oil, 8 in. and 10 in. with a pum rate of 300 t.p.h. at temperatures between 40°C and 70°C. Diesel Oil/ Kerosene 6 in. connections and pumping rate of 300 t.p.h. Nap 8 in. Lube oils 6 in. lines, 150 t.p.h. and a line for Alcohol 6 in. The no line for Gas. There are 3×5 ton electric cranes and 1×12 ton de crane. Coal and Cement are also discharged at this berth, the coa Decauville cars and the Cement to trucks, handling 750 tons per 8 h day, with 5 gangs.

At the South berth the oil lines are identical, and there is also a f connection for loading or discharging Super Gas, at 200 t.p.h. Th are no cranes at this berth.

The Western berth has the same installations except for Super G and Alcohol.

There are 3 in. water lines at each berth, and use of 2 tugs is esse for berthing or unberthing. At the North berth, vessels fully loaded lie up to 15 m. out from the quay, owing to accumulation of mud will gradually close in as the vessel lightens. Access gangways placed by the Port.

Railway Connections: Basins 1 and 2, River Traffic Basin and Deposits "A" and "B" have railway lines on all sides, belonging t Port Administration, which are connected with the main lines o Uruguayan State Railways.

The Port Administration has 2 electric locomotives used exclus in the port.

Cranes: The Port Administration has 2 heavy-lift floating cran 80 tons and 200 tons capacity, a mobile crane of 20,000 kilos, 46 movable electric cranes of 5,000 kilos each; 5 movable ele cranes of 1,500 kilos each; 1 fixed electric crane of 4,000 kilos; the aforementioned 5,000 kilos cranes, are placed alongside the walls for vessel's operations.

There are also 24 electric trolleys of 1,500 kilos, and one of 1,000 There is a fixed crane for 200 tons on Muelle Escala.

Fiscal Lorries: The Port Administration has purchased special and 12 auto cranes for receiving cargo, as the railway wagons ava are not sufficient to carry all the cargo that is at present being han at this port.

Loading Operations: Loading is effected from carts, lorries and/or wagons and the cargo is hoisted on board with the cranes. Cargo is also loaded from lighters.

Grain Loading: There are 2 mobile grain vacuvators, each of which can load bulk grain at around 60 t.p.h, also 10 smaller machines that can each load around 20 t.p.h.

Fumigation: Montevideo is the only port in Uruguay at which vessels can fumigate, using the cyanide method. The tariff is per cubic metre fumigated over a basic charge which varies according to n.r.t. There are surcharges for overtime.

Disinfection of Mail Bags: To avoid delay through disinfection mail bags can be fumigated on board in a 10% formalin solution and kept in a closed space for 4 hours before vessel gets into port. The closed space will be opened in the presence of a Health Officer who will verify the use of formalin. When in doubt, fumigation will be carried out again and exposed for 2 hours.

Height of Quay above Water: Tide being very small, the height of quay above water only varies from 8 ft. – 10 ft. at LW to 10 ft. – 12 ft. at HW. Wind influence is felt even in the bay, as a South wind will raise water as much as 5 ft., or a Northerly wind reduce it 2 ft. or 3 ft.

PORT EQUIPMENT: *Shore Cranes:*

Berth No.	*No. of Cranes*	*Capacity tons*	*Type*
Muelle de Escala	1	40	Portainer
1 - West	3	5	Demag
1 - East (1/2)	7	5	Skoda
4-5	9	6	Duro Felguera
3 - West (6/7)	2	40	Takraf
	4	12.5	Takraf
3 - (Front)	4	5	Demag
3 - East (8/9)	9	5	Demag
11 - 12	5	6	Duro Felguera
	1	200	Floating

Mobile Cranes/Fork Lifts:

Type	*Capacity tons*	*No.*	*Type*
Fork Lift	2	56	Komatsu
Fork Lift	1	27	Komatsu
Fork Lift	3	10	Komatsu
Fork Lift	12	2	Komatsu
Fork Lift	2	16	Toyota
Fork Lift	1	10	Toyota
Fork Lift	4.5	2	Clark
Fork Lift	28	5	Kalmar (with spreader)
Fork Lift	12	3	Kalmar
Container Crane	60	4	Bellotti
Mobile Cranes	40	2	Poclain
Mobile Cranes	20	2	Poclain
Mobile Cranes	30	1	Bucyrus
Mobile Cranes	1.5/6	13	
Container Trucks	50	12	

STEVEDORES: Working hours: 1st shift, 0700 to 1300 hrs.; 2nd shift, 1300 to 1900 hrs.; 3rd shift, 1900 to 0100 hrs.; 4th shift, 0100 to 0700 hrs.

Normal capacity per gang per hour: *(a)* Rice – about 80/90 tons per gang/hour. *(b)* Meat – about 60/100 tons per gang/hour.

Overtime is compulsory if port is congested.

Lavatory Conveniences for Shore Labour: Each vessel must furnish conveniences for all shore labour employed on board. Work has been stopped until such conveniences are installed. It is advisable, therefore, for vessels calling at Montevideo to be equipped with 2 spare lavatories, 1 for tally clerks and 1 for stevedores, etc.

MEDICAL: Any urgent case must be advised in advance. In normal cases, the Health Service Doctor in the port will visit. For this purpose there are Clinics and Hospitals with optional assistance. Vaccination Certificates are issued by the Port Health Service. There are also private health and medical services which give on-board treatment.

TANKERS: Dirty ballast can be discharged depending on whether or not there is a berth at La Teja, Inflammable Materials Dock. A.N.C.A.P. have the necessary reducers for any type of operation.

Diameter of pipes: Crude – 12 in.
Fuel oil – 8 in.
Dirty ballast – 8 in.

Berth depths: North Quay – 29.6 ft.
South Quay – 22 ft.
West Quay – 14 ft.

DENSITY: This varies according to wind and tide (1006 – 1002). The degree of salinity (max. 10 gm. per litre) is broadcast daily in the weather reports by radio, and varies from fresh to brackish to sea water. Steady South winds give the highest degree of salinity.

FRESH WATER: Fresh water is supplied by the Port Authorities at all quay berths. Request must be made through the Agents, vessels supplying their own hoses where possible. It is important that the water meter should be read together with the Port official both at connecting and disconnecting to verify the exact quantity. Loading rate 20 cu.m./hr. Water also available by barge (capacity 170 tons) loading rate 18 t.p.h. – 20 t.p.h.

FUEL: This can be taken on board whilst anchored in the foreport via two barges, one of 595 tons delivering at a rate of 250 – 350 cu.m./hr., the other of 310 tons at the rate of 200 to 250 cu.m./hr.

Also available from the Uruguayan tanker "Valiente" (capacity 1,337 cu.m. of fuel, rate of 700 cu.m./hr.) or 196 tons of water at the rate of 70 cu.m./hr. This service can be effected outside the port.

A.N.C.A.P. Information: All grades subject to confirmation, the request being made via the Agent 15 days in advance.

	Width	13.72 m.
	Height of water at the stocks	4.75 m.
Maua	Length	79.25 m.
	Length on stocks	74.42 m.
	Depth of water	12 ft.
	Width of pontoon	15.25 m.
	Capacity of operation	2,000 tons

GANGWAY/DECK WATCHMEN: Shore watchmen are compulsory. Arranged by Agents. 1 required on deck and 1 for each gangway. Vessels carrying dangerous cargo must also employ a guard of the Prefectura.

Vessels calling for supplies only, for orders, in distress or to land sick crew members or to enter dry dock, need not employ Watchmen. Repairs afloat require a watchman, if they do not carry out commercial operations.

Shifts are of 8 hours, commencing at 0700 hrs. Vessels under repair, and those at ANCAP moles may fix 12-hour shifts, paying a shift and a half.

If special watchmen are required for goods or working equipment, application must also be made to the Union.

If watchmen are needed in the holds, same applies.

Regulations also require a watchmen in the holds wherever the ship has a crew member, cadet or officer permanently on watch to prevent pilferage. However, where ship's personnel are in the hold to watch the stowage of the cargo, no extra watchman is required. Masters should therefore, advise Agents if they intend to place crew members permanently in the holds during discharge, so that Agents can advise the Association before they make their claims.

Care must also be taken on arrival, since the watchman is on duty from 0700 hrs. on, whereas it may be necessary to place the gangway safety net, etc., before that time, so that Pilot may disembark.

Only those involved in this operation should go ashore. The Receiving Commission may ask for the gangway to be opened before 0700 hrs., which is in order, but no one else should use the gangway to avoid claims from the Union.

Vessels lying in the anteport must provide launches for the transport of watchmen employed.

REPATRIATION: There are facilities for exchanging crews.

AIRPORT: Located 30 minutes away by car. There are various regular services to all parts of the world.

TIME: GMT minus 3 hours. (However changes are possible).

HOLIDAYS: 1st January (New Year); 6th January (Epiphany); 3 days in February (Carnival); 7 days in March or April (Tourist Week); 1st May (Labour Day); 18th May (Battle of the Stones); 19th June (Artigas' Birthday); 18th July (Swearing of the Constitution); 25th August (Declaration of Independence); 12th October (Day of the Race); 2nd November (All Souls'); 25th December (Christmas Day).

On these days, work will always proceed when the Agent or Owner requires it or also if the Port Authority requires it, should there be a number of vessels anchored in the Roads awaiting a berth.

POLICE/AMBULANCE/FIRE: Port Police (Immigration): 95.21.51; Fire Brigade: 91.51.51 to 56 – extensions 139/337. Ambulance: 91.51.51 – extensions 272/382.

Prefecture of the Port of Montevideo: 95.21.27 – 95.21.77, 95.54.05, 95.52.01, 95.22.27, 95.24.27 ext. 07, 91.51.51 ext. 199, 91.93.03, 91.53.71 ext. 199.

TELEPHONES: There are services on all quays. Telephones can be requested by the Agent from the Port Authority.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: The prefecture issues identity cards. Crew not allowed ashore without card.

DEVELOPMENTS: A container park and fish quay have been built alongside the Eastern Quay and in the Mantaras Zone respectively.

A battery of silos will be constructed at C.M.B. (between Warehouses 7 and 8) which will facilitate the loading and unloading of grain.

SHIPMASTER'S REPORT: July 1983 (Updated 1990).

Documents: As per "Guide to Port Entry".

Pilotage: Compulsory. Pilot boards at Sea Buoy. 24 hours' notice required.

Anchorages: As per B.A. Chart 2001.

Restrictions: Max. draft 28 ft. Possible to depart/enter 24 hours a day.

Max. Size: Largest vessels using the port are LASH vessels, length 272 m., beam 30 m. – 40 m., max. draft 28 ft.

Health: Inform Agents of vessel's state of health and request Free Pratique.

Radio: Cerrito Radio Station.

VHF: Vessels must abide by Uruguay Regulations as per Radio Signals Volume 6, Part 2 otherwise will be subject to very heavy fines.

As soon as vessel is inside Territorial Waters, i.e., S.W. of a line bearing 128° from Chui Lt. and West of 50° 50′ W., they must report to the appropriate station on VHF.

Pilots and Port operate on Channel 16.

Tugs: Available.

Berthing: Vessel berthed at Darsena/Muella A. Least depth in channel from sea to berth was 30 ft., distance between sea and berth being 6 miles. Mean tidal range at berth is 2 ft. Nature of bottom at berth – mud.

Cranes: Sufficient quay cranes of 4 tons capacity available. One floating crane of 200 tons capacity available.

Equipment and storage available for breakbulk/palletised cargoes.

Stevedores: Stevedores were very helpful.

Medical: Doctor and hospital available.

Density: 1002.

Fresh Water: Available.

Fuel: Bunker fuel and diesel oil available.

Repairs: Can be undertaken.

Dry Docks: Available.

Surveyors: Lloyds' Surveyor based at the port.

Airport: Available.

General: Fresh provisions, meats, groceries and laundry services available.

AUTHORITY: Administracion Nacional de Puertos, Rambla 25 de Agosto de 1825 No. 160, Montevideo, Uruguay. *Tel:* 96-07-34, 95-03-58. *Telex:* Naveanp Uy 22351. *FAX:* 95-85-35. *Contact:* Ing. Euclides Cotignola, General Manager.

NUEVA PALMIRA: 33.53 S. 58.25 W. (See Plan)

LOCATION: Situated on East bank of Uruguay River, 155 miles above Montevideo. Km. 0 on River Uruguay.

DOCUMENTS: The following documents are required for Port clearance:

Cargo or Ballast Manifest.
Negative Passenger List or List of Passengers, visaed by the Consul.
Crew List.
Stores List.
List of Personal Effects.
Register.
Maritime Declaration of Health.

PILOTAGE: The information required from vessels navigating within the area of the Port Control are:

Time of entry and leaving the area.
International call sign.
Name of vessel.
Flag.
Estimated course.
Latitude.
Longitude.
Port of destination.
Estimated time at port of destination or other point of call.

The area appointed for effecting change of Pilots is the Port Roads. The Pilots arrive at the vessel in a launch 10.6 m. overall length, with cabin, painted orange, owned by the Uruguay Pilots' Corporation.

ANCHORAGE: The area designated for anchoring is located with roads, depth being between 30 ft. and 45 ft.

RESTRICTIONS: There are no restrictions for berthing in the except those imposed by weather conditions (winds, etc.). Vessels b without the aid of tugs.

MAX. SIZE: *Old Port:* Max. draft 23 ft.

New Port: Max. draft 26 ft. 6 in.

Also see "Berthing".

HEALTH: The Health Authorities will require a Crew List and Mari Declaration of Health. In the event of disease being detected on bo the Health Official will proceed to inform the Aid Centre who will arra for a doctor to attend on board, with the vessel placed in quarantin the patient will be transferred to hospital, depending upon the ill discovered. To date, no such occurrence has arisen in the port.

RADIO: VHF equipment with permanent listening out on Channel 1

RADAR: There is no radar equipment.

VHF: All communications are effected by means of VHF equipment. T call sign is CWC 31 – "Control Palmira Prefecture", and the follow Channels are used: 6, 8, 9, 11, 12, 13, 14, 16, 25, 26, 68 and 69. T station operates permanently on Channel 16, the frequency be 156.800 MHz.

TUGS: The service of a tug is not necessary for berthing vessels.

BERTHING: The port has the Official Quay and the quay owned Navios.

Official Quay: Length 240 m., length of the head 80 m., width in t centre 40 m.

Navios Corporation Transfer Station: Navios Corporation is a priv company that owns and operates a Transfer Station located in Nu Palmira Free Zone.

Facilities: Unloading, storage and loading of materials in bulk, like and grains. For these services, it has 2 docks (one for barges and other for vessels and barges), cranes, conveyor systems, wareho and stockpile.

Unloading: It is possible to unload vessels up to 28 m. breadth a 16.5 m. depth by crane and clamshell in the exterior dock. The unloa rate is 300 tons/hr. for wheat, and it varies with the stowage facto different commodities.

For unloading barges, Navios has 2 docks (exterior and interior). T exterior one, with Marion crane, can unload grains at 300 tons/hr. a ore at 400 tons/hr. The interior one (1991 investment), with Lieb crane, admits simultaneous work with 2 barges on both sides of t dock (this avoids losing barge shifting time). Cleaning of barges a vessel's holds is performed by the Navios payloader.

Storage: Stockpile for ore with a capacity of 50,000 metric tons.

Three warehouses divided into 11 silos for grains (total capa 75,000 metric tons).

Goods' identity (classified by customer) is maintained to prese quality and quantity.

Loading: Vessels must be ocean bulk carriers up to Panamax s (225 m. length, 32 m. breadth, 18 m. depth), and appropriate for be loaded by conveyor with flexible spout that is provided by Nav Trimming and spout position will be carried out by Navios person No manual trimming is performed. The vessel must shift from ster bow by her own means and at her own expense. Loading rate from to vessel (grains) is 400 t.p.h. and 700 t.p.h. from stockpile to ve (for ore).

Mooring Conditions: With Uruguayan "Rio Uruguay" Pilots and wi tugs (bow towards North position).

Navios dock draft: 28 ft. below Chart Datum (the water level is al always 2 ft. above zero). Vessels can arrive from Martin Garcia (max. 21 ft.).

Sailing draft: 28 ft. across Parana River and Mitre Channel.

Transhipments: It is possible to load vessels directly from barges t both docks for grains and also for ore.

Conveyor System: It permits combined operations, including vess barges, trucks, stockpile and silos, in all imaginated combinations.

It is possible to work simultaneously by loading a ship from si barges, and unloading from the other dock to silo or stockpile avoi the river transportation's delay.

Labour Rules: Navios does not use stevedores as it uses its personnel. If customers require, it is able to work 24 hours a including Sundays and labour holidays.

Supplies: Navios supplies fresh water free of charge.

Operator: Corporacion Navios Sucursal Uruguaya, Zona Franc Nueva Palmira, Nueva Palmira, Uruguay. Tel: (598-544) 6183, 6 Fax: (584-544) 6492.

Montevideo Office: Juan Carlos Gomez 1445, Esc. 701 Esquin de Mayo. Tel: (598-2) 956509, 964273, 963310. Fax: (598-2) 96 Telex: 22041 Navigen Uy.

CRANES: The Official Quay is equipped with 3 cranes of the Na Port Administration. They are mobile cranes on rails. Two ar 3,000 kg., and the third is for 5,000 kg.

STEVEDORES: As soon as the vessel communicates the ETA a port, the Agent will make all necessary arrangements for steve services to commence work as soon as the vessel has obtained Pratique. These services will be made available dependent upo tasks required to be fulfilled.

MEDICAL: The local Public Health Aid Centre is entrusted furnishing any medical aid which may be necessary on board.

BULK HANDLING FACILITIES: There are no tanks, but there warehouses for storing grain and general cargo. These wareho belong to the National Port Administration and to the Free Zone are located within the port area.

FRESH WATER: Fresh water is supplied by the National Administration.

FUEL: There is a fuel storage depot within the port area, and sho be necessary to supply bunkers to a vessel, application has to be to ANCAP who will supply via tanker trucks.

FIRE PRECAUTIONS: Fire Station and fire engine available.

CONSULS: There are none at local level. In the town of Carmelo, 21 km. from Nueva Palmira, there is the Consulate of the Argentinian Republic.
REPAIRS: Minor repairs possible.
SURVEYORS: None available.
GANGWAY/DECK WATCHMEN: The service of watchmen is not necessary, unless the vessel is carrying flammable cargo.
HATCHES: Opening and closing of hatches is normally carried out by stevedores. MacGregor hatches opened/closed by crew.
CUSTOMS ALLOWANCE: Each crew member is permitted to carry out of the bonded ship's store, 5 kg. tobacco, 2 cartons of cigarettes and 2 bottles of wine.
CARGO GEAR: Normally, loading and discharge are effected by means of land-based equipment.
REPATRIATION: There are facilities for changing crews, and to effect any repatriation necessary. In both cases, the arrangements are carried out with the participation of the Immigration Authorities and the Maritime Agency concerned.
AIRPORT: There is the airport of Zagarzazu located between Nueva Palmira and Carmelo, approximately 15 km. from this town. Local airport for small airplanes (Suarez Noya) is 8 km. from city.
TIME: Local time is GMT minus 2 hours.
HOLIDAYS: 1st January, 19th April, 1st May, 19th June, 18th July, 25th August, 12th October, 8th December, 25th December. Holidays do not interrupt operations on vessels.
POLICE/AMBULANCE/FIRE: Police: Tel. 544-6042, Ambulance: Tel. 544-6082. No fire brigade.
TELEPHONES: It is not possible to have telephones installed on board vessels.
SERVICES: There are stevedoring services, Maritime Agents and Customs Clearance Agents.
SHORE LEAVE: Once Free Pratique is granted, there are no prohibitions for crew members going ashore.
DEVELOPMENTS: The lengthening of the head of the Official Quay by 100 m. to the North is planned. Grain Silo with capacity of 25,000 tons to be built.
AUTHORITY: El Sub-Prefectura de Nueva Palmira, Nueva Palmira, Uruguay. *Tel:* 544-6139. *FAX:* 544-6194.
Also see "Montevideo".
AGENT: Antonio Vico y Cia., Gral. Artigas 1171, 70101 Nueva Palmira, Uruguay. Tel: (0544) 6037, 6765. Fax: (0544) 6426. Telex: 29015.

PAYSANDU: 32.18 S. 58.06 W. (See Plan)

LOCATION: Situated on the East bank of Uruguay River, 380 km. above Montevideo. Km. 204 on River Uruguay.
DOCUMENTS/PILOTAGE/HEALTH/RADIO: See "General" at beginning of Uruguay section.
RESTRICTIONS: River navigation controlled by depth in the passes at Chiron, Vera and Urquiza. Since river conditions vary from season to season, Agents should be consulted beforehand regarding available draft at any particular time.
ANCHORAGE: Off Montevideo.
MAX. SIZE: Up to 15 ft. draft fresh water, depending on river conditions.
TUGS: Available.
BERTHING: Grain Elevator Berth: 20 ft. depth alongside at zero tide.
Coastal Berth: Length 300 m. Depth 11 ft. at zero tide.
ANCAP Pier: 1 berth for tankers, 30 ft. depth at zero tide.
There is 1×5 ton crane on the grain quay and 3×3 ton cranes on the coastal berth. Loading on the ANCAP berth is by lorry.
STEVEDORES: Working hours: 0800 – 1200 and 1430 – 1800 hrs. Saturdays: 0800 – 1230 hrs.
MEDICAL: All assistance available.
FRESH WATER: Available at all berths.
FUEL: By negotiating through the intermediary of the Customs Clearance Agent the required quantity is delivered.
REPAIRS: Minor repairs can be effected.
CONSULS: Local representation for Argentina, Brazil, Italy and Paraguay. All other Consuls at Montevideo.
GENERAL: Refer to "Montevideo" for all general information.

NOTES

Please also advise Shipping Guides Ltd.

Republic of Vanuatu

PORT VILA: 17.45 S. 168.18 E. (See Plan)

PORT LIMITS: A line drawn between Pango Point and Devil's Point.

DOCUMENTS:

Last Port Clearance.
2 Crew Lists.
2 Passenger Lists.
2 Cargo Manifests.
2 Stores Lists.

Log Book, Derat and usual Ship's Certificates to be available for inspection.

PILOTAGE: Compulsory for all vessels over 60 m. in length. Pilot boards 2 miles West of the Fairway Buoy, on the leading lights. Pilot launch displays the Pilot (H) flag by day and white over red light at night when engaged on piloting.

24 hours' notice of ETA to be given.

Telegrams/Telex for Pilot should be addressed to Harbour Master, Vila, or advise through Agents. ETA messages for night arrivals, weekends and public holidays must arrive during office hours, Monday to Friday. VHF watch is kept on Channel 16 during working hours. Contact normally made 2 hours before arrival at pilot station.

ANCHORAGES: When a vessel has to await a berth or tide, the Master may anchor in the main bay North of the leading lights (1,200 m. from lower lead) and well clear of vessels leaving Pontoon Bay; or as directed by the Harbour Master.

RESTRICTIONS: No restrictions except that no services will be provided after 2300 hrs. and before 0500 hrs., unless in emergency or by prior arrangements.

MAX. SIZE: Governed by berth size and max. LOA 250 m.

HEALTH: Pratique messages should be addressed to Harbour Master. If vessel not healthy, medical advice should be requested through Agents.

Pratique messages will not normally be responded to if the vessel is healthy.

RADIO: Messages or communications possible via Port Vila Coastal Radio. Call sign YJM.

VHF: Port and radio station keep watch on Channel 16 during working hours.

RADAR: No radar services.

TUGS: One tug available for berthing/unberthing. 780 h.p., 14 tons bollard pull.

BERTHING:

Main Government Wharf: Steel pile and concrete decking construction; with bollards 30 m. from each end of the wharf. Length of wharf 212 m, width 9 m. and depth 10.7 m. alongside. Loading/discharging by ship's gear.

Transit storage 2,000 sq.m.; open storage 1,000 sq.m. Can take Ro/Ro traffic.

Arammadi Wharf: Privately owned. Length 55 m., depth 8.2 m. alongside. Vessels of 150 m. length can berth safely. Ample open storage, but no closed storage.

Town Wharves: 2 small wharves on town waterfront, depth 2.5 m. alongside. Also see "Tankers".

CRANES: None available.

STEVEDORES: *Working Hours:* Monday to Friday: 0700 – 1100, 1300 – 1700, 1800 – 2300. Saturday: 0700 – 1500. Sundays and Public Holidays: No cargo work. Gangs to be ordered previous day by Agent.

MEDICAL: Government hospital with full facilities. Private doctors and dentists available. Arrangements may be made in advance with Agent by telex or on arrival.

TANKERS: Tankers anchor using a "Mediterranean Moor" with 2 lines to the shore. Due to bar at entrance to bay, entry is made at HW only with controlling draft of 7 ft. plus height of tide. Max. size 1,500 d.w.t.

There is an overhead power cable between Iririki Island and the mainland with a vertical clearance of 19 m.

DENSITY: 1025.

FRESH WATER: Available at main wharf at a filling rate of about 38 t.p.h. At the Star Wharf fresh water available at a filling rate of about 2 t.p.h. Water is good quality and potable.

FUEL: Fuel can be supplied by Shell, Mobil and B.P. by road tanker.

CONSULS: Australia, China, France, New Zealand, Papua New Guinea, Sweden and U.K. are represented.

The E.E.C. and E.S.C.A.P. also have resident representatives.

REPAIRS: Small repairs can be undertaken.

DRY DOCKS: None.

SURVEYORS: Classification Societies' Surveyors can be brought from Fiji and New Caledonia at short notice.

GANGWAY/DECK WATCHMEN: Not available or necessary.

OPENING/CLOSING HATCHES: Hatches are normally opened and closed by ship's crew.

CUSTOMS ALLOWANCES: 200 cigarettes or 100 cigarillos or 50 cigars or 250 grammes tobacco. 2 litres of wine and 1.5 litres of spirits.

CARGO GEAR: Ship's gear used for loading/discharging. 11 forklifts from 2 – 20 tons, 1×22 ton flat-bed truck, 1 flat-bed truck with 19 ton crane, 1×8 ton tipper truck, 1 prime mover, 1×20 ton semi-trailer, 1×10 ton tilt trailer, 3×3 ton trucks and 1×20 ton container top lift frame (20 ft. containers) available.

REPATRIATION: Arranged by Agent.

AIRPORT: Bauerfield International Airport in Vila about 5 km. from port. Daily services to Noumea. Regular services to Fiji, Auckland, Sydney, Brisbane, Honiara, Papua New Guinea and Naura.

TIME: GMT plus 11 hours. GMT plus 12 hours from late September to late January.

POLICE/AMBULANCE/FIRE: Police, Tel: 22222; Ambulance, Tel: 22100; Fire, Tel: 22333.

TELEPHONES: Available on board at Main Government Wharf through Agent.

SERVICES: Diver available. Tinned, frozen meat and vegeta available, also bonded stores.

BANKS: Available.

SHIP SUPPLY SERVICE: Tug "Roimata" and pilot boat "Tekoni II" c be used in an emergency for transport of personnel/essential sto There are various charter boat operators who can be mobilised thro the Department for Emergency Operations.

SHORE LEAVE: No restrictions.

IDENTIFICATION CARDS: Not required.

GARBAGE DISPOSAL: Collection service available if reques through ship's agent.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: Usual local facilities.

CURRENCY: Vatu.

REGULATIONS: No special regulations.

DELAYS: Only when more than one ship in port.

GENERAL: *Charts:* B.A. 1493 and 1494 cover this port.

DEVELOPMENTS: The privately owned 50 m. wharf to be extende 40 m. and strengthened for container handling. No date yet fixed commencement of construction.

AUTHORITY: Ports and Marine Department, Private Bag 46, Port Vanuatu, S.W. Pacific. *Tel:* 22339. *Telex:* Vangov 1040 *Contact:* Captain Leith Nosak, Principal Marine Officer Tel: 23646 (home). Paul Peter Lenis, Harbour Master. Tel: 2 (home).

SANTO: 15.31 S. 167.11 E.

The Port of Santo is sometimes referred to by the name of the old 'Luganville', but nowadays the port and the town are usually ca 'Santo'.

PORT LIMITS: The Port of Santo includes that area of the Seg Channel bounded in the East by a line running due North from B Rock Point on Aore Island (from the 'Black Rock' on B.A. Chart 17 This is known as Pointe Chapuis on French charts. It is bounded in West by a line running due East from the Renee River on the islan Espiritu Santo.

DOCUMENTS:

Last Port Clearance.
2 Cargo Manifests.
1 Crew Declaration.
2 Animals Lists (Nil if none aboard).
2 Prohibited and Restricted Goods (Arms and Ammunition).
2 Lists of Ship's Stores (Cigarettes, Tobacco, Alcohol, etc.).
6 Crew Lists.

All the above can be provided on ship's paper.

The following is a Vanuatu form which can be filled in on arrival Ship's Report and Arrival Declaration (Vessel's Details).

PILOTAGE: Telegrams for the Pilot should be addressed 'Har Master Santo' or advice passed through Agents. ETA message night-time and week-ends must arrive during office hours Monda Friday.

Ships calling at Port Vila first, may pass ETA Santo throug Harbour Master at Vila.

VHF watch is kept during office hours on Channel 16 and for 2 h prior to all advised arrivals. Pilot boat also watches Channel 16.

The pilot boat is a 12 m. boat with white hull and superstruc She has 'Pilot' in black letters on the cabin and exhibits a pilot She carries a red flashing light with her pilot lights at night.

The pilot station is 1 mile East of Black Rock Point at the Eas entrance to the Segond Channel. By day and in good visibility the may board or disembark at the South-Western end of the Seg Channel South of Georges Philippar Pass, though this is not normal should be by prior arrangement.

Pilot ladder should be rigged in accordance with the S.O.L convention.

ANCHORAGES: Vessels may anchor anywhere in the Segond Cha except in the 'Prohibited Anchorage' close off the Main Wharf (wh shown as 'Dock No. 3' on B.A. Chart 1736). There is a patch w least depth of 14 fathoms 1 mile S.S.W. of the main wharf wh recommended for anchoring, especially for smaller vessels se shelter from the S.E. trades. A strong tidal current, normally 3 knots, runs in the channel and vessels should give plenty of sc

RESTRICTIONS: There are no restrictions on entry. However stevedores do not work from 2300 hrs. to 0700 hrs., vessels due to between these times are *recommended* to slow down, save fuel arrive at the pilot station at 0530 hrs. or 0600 hrs. to berth in day

MAX. SIZE: Governed by berth size only.

HEALTH: Pratique messages should be addressed to Harbour M with ETA message. If vessel is *not* healthy, Harbour Master will a action to take. Pratique messages will not normally be responde vessel is healthy. Vessels arriving from Port Vila do not require Pra

RADIO: Message should be sent via Port Vila radio, call sign YJ

VHF: A port watch is kept on Channel 16 during office hours Mo to Friday and from 2 hours prior to advised ETAs. Call 'Harbour M Santo'. The pilot vessel also watches Channel 16 VHF when on pi duty.

RADAR: No radar service.

TUGS: None, but one may be obtained in emergency from Port

BERTHING: Salt water Berth 140 m. long with a depth of 10.5 LWS, and this is the maximum draft. Vessels can, and usua overhang the ends of the wharf with lines on dolphins or bollards shore. Dolphins are situated 22.5 m. East and 35 m. West of the

Also see "General".

RANES: None.

ULK CARGO FACILITIES: Stevedores are currently interested in perimenting with bulk loading of copra (rather than from bags) and rious methods are used to suit different ships. All methods, however, quire lifting by ship's gear. There is interest in the construction of a mall coconut oil mill, storage tanks for which are already constructed.

RIDGES: None.

TEVEDORES: Stevedores work 0700 hrs. to 1100 hrs., 1300 hrs. to 00 hrs. and 1800 hrs. to 2200 hrs. Advice given at least the previous y by Agents should be sufficient. Stevedores do not work on Sundays, r if avoidable on public holidays.

EDICAL: Medical attention can be arranged after arrival and there is hospital in Santo. However, medical treatment that is not of an mergency nature should be sought elsewhere.

ANKERS: Tankers berth at the main cargo wharf. The discharge line 8 in. and the rate of discharge is 150 tonnes per hour.

ENSITY: 1025.

RESH WATER: Vessels can take up to 500 tonnes if 2 working days' otice are given. Otherwise the maximum amount may be as little as tonnes. Water is good though a little hard.

UEL: Small quantities can be arranged by truck. Large quantities can e delivered by the 8 in. tanker discharge line, but must be by prior rangement with Shell or Mobil. Santo is not normally a bunkering port.

RE PRECAUTIONS: All normal precautions only.

ONSULS: None.

EPAIRS: No shore facilities suitable for larger vessels.

RY DOCKS: None. Slipway for vessels up to 50 m. length.

URVEYORS: None.

ANGWAY/DECK WATCHMEN: Not considered necessary.

ATCHES: Hatches are opened and closed by either crew or evedores. Recommended that crew carry out this operation on copra ading ships.

USTOMS ALLOWANCES: (Per crew member) 200 cigarettes or 00 cigarillos or 50 cigars or 250 grammes tobacco. 2 litres of wine and 5 litres spirits.

ARGO GEAR: Ship's gear only. Ashore: 5 forklifts (from 2.5 to 22 nnes), 2×3 tonnes flat trucks, 1×6 tonnes dump truck, 8 tractors, 0×2 tonnes trailers and 1×22 tonnes container carrier are available. o lighters available.

EPATRIATION: Possible from Santo Airport via Port Vila.

IRPORT: Santo International Airport is about 6 km. from town.

ME: GMT plus 11 hours. GMT plus 12 hours from late September to e March.

OLIDAYS: Holidays vary from year to year. It is recommended to seek dvice of local Agents. It is not normally possible to work cargo on public olidays or Sundays.

OLICE/AMBULANCE/FIRE: Police tel: 222; Fire tel: 316; Health fficer tel: 419.

Police station is close to the wharf. There is no ambulance service. e fire service consists of 1 fire tender operated by Public Works epartment. The Harbour Master has some hoses and a small foam nerating machine stationed on the wharf.

ELEPHONES: There is a public telephone in the Post Office near the arf.

ERVICES: None.

TORAGE: General cargo sheds of 6,000 cu.m.; 9,000 cu.m. of copra orage. Container yard for 200 TEUs. There is a minimum of 500 cu.m. of open storage.

HORE LEAVE: No restrictions.

ENTIFICATION CARDS: Not required.

ARBAGE DISPOSAL: Not available.

ASTE OIL DISPOSAL: Not available.

EAMAN'S CLUBS: No club. Some local facilities.

URRENCY: Vatu. U.S.$ 1.00 = 100 Vatu (approx.).

ELAYS: Only for stevedores non-working times or when there is more an 1 ship present in the port.

EGULATIONS: No special regulations.

ENERAL: Tidal stream in the Segond Channel can reach as much as knots, the Westerly flood stream being predominant and the East going b stream occasionally absent. The flood stream can set in a North-esterly direction at the main wharf, thus setting a vessel down onto e wharf and making an apparently simple berthing manoeuvre a little fficult. It is recommended that when S.E. trades are blowing, and a essel has to berth port side to in order to stem the tide, the starboard nchor should be laid off whilst berthing with about 5 or 6 shackles ading 2 points for'd of the beam. This is to heave the bow away from e wharf on departure.

UTHORITY: Department of Ports and Marine, Box 148, Santo, anuatu. *Tel:* 739 (office); 454 (home). *Contact:* Captain M. Toa, arbour Master.

NOTES

Please also advise Shipping Guides Ltd.

Venezuela

GENERAL:

BERTHING PRIORITY: The Venezuelan Ministry of Communications has decreed, through the Directorate General for Transport and the Port Captaincies, the following new docking priority system:

1. Vessels owned by the C.A. Venezolana de Navegacion or chartered by that company.
2. Venezuelan vessels belonging to private companies.
3. Vessels of other countries.

Previously, vessels chartered by the C.A. Venezolana de Navegacion did not get priority treatment and it is understood that, with these new priorities, the number of vessels with docking privileges has been tripled, thus resulting in greater delays for vessels operated by foreign companies.

DOCUMENTS: *Prior to Arrival:*

Arrival Notice: The Agent must submit 24 hours in advance of the vessel's arrival, a letter-notification indicating date and time of arrival, name and nationality, name of Master, length, gross and net registered tonnage of cargo for the port, origin, destination, shipper and agency, in 16 copies, with the following distribution:

Captain of the Port, Customs (2), The National Institute of Ports-INP (3), Armed Forces of Cooperation, National Guard, Police Intelligence Service Bureau-DISIP, National Bureau of Identification and Alien-Immigration, Interpol, Ministry of Health and Social Welfare-Public Health Unit, Ministry of Agriculture and Livestock-Animal and Plant Health, Post Office and Chamber of Commerce.

Information on Cargo and Passengers for the Port: The agency must receive by airmail, sufficiently in advance, the following documents to be submitted to the authorities at least 24 hours before the vessel's arrival:

Documents	*Captain of Port*	*Customs*	*INP*	*Agency*	*Total*
Cargo Manifests(a)	–	1	3	3	7
Correction Letter to Manifest	–	1	–	1	2
Bills of Lading	–	–	2	1	3
Stowage Plan(b)	–	–	1	2	3
Cargo List	–	–	10	–	10
Container List	–	–	12	–	12
Dangerous Cargo List	2	–	1	1	4
Passenger List	–	–	–	1	1
Mail List	–	–	1	–	1

(a) As of January 29, 1979, the Cargo Manifest may be submitted on LAFTA/OAS Form 2, instead of on the Venezuelan Freight List (Sobordo).

(b) The Venezuelan Shipping Association is negotiating to have the stowage plan submitted to the National Institute of Ports on the vessel's arrival, instead of 24 hours in advance.

Request for Port Services: 24 hours before the vessel's arrival, the agency must submit to the Captain of the Port the request for pilotage, towage and berthing.

At the same time, it must request permission to disembark and embark passengers and cargo and unload merchandise, on a form addressed to the Customs Administrator, with copies to the INP and the National Guard.

Additional Requests: The agency must draw up and submit to the National Institute of Ports, 24 hours before the vessel's arrival, 12 copies of the cargo index, a document corresponding to tally books.

On Arrival:

Type of Document	*Number and distribution of documents*						
Basic forms	*Captain of Port*	*Customs*	*INP*	*National Guard*	*Public Health*	*Others*	*Total*
General Declaration	1	1	1	1	1	2(a)	7
Cargo Manifest	1	3	–	–	–	–	4
Crew List	2	2	–	2	–	5(b)	11
Passenger List	1	2	3	2	–	5(b)	13

Vaccination List	–	–	–	–	1	–	1
Narcotics List	–	2	2	1	–	–	5
Firearms List	–	2	2	1	–	–	5

(e) DISIP, Bureau of Military Intelligence, Interpol, Identification and Tourism.
(f) When a vessel returns to the country goods missing in unloading other vessels, it shall submit, in addition to the cargo manifest a return cargo manifest containing the data required for the manifest and the name of the vessels on which the goods were originally manifested (Organic Law of Customs).
(g) Eliminated by the Organic Law of Customs.

Prior to Departure:

Clearance Documents: At least 6 hours in advance, the reque the clearance permit must be submitted to the Captain of the Por

Request for Pilotage: Also 6 hours in advance, or more, the req for pilotage must be submitted to the Captain of the Port.

SHIPMASTER'S REPORT: July 1982 – WARNING.

You may wish to caution all seafarers who may in the future tra Caripito, and the other similar jungle areas. The problem in this used to be mosquitoes, but although they are still around, the prob that we have recently experienced is a moth locally know 'Palometas'. One doctor referred to it as an insect 'Hylesia Canit

My information is limited, due to language difficulties, but the prob is very real, and I cannot caution the unaware strongly enough to precautions. The vessel has traded to Caripito frequently over the two years, and this would appear to be the first experience as I can nothing about these moths in writing and our first warning was g when an Agent saw some of these moths onboard. This type of m appears suddenly from the jungle with no regular cycle, and like o moths is attracted at night by lights, be they from vessels, home berth installations. They are about *one inch* in length, their bodies a pencil thickness and filled with eggs. They flutter in vast numbers an the lights, and it would appear that the dust, pollen, hair or wha comes off them, falls onto the ship's structure or persons nearby. T do not bite and therefore I assume the dust, breathed in or landi the skin causes a red pimply rash which gradually spreads over whole body. It affects everyone differently, some crew were covere a very heavy bumpy red rash within a few hours of exposure, ot only in small patches on the arms which spread over the body ta several days, but in all cases causing extreme discomfort due to itching and constant desire to scratch. At first it was only crew who w on deck that were affected, but as I assume the dust was brough the accommodation by clothing, fans and the moths which got pas doors, the engine and catering crew were similarly affected.

Over two thirds of the crew were treated locally within 24 hours, injections, tablets, lotions & creams but this only brought tempo relief. Rashes picked up 10 days ago with the first incident are clearing up, but fresh rash areas appeared when we visited the Car area 3 days ago. We are on a weekly schedule, and one would t we will build up a resistance to this problem. The local people also s from this rash, but the ones I met only had a very light rash on a neck and body. They cannot say how long the moths will be pre varied reports of two weeks to months. However, we are now adop the following anti-moth measures:

1. Put the air conditioning on recirculation, ensure all openings closed.
2. At night when underway, blackout the vessel as much as poss During the San Juan River passage to Caripito, navigation lights situation if possible.
3. When you anchor in San Juan River to wait for the tide or b at Caripito, blackout the vessel and allow no one outside if possib night, anchoring or picking up by torchlight. Having anchor lights o night is debatable, the local dredger does not.
4. Wash the vessel down completely at daybreak, and sweep all t moths off the deck.
5. For night mooring/deck operations, have as few lights on as s possible, all exposed crew should cover themselves comp particularly around the neck area.
6. After clearing the Maturin Bar (river entrance) wash down the w ship. The dust off the moths is still active days after leaving the Wash all filters of air conditioning units.

Knowing about this problem could have reduced exposure to wh an extremely unpleasant experience, and I have urged the installation to include a warning in their Port Information Guide.

AMUAY BAY: 11.46 N. 70.15 W. (See P

OPERATORS: Lagoven, S.A.

ESSENTIAL REQUIREMENTS:

1. Incoming vessels must send ETA at least 3 days before arr Amuay Bay. During hours of darkness all vessels must ide themselves on arrival either by radio-telephone or Aldis, pref the former.
2. If a ship originally cleared for another port (including some Venezuelan port) is diverted at sea to Amuay Bay, o information must be radioed prior to arrival to avoid heavy fine or delays. See "Radio".
3. No dirty ballast may be pumped overside in port or in Venez coastal waters. Ballast disposal facilities are available at Am Terminal.
4. The use of Venezuelan Government Pilots is compulsory docking and for movements inside the bay.
5. The Venezuelan flag should be displayed at the mast-head d daylight hours by ships anchored and berthed in Venez waters.
6. In addition to other clearance documents, 2 copies of an ite list of articles in the ship's chest must be presented to Auth on arrival.
7. Emergency fire signal is 5 long blasts on ship's whistle or No other signal is to be given in the case of emergency.
8. Ratguards must be in place on all mooring lines.

LOCATION: The port of Amuay Bay is located on the Gulf of Ven on the West Coast of the Paraguana Peninsula, Venezuela. Th buoy marking the entrance to the bay is located in Lat. 11° 44' 2 Long. 70° 14′ 50″ W.

DOCUMENTS: Inward Clearance is effected on board immediately after docking by Government Port Officials and a representative of the Marine Department. It is necessary that the following documents be ready on arrival:

Clearance from Last Port.
Ballast Certificate from Last Port.
Crew Lists (5 copies).
Passenger Lists (5 copies).
Baggage List (3 copies).
Lists of Personnel Effects (3 copies).
Stores Lists (3 copies).
Lists of Slop Chest (3 copies).
Sailing Permit (Zarpe).

Vessels arriving with cargo to discharge, will also require:

Manifest (Sobordo) (1 original and 2 copies from each loading port).
Bills of Lading, 1 original and 5 copies from each loading port.
Tally Books (6 from each loading port).
Commercial Invoices (3 from each loading port).

Although vessels proceed directly to Amuay Bay, clearance documents should be prepared showing the port as Las Piedras, Paraguana (Amuay Bay). Failure to observe this requirement may result in penalties up to a maximum of Bs.2,000.

Admeasurement Certificate: All ships calling at a Venezuelan port for the first time must be measured for tonnage by the Captain of the Port. It is the usual practice to take ashore the ship's Panama Canal or Suez Canal Certificate, or any other certificate with which Venezuela is in agreement, which is used as a basis for recalculating tonnage under the Venezuelan Regulations, and is returned before sailing. The Venezuelan Admeasurement Certificate, when later issued, is forwarded to the owners. A fee is charged for this certificate, which is payable only on the ship's first call. Vessels registered in the following countries are excluded from the above regulations: Denmark, France, Germany, Ireland, Netherlands, Norway, Portugal, Sweden, United Kingdom and U.S.A.

Vessels that were originally cleared for another foreign port, or another Venezuelan port, and were subsequently diverted at sea, should radio the following information to "Lagomar-Judibana" prior to arrival:

Vessel's name
Master's name
Vessel's flag
Number of crew
Estimated time
of arrival.

Last port of call
Port for which originally
cleared
Grade and quantity of cargo
to be lifted.

This information is required in order to make in advance special arrangements for Inward Clearance, to avoid payment of fine.

Outward Clearance and cargo documents are delivered on board by the Marine Dispatcher. However, in order to obtain the sailing permit, a special form, delivered on board on arrival, must be completed, not later than 2 hours before sailing time. This form gives cargo and freeboard information by the Captain of the Port.

In the event the berth is required by another vessel, a vessel having completed loading may be required to vacate the berth promptly and proceed to anchorage to await cargo documents.

PILOTAGE: Pilots are employees of the Venezuelan Government and pilotage is compulsory for vessels entering or leaving the harbour. The Marine Department will arrange for Pilots to board all vessels as necessary.

The Pilot acts in an advisory capacity; the Master retains responsibility for the ship at all times. In the event it becomes necessary to disregard the Pilot's instructions in order to ensure the safety of the ship, the Master must forward through the Marine Department a full written report of the circumstances, for delivery to the Captain of the Port.

ANCHORAGES: For vessels awaiting berth, there is a good anchorage about 1 mile N.W. of the sea buoy in 8 to 12 fathoms with a sand and mud bottom. Ship Masters are requested not to anchor at a distance greater than 3 miles from the sea buoy.

RESTRICTED AREA: A restricted fishing area has been established by the Venezuelan Government which is prohibited for mechanically propelled vessels drawing more than 5 ft. This zone lies within the area of the Paraguana Peninsula from Punta Macolla, Lat. 12° 5′ 32″ N., Long. 70° 12′ 55″ W., to Punta Estanques (Los Taques), Lat. 11° 48′ 45″ N., Long. 70° 16′ 45″ W., and a line connecting the positions below indicated: Lat. 12° 07′ 40″ N., Long. 70° 14′ 25″ W.; Lat. 12° 03′ 15″ N. Long. 70° 19′ 23″ W.; Lat. 11° 49′ 25″ N., Long. 70° 21′ 50″ W.

MAX. SIZE: Length 1,000 ft.; draft 43 ft. Also see "Berthing".

HEALTH: *Sanitary Inspections:* A close control of veneral diseases has been put into effect by the Government Sanitary Office.

Immediately after docking a Sanitary Inspector will board the vessel and all Crew members will be checked before going ashore.

Those persons found with infection must be sent to the Government Anti-venereal Clinic for proper medical attention and return to vessel before sailing. 20 Bolivares per ship.

Shore passes will be granted to all healthy persons.

Masters are required to co-operate in this campaign.

RADIO: The cable and telegraphic address for the Lagoven S.A. at Amuay is "Lagomar Judibana". Radio messages to and from ships at sea are routed through "Shipward 2 New York" for retransmittal through Aircon system to Judibana (Amuay Bay).

Radio Notice of Arrival should be sent 72 hours prior to arrival at Amuay. The message should include the following:

(1) Vessel's name.
(2) Flag.
(3) Last port.
(4) Next port.
(5) Crew List to include name/nationality/Passport number/time onboard/home address.

Ship-to-shore telephone: Radio-telephone listening watches are maintained on a 24-hour basis in the Marine Office on the following frequencies: 2182 kHz.; 156.8 MHz.

International telephone: International telephone calls are routed through Caracas, Venezuela. Telephone number is Punto Fijo area 069-51557 (It is usually difficult if not impossible to complete a call.). Telex: 54193 Lagoven.

Also see "Documents".

TUGS: Tug assistance is considered essential and is afforded all vessels entering, leaving or shifting in the harbour by 2 × 1,600 h.p. tugs. Disposition and manoeuvres of tug-boat are directed by the Pilot, who uses a "walkie-talkie" to convey orders to the tugs.

BERTHING: 4 finger piers provide 8 berths, numbered 1 to 8, from South to North.

Berth	1	2	3	4	5	6	7	8
Max. Arrival d.w.t. (m.t.)	70	92	24	44	16	30	16	30
Max. departure d.w.t. (m.t.)	112	112	48	48	38	38	94	94
Max. Draft (S.W.)	43′	43′	*37.6′	*37.6′	*37.6′	*37.6′	*37.6′	43′
Max. Length Ship	1000′	1000′	650′	700′	700′	700′	856′	856′
Max. Beam	Unl.	Unl.	Unl.	†	†	†	†	Unl.
Bow to manifold distance	495′	495′	300′	320′	330′	330′	340′	340′

Ballast line, fresh water and all grades bunkers at all berths.

*The max. draft will be increased to 40 ft.

†Max. beam permissible varies dependent upon the beam of vessel berthed on other side of the slip.

The use of an anchor when docking is permitted at all berths. It is considered prudent to have the outboard anchor hove-out prior to entering the harbour in order to facilitate speedy release if necessary while docking. The Pilot will advise whether the ship is to be berthed port or starboard side to the dock.

Products handled:

Berths No. 1 & 2: F.O., heating, heavy distillates, TJ-102, topped crudes, all crudes.

Berths No. 3 & 4: Lubes, F.O., LCT asphalts (penetration).

Berths No. 5 & 6: Naphtha, jet fuel, crudes, F.O., heating, MC/RC asphalts, kerosene, TJ-102, topped crudes, LCT (pref.).

Berths No. 7 & 8: Naphtha, kerosene, heating, F.O., jet fuel, MC/RC asphalts, all crudes except TJ-102.

LOADING: Loading rates particulary for low-flash products loaded during the hours of darkness or when topping-off cargo tanks, will be reduced by the terminal to meet existing conditions.

All loading and discharging will be stopped during the passage of an electric storm, and ullage covers must be closed and dogged down. During periods of calm, loading of gasoline or other similar low-flash products may be loaded at reduced rates or loading stopped if the heavy vapours are not being dispersed quickly enough to prevent hazards from accumulated gas pockets. Ship's officers are cautioned to be on their guard during such conditions.

Loading rates will be reduced when topping-off, if requested by the ship's officer.

Some of the fuel cargoes are loaded from fuel reservoirs through certified positive displacement meters, and shipping documents are prepared on the metered figures. All reconstituted crudes are line blended with conditions recording of component rates and quantities. Actual loading rates of both this crude and metered fuel cargoes are available at any time upon request of the standby.

Instructions as to grade or grades of cargo, and the approximate loading rate anticipated, will be given to the Master on completion of Inward Clearance. Supplementary information including number and size of lines and hoses will be furnished to the Chief Officer before loading commences.

If vessel's loading orders from owners or charterers do not agree with the terminal's orders, either as to grades or quantity, the marine representative should be advised immediately. The terminal is authorised to load 10% more or less than the quantity nominated; if the cargo to be lifted will be more or less than this 10% limitation it is necessary to cable New York for confirmation.

A terminal employee is stationed at each pier during the entire time the ship is discharging ballast, bunkering, or loading cargo. Fifteen minutes "stand-by" notice should be given to this man prior to completion of ballast, bunkers, or cargo.

Vessels loading Liquid and Flaked Sulphur: *For vessels loading Liquid Sulphur, the following applies:*

Location: Pier 2, Berth 3 at Amuay Bay.

Draft – 40 ft., length overall – 700 ft., beam – no limitation.

Loading will be at the rate of 400 long tons per hour through a 6 in. line and rubber hose.

Maximum cargo size – 25,000 long tons.

Normal loading temperature is 275°F. (Minimum – 265°F. Maximum – 295°F.). Density at normal loading temperature is 112 pounds per cu. ft. Viscosity at same temperature is 8.5 centipoises.

Safety precautions/provisions: Molten sulphur classified as "Grade E Liquid" by U.S. Coast Guard. No naked light, open flames or sparks should be permitted near any tank openings. Molten sulphur is combustible but is handled at temperatures below its flash point (325°-370° F) and ignition temperatures (476-502° F).

For vessels loading Flaked Sulphur, the following applies: Physical characteristics of the loading facilities:

(a) Location: Lat. 11° 44′ N., Long. 70° 14′ W. Anchorage approximately 2,000 ft. South Punta Adaro with a depth of 33 ft. 400 yards offshore and dropping off to 50 ft. 1,000 yards offshore. In the rare event that the wind is Westerly vessel would anchor further offshore.

(b) No draft, length or beam limitation. (Vessels loading up to 24 ft. draft may be anchored inside the bay).

(c) Loaded barges whose overall dimensions are 200 ft. × 42 ft. × 17 ft. will be brought alongside with the aid of tugs and removed when required, barges will be equipped with fenders. The hoppers are 160 ft. × 37 ft. × 14 ft. Loading from barges to ship will be done using ship's gear and clam shells of 1.25 ton capacity. Clam shells will be furnished by Lagoven free of charge. Personnel (stevedores) to carry out the loading operation will be supplied by Lagoven or the ship's crew can be used if this is set forth in the charter party. Loading rate 1,000 long tons per day.

(d) The anchorage is sheltered in the lee of the Adaro Peninsula. Wave heights vary between 1 ft. and 2 ft.

(e) Normal Maximum parcel size – 10,000 tons loaded at a rate of 1,000 tons per day, however, an additional 2,500 tons can be supplied at a loading rate of 500 tons per day.

(f) Flaked Sulphur when stored in large quantities varies in density from 55 to 90 pounds per cu.ft. Average density is anticipated to be 70 lbs./cu.ft. Individual flakes are of irregular shape and are less than 0.5 sq.in. in area and less than 0.0625 in. thick. This size data is not a specification nor guarantee and is provided only to indicate the order of magnitude dimensions.

General:

Fee of Bs. 200 will be charged for trips between the Terminal and the anchorage by launch or tug for delivering personnel.

Method of cargo quantity determination: Barge drafts are marked to the nearest inch and capacity tables prepared by Charles Martin. The draft prior to commencement of and upon completion of discharging are noted. The amount transferred is obtained by consulting the tables. The quantity arrived at by totalling the amounts from the barges used is compared to the ships figures and reconciliation reasoned.

BALLAST: Vessels should arrive with sufficient ballast to permit safe handling. The Pilots require a draft of minimum 8 ft. forward, 18 ft. aft, on a T-2 or similar size tanker, 11 ft. forward and 20 ft. aft on a 26,000 d.w.t. or larger vessel. Ballast should be carried in a minimum number of tanks, and all other tanks stripped, so as to minimise deballasting time.

A relatively small amount of salt water remaining in ship's tanks or lines can contaminate crude and cause operating problems for the refiners. It is important therefore to strip tanks and lines as dry as possible.

Vessels provided with completely segregated ballast system are permitted to discharge ballast and load cargo simultaneously.

Absolutely oil-free ballast may be discharged overside. All dirty ballast must be pumped ashore. A 30 in. ballast line, 2×60,000 and 1×120,000 barrel slop tanks and separator system are available.

A considerable number of vessels are now participating in the programme to eliminate pollution of the seas. Under this programme, vessels may arrive carrying quantities of oil/water emulsion. If it is desired to follow the "load-on-top" procedure in such instances, it is requested that the Marine Representative be informed on arrival.

MEDICAL: Medical treatment and hospitalisation, if required, is provided at a hospital located in the Lagoven concession, operated by the Society of Catholic Medical Missionaries. Several dentists are located in the area.

Italian Crew members covered by Casa Maritime insurance receive medical attention from the appointed medical representative in Punto Fijo.

Authorisation forms for medical and dental treatment are provided, which require Master's signature. Transportation is available at the Marine Office. Please note that if the patient does not speak Spanish or English, an interpreter should accompany him.

DENSITY: The usual density of sea water at the berth is 1025, temperature ranges from 78°F. to 85°F.

FRESH WATER: Fresh water can be supplied if necessary; however, supplies are limited to essential requirements. All fresh water is piped from distant sources. Loading rate is about 10 t.p.h.

FUEL: Ship's requirements specifying grade and quantity desired are to be given to the Marine Representative boarding the vessel on arrival. All grades of bunker fuel, intermediate fuels and Diesels are available except Esso diesel. Bunker delivery rates average 2,500/3,500 barrels per hour. Bunkers are loaded through meters which automatically register quantities on bunker receipts.

It is the responsibility of ship's engineer to give "standby" notice to the terminal employee and advise him when to shut down.

CONSULS: Brazil, Great Britain, Italy, the Netherlands, and Norway have consular representatives in the area.

CUSTOMS: Venezuelan laws are strict in regard to contraband and Masters are requested to instruct their crews not to take cigarettes or other articles ashore. Cigarettes in carton lots, cigars, tobacco, souvenirs, gifts (particularly items of women's apparel) should be collected prior to arrival in port, listed with the items in the slop chest and placed in the custody of the Master for deposit in the slop chest or closet which will then be sealed for the duration of the vessel's stay in port.

Firearms on board any merchant vessel calling at Venezuelan ports must not exceed one per officer, nor can the ammunition exceed 18 cartridges per officer. All firearms and ammunition must be noted on the Stores List. Officers must not carry firearms while the ship is in Venezuelan waters and these side-arms and ammunition should be collected and held in the Master's safe custody. Crew members should be warned against taking knives or other weapons ashore.

While the vessel is in port, Venezuelan National Guard Officials are assigned on board to ensure compliance with Customs regulations. The law requires that meals be supplied to these officials during regular meal hours. Masters are requested to give them the privilege of eating in the officers' mess-room, to avoid difficulties.

TIME: GMT minus 4 hours.

SHORE LEAVE: Also see "Health". Shore passes will be granted to all healthy persons. A representative of the Captain of the Port boards on arrival and issues the required number of passes. Shore passes are to be collected prior to sailing and given to the Pilot undocking the vessel. Vessels are not permitted to sail until all Crew members are on boa unless hospitalised or prior arrangements made for disembark A letter to this effect is required from the Master.

REGULATIONS: (i) *Pollution:* The laws of Venezuela are very stric regard to the pollution of harbour and coastal waters by oil, and hea fines are imposed for violations. No dirty ballast, oil or bilge slops a to be pumped or allowed to escape overboard. All overboard dischar valves from cargo tanks and bilges are to be secured before loading discharging commences. Loading is to be conducted with the grea care and vigilance in order that errors or delays in handling cargo val may not result in overflows. All deck scuppers should be plugged bef loading to avoid harbour contamination should an overflow occur. T Authorities require that a written report be submitted by the ship invol in the event of an oil spill.

(ii) *Gangways:* All vessels using the port of Amuay must provid safe gangway. The use of rung ladders, pilot ladders, etc., is con to Port Regulations, and Port Authorities will not board except by mea of a safe gangway or accommodation ladder.

(iii) *Passengers:* Passengers will not be permitted to disembark unl in possession of the required visa and documents. To facil clearance, if passengers are carried, the Master should include ad to this effect in his radio ETA.

(iv) *Visitors:* All visitors to ships are prohibited except those comp employees, petroleum inspectors, etc., whose duties require t presence aboard.

(v) *Rats:* Rat guards required at all times.

GENERAL: *(a) Weather Conditions:* There is little rainfall at Amuay Ba annual precipitation averages 12 in. The so-called rainy season usu coincides with the Caribbean hurricane season, from August November, although Amuay lies South of the usual hurricane tra During these months calms are often experienced and winds from Westerly direction may be expected. Normal winds are steady from N.E., average Force 4, Beaufort Scale, with a max. of Force Temperatures average about 85°F., with little variation from day to ni or season to season.

(b) Tides: The normal range of the tide is about 12 in.; however 28 in. range has been observed during spring tides.

(c) Lubricating oil: Supplies of Essomarine lubricating oils a available. Requirements should be given in vessel's radio notice arrival.

(d) Bonded Stores: Cigarettes or other stores in bond are obtainable in Amuay Bay.

(e) Cash Advances: The local currency is the Venezuelan Bolivar a cash advances are made only in this currency. It is requested that a requirement for cash advances be included in the vessel's ETA rad to permit delivery on board on arrival.

(f) Charts: No supplies of charts or sailing directions are available Amuay Bay.

(g) Laundry: A 6 hour laundry service is available throughout ea working day. Such service should be requested in the vessel's E message.

(h) Mail: Itemised lists are required for ship's mail, to be signed the Master. Unless other instructions are given, ship's mail recei after sailing, or for vessels on which no advice has been received, be held for 30 days and then returned to Owners or Operators at sh expense.

(i) Inspection – Petroleum Products: Chas. Martin & Co. and E Saybolt, petroleum inspectors, are available if specified. Teleph numbers, Chas. Martin 44665, 44650 and 44211; Saybolt 44639, 44 and 44227.

(j) Norwegian Government Seamen Service: A field representati the above service is stationed at Amuay providing Norwegian Swedish film exchange and other usual services. His telephone nu is 51459.

(k) Personnel – Seamen Left Ashore: In the case of seamen left as for hospitalisation, repatriation or other reason, all documents personal effects are to be delivered to the Marine Office before sai A letter is required from the Master advising the maximum advance be made to the seamen, if any, and instructions concerning repatriation. All expenses incurred by seamen left ashore, including of repatriation, are for ship's account.

It is important that Masters bear in mind that the Venezuelan law at all times hold the vessel, her Master, Agent or owner, responsible any seamen left behind in Venezuela.

(l) Provisions and Stores: Provisions and stores in limited quan are available, the prices and quality of some items, such as fresh fish, shrimps, vegetables, etc. are competitive; dry stores considerably higher than in most ports. The Port Steward will assi filling requisitions.

(m) Radar and Radio: Radar and radio repairs can be effecte Amuay. A service repair man is available, but spare parts are limi

(n) Repairs: Shore facilities are available only for emergency rep of a minor nature. The nearest dry docks are those at Puerto Cab and Curacao, N.A. Several contractors in the area provide labour hull painting and for tank cleaning. Contracts for these services are m by the ship's Master directly with the contractor.

(o) Surveyors: There are no appointed surveyors to American Bu of Shipping or Lloyd's in the area. However, with sufficient adv notice, arrangements can be made to have their nearest representa come to Amuay to attend surveys.

(p) Walport Film Exchange: Subscribers to the Walport Service exchange films at the Marine Office.

(q) Plimsoll Marks: The Captain of the port requires that the Pli Marks of all vessels using the port be clearly visible. Vessels wi checked on completion of loading, and if the Plimsoll Marks are readily legible, permission to sail may be withheld.

(r) Landmarks: Three conspicuous radio towers, 350 ft., pa alternate red and white bands, with red flashing aircraft warning li are located in the refinery area, 1 mile East of the docks.

ATTENDANCE: Representatives of the Marine Department board vessels immediately on arrival, and it is particularly requested that Masters indicate at that time all ship's requirements. The Marine Office Building is located at the Pierhead Trestle and personnel are available for assistance at all hours. Telephones are located on all docks and the Marine Shift Supervisor can be called on telephone No. 444475 or 444465.

CARIPITO: 10.09 N. 63.02 W.

Also see "General – Shipmaster's Report, July 1982".

OPERATOR: Lagoven, S.A.

LOCATION: Caripito is located on the West bank of the San Juan River in Lat. 10° 09′ 25″ N., Long. 63° 02′ 01″ W.

Also see "General" before first port.

ESSENTIAL REQUIREMENTS:

1. Incoming vessels must send to Caripito their ETA Guiria at least 3 days in advance followed by confirmation 48 and 24 hours before arrival.
2. If a ship originally cleared for another port (including some other Venezuelan port) is diverted at sea to Caripito, certain information must be radioed to Caripito prior to arrival to avoid a heavy fine and/or delays. See "Radio".
3. No dirty ballast may be pumped overside in port or in Venezuelan coastal waters. Limited ballast facilities are available at Caripito Terminal.
4. Vessels calling at Caripito must obtain Government Pilots at Guiria.
5. The Venezuelan flag must be displayed during daylight hours while vessel is within port limits.
6. The emergency fire signal in Caripito dock area is 6 short blasts and 1 long blasts on ship's whistle or siren. No other signal is to be given in the case of emergency.

DOCUMENTS: (Also see "Radio").

1. *Clearance (inward and outward).* Inward Clearance is effected at Caripito. The Sanitary Inspector boards vessel at anchor or at berth depending on tidal conditions and/or the availability of a berth. The Customs and other Government officials usually board at the berth. However, should there be a delay awaiting berth or tide, the entry will be granted while vessel is at anchor, in which case accommodation ladder must be rigged.

It is necessary that the following documents be ready on arrival:

Ballast List (1 original).
Passenger List (5 copies).
Baggage List (5 copies).
Crew List (7 copies).
Sailing Permit from Last Port (1 original).
Stores List (5 copies).
List of Personal Effects (3 copies).
List of Contents of Slop Chest (3 copies).
List of Passengers in Transit (5 copies).

Cargo documents. These are normally placed on board prior to departure, but in some cases when it is imperative to leave because of the tide, they are delivered at Marieta Pt. while vessel is at anchor awaiting tide to cross the Maturin Bar.

APPROACHES: The traffic in San Juan River is restricted to one-way from Marieta Point to Caripito. Therefore, instructions are issued at Guiria to incoming vessels relative to what action to take on arrival at Marieta Point. Outbound traffic is controlled so as not to conflict with these instructions.

1. Guiria: The town of Guiria is located on South coast of Paria Peninsula on N.W. shore of Gulf of Paria. When approaching from East a signal tower will be observed on a bluff slightly to North of town.
2. Maturin Bar: Buoy E-1, marks the entrance to Maturin Bar Channel and is located in position Lat. 10° 18′ 57″ N., Long. 62° 28′ 16″ W. (approx.) and displays a flashing white light every 5 secs.
3. Channel: Maturin Bar Channel is 14 miles in length and 400 ft. in width. The tidal range over the bar varies from 4.6 ft. to 5.7 ft. with currents up 3 knots. The average salinity of water is 1.009; however, this may vary considerably between wet and dry seasons and spring and neap tides dredging of channel to 32 ft. (MLWS) has recently been concluded. Maximum draft permitted by Venezuelan regulations is 34 ft. in fresh water. There is a restriction of 6 in. less for all motor tankers.

On leaving Maturin Bar Channel the San Juan River narrows from approximately 1.25 miles in width to about 0.7 miles with slight variations in width up to Marieta Point where it narrows to about 1,200 ft. and varies between 800 ft. and 2,000 ft. up to Caripito. Marieta Point marks intersection of Cano Frances and the San Juan River. It is also at this point that course of San Juan River changes approximately 100° to starboard and it is the beginning of one-way traffic. Frequently, incoming vessels are requested to anchor below this point to await outbound traffic. There are 32 lights marking strategic points in San Juan River between Maturin Bar and Caripito Terminal. These light towers are painted aluminium and are easily visible during daylight hours.

PILOTAGE: Pilots are employees of Venezuelan Government and act in an advisory capacity. The Master retains responsibility for ship at all times. In the event it becomes necessary to disregard the Pilot's instructions in order to ensure the safety of the ship, the Master must forward through the Marine Department a full written report of the circumstances, for delivery to the Captain of the Port.

Pilots are compulsory and are embarked and disembarked at port of Guiria through a sub-Agent. Vessels should proceed to the Guiria Sea Buoy (position Lat. 10° 33′ 25″ N., Long. 62° 15′ 05″ W., displaying a flashing white light every 5 secs.), and await instructions. If arriving during the hours of darkness, certain instructions are usually transmitted by light signals from the signal tower. Voice radio communications can be established at any time with Guiria or Lagoven Caripito on frequencies 2182 kHz, 2638 kHz and 2738 kHz. The launch which embarks the Pilot will also deliver instructions to the Master relative to the movements of his vessel en route to Caripito, port regulations, facilities, etc. The regular pilotage fees cover the area from the entrance to Maturin channel to and from Caripito. The Pilot is to be provided with sleeping quarters and food, equal to that provided for the officers aboard ship. (A representative from Port Services will assist as interpreter, whenever necessary.)

Note: Complaints or observations concerning the Pilot's handling of vessel should be noted on back of pilotage ticket.

TIDES: The normal range of tide in the dock area is about 12 ft. with currents up to 3 knots during the flood and 4 knots during the ebb in rainy season (May-December). The normal current is 2.5 knots during the flood and 3 knots during the ebb.

ANCHORAGE: For vessels awaiting berth, there is an anchorage about 1,000 m. up-stream from the Caripito Terminal. Vessels awaiting clear channel may at times be requested to anchor at Punta Marieta. Vessels awaiting high tide anchor at Punta Marieta or off Punta Gorda.

MAX. SIZE: Vessels up to 660 ft., 61,000 d.w.t. and max. draft *33 ft. (FW) at Berth No. 2 and LOA 775 ft., 61,000 d.w.t. and max. draft *33 ft. (FW) at Berth No. 3 when vessels are loaded. No restriction on vessel's beam at the berths.

*Safe draft per tide tables.

RADIO: The cable and telegraphic address for Lagoven at Caripito is "Lagomar – Caripito". Messages to and from ships at sea are routed through the Government Radio Station at Maiquetia (La Guaira), call letters "YVG". This station operates on a 24-hour continuous watch, on the following frequencies:

Listening Frequencies: Low frequency, 500 kHz; high frequency, 4178, 6267, 8356, 12534, 16712, 22225 kHz. Transmitting Frequencies: Low frequency, 500, 472, 464, 417 kHz; high frequency, 4322, 4352, 6505.5, 6519.5, 8722, 8730, 12817.5, 17141.6 kHz. Radio Notice of Arrival should be sent 72 hours prior to arrival at Guiria and corrected if weather or other conditions delay the vessel.

Radio telephone listening watches are maintained on a 24-hour basis at Guiria and at Caripito on 2182 kHz. The following frequencies are available for communications after contact: 2638 kHz and 2738 kHz.

All vessels en route to Caripito may also communicate with Amuay or La Salina Marine offices and request that message dealing with corrected ETAs, Pilots and other business be relayed to the Caripito Marine Office.

Vessels that were originally cleared for another foreign port, or another Venezuelan port, and were subsequently diverted at sea, should radio the following information to Lagomar Caripito prior to arrival:

Vessel's name
Master's name
Vessel's flag
Number of crew
Estimated time of arrival at Caripito
Last port of call
Port for which originally cleared
Grade and quantity of cargo to be lifted

This information is required in order to make in advance special arrangements for Inward Clearance, to avoid payment of a fine. It is necessary in such a case that the following documents be ready on arrival:

Crew List (original and 6 copies).
List of Personal Effects (original and 2 copies).
List of Contents of Slop Chest (3 copies).
Stores List (original and 1 copy).

Also required are the original and 2 copies of the radiogram instructing Master to proceed to Caripito. Outward Clearance documents are placed on board the vessel prior to departure from the Caripito terminal.

Masters should bear in mind that while vessels are within Venezuelan territorial waters, Government Authorities do not permit the use of ship's radio equipment. Cables and radiograms should be handed to the company representative for transmittal via shore radio communication system. Caripito has also radio telephone communication with North and South America and Europe. For further information contact Port Services Section in the terminal building, telephone 2335/2336.

BALLAST: Ballast is not required when mooring. Any ballast carried should be in a minimum number of tanks, and all other tanks stripped, so as to minimise deballasting time.

A relatively small amount of salt water remaining in ship's tanks or lines can contaminate crude and cause operating problems for the refiners. It is important therefore to strip tanks and lines as dry as possible.

Vessels provided with completely segregated ballast system are permitted to discharge ballast and load cargo simultaneously. All ballast clean or dirty must be pumped ashore. Contaminated residues may be pumped ashore, where facilities are available for receiving up to a maximum of 20,000 barrels.

A considerable number of vessels are now participating in the programme to eliminate pollution of the seas. Under this programme, vessels may arrive carrying quantities of oil/water emulsion. If it is desired to follow the "load-on-top" procedure in such instances, it is requested that the Marine Representative be informed on arrival.

BERTHING: The Marine Office Building is located on the West bank of the San Juan River upstream from the berths. Representatives of the Marine Department board vessel immediately upon arrival and it is particularly requested that Masters indicate at that time all ship's requirements. Personnel are available for assistance at all hours.

Lagoven maintains a deep water terminal, consisting of 2 ocean tanker berths, Nos. 2 and 3. These are T-type piers with breasting dolphins located approximately 10 ft. off the face of each pier.

All terminal facilities are under the control of Lagoven, S.A. The port is open for navigation during day and night. All ocean tankers are moored at Berths No. 2 and 3 on the flood tide only. Vessels may sail from Berth No. 3 at any stage of the tide. Sailings from Berth No. 2 are restricted to flood tide only when Berth No. 3 is occupied.

A vessel entering or leaving port must be assisted by the same Government Pilot taken aboard at Guiria. A Custom guard will board at the same time and remain with the vessel. A Lagoven Representative will deliver to the Master his loading and docking instructions together with any other information pertinent to the vessel's call. He will also sign the Notice of Readiness if requested. The vessel will proceed to anchor to await flood tide to dock, to await berth, or will swing to the flood tide in the turning basin and proceed directly to the berth depending on circumstances.

LOADING: Loading rates, particularly for low-flash products loaded during the hours of darkness or when topping off cargo tanks, will be reduced by terminal to meet existing conditions.

All loading and discharging will be stopped during passage of an electric storm, and ullage covers must be closed and dogged down. During periods of calms, loading of gasoline or other similar low-flash products may be loaded at reduced rates or loading stopped if the heavy vapours are not being dispersed quickly enough to prevent hazard from accumulated gas pockets. Ship's officers are cautioned to be on their guard during such conditions.

Loading rates will be reduced when topping off, if requested by the ship's officer.

Instructions as to grade or grades of cargo, and the approximate loading rate anticipated, will be given to the Master. Supplementary information including number and size of lines and hoses will be furnished to the Chief Officer before loading commences.

If vessel's loading orders from Owners or charterers do not agree with terminal's orders, either as to grades or quantity, the marine representative should be advised immediately. The terminal is authorised to load 10% more or less than the quantity nominated; if the cargo to be lifted will be more or less than 10% limitation consultation is necessary.

A terminal employee is stationed at each pier during the entire time the ship is discharging ballast, bunkering, or loading cargo. Fifteen minutes "standby" notice should be given to this man prior to completion of ballast, bunkers, or cargo.

MEDICAL: Medical treatment and hospitalisation, if required, is provided at a hospital located in the concession. Several dentists are located in the town of Caripito. Authorisation forms for medical and dental treatment are provided, which require Master's signature. Transportation is available at the Marine Office. Please note that if the patient does not speak Spanish or English, an interpreter should accompany him.

FRESH WATER: Fresh water is available in any quantity. Delivery is made through 2.5 in. national standard fire hose thread hydrants. Ship's personnel must provide hoses and connect up.

FUEL: IFO-180, IFO-380, Marine Diesel and Gas Oil are available. It is the responsibility of ship's engineer to give "stand-by" notice to the terminal employee and advise him when to shut down.

CONSULS: There are no consular representatives in the area. Vessels bound for U.S.A. or British Caribbean ports will be provided with a letter stating this fact.

REPAIRS: Only minor repairs of an emergency nature can be made. There are no electronic repair services available in the area.

CERTIFICATES: All ships calling at a Venezuelan port for the first time must be measured for tonnage by Captain of the Port. It is the usual practice to take ashore the ship's Panama Canal or Suez Canal Certificate, which is used as a basis for recalculating tonnage under the Venezuelan regulations, and is returned before sailing. The Venezuelan Admeasurement Certificate, when later issued is forwarded to the Owners. A fee is charged for this certificate, which is payable only on ship's first call. Vessels registered in following countries are excluded from above regulations: Denmark, France, Germany, Ireland, Netherlands, Norway, Portugal, Sweden, United Kingdom and U.S.A.

CUSTOMS: While the vessel is in port, Venezuelan National Guard officials are assigned on board to ensure compliance with Customs regulations. The law requires that meals be supplied to these officals during regular meal hours. Masters are requested to give them the privilege of eating in the officers' messroom, to avoid difficulties.

Venezuelan laws are strict in regard to contraband and Masters are requested to instruct their crews not to take cigarettes or other articles ashore. Cigarettes in carton lots, cigars, tobacco, souvenirs, gifts (particularly items of women's apparel) should be collected prior to arrival in port, listed with the items in the slop chest and placed in the custody of the Master for deposit in the slop chest or closet which will then be sealed for the duration of the vessel's stay in port.

Firearms on board any merchant vessel calling at Venezuelan ports must not exceed 1 per officer, nor can ammunition exceed 18 cartridges per officer. All firearms and ammunition must be noted on the Stores List. Officers must not carry firearms while ship is in Venezuelan waters and these side-arms and ammunition should be collected and held in the Master's safe custody. Crew members should be warned against taking knives or other weapons ashore.

SHORE LEAVE: Shore leave is permitted and a representative of the Captain of the Port boards on arrival and issues the required number of passes. Shore passes are to be collected prior to sailing, and given to the Lagoven Despatcher undocking the vessel. Vessels are not permitted to sail until all crew members are on board, unless hospitalised or prior arrangements made for disembarking.

TIME: Local time is GMT minus 4 hours.

GENERAL:

Gangways: Gangways at Berths No. 2 and 3 are provided by the terminal.

Plimsoll Marks: The Captain of the Port requires that the Plimsoll Marks of all vessels using the port be clearly visible. Vessels will be checked on completion of loading, and if the Plimsoll Marks are not readily legible, permission to sail may be withheld.

Surveyors: There are no appointed surveyors to the American Bureau of Shipping or Lloyd's in the area. With 48 hours' notice, non-exclusive surveyors can be obtained from Caracas, or at times from Puerto La Cruz, or qualified Masters or chief engineers may be available for appointment as surveyors when required.

Bonded Stores: Cigarettes or other stores in bond are not obtain at Caripito.

Cash Advances: The local currency is the Venezuelan Bolivar and c advances are made only in this currency. It is requested that requirement for cash advances be included in the vessel's radio E to permit delivery on board on arrival. Cash returns can be accep only during the normal working day – 0700 to 1600 hrs. Sundays holidays excluded.

Provisions and Stores: Provisions and stores in extremely lim varieties and quantities are available at prices considerably higher t in most other ports.

Charts: No supplies of charts or sailing directions are availab Caripito.

Personnel – Seamen Left Ashore: In the case of seamen left ashor hospitalisation, repatriation or other reason all documents and pers effects are to be delivered to the Marine Office before sailing. A l is required from the Master advising the maximum advances to be m to the seaman, if any, and instructions concerning his repatriatio expenses incurred by seamen left ashore, including cost of repatria are for ship's account. It is important that Masters bear in mind tha Venezuelan law will at all times hold the vessel, her Master, Age owner, responsible for any seamen left behind in Venezuela.

Laundry; Laundry service is available.

Lubricating Oil: Supplies of marine lubricating oils are available Puerto La Cruz. Quantities required should be included in the ETA c

Mail: Any pending ship's mail will be delivered on board by the ma dispatcher on arrival at Caripito. At the same time he will receive ship's mail to be dispatched. The marine dispatcher will accept pers mail only if it carries the proper amount of Venezuelan postage, Master authorises postage by signing 7 copies of the Company Transmittal form. Masters interested in knowing the individual pos amounts to be paid by each crew member, should provide a lis duplicate, of the senders, and number of letters sent by each identified by a number written on each letter. Copy of this will be retur aboard vessel when leaving this port outward bound. If not ready time, it will be air-mailed to the vessel's next port of call.

Inspection – Petroleum Products and Crude Oil: Inspecciones C AIVEPET, C.A., Caleb-Brett, C.A. and SGS (Redwood), C.A. petrole inspectors are available from Puerto La Cruz if specified.

Visitors: All visitors to ships are prohibited except those comp employees, petroleum inspectors, etc., whose duties require t presence aboard.

Passengers: Passengers will not be permitted to disembark unles possession of the required visa and documents. To facilitate clearan if passengers are carried, the Master should include advice to this ef in his radio ETA.

Pollution of Harbour and Coastal Waters: The laws of Venezuela strict in regard to pollution of harbour and coastal waters by oil, heavy fines are imposed for violations. No dirty ballast, oil or bilge s are to be pumped or allowed to escape overboard. All overbo discharge valves from cargo tanks and bilges are to be secured be loading or discharging commences. Loading is to be conducted greatest care and vigilance in order that errors or delays in hand cargo valves may not result in overflows. All deck scuppers shoul plugged before loading to avoid harbour contamination shoul overflow occur. The authorities require that a written report be subm by the ship involved in the event of an oil spill. Incidents of this na should be reported immediately, either by VHF or telephone, to the Services Section.

SHIPMASTER'S REPORT: September 1992.

Rio San Juan: Chart No. 1330.

The beacons are considerably different from those shown on the c Their positions can only be regarded as approximate as they were t "on the run" by radar. However, they do give a reasonably acc idea of the courses, and the number, position and characteristics o beacons.

The land appears to have extended seaward. Lights of beacons (w lit) are as per IALA B and leading lights are white. The entrance is confusing if made in the dark for the first time, with the chart as it The lights in the Bar Channel are irregular and in the river quite unrel altogether.

There are no leading lights on the 031° course. One beacon is for two courses.

The pilot station is at Guiria.

Crossing the bar inward will be on the ebb tide and a draft of forward and 23 ft. aft is asked for, 17 ft. to turn the vessel more a and 23 ft. for crossing the bar at "full" speed. Normally it is neces to reduce speed a little when passing Beacons No. 3, 5 and 6, w the least depths are located.

Caripito: Only one operational berth (No. 3). Two dolphins at the S end of No. 2 have suffered subsidence. There are new Chicksan on the berth itself. No. 3 has 3×10 in. hoses and a shore gangwa

There are no tugs, vessel is turned about 0.75 miles above the b about 2 hours before high water, by placing the bow on the bank. Turning Basin is extending slowly into the jungle.

Vessel moors starboard side alongside with moorings 3-3-2. A b rope aft is used for springing-off when leaving. As there is a rise fall of around 18 ft. at Springs, connections should be ready, to exp loading time, and since there is a variable depth of water alongside not more than 33 ft. at low water. It is sometimes necessary to loading at low water, and sail at high water. Vessels should sail as to high water as practical, as there is little water down river fro berth. Until clearing Beacon No. 28, virtually no water showed on echo sounder and vessel touched bottom at Beacon No. 31.

Dredging is in progress in Caripito.

Two grades of crude oil are available, Pilon API 13.3 and API 26-28.

Pilon is used for making asphalt.

VHF Channel 12 used between Caripito and Guiria.

Slop facilities and fresh water available.

On the outward voyage, vessels anchor to await high water at the position marked on the chart.

Vessels nearly always touch bottom when loaded to 33 ft. when passing the bar channel, but the bottom in the river is reputed to be soft.

The night-time river transit can be very difficult due to the very few lights, especially in the rainy season. Vessels occasionally fail to make the turns, especially at Dos Aguas, and on occasions enter the jungle.

There are no chandlers or Agents. The Agents must travel from Puerto La Cruz or Puerto Ordaz.

Repatriation possible from Maturin or Barcelona (via Caracas).

AUTHORITY: Petroleos de Venezuela, S.A., Apartado 169, Caracas 1010-A, Venezuela. *Tel:* 708-4111. *Telex:* 21890, 23489, 24477 PDVSA VE. *Contact:* Lermit Rosell, Marine Corporative Manager.

EL CHAURE: 10.15 N. 64.37 W. (See Plan)

LOCATION: El Chaure Marine Terminal is located on the South shore of the head of Bergantin Bay. 1.8 miles N.E. of Puerto La Cruz: Lat. 10° 14′ 50″ N. Long. 64° 36′ 57″ W.

This terminal is also considered to be Berth No. 6 of 'Puerto La Cruz' which also see.

DOCUMENTS: To avoid penalties, ships clearing for Venezuelan Ports must present certain papers herein set forth for arrival and clearance after docking. The Clearance is made by Government officials accompanied by a company representative.

The following documents must be presented:

1 copy of Ship's Register
Clearance from Last Port
1 copy of Ballast Certificate
6 copies of Crew List
5 copies of Passenger and Baggage List
2 copies of List of Passengers in Transit
4 copies of List of Personal Effects
4 copies of Stores List
2 copies of List of Slop Chest
Sailing permit issued by Marine Authority of last port of call.
Dispatch issued by Venezuelan Consul at last port.

PILOTAGE: Pilots are employees of the Venezuelan Government and pilotage is compulsory for vessels entering or leaving the harbour. The Company will arrange for Pilots to board all vessels as necessary. Whenever it might be deemed necessary for the Master to disregard the Pilot's advice in order to ensure the safety of the vessel, a written report must be submitted by the Master to the Venezuelan Port Captain, explaining the reason for such action.

ANCHORAGE: The crossed line portion on the plan is the anchorage zone for all ships after arrival at Pozuelos Bay. The Company will dispatch the Pilot, by launch, to all ships when they are ready to be docked. On entering the Pilot Zone, the Venezuelan flag must be flown from the foremast; it must be flown at all times between sunrise and sunset.

MAX. SIZE: Max. draft 40 ft., max. LOA 800 ft. max. d.w.t. 58,000 tons.

RADIO: El Chaure Terminal Office may be contacted on radio-telephone SSB or AM frequencies of 2738, 2638, 2182 and 2120 KHz. Frequency 2182 kHz should be used for initial contact.

Arrival advice: Masters are required to advise by cable their ETA. Such notice should reach El Chaure at least 48 hours ahead of vessel. In cases of ships being diverted at sea to a Venezuelan Port, or to another Venezuelan Port, Venezuelan regulations require, by cable, prior to arrival, name of Master, number in crew, port of departure, port to which originally cleared, flag of ship and net registered tonnage.

VHF: Channel 16 can be used after arrival at Pozuelos Bay.

TUGS: Tug assistance to moor and unmoor is compulsory at El Chaure installations. Ships over 145 m. long must use 2 tugs having not less than 1,600 h.p. each for mooring and unmooring at El Chaure. 1 launch is required for handling the lines.

BERTHING: The wharf has a length of 100 ft. with dolphins established on each side. The dock accommodates vessels drawing up to 40 ft. Sea conditions are usually very good in the entire area. Waves are almost nil and out of the hurricane path. A chain of small islands makes El Chaure a natural port. Only 1 vessel at a time can be moored for loading or unloading. The normal range of the tide is 1 ft.

BALLAST: Vessels arriving in El Chaure must carry sufficient ballast to ensure safe handling. By Venezuelan Law, all dirty ballast must be pumped ashore into ballast pits. Vessels having separate clean tanks for ballast may pump overboard, after first being inspected and passed by Port Authorities. The Company Terminal facilities include a 16 in. ballast line, which empties into ballast pits about 3,500 ft. from the dock. These pits have an elevation of 32 ft. above the dock and will hold 50,000 bbls. The ballast line will stand a pressure of 100 p.s.i.g. The pressure is recorded at the dock. The vessel will be held responsible for damages to the shore ballast line and spills that maybe occur because of line rupture.

LOADING: Before tying up, blind flanges on the ship's manifold should be removed, hose derrick to be topped and rigged to lift shore hoses along with dock booms. All vessels must dock with starboard side to dock. The Company dock supervisor will inform the Master of the vessel as to characteristics of cargo to be loaded, loading rates and all other information necessary for safe and efficient loading operations. During the ship's stay at the dock, company employees are available at all hours to assist in any manner. After loading is completed, if the dock space is required for another vessel the ship must vacate the berth and wait at anchorage until cargo and sailing papers are completed.

FRESH WATER: Available, rate 10 t.p.h.

REPAIRS: Facilities are limited; any repair work must be requested by Master in writing.

CONSULS: The following are in Puerto La Cruz: Belgium, Brazil, Colombia, Denmark, France, Germany, Italy, Norway, Panama, Spain, Sweden and United Kingdom.

SURVEYORS: Aivepet, E.W. Saybolt, Caleb-Brett, Inspectorate, Inspecciones and Viusepet maintain offices in Puerto La Cruz for inspection of cargo if required.

TIME: Local time is 4 hours slow on GMT, year round.

POLLUTION: Pollution of coastal waters is strictly forbidden by Venezuelan Law. The escape of dirty ballast or of cargo either at the dock or in the harbour or in territorial waters will result in heavy fines by Venezuelan authorities. If oil is spilled an estimation of quantity should be made by the Master of the vessel, Venezuelan Authorities and Company personnel, acting jointly. Their joint report must be submitted to the Venezuelan Petroleum Inspector from the Energy and Mines Office, and also the National Guard Headquarters in Puerto La Cruz. The Ministry of Energy and Mines will assess a fine based on the quantity of oil that was spilled. Also the ship is held responsible for the spill and cleaning. Chemicals, equipment, boat and labour used for this purpose are for the ship Owner's and/or operator's account. Each ship must maintain strict supervision on discharging of ballast as well as loading cargo in order to avoid spillage.

CUSTOMS: Venezuelan laws are strict in regard to contraband and Masters are requested to instruct crews not to take cigarettes or other articles ashore.

GENERAL: *Crew:* Passes for shore leave for ship's crew will be given to Master by Company Representative on docking or at anchorage. These passes must be filled out for each Crew member prior to Venezuelan authorities' visit. Passes may be used during the ship's stay but must be returned to the National Guard at the dock prior to departure. Before ship's departure a report must be made to the Dock Master if any Crew member is missing. Crew members left behind will be placed in custody by Venezuelan authorities until deported at vessel's expense. A Crew member requiring medical or dental treatment must submit his request for such aid through the Master to the Dock Master. Arrangements for seamen arriving from other ports, transferring to other ships or being repatriated are handled by the vessel's Agency.

Under the Venezuelan law the vessel is responsible for all seamen in the country during their entire stay. Masters are requested to leave written instructions with the Dock Master for handling seamen left ashore. The Master of the ship must indicate his acceptance of the responsibility for all costs incurred in handling a seaman.

Seaman Left Ashore: A letter from the Master is required advising the amount of cash advance and any other instructions concerning the seaman's repatriation. All expenses incurred by the seaman, including the cost of repatriation are for the vessel's account. The documents and personal effects of seamen left ashore for hospitalisation, repatriation or any other reason, must be delivered to the Terminal Office before sailing. Venezuelan Law holds the Master, ship's representatives and Owners responsible for any seaman left behind in this country.

In Dock: Masters are requested to observe the following regulations while alongside the Company Terminal:

1. – Sufficient number of Crew members must be on board at all times, during discharge of ballast and loading of cargo to ensure proper handling of mooring lines.
2. – Rat guards are to be on all mooring lines during entire stay.
3. – Venezuelan authorities do not permit blowing of heavy smoke from vessel's funnel, while in port. Breaking of this rule may result in Government fine and/or removal of ship from the dock.
4. – Venezuelan National Guard personnel are assigned to guard duty for each ship while it is at the dock. Meals must be furnished for these guards in the Officers' Messroom.

Visitors: All visitors to vessels are prohibited, without written permission of the Port Authorities. Dock Master, Petroleum Inspectors, Dispatchers and Terminal employees handling hoses may board ship in performance of their duties.

Charts: Not available at El Chaure.

AGENCY: All incoming vessels must have a local Agent to render all services required for a prompt and efficient tanker turnaround and to cancel all vessel disbursements.

OPERATOR: Corpoven, S.A. *Telex:* 21462, 21363, 21165. *FAX:* 708-12-59, 74-08-68, 708-17-11.

EL GUAMACHE: 10.52 N. 64.04 W. (See Plan)

SHIPMASTER'S REPORT: October 1978.

LOCATION: The Port of El Guamache is a developing port, located about 1,000 ft. Northward of Pta. Mangle on the Isla De Margarita (See B.A. Chart 230).

DOCUMENTS:

Clearance from Last Port.
Sealed envelope for Customs.
Visaed B/L and Sobordos.
Despatch from last Venezuelan port, if any.
6 Crew Lists.
Vaccination Certificates of Crew.
4 Stores Lists (Deck, Engine, Provisions, Bonded store).
4 Personal Effects Lists.
4 Arms and Ammunition Lists.
4 Passengers Lists.
4 Mail Lists.

PILOTAGE: Pilotage is compulsory. Pilot boards on arrival or at anchorage. Vessels arriving at the anchorage must keep engines on stand-by and wait for shifting or berthing instructions.

Note: As at other Venezuelan ports, vessels must fly the Venezuelan flag at masthead and lower gangway for boarding party – Agents, Customs Officers, Quarantine Officers, Immigration Officers, Pilot and representative of Port Captain, etc.

ANCHORAGE: On the Western side of the Pta. Mangle in Bahia Guamache, depth 8–11 fathoms.

RADIO: As a new developing port, no radio service at Margarita Island, all ETA wireless messages must be sent via ITT or YVG – 72, 48, and 24 hours prior to arrival

The port office is equipped with radio telephone installation, operating 0600-2000 hours, transmitting on VHF frequencies 156.8 MHz (Channel 16.) Vessels calling in Spanish language will be answered promptly; if calling in English will be answered by English speaking person when on duty.

TUGS: Not available.

BERTHING: Length 126 m. with 3 dolphins installed at each end with catwalk to dolphins. Depths of water, 36 ft. at LW and 42 ft. at HW.

STEVEDORES: Arranged by Agents, normal working hours 0700 – 2100, cargo discharged into warehouse.

MEDICAL: Available at Polamar City about 31 km. from the berth.

DENSITY: 1025

FRESH WATER: Not available.

FUEL: Not available.

REPAIRS: No repair facility available.

GANGWAY/DECK WATCHMAN: Necessary, normally engaged by Customs or Police.

OPENING/CLOSING HATCHES: Normally by crew.

AIRPORT: Distance about 15 km. from port. Connections to other cities.

TIME: Local time is GMT minus 4 hours.

HOLIDAYS: As other Venezuela ports.

PROVISIONS: Fresh and dry provisions supplied through ship chandlers from Polamar City and delivered on board.

CUSTOMS ALLOWANCES: 200 cigarettes and 1 bottle of wine or spirit.

TELEPHONE: No telephone connection to vessel at present but provided inside warehouse and port office.

SHORE LEAVE: Shore leave permitted. Passes issued by representative of the "Direccion de Marina Mercante" on arrival. Shore passes to be collected prior to sailing and given to Agent.

DEVELOPMENTS: El Guamache has a development programme to construct new wharves Northward from present pier to accommodate 6 ocean-going vessels and expected to complete within 3 years.

All port facilities will be available. Margarita Island is the only free port in Venezuela. Tourism from the mainland and overseas is increasing day by day as Margarita Island has very good weather and beaches.

EL PALITO: 10.29 N. 68.07 W. (See Plan)

OPERATORS: Corpoven S.A.

LOCATION: The terminal facilities operated by Corpoven S.A. at the port of Puerto Cabello (Punta Chavez), are situated on the Venezuelan coast, 7 miles West of Puerto Cabello. The terminal has a 2,707 ft. pier, part causeway and part trestle, extending out from Punta Chavez along a shallow reef then angling into water 45 ft. deep. 2 tankers can tie up simultaneously at the berths.

Position: Lat. 10° 29′ N., Long. 68° 07′ 13″ W.

Charts: B.A. Chart No. 1628 or Charts No. 24453 and 5752.

ESSENTIAL REQUIREMENTS:

1. Incoming vessels must send ETA 72 hours before arrival at El Palito Terminal and another 24 hours before arrival by telex and communicate by VHF Channel 16, at least 4 hours before arrival advise and/or confirm any change of ETA.

2. If a vessel originally cleared for another port (including some other Venezuelan port) is diverted at sea to El Palito, certain information must be received prior to arrival, to avoid heavy fine and/or delays.

3. No dirty ballast may be pumped overside in port. Limited dirty ballast disposal facilities are available at El Palito Terminal.

4. The use of Venezuelan Government Pilots is compulsory for docking and undocking.

5. The Venezuelan flag should be displayed at the mast-head during daylight hours by vessels anchored and berthed in Venezuelan waters.

6. In addition to other clearance documents, 2 copies of an itemised list of articles in the ship's slop chest must be presented to the authorities on arrival.

7. The emergency fire signal is 5 long blasts on the vessel's whistle or siren. No other signal is to be given in case of emergency.

8. The radar equipment must be turned off during cargo operations, and radio transmitter aerials must be earthed. Any information should be given to the Agent's representative for transmittal via shore facilities.

9. Loading will not be started until all deck scuppers are properly sealed.

10. Towing wire must be correctly positioned as soon as the vessel is alongside berth.

DOCUMENTS:

Clearance Inward and Outward:

(a) Inward Clearance is effected on board immediately after doc by Government's Port Officials and a representative of Ma Terminal and ship's agency. It is necessary that the follo documents be ready on arrival:

1.	Ship's Register.	
2.	Derat Certificate.	
3.	Clearance from last Port.	1 original
4.	Ballast Manifest from Last Port.	1 copy
5.	Crew List.	6 copies
6.	List of Passengers in Transit, if any.	6 copies
7.	Passenger and Baggage List.	6 copies
8.	List of Personal Effects.	6 copies
9.	Stores List (see (c) below).	6 copies
10.	List of Slop Chest.	6 copies
11.	Sailing Permit (issued by Maritime Authority of last Por	
12.	All Crew Vaccination Cards, Identification Cards or Passp	

(b) Vessels arriving with cargo to discharge will also require Bi Lading and Tally Books.

(c) Stores List prepared should indicate separately all deck, en and cabin stores. The Stores List may be prepared on board to arrival.

Clearance Documents Outbound: Outbound Clearance and ca documents are delivered on board by the Terminal representative

In the event the berth is required by another vessel, a vessel ha completed loading may be required to vacate the berth promptly proceed to anchorage to await cargo documents.

APPROACHES: The terminal pier is marked by the following lights: occulting red light at the top of No. 1 (N.W.) fire fighting monitor to 80 ft. above sea level. Lat. 10° 29′ 51″ N., Long. 68° 07′ 13″ W., one green light, flashing every 3 seconds at the top of No. 2 (S.E. fighting monitor tower, 80 ft. above sea level, located 275 ft. S.E. of N fire fighting monitor tower. A group of 5 crude storage tanks, pai white, visible 20 miles on a clear day, are located 1.25 miles 200° the head of the pier.

Three large chimneys from a power plant located about 3 miles W of the Terminal, are very conspicuous in the area. They are painted broad red and white bands.

When approaching, Refinery installations are clearly visible. On c nights, tanks, Refinery lights and flares provide best landmarks.

White flashing lights are installed at the top of Refinery chimneys towers for air traffic warning purposes, for the local airport in Pu Cabello.

Masters approaching the coast should keep a sharp lookout for fis boats, nets and small crafts.

PILOTAGE: Service available 24 hours. The Pilot's normal wor hours are from 0600 hrs. to 1800 hrs. There are no special charges their assistance during those hours on workdays. On Sundays holidays they charge overtime. There is also a charge when ship anchored in the bay as according to the pilotage law each moven (and entering the bay is one movement) requires a Pilot. By sp agreement only Pilot's overtime will be charged for anchorage anchorage and docking is considered as one movement with respe Government Pilotage Fee.

Pilotage is a compulsory government service. The govern charges the Pilot's assistance according to ship's net tonnage. Ves under flags of Panama and Liberia are required to have their Venezu Tonnage Certificate. The government charges for docking and sai

Pilots are employees of the Venezuelan Government and pilota compulsory for vessels entering or leaving the harbour. The termina arrange for Pilots to board all vessels as necessary. Pilots mee vessel via launch provided by the terminal. The Pilot may decli moor the vessel if it is not equipped with satisfactory mooring equip lines, gear, anchors, etc., or if it is not sufficiently ballasted. It i responsibility of the Master to notify the Pilot of any special condi or peculiarities, such as defective navigation equipment, mooring tackle, gear or lack of necessary equipment, which might im hazards in connection with the handling, mooring, discharging or loa of vessels.

At the berths, vessels must be moored to the entire satisfaction of Pilot and the Terminal's Mooring Master.

The Pilot acts in an advisory capacity. The Master re responsibility for the vessel at all times. In the event it becom necessary to disregard the Pilot's advice in order to ensure the sa of the vessel, the Master must forward a full written report of circumstances through the terminal for delivery to the Port Captain

ANCHORAGE: Notice of Readiness can be tendered at anchorage suggested anchorage for El Palito Terminal is located 0.5 to 1 mile N or West of the seaward end of the pier for Berth No. 1. The area to East of the pier is recommended as anchorage for Berth No. 2.

Shipmaster's Report: August 1992.

I was instructed to anchor 1.5 miles from jetty.

RESTRICTIONS: None. Vessels enter day or night and at any sta tide.

MAX. SIZE: The loading facilities consist of 2 berths. Term restrictions and safe drafts are as follows:

	Max. Arrival	*Dra Sai*
Berth No. 1 (West) (starboard side alongside)	40 ft.	40
Berth No. 2 (East) (port side alongside)	33 ft.	38
Max. d.w.t.	50,000 tonn	
Maximum displacement	65,000 tonn	
Maximum LOA	750 ft. (228 m	
Minimum LOA	328 ft. (100 m	

No limitation is placed on tankers beam.

HEALTH: No Radio Pratique. Health Officers board vessel at bert

RADIO: Puerto Cabello, Venezuela, Coastal Station call sign YVL, makes radio contact with all vessels "CQ" on 8722 kHz at the following hours: 1130, 1330, 1530, 1830, 2130, 0030, 0200 GMT. Also "CQ" on 7141 kHz at 1630 GMT and "CQ" on 4322 kHz at 0430 and 0630 GMT.

Arrival Message: Incoming vessel must send ETA 72 hours and 24 hours before arrival at El Palito Terminal by telex and establish contact with the Terminal at least 4 hours before arrival, confirming or advising any change of ETA.

The original ETA messages should include the following:

(a) Name of vessel and Master.
(b) Vessel's flag and Summer deadweight.
(c) Number of crew and passengers.
(d) Last Port from which originally cleared.
(e) Dirty ballast and deballasting time.
(f) Slops quantity, if any.
(g) Sickness on board.
(h) Any additional information that in Master's opinion is necessary.

If a vessel, cleared for another port (including some other Venezuelan port), is diverted at sea to El Palito, telex advising the amended orders must be sent at least 40 hours before arrival, to avoid heavy fine and/or delays.

Communications: El Palito Terminal can be contacted by the following ways:

Radio: VHF Channel 16 and SSB 6218.1 kHz.
Telex: CPV 28013.
Fax: 041-304381.
Telephone: 041-304249, 041-304250.

VHF: Master should call El Palito Marine Terminal, 3 hours before arrival, on Channel 16.

TUGS: Two tugs of 3,000 h.p. each are available at El Palito, and use is compulsory for berthing and unberthing. The service is arranged by the Terminal.

BERTHING: The use of both anchors is required for docking at both berths. It is considered prudent to have both anchors hove-out prior to entering the harbour in order to facilitate speedy release while mooring. The Pilot will advise whether the vessel is to be moored port or starboard side to the dock.

In the event the berth is required by another vessel, a vessel having completed loading may be required to vacate the berth promptly and proceed to anchorage to await cargo documents.

East Berth: Approach at very dead slow speed along a line parallel to a line formed by the East and the West berth at a distance from it equal to the distance of the North buoy. Drop the starboard anchor at the point of intersection of the ship's fore with a line formed by the two East shore range markers. Continue along same path at very dead slow speed until reaching with the ship's fore the East berth. Drop the port anchor. Allow the ship to drift into position alongside berth. This will be done by tying mooring lines as required by Pilot and with the help of the ship's engines and tugs under Pilot's instructions.

West Berth: Approach at very dead slow speed along a line parallel to a line formed by the East and West berths and at a distance from it equal to the distance of the North buoy. Drop the port anchor at the point of intersection of the ship's fore with a line formed by the two West shore range markers. Continue along same path at very dead slow speed until reaching with the ship's fore the West berth. Drop the starboard anchor. Allow the ship to drift into position alongside berth. This will be done by tying mooring lines as required by the Pilot and with the help of the ship's engines and tugs under Pilot's instructions.

General: Chicksan loading arms with 12 in. connections, 2 for Fuel oil, 1 for diesel products, 1 for leaded and 1 for unleaded gasolines. All dirty ballast to be pumped ashore through the fuel oil loading arms.

Mooring Lines to be used: Vessels of any deadweight must secure with at least:

Forward:	(a) 2 breast lines
	(b) 2 springs
Aft:	(a) 2 breast lines
	(b) 2 springs
	(c) 1 seabuoy line

All ropes must be fibre, polypropylene or wire of 1.25 in. minimum diameter each connected by a 2.5 in. shackle.

BALLAST: Due to the exposed location of the oil piers, vessels are required to be ballasted with minimum ballast necessary for safe berthing manoeuvres at El Palito.

This minimum ballast consists of approximately 25% of their respective Summer deadweight.

The ballast quantity should be carried in a minimum number of tanks, in order to minimise deballasting time whilst alongside.

Vessels equipped with a special separate and clean ballast system or segregated ballast can discharge their ballast into the sea, after first being inspected and passed by Terminal representative. According to regulations, a maximum of 20 ppm is permitted.

Dirty ballast must be pumped ashore. El Palito facilities can handle a maximum of 20,000 bbls.

LOADING:

Cargo Information: On completion of Inward Clearance, information regarding the number of Chicksans, loading rate, temperature and API from cargo will be given to the Master and Chief Officer. A 15 minute stand-by is required prior to finishing any grade. During ballast discharge, supplementary information will be given to the Chief Officer.

Draining Chicksans: Chicksans are drained by gravity on all products (except iso-butano, tel, benzene, ortho-xilene). Ships personnel must cooperate with Terminal personnel in this operation to ensure complete draining of Chicksans into ship's tanks.

Scuppers: Loading will not be started until all deck scuppers are properly sealed to the satisfaction of the Terminal.

Simultaneous Deballasting and Loading: Vessel's equipped with separated and completely segregated ballast tanks, lines and pumps which are never used for oil may be permitted to discharge ballast and load simultaneously, providing approval has been obtained from the Terminal.

Chicksans: There are 6 Chicksans on each berth. Loading arm connections are 12 in., except for iso-butane, benzene and ortho-xilene, which are 8 in. and tel, which is 4 in.

The products benzene, ortho-xilene and tel can be loaded only on Berth No. 2.

Approximate Gravities and Temperatures of Products to be delivered or received:

Product	*API Specific Gravity*	*Temperature (approx.)*
Iso Butane	0.564	−11.5°C
Alquilate	70.8	86°F
Fuel Oil	11.5	140°F
Diesel Oil	32.0	90°F
Crude	28.0	90°F
Gasoil	36.5	90°F
Premium Gas	64.0	86°F
F.C.C.	58.0	105°F
U/L Gasoline	63.0	84°F
V.G.O.	23.5	117°F
Jet Fuel	45.5	95°F
Natural Gas	82.0	80°F
Benzene	0.8833	83°F
Ortho-xilene	0.8828	85°F

Loading Rates:

Product	*Loading Rates* bbls./hr.
Alquilate	7,500
Fuel Oil	18,000
Diesel Oil	8,500
Crude	22,000
Gasoil	8,500
Premium Gas	7,000
F.C.C.	7,000
U/L Gasoline	8,000
V.G.O.	6,500
Jet Fuel	8,000
Natural Gas	6,000
Benzene/Ortho-xilene	1,800

MEDICAL: Medical and dental treatment and hospitalisation, if required, are available in Puerto Cabello. Authorisation for any medical and/or dental treatment must be made by the Master through the Agent.

FRESH WATER: Not available.

FUEL: Bunkers are available only for vessels loading or discharging cargo.

Bunker supply should be arranged between owners and Corpoven's Head Office prior to vessel's arrival. A telex must be received by El Palito Terminal indicating quantity and gravity of the bunkers to be received.

CUSTOMS: While the vessel is in port, Venezuelan National Guard officials are assigned on board to ensure compliance with Customs regulations. The law requires that meals be supplied to these officials during regular meal hours.

Venezuelan laws are strict in regard to contraband and Masters are requested to instruct their crews not to take cigarettes or other articles ashore.

Cigarettes in cartons, cigars, tobacco, souvenirs, gifts (particularly items of women's apparel), should be collected prior to arrival in port, listed with the items in the slop chest and placed in the custody of the Master for deposit in the slop chest which will be sealed for the duration of the vessel's stay in port.

CONSULS: French, Norwegian, Danish, Italian and Panama Consulates are represented in Puerto Cabello. There is no American Consulate. It is necessary for Masters of Panamanian flag vessels to visit the Panamanian Consulate at Puerto Cabello to present documents and receive dispatch as required by law. Regular office hours are from 0800 to 1200 hrs. and from 1400 to 1700 hrs. Mondays through Fridays; any dispatch issued outside of regular office hours is billed at double fees. Agent will arrange transportation to Puerto Cabello upon request.

REPAIRS: Emergency and minor repairs only are possible.

DRY DOCKS: The nearest dry docks are located at Puerto Cabello, 8 miles East from El Palito, and Curacao.

HOLIDAYS: *National Holidays:* By order of the local Port Authorities, it is requested that all ships in port be fully dressed on the following holidays: January 1st (New Year's Day); April 19th (Declaration of Independence); June 21st (Merchant Marine Day); July 5th (Independence Day); July 24th (Birth date of General Simon Bolivar); October 12th (Columbus Day); December 25th (Christmas Day).

REPATRIATION: The documents and personal effects of seamen left ashore for hospitalisation, repatriation or other reason, must be delivered to the Terminal Office before sailing. A letter from the Master is required advising the maximum amount of advances to the seaman and any other instructions concerning his repatriation. All expenses incurred by the seaman, including the cost of repatriation, are for the vessel's account. Venezuelan law at all times holds the Master, Agent or Owner responsible for any seaman left behind in Venezuela.

AIRPORT: Distant about 4 miles.

TIME: Local time is GMT minus 4 hours.

SHORE LEAVE: Shore leave is permitted and a representative of the Captain of the Port boards on arrival and issues the required number of passes.

Vessels are not permitted to sail until all crew members are on board, or special permission has been obtained to sail without a crew member.

GARBAGE/WASTE OIL DISPOSAL: No facilities available.

SEAMAN'S CLUBS: None.

CURRENCY: Bolivar. No local currency restrictions.

REGULATIONS:

Engines: No engine repairs will be made while the ship is in dock. Engines are to be kept at standby at all times while the ship is in port.

Rat-guards: Vessels must use rat-guards on all mooring lines.

Visitors: All visitors to vessels are prohibited, without written permission in each case by the Port Captain or Terminal Office.

Petroleum inspectors, dispatchers, and terminal employees may board ship in performance of their duties.

Pollution: The laws of Venezuela are very strict in regard to the pollution of harbour and coastal waters by oil, and heavy fines are imposed for violations. No dirty ballast or oil is to be pumped or allowed to escape over the side. No engine-room or pump-room bilges may be pumped overboard. All pump-room sea suctions and overboard discharge valves must be secured prior to loading or discharging cargo. Loading must be conducted with the utmost care and vigilance so that errors or delays may not result in spills. All deck scuppers must be plugged tight before loading so that in the event of a spill pollution of the harbour may not result.

Garbage: No garbage is to be thrown over the side while the vessel is in port.

Passengers: Passengers will not be permitted to disembark unless in possession of the required visa and documents. To facilitate clearance, if passengers are carried, the Master should include this information in his ETA.

Firearms: Firearms on board any merchant vessel calling at Venezuelan ports must not exceed one per officer. All firearms and ammunition must be noted on the Stores List. Officers must not carry firearms while the vessel is in Venezuelan waters and these side-arms and ammunition should be collected and held in the Master's safe custody.

Alcoholic Drinks: We would kindly request Masters to advise their crew members that the introduction of alcoholic drinks through the company's gates is strictly prohibited.

If anyone found with alcoholic drinks within the company's area, it will be confiscated without payment of indemnities. Drunkards are not allowed to board any vessel, unless accompanied by an authorised ship's officer.

Bar Service: Please be advised that we have received instructions from the Custom Authorities, that all vessels maintaining a "Bar Service" on board for the use of officers, crew, passengers and visitors, must keep this "Bar" closed during the vessel's stay in port.

Photographing: Photography within the boundary fence of this Terminal is prohibited. Taking cameras inside refinery's installation is likewise prohibited.

Fishing and Painting: Fishing and painting of ship's side from the piers is strictly forbidden while tied up at El Palito.

WEATHER: Winds are normally from the N.E. with an average Beaufort Scale Force of 2-3. Average temperature about 85°F.

The months of December, January, February and March have the roughest sea and swell, and vessels may not be able to dock due to the weather.

TIDE: The normal range of the tide is 1 ft.

GENERAL:

Bonded Stores: No cigarettes or bonded stores are available at El Palito.

Cash Advances: Cash advances are available in Venezuelan Bolivares only and should be included in the vessel's radio ETA, to permit delivery on board on arrival.

Charts: No charts or sailing directions are available at El Palito.

U.S.S. Club: There is no U.S.S. Club available at El Palito or film exchange service.

Inspection of Petroleum Products: Outside inspectors of petroleum products are available in the area. However, inspectors shall be nominated by shippers/suppliers/owners prior to vessel's arrival, and notice shall be given to El Palito Terminal, in order to permit access to nominated inspectors.

Laundry: Laundry facilities are available at El Palito.

Lubricating Oil: Certain types of Corpoven lube oils only are available. Requirements should be sent by radio with ETA to Agent.

Mail: Mail service posted from El Palito arranged by Agent.

Provisions: Provisions are available at El Palito.

Radio and Radar: Repairs possible through Agent.

Gangways: Gangways are provided by El Palito,Terminal.

AGENCY: Corpoven S.A. does not, as Operator of the Terminal, act as Agent for any vessel or for firms or agencies engaged in coastwise or international transportation operations. All services in connection with the arrival, loading, or departure of vessels are performed as a representative and for the account of the shipper in the case of cargoes loaded, and as the consignee, in cases where cargo is received.

SHIPMASTER'S REPORT: July 1988.

Two tugs are used for berthing, one astern on tug's line and the other to illuminate the forward buoy and push as required.

The aft buoy line is the first line sent away and is used to check the vessel's swing into the berth.

There is a constant swell running, and positioning vessel in the berth is very long and drawn out as the loading arms are restricted in vertical and horizontal movement.

The swell causes the ship to move out of position, all moorings need to be adjusted simultaneously and with the small numbers onboard this was very difficult.

Leaving the berth was fairly straightforward, with one tug on aft main deck to pull vessel off while recovering anchors.

Chart B.A. 1966 leaves a lot to be desired for approaching a port. El Palito Terminal can be identified by 3 towers, each with a high intensity light near the top and a flare. There is a mass of background lights and the navigational lights are completely obscured. Coming from the North, these lights are visible at 20 miles and with the flare make the pattern, light, flare, light, light from port to starboard. The berth is situated right below these lights.

The radar picture shows 2 similarly shaped jetties, so the lights are a good guide to the correct berth.

Segnini, Terminal Supervisor.

GUANTA: 10.15 N. 64.35 W. (See P

SHIPMASTER'S REPORT: 1978.

LOCATION: Lat. 10° 15′ N., Long. 64° 35.5′ W. About 5 miles Ea Puerto La Cruz.

DOCUMENTS:

6 Crew Lists.
6 Passenger Lists (or negative).
6 Ship's Stores Lists.
6 Crew Personal Effects Lists (well detailed).
1 Declaration of Health.
Clearance from Last Port.
Cargo Manifests.
Full set of Manifests and B/Ls.

Entry Formalities: Normally carried out after docking unless there no berths available; then vessel can be cleared at anchorage in B Pozuelos, during daytime. At night only in case of emergency.

Accommodation ladder must be rigged.

Hours of entry: From 0700 – 1100 hrs. and from 1300 – 1700 Overtime outside these hours.

APPROACHES/PILOTAGE: A vessel bound for Guanta has to e Bahia Pozuelos as she must first call at Puerto La Cruz to emba Pilot. The anchorage area for waiting berth turn is also in B Pozuelos. This anchorage is in depths of 48 ft. to 80 ft. and is protected from swell by surrounding islands. No size limitation.

Bahia Pozuelos is the anchorage and Pilot embarking area for 3 p Puerto La Cruz, Guanta and Pertigalete.

The use of Government Pilot is compulsory for all vessels docki undocking. ETA: 48 and 24 hours in advance via the vessel's Age

Pilot boarding hours: From 0530 – 1700 hrs. every day. Vessel ca dock after sunset. Sailing may be arranged at any time.

HEALTH: All vessels boarded by Port Doctor. No automatic Pratiq

RADIO: Curacao Radio PJC. No local station.

VHF: All Agencies maintain radio watch on Channel 16 during o hours. Tugs and launches also equipped with VHF (call: "Ramrey")

TUGS: 3 tugs available: 1×1,700 h.p. and 2×1,200 h.p. All priva owned. Sometimes vessels bound for Guanta or Pertigalete have to for 2 or 3 hours as these private tugs have contracts with oil compa in Puerto La Cruz and are available only when no tanker is docki undocking. Tug's lines used. Normally tugs join the vessel inside Gua Bay.

BERTHING/MAX. SIZE: One concrete pier on piles, 763 ft. in le where vessels normally dock starboard side to. The apron is 20 ft. w in centre, 42 ft. at ends.

One modern concrete pier on piles, 1,056 ft. in length where vess normally dock port side to. The apron is 115 ft. wide in centre and B at ends. The piers are well fendered with rubber hoses and used t

Height of piers above HW: 10 ft. Mean tidal range: 1 ft. 6 in. Max. d alongside small pier: 23 ft. 08 in. Minimum draft alongside long p 26 ft. 08 in. Depths varies from a minimum of 27 ft. to a max. of 3 at the Western end of the long pier.

CARGO HANDLING FACILITIES: All cargo normally discharge vessel's own gear, directly on to truck or trolleys. The piers are connected to the railroad. No floating crane.

The following mobile cranes are available in the port area: 1 cr max. 120 tons; 1 crane max. 30 tons, with telescopic extension bo max. 60 ft.; 2 small cranes max. 6 tons with a boom length of 30 f

Forklifts: 15 forklifts capacity 3.5 tons; weight 5.2 tons with f counterweight. To use these forklifts on board, the hoisting gear sh lift over 6 tons.

2 forklifts capacity 5 tons, weight 12 tons; 1 forklift capacity 20 t weight 25 tons, specially for containers.

Flatbed trolleys: 30 trolleys capacity 8 tons; 1 trolley capacity 70 t

No lighters available.

All discharging gear normally supplied by Agency. For heavy lifts recommended to have special slings on board.

BULK CARGO FACILITIES: On the Eastern side of the Guanta B there is a berth for loading coal by means of a fixed chute. D alongside 30 ft.

Grain Cargo: Receivers supply suction machines. There are 2 machi available, capacity 1,000 tons per machine during 24 hours. G vessels work round the clock.

Liquid Cargo: Sometimes tallow and liquefied gas are hand Discharged by vessel's pump into tank trucks. Hoses normally supp by vessel.

CONTAINER HANDLING FACILITIES: No container berth. No c 1 forklift capacity 20 tons. There is a small container stacking area

STEVEDORES: Normal working hours: 0700 – 1100 hrs. 130 1700 hrs. (Monday to Friday); 0700 – 1100 hrs. (Saturdays).

Overtime: Monday to Friday, 1800 – 2300 hrs. (night shift); Satur 1300 – 1700 hrs.

Normally port does not work after 1700 hrs. on Saturdays or Sund

Ordering of gangs: For 0700 hrs. requested previous day be 1500 hrs. For 0900 hrs. requested same day at 0700 hrs.

Overtime rates: 50% for the night shift (Monday to Friday); 100% Saturday afternoon shift.

The gangs consist of 12 longshoremen and 12 stevedores, incl 2 winchmen, 1 signalman and 1 checker.

Capable supervision only available from Agency.

Rigging or cleaning gangs are available.

MEDICAL: Private hospitals at Puerto La Cruz. Private doctors gen do not visit ships. If medical attention is required on board, the Doctor will attend patient, unless he authorises another doctor to m the visit.

In case of emergency, when the vessel is anchored in Bahia Pozu a launch can be arranged to pick up the sick crew member.

DENSITY: Salt water all the year round.

FRESH WATER: Available at 5 Bolivares per ton at the main pier only. Hoses supplied by ship. Rate: about 5 t.p.h.

Presently there is no water available at Berth No. 3 (Western end of pier).

FUEL: No Bunker "C".

Diesel: Delivered by trucks; arrangement must be made at least 4 hours in advance.

Gas Oil: Delivered by trucks under previous arrangement.

CONSULS: See "Puerto La Cruz".

REPAIRS: Only minor engine or electric motors can be repaired.

DRY DOCK: Not available.

SURVEYORS: None.

GANGWAY/DECK WATCHMEN: Not available. No shore gangway available.

CUSTOMS ALLOWANCES: 200 cigarettes and 1 open bottle spirits.

REPATRIATION: Can be arranged. No special requirements.

AIRPORT: At Barcelona, about 15 miles by road. 3 flights daily to Caracas.

TIME: 4 hours slow of GMT, all the year round.

HOLIDAYS: New Year's Day, Holy Thursday, Good Friday, Holy Saturday, April 19th, May 1st, June 24th, July 5th, July 24th, October 12th, November 24th, Christmas. No labour available on these days.

TELEPHONES: No facilities at Guanta. Private calls can be made from the central office at Puerto La Cruz (5 miles) during the following hours: 0700–2100. Long distance calls dispatched quicker from the Hotel Melia at Puerto La Cruz.

SHORE LEAVE: From a ship anchored in Bahia Pozuelos: Allowed if the vessel has been cleared and if every crew member has shore pass. One private launch available but very expensive.

From Guanta berths: Allowed with shore passes.

IDENTIFICATION CARDS: Passes for shore leave are issued by officials of the Port Captain's Office, when boarding the vessel for clearance. These passes should be filled out on board. They are valid for the duration of the vessel's stay in port only and have to be returned before sailing.

In order to comply with Immigration Regulations, crew should be carefully checked before departure and any missing seaman reported to the Agent. The same applies to passengers in transit.

GARBAGE DISPOSAL: No facilities.

DELAYS: Presently, Guanta is somewhat congested and the waiting time varies from a few days to 15 days, especially during the rainy season.

GENERAL: Venezuelan regulations strictly prohibit the pumping overboard of dirty ballast or throwing garbage or dunnage in territorial waters. Heavy fines are imposed for pollution of waters and sometimes fishermen are quick to report any infringement.

Berthing Turn: On the basis "first come, first served" but Venezuelan vessels have some priority.

Supplies and Laundry: Several private firms based at Pto. La Cruz. Nearly all kinds of fresh provisions are available.

Laundry service available; may be completed in 8 to 10 hours.

General: Guanta is a natural harbour surrounded by mountains which protect the bay completely in bad weather. The port has never been closed for bad weather.

Venezuelan Flag: Upon arrival at Pozuelos Bay ship should display the flag from the foremast at all times. When anchored or docked, the flag should be displayed only between sunrise and sunset.

Warehouses and Cargo Sheds: No transit cargo shed. No refrigerated storage available.

There are 5 warehouses with a total floor space of 75,000 sq.ft.

Open Space: A total of 5.7 acres, mostly covered with asphalt or concrete.

Weather: The rainy season starts in mid-May and ends in November or December. During the rainy season it is usually calm in the early hours of the day followed before mid-day by light Westerly or variable breezes. In the afternoon the breezes change to North-Easterly at about 12 knots until midnight. During the dry season the cycle is similar but the North-Easterly wind may reach 25 knots. This can prevent all communications between anchored vessels and the shore.

AUTHORITY: "INP" Instituto Nacional de Puertos.

SHIPMASTER'S REPORT: 1975.

LOCATION: Lat. 10° 14.7′ N., Long. 64° 35.5′ W.

Guanta is located in the Bay of Guanta. It is a well protected port against currents and winds.

The port is entered between 2 well lighted islets.

DOCUMENTS:

Maritime Declaration of Health (together with inoculation list of crew).
10 Passenger – (or non-passenger) Lists.
10 Transit passenger – (or non-transit passenger) Lists.
10 Crew Lists.
4 Personal Effects Lists. (new clothes, etc., to be mentioned).
4 Ship's Stores Manifests.
Clearance from Last Port.

PILOTAGE: Government pilotage is compulsory. Pilot is embarked and disembarked near the Sea Buoy of Puerto La Cruz, in position: Lat. 10° 15.5′ N., Long. 64° 41′ W.

ANCHORAGE: On the Pto. La Cruz Roads.

RESTRICTIONS: Entering: In daylight hours only: 0600 – 1800 hrs.

Sailing: Day and night.

TUGS: One powerful tug available, compulsory to use when ship's length more than 90 m.

BERTHING: New Pier: Length 322 m. Old Pier: Length 233 m.

Water Depth: According to Pilots information: Old Pier: 29 ft. New Pier: 34 ft.

STEVEDORES: *Working Times:* Monday to Friday: 0700 – 1100 hrs., 1300 – 1700 hrs., 1800 – 2300 hrs. Saturday: 0700 – 1100 hrs., 1300 – 1700 hrs. Sunday: No work is done.

Gangs have to be ordered by 1500 hrs. the day before required.

FRESH WATER: Ships can replenish their fresh water tanks without charge (Included in port charges). Own hoses to be used.

OPENING/CLOSING HATCHES: Opening/Closing hatches, setting derricks: Special Rigger gangs take care of this. It is absolutely forbidden for ship's crew to touch these kind of jobs.

GENERAL: *Waste Water:* Special care should be taken to prevent waste water, from sanitary or engine-room systems fouling the jetty. Heavy fines are made in case this happens and a special shore gang might be ordered to clean same.

Customs: 2 Customs Officers have to be provided with food.

OPERATORS: Servicio Portuario de Guanta.

GUARANAO: 11.40 N. 70.13 W. (See Plan)

SHIPMASTER'S REPORT: January 1983.

LOCATION: The port of Guaranao is located on the Gulf of Venezuela on S.W. coast of the Peninsula de Paraguana, Venezuela. It lies between Amuay Bay to the North and Punta Cardon to the South.

DOCUMENTS: Inward Clearance is effected on board immediately after docking by Government Port Officials and a representative of the Marine Department.

The following documents must be ready on arrival:

Clearance from Last Port.
Crew Lists (7 copies).
Passenger Lists if any (5 visaed copies).
Baggage Lists if any (3 visaed copies).
List of Personal Effects (4 copies).
Stores Lists (2 copies).
Sailing Permit (Zarpe).

APPROACHES: Masters when approaching the coast should keep a sharp lookout for fishing boats, nets, small craft or sunken wrecks. From Punta Zarobon the coast, which is bordered by cliffs from 85 ft. to 65 ft. (25.9 m. to 19.8 m.) high, trends about 2 miles SSW to Punta Gorda.

PILOTAGE: Compulsory. Vessels have to wait for Pilot about 0.5 miles offshore at anchorage. Ship's can make contact with pilot station by VHF on Channels 16 and 68.

Maracaibo Pilots board and leave in position marked on chart.

Also see Punta Cardon (Pilotage – Shipmaster's Report dated January 1989).

ANCHORAGE: Generally ships must anchor about 0.5 miles offshore to wait for Pilot. Good anchorage is obtained in depths of 28 ft. (8.5 m.), muddy bottom and depths of less than 18 ft. (5.5 m.) extend up to about 0.25 miles offshore in this bay, and depths of less than 36 ft. (11 m.) extend about 7 cables NNW from Punta Zarobon (Guaranao).

RADIO: Arrival notices and radio messages to and from ships at sea are usually transmitted through Curacao (PJC) and routed through Agent's head offices at Caracas, Venezuela. The port radio control is Las Piedras Paranagua.

TUGS: One tug is available to assist with berthing/unberthing.

BERTHING: A pier extends about 3 cables Westward from shore at Salinas, Guaranao, and the Southern half of this pier is for Ro-Ro vessels stern to. A floating pier about 1 cable distance South of and parallel to the former, extends Westward from shore about 810 ft. (247 m.) and is 164 ft. (50 m.) wide.

CARGO HANDLING FACILITIES: There are fork lift trucks of all sizes, 6 mobile cranes at the floating pier, and some towing vehicles.

MEDICAL: Services available.

FRESH WATER: Not available.

FUEL: Available if advance notice is given. Fuel/diesel oil and lubricating oil can be obtained from either Amuay Bay or Punta Cardon.

FIRE PRECAUTIONS: This port is used for discharging general cargo, especially waste paper and timber. Waste paper is considered as dangerous cargo, therefore Masters are called to pay attention to their fire-fighting equipment and to have it ready during discharging waste paper.

WATCHMEN: Not available.

SHORE LEAVE: Permitted, but shore passes must be carried and passes returned before the vessel sails.

GENERAL: *Stores:* Provisions, deck and engine stores available but not bonded stores.

Garbage Disposal: No facilities.

SHIPMASTER'S REPORT: December 1990.

Tanker of length 135 m. berthed port side alongside.

Vessel arrived with clean ballast with the intention of discharging ballast to sea. Port authorities advised that this was not permitted even though the ballast was clean. The shippers arranged and received the ballast by shore trucks of 44 cu.m. capacity each. Deballasting (780 cu.m.) into the trucks took 26 hours and involved 19 trips by the trucks.

Cargo was delivered to the pier by trucks and was pumped on board by 2 small portable pumps through 2×4 in. diameter hoses. Loading was eventually reduced to one pump due to the viscosity of the cargo.

Final cargo figure was 6,000 tons short of the 10,000 tons that the vessel had expected to load and the 4,000 tons that was loaded took 120 hours.

AUTHORITY: Las Piedras-Guaranao Port Captaincy, P.O. Box No. 2, Codigo Postal 4102-A, Punto Fijo, Edo. Falcon, Venezuela. *Tel:* (069) 402008. *Telex:* 54119. *Cables:* Capipuerto Las Piedras. *Contact:* Captain David Jimenez Quintero, Harbour Master.

JOSE TERMINAL: 10.06 N. 64.51 W. (See Plan)

FLAG: Venezuelan flag must be displayed from the foremast when entering Pozuelos Bay and when manoeuvring or docking, regardless of the hour; however, while at anchor or while moored at berth, it needs to be displayed only between sunrise and sunset.

LOCATION: The Terminal of Jose is located West of Pozuelos Bay at: Lat. 10° 06′ 19″ N., Long. 64° 51′ 10″ W. on the N.E. coast of Venezuela. The usual hurricane path is several hundred miles to the North.

The lighthouse marking the entrance to Pozuelos Bay is located at: Lat. 10° 18′ 18″ N., Long. 64° 41′ 07″ W. Visibility is 20 miles.

DOCUMENTS: Arrival Clearance is effected on board vessel shortly after docking by Government Officials and a representative of the Company. The following documents are required and should be prepared prior to arrival.

Ship's Register.
Ballast Manifest (1 copy).
Crew List (6 copies).
Passenger and Baggage List, if any (5 copies).
List of Passengers in Transit, if any (5 copies).
List of Personal Effects (4 copies).
*Stores List (5 copies).
List of Slop Chests (4 copies).
Sailing Permit issued by Marine Authority at last port of call.

*Store List should indicate separately all deck, engine and cabin stores.

APPROACHES: Puerto Jose is approached through a channel 150 m. wide, with a minimum depth of 13.6 m. There is a turning area 460 m. in diameter.

PILOTAGE: The use of Government pilots is compulsory for all vessels docking or undocking. This service will be arranged at all times. If it becomes mandatory for the Master of the vessel to disregard Pilot's order in order to ensure safety of the ship, a written report in Spanish shall be submitted promptly by the Master of the ship to the Government Port Captain.

RESTRICTIONS: No restrictions are made on arrival/sailing time.

MAX. SIZE: The loading facilities consist of one Berth.
The docking characteristics are as follows:

Max. Deadweight	42,000 tons
Max. Ship Capacity	75,000 cu.m.
Min. Ship Capacity	11,000 cu.m.
Max. Draft	39 ft.
Max. LOA	800 ft.
Max. Lightship weight	22,000 tons

SPM: See "Shipmaster's Report" dated September 1994.

HEALTH: In theory the Government Port Doctor is to board each incoming vessel and board only outgoing vessels which carry passengers. In practice, however, the doctor boards at his discretion.

RADIO: Masters are requested to advise Corpoven Puerto La Cruz by radio 72 hours in advance of estimated arrival giving vessel's name, date and hour of arrival, bunkers, name of Master, port of departure, draft (arrival), Venezuelan gross tonnage, flag of ship and dates that ships' certificates expire. Vessels may contact the terminal of Puerto La Cruz by radio-telephone on 2182 kHz, SSB and VHF Channel 16. There is standby attention 24 hours a day. The terminal also has the frequencies 2080, 2120, 2638, 2738 and VHF Channels 6, 12, 13, 16, 17, 73 and 74.

Ship-to-shore radios are installed on the oil dock and on both tugs.

TUGS: There are 2 tugs at the port for mooring or unmooring and use is compulsory for all vessels. The tugs available are radio equipped and are 3,000 h.p. or more. Generally the Government Pilot will not begin manoeuvers until he is assured that the tugs are on stand-by.

BERTHING: *Arrival at Dock:* While alongside the berth the following rules must be observed:

(a) Master must ensure that mooring lines are properly tended, and that sufficient personnel are onboard at all times to handle lines. Loading will be temporarily suspended upon infringement of this regulation.

(b) Masters are requested to remove the blank flanges from their vessel's loading manifold before docking, so as to expedite the connecting of the shore loading arms by company personel. Vessels are requested to have their derrick and gangway ready for use.

NOTE: Vessels normally dock with starboard side to dock, unless advised otherwise.

(c) While docked, the discharge of sea water, hot water or steam on dockside of ship is prohibited. Hot water or steam may activate the automatic sprinkler system as well as damage piping located under the dock surface.

(d) Rat-guards must be placed on all ropes connected with the shore.

(e) Heavy exhaust smoke from vessel's funnel is not permitted. Any infringement of this rule will result in Government fine and/or removal of ship from dock.

(f) Meals must be provided in officer's messroom for Venezuelan National Guard personnel who may be assigned to the vessel during her stay in port.

(g) Masters are requested to display on top of mast a red flag in daytime and red light at night indicating that ship is handling dangerous cargo.

(h) Unregulated crafts should not be allowed to come alongside ship moored at Terminal without the permission of the Terminal Operator. It will be the responsibility of the ship's Master to ensure that this regulation is obeyed.

LOADING: *Products Handled:* Natural gas, propane, isobutane, normal butane and pentane.
Loading rates:

Propane	12,000 gallons p.m.
Butane	6,000 gallons p.m.
Gas/Pentane	4,150 gallons p.m.

Only one commodity handled at one time.

After the vessel has been cleared, the Company Dock Supervisor on watch will give the Master of the vessel written instructions with respect to the cargo.

During loading operations, company employees are on watc administer to the needs of each vessel.

Upon termination of loading cargo, cargo lines are displace controlled rates prior to disconnecting.

Shortly after completion of loading, company personnel and independent inspector, together with a vessel's officer, will take s ullages and later, deliver cargo and sailing papers to the Master of vessel.

Ships must vacate berth upon completion of loading and await pa at anchorage in Pozuelos Bay.

For information regarding completion of loading, the dock super can be contacted by telephone from telephone booth at berth.

MEDICAL: All requests for medical or dental treatment mus accompanied by a written request from the Master to the vessel's A

BALLAST: There are no facilities for deballasting.

FRESH WATER: Not available locally.

Fresh chlorinated water is available in limited quantities at an ave rate of approximately 2 tons per hour at the Puerto La Cruz Termi

FUEL: Bunkers are not available at this Terminal.

Bunker "C" and Heavy Diesel Fuel and a complete range intermediate fuels are available in reasonable quantities at Puert Cruz Terminal, subject to safety and operational restrictions. Del rates to the ships are approximately as follows:

Bunker "C"	200 t.p.h.
Heavy Diesel	150 t.p.h.
Intermediate Fuels	100 t.p.h.

Meters are installed in all bunker systems and are calibrated i barrels; except diesel meters which indicate gross barrels.

The dock valves on the bunker lines on the docks of Puerto La C Terminal will only be opened and closed upon advice from the sh personnel.

Lubricants and gasoil are available through the vessel's Agent.

CONSULS: The following foreign countries have consular offices in vicinity of Puerto La Cruz:

Belgium
Brazil
Colombia
Denmark
France
Great Britain
Italy
Netherlands
Norway
Spain
Sweden

Vessel's Agent should be appraised of vessel's consular requireme promptly upon docking.

SURVEYORS: 1. Saybolt, Caleb-Brett, Aivepet and others are availa at Puerto La Cruz.

2. Lloyd's Register, American Bureau, Bureau Veritas, P & I availa at Puerto La Cruz or from Caracas via the ship's agent.

CUSTOMS: Crew members should be warned against taking knive other lethal weapons ashore, as this is strictly prohibited. All firear and ammunition must be noted on Stores List. They cannot excee per officer and 18 cartridges per gun. No arms may be carried w ship is in Venezuelan waters or tied up at dock. Contraband of a description will be confiscated. Each man is allowed 1 package cigarettes on his person and this package must be opened. No li is to be taken ashore. It is prohibited to carry liquor from shore to s without authorisation from Master of vessel. It is further strictly prohib to consume liquor in dock area.

It is normally forbidden to take photographic cameras asho However, upon written request to the National Guard contingent on t oil dock, special permission may be obtained. This is subjec 2 limitations: (1) that the camera is returned to the ship; (2) tha photographs are taken of the petroleum installations.

REPATRIATION: Seamen discharged from hospital for transfe another port, seamen arriving from another port or those be repatriated are handled by the vessel's Agent, who must comply w all Venezuelan Regulations.

In the case of seamen left ashore for any reason, Masters requested to furnish a letter accepting responsibility for all expen incurred, advances if any, and instructions for repatriation. Venezue regulations, at all times hold the vessel responsible for a seaman du his stay in the country. Close contact is maintained by radio with owners regarding disposition of their seamen.

TIME: GMT minus 4 hours all year round.

EMERGENCY CO-ORDINATION CENTRE: Seccion de Segur Busqueda y Salvamento Maritimo. Telex: 31154. Tel: (02) 513 512156.

TELEPHONES: There is a telephone booth on dock. The supervisor duty may be contacted at any time.

IDENTITY CARDS: Passes for shore leave are issued by the offic of the "Capitania de Puerto", who board with the Customs Author upon the vessel's arrival at dock. These passes are valid for the dura of the vessel's stay in port and must be returned before sailing to t guard assigned to the vessel.

In order to comply with Immigration Regulations, crews should carefully checked before sailing, and any missing seamen reporte the vessel's Agent.

Crew members left behind when the vessel sails will be held in cust until deported at the vessel's expense.

REGULATIONS: *Excessive Smoke:* It is absolutely prohibited exhaust heavy smoke through a ship's funnel while tied up at Company's dock. It is also prohibited to blow boiler tubes. Failur comply with this regulation will result in any or all of the following acti

1. The loading operation will be immediately shut down.
2. Vessel will be subject to fine.
3. Vessel may be removed from dock.
4. Ship's Agent will be advised of infractions of this regulation.
5. Fines, time lost, and other related expenses will be charged aga the vessel.

Pollution: Venezuelan laws are very strict on this subject and authorities quickly enforce existing statutes. For this reason each Ma is handed a circular that emphasises the necessity of complying federal and local laws and customs.

The spilling or discharge of dirty ballast, crude oil or petro products into coastal waters is defined as pollution, as is also throwing overboard of garbage, trash or other unwanted objects while the vessel is at anchor or dockside. Prior to the start of loading operations all discharge valves, bilges and scuppers must be closed and strict vigilance exercised during deballasting and loading operations.

When a spill does occur, the Master, Government officials and a company representative evaluate the quantity and submit a report to the Government Petroleum Inspector. This report becomes the basis for a federal fine that is practically incontestable. An additional expense occurs when local authorities require assistance in cleaning beaches and shorelines after a major spill and can pinpoint the responsible vessel or source.

TONNAGE CERTIFICATE: Due to reciprocal agreements between Venezuela and the following countries, ships flying the flag of any of the below-named countries are exempted from Arqueo compliance and payment of fees: Denmark, Great Britain, France, Germany, Netherlands, Norway, Portugal, Sweden, United States.

Ships bearing the flag of any other nation shall require a Venezuelan Arqueo Certificate. The cost of measuring is contingent on the size and tonnage of vessel. The certificate is usually issued after the ship sails from port. It is then sent to the marine department of the Owners of the vessel by airmail.

GENERAL: *Dockmaster's Office:* Loading and marine personnel offices of Corpoven S.A. are located at the entrance of the dock. Any matter concerning loading and/or bunkering, is handled through this office, which is open 24 hours every day.

The Documentation Section is located at the Puerto La Cruz Terminal. On the dock there is a telephone booth and the supervisor on duty can be contacted at any time.

Cash: The local currency is the "Bolivar". Foreign exchange may be secured from local banks. Local banks are open Monday to Friday 0830 – 1130 hrs. from 1400 – 1630 hrs. except holidays.

Ship's Requirements: All ship requirements such as chandlery supplies, mail, cash advances, medical attention, dental care, consular services, repair work, laundry service, bonded stores, transportation, etc., should be obtained through the vessel's Agent.

No charts or sailing books are available in the Terminal. These should be forwarded by airmail to the vessel's Agent for delivery to the ship.

Movement of Passengers: Inasmuch as the Company's Terminal is not a public port, only bona fide crew members and Corpoven employees are permitted to join or leave ship in Jose.

AGENCY: All incoming ships to lift cargoes at this Terminal must have a local Agent to render all services required for a prompt and efficient tanker turnaround and to cancel all ships disbursements during the port stay.

Corpoven as operator of the Terminal charges a fixed fee for General Services such as:

Complete documentation service.

Preparation of disbursement accounts for the Agent of Vessel.

Dispatch of vessel.

Control over marine units which service vessel.

Assistance and supervision in docking of vessel. Supervision over connecting of loading system and related cargo facilities.

Offices of Corpoven loading and marine personnel are located on the first floor of the building between Berths No. 1 and 2. Any matter concerning loading, bunkering, is handled through this office, which is open 24 hours of every day. On the ground floor of this same building is the Documentation Section.

SHIPMASTER'S REPORT: September 1994.

Charts: B.A. Charts No. 1480, 230, 1498. U.S. NOAA Chart No. 24430.

Approaches: From North, East or West, the approach is easily identifiable with the many islands, principal of which is Isla Margarita to the N.E. of Puerto La Cruz.

Approaching Bahia de Pozuelos, the Racon on Cayo Borracho and light on Morro Pelatos (LL 6480) are not operating.

The light Morro de Robledal (LL 6500) Isla Margarita is not operating.

Using Canal de Margarita from and to the East to reduce the distance to Puerto La Cruz is not advised for large tonnage due to numerous fishing craft/ferries and Corpoven Oil Jetty adjacent to the strait. Smaller vessels under about 10,000 d.w.t. can safely navigate the passage, as we have done on a number of occasions.

Anchorage: For Puerto La Cruz and Puerto Jose in Bahia Pozuelos.

Anchorage area is marked on B.A. Chart No. 1498, the Southern limit 2.5 miles North of the city. A number of ships were observed to be anchored South and East of the charted limits.

Light buoys off Punta Puinare (Lat. 10° 17.4′ N., Long. 64° 40.7′ W.) and off Punta Baregan (Lat. 10° 14.8′ N., Long. 64° 39.1′ W.) are both in position and operating.

The bay is well sheltered and holding ground good with mud/sand bottom.

On our visit, another 4 vessels were anchored over the whole bay.

Pilot: For Puerto La Cruz, Pilot officially boards in position marked on B.A. Chart No.1498 in the anchorage area, but it was seen that tankers proceeding to Guaraguao Oil Terminal embarked their Pilot near the light buoy off Punta Baregan. Oil Terminal pilotage is throughout 24 hours.

For Puerto Jose, Pilot again officially boards at the above position, but this depends if a Pilot is disembarking off an outbound vessel from Jose Terminal. In this case, the Pilot will board at Jose Fairway Buoy. He generally disembarks at Jose Buoy and returns to Puerto La Cruz by launch.

Pilots for both Puerto La Cruz and Jose Terminal come from the pilot station near the Ferry Terminal in Puerto La Cruz. Two black hulled/white upperworks fast launches with boarding platforms are used.

Pilotage for Jose Terminal is 24 hours. Although Pilot berthing us (75,000 cu.m.) at Jose advised that maximum sized vessels at Jose would be berthed in daylight only and with wind speed not over 15 m./sec. (Force 7).

With maximum draft and size, berthing Pilot at Jose seemed competent and reasonable English spoken.

Accommodation gangway/ladder arrangement required for ballasted vessel when boarding/disembarking.

VHF/Telex: All pilotage arrangements through the Agent. In fact the boarding arrangements at Jose came through the Agent with little direct contact with the Pilot.

Pilot station to monitor Channel 16, and works on Channel 12.

Corpoven Control Telex No. 031-81147 as listed in ALRS is operational.

Agemar Agency monitors VHF Channel 16 throughout and works on Channels 11 and 13 generally.

Cosmos Shipchandler monitors VHF Channel 16 from 0730 hrs. – 1900 hrs. and works on Channel 8.

Jose Terminal – Approach Channel: There does not seem to be a Venezuelan chart available of the Jose Terminal and approaches. The best chart is U.S. NOAA Chart No. 24430. The depths from Bahia Pozuelos to and from Jose are accurate.

New SPM Buoy in position Lat. 10° 09.0′ N., Long. 64° 50.2′ W. with outlying mooring marker boys, painted yellow, radiating N.E./S.E./S.W./N.W., 0.75 miles each side of SPM. Pilot reports buoys will be lighted. On our visit, lights not observed.

Vessel will always approach Jose from the N.E., that is from Bahia de Pozuelos, across Bahia de Barcelona (after formalities). Fairway Buoy is in position Lat. 10° 06.3′ N., Long. 64° 50.6′ W. and is best approached on a course of 228°, thereby leaving the SPM and outer mooring buoy to starboard.

Fairway/channel buoyage is IALA "B" with good lights.

Depths: We found minimum channel depths, when reduced to C.D. (0.2), of 14.3 m. by echo sounder. This is also valid for the Western Turning Basin off Berth No. 8. Alongside Berth No. 8, we found a minimum of 13.8 m. when reduced to C.D. (0.2), by hand lead line. Pilots say Berth No. 9 (East/Methanol) has been dredged to same depth as Berth No. 8.

Tugs: One tug of 1,500 h.p. on stand-by 24 hours whilst vessel alongside. Tug moors on Western side of pier (See "Plan").

For mooring medium sized vessels, this tug and one of 3,000 h.p. from the Corpoven Terminal in Puerto La Cruz used. For mooring maximum sized vessels, 3 tugs used, 1×1,500 h.p. pushing and 2×3,000 h.p. with tugs' lines fore and aft.

Two tugs with tugs' lines used for unberthing.

Berthing: Maximum draft quoted is 39 ft. and maximum size 75,000 cu.m.

This vessel, with draft 38 ft. 08 in., 75,000 cu.m., 226 m. length and 34 m. breadth, had no difficulty in swinging in the Turning Basin and berthing head-out on Berth No. 8. Always berth head-out on both berths.

Terminal very well fendered. Plenty of mooring hooks.

Moorings 2-2-2 each end, first lines run by pilot boat. Aft stern lines for maximum sized vessels more like breast lines.

Gangway: Shore hydraulic gangway from tower on both berths. With our freeboard of 11.5 m. shore gangway stayed onboard throughout.

Berth: One berth either side of platform (length 270 m.) lying 024°/204°, directly connected to pipe/roadway trestle pier of 1,440 m. long, lying 002°/182° to shoreline. Total length 1,700 m. (approx.).

Berth No. 8 is on Western side and handles LPG/Pentane.

Berth No. 9 is on Eastern side for Methanol/MTBE.

As per "Plan", LPG arms are 2×10 in. 300 ASA connections with vapour 2×8 in. 300 ASA. Configuration V-L-L-V. Pentane has 1×8 in. 300 ASA connection. Methanol 2×8 in. 300 ASA.

Discharge rate for LPG averaged 800 tonnes/hr. Due to power failures ashore and shore tank pressures, there were 2×2 hour stoppages. Generally only small amounts of LPG are imported and larger amounts exported (both Propane/Butane) from the adjacent refinery. From onboard experience, the LPG loading rate is about 10,000 bbls./hr. Cooldown on berth allowed. Vapour return charge.

Ship in contact with Loading Master by walkie-talkie provided by Terminal. English and level of understanding varied a great deal. Surveyor had a good level of English.

Preliminary survey conducted at anchor off Puerto La Cruz, together with sampling, but believe this was due to the unusual nature of our shipment.

Terminal: Three separate shore facilities – East to West. "Orimulsion" storage facility with undersea line to SPM, then LPG storage/refinery at base of pier, and Methanol/MTBE storage and refinery. The LPG facility has a storage capacity of about 520,000 bbls., refrigerated plus pressure storage.

The pier is owned and managed by the state corporation Corpoven, which markets the product from and to other state companies Pequiven/Lagoven.

SPM: A new SPM Buoy, 1.8 miles N.N.E. of the Fairway Buoy, has been positioned to load tankers of 150,000 d.w.t. for the export of "Orimulsion", a crude oil emulsion used in power stations.

The SPM is due to load its first tanker in October 1994.

The emulsion (API of 8) is piped some 300 km. from the Orinoco basin near Puerto Ordaz.

Depth around the SPM is a minimum of 12 fathoms.

Stores: No storing can take place at the Terminal. Stores can only be loaded at Puerto La Cruz Anchorage. Launch charge for storing is U.S.$35.00 per hour, normally a minimum of 2 hours.

Numerous chandlers available, the two principal ones are Cosmos (Telex: 81281 Cosma Vc. Fax: 081-674448. Tel: 081-686276), run by a Korean couple and a British lady. Prompt service and good quality provisions. The other chandler of note is Mermaid (Telex: 81396 Memai Vc).

Bunkering: No bunkers available at Jose Terminal. No barges allowed alongside. Bunkers can only be taken at Puerto La Cruz Anchorage. All grades available by barge. Pumping rates HFO (380 cst.) 140 tonnes/hr., gas oil 45 tonnes/hr. Figures accurate. High water content in HFO 380 cst.

Fresh Water: No fresh water at Jose Terminal, although small bore line to control rooms was observed.

Fresh water can be obtained at Puerto La Cruz Anchorage at U.S.$15.00 per tonne from a tug. Good notice required through Agent.

Repatriation: From Barcelona Airport, about 10 miles to East of Jose Terminal. Frequent flights to Caracas International Airport. Daily flights by American Airlines to Miami.

Telephone: Not available on jetty. A card phone is available at base of pier (but no card selling point). Nearest international telephone is Barcelona Airport or Puerto La Cruz with numerous card points; or can obtain home country direct.

Formalities: Vessel cleared at anchor off Puerto La Cruz, generally during daytime hours only, unless immediately berthing. Customs Officer also boards at Jose Terminal as in different Customs district.

Initial boarding party of 5 Customs/Immigration/Coast Guard. Agent handles all formalities. Ships/IMO forms accepted.

6 copies Manifest.
8 copies Crew List.
3 copies Crew Effects List.
3 copies Stores/Bond List.
2 copies Ports of Call List.
2 copies Ship's Particulars.
1 copy Health Declaration.
1 copy Vaccination List.
1 copy Arms/Ammunition List (Nil).
1 copy Passenger List (Nil).
1 copy Ship's Register.
1 copy All Ships Certificates.

Official Shore Passes required, and they do not have to be returned.

Bond sealed. Beer not sealed.

General: Watch for females boarding at Puerto La Cruz Anchorage. Persons using Jose Jetty, all require passes.

Rate Bolivar to U.S.Dollar: 170 B. = U.S.1.00 (1st September 1994).

Taxi fares from Jose Terminal to Puerto La Cruz vary. Officially authorised taxis allowed to use jetty, charge U.S.$30.00 to City. Loading Master will arrange. From City to Jose (if they understand where you want to go to) is U.S.$10.00 – 20.00.

U.S. Dollars accepted ashore, but smaller shops/bars only accept Bolivars. Money changers available along seafront.

Not allowed to walk down jetty from Turning Basin to main gate, must arrange terminal transport.

OPERATOR: Corpoven S.A. *FAX:* (081) 603099.

LA GUAIRA: 10.36 N. 66.56 W. (See Plan)

PORT LIMITS: Between the points 10° 37′ 40″ N., 66° 48′ 30″ W. and 10° 37′ 40″ N., 67° 07′ 07″ W. and the coast line.

DOCUMENTS:

Sealed envelopes for Customs.
Visaed B/L and Sobordos not in envelopes.
Despatch from last Venezuelan port, if any, or
Zarpe from last foreign port, if arriving directly from abroad.
Fumigation Certificate.
Bill of Health.
Vaccination Certificates of Crew.
4 Stores Lists (with arms and narcotics).
4 Lists of Personal Effects.
6 Crew Lists.
12 Lists of Passengers for La Guaira, or negative Passenger List.
8 Lists of Passengers in Transit.
2 Lists of Luggage (only for passenger luggage).
1 Master's Declaration.
1 List of Stowaways, if any.
8 Cargo Lists.

PILOTAGE: Compulsory and vessels have to wait for Pilot in the pilotage zone N.W. of the entrance. Ships can make contact with the pilot station by VHF Channel 16 or 12.

MAX. SIZE:

Berth No.	*Length (m.)*	*Depth (m.)*	*Remarks*
01-E	176	10.95	Roll-on/Roll-off
01-D	176	10.95	General Cargo
01-C	176	9.55	12 ton electrical cranes
01-B	176	8.55	12 ton electrical cranes
01-A	176	8.80	12 ton electrical cranes
01	155	9.15	12 ton electrical cranes

19	171	9.75	Passenger Berth
19-A	72	4.55	Passenger Berth
20	150	3.00	Fishing Berth
21	290	6.10	Warship Berth

ANCHORAGES: Generally ships must anchor in the N.E. area entrance, the depth varies from 8 to 20 fathoms. The bottom is and occasionally rocks.

RESTRICTIONS: There are no restrictions imposed upon entry.

HEALTH: Ships from Venezuelan ports obtain Free Pratique. Ships abroad must send a cable to Health Authorities requesting Free Pra or advising illness.

RADIO: In order to enable Agents arrange for quick entry and ber Masters should give their ETA message at following intervals Curacao Radio (ITT): 72, 48 and 24 hours prior to arrival, indicat the 48-hour message, the quantity of parcels (or tonnage if bulk c per hatch. This is imperative for applying for the necessary pers of the Instituto Nacional des Puertos (I.N.P.). Also, draft, passen requirements for bunkers, fresh water, provisions, repairs, me assistance, etc. This telegram the Master to sign with his full nam

VHF: Communication with the Port Authorities and the pilot statio possible by VHF. Ship must make contact on Channel 16 and ch after to some Channel between 1 and 70, Channel 12 is normally for this manoeuvre.

TUGS: The use of tugboats within the port is compulsory, bot entering and leaving port, as well as for manoeuvres in the port Ships longer than 139 m. must be assisted by 2 tugboats.

Ship's lines are used in the manoeuvre. The Port of La Guaira 2 tugboats of 1,800 h.p. each. Normally they join the vessel a entrance of the port.

BERTHING: Normally a minimum of 24 ocean-going vessels can b at one time. Berths No. 01-E, 01-D, 01-C, 01-B, 01-A, 01, 02 an are along the Breakwater Pier East-West, parallel to the coast. At No. 01-C, 01-B, 01-A, there are 12 electrical cranes of 12 tons. At No. 03 ships discharge grain directly to a silo by 2 grain towers, ave daily rate 2,000 tons. Silo capacity 12,000 tons.

Within the port is a finger pier, parallel to the Breakwater Pier, 2 Customs warehouses alongside, with berths North and South, 2 The main pier is parallel to the coastline, East-West, with Berths No 11, 12, 13, 14 and 15,, along which piers there is ample Cus warehouse space, including outdoor space on the roofs as well as an uncovered storage area. There are 15 × 6 ton electrical cranes a pier.

The Passenger Terminal is on a finger pier, in direction North with its land end in the corner of Berth No. 15. There are 2 berths side, namely Nos. 16 and 17 in the inner basin and Nos. 18 and the outer basin.

Passenger vessels have priority for berthing and they have to le port within 24 hours.

BULK CARGO FACILITIES: Bulk carriers only discharge, at 01-D, 01-C and 03. There are no facilities for cargo.

SPECIALISED CARGO HANDLING FACILITIES: The only specially equipped for Roll-on/Roll-off traffic is Pier 01-E, but No. 04, 09 and 16 are also used for this kind of cargo.

There is no fixed equipment for handling containers but the Inst Nacional des Puertos has some mechanical equipment for hand containers.

This port does not have any other facilities for specialised handling.

BRIDGES: There are no bridges.

STEVEDORES: Supplied exclusively by Instituto Nacional des Pue at costs per weight of cargo in accordance with governmental dec

The Port Agent applies for the necessary number of gangs per Each gang consists of 11 stevedoremen (estiba) and 11 longshore (caleta).

Switching of gangs from one hatch to another is not permitted.

There are no longshoremen costs for cargo handled during str time, but only for that handled during overtime.

(a) *Straight time*
Monday – Friday 0700 – 1100 hrs.
1230 – 1630 hrs.
Saturday 0700 – 1200 hrs.
(b) *Overtime*
Monday – Friday 1800 – 2300 hrs.

(c) *Saturday afternoon* work is not permitted, but if a vessel terminate operation and sail within a maximum of 3 addit working hours, a special permit would be granted by Customs Port Authorities. In such a case, the additional working hours considered as overtime.

(d) *Work on Sunday* is not permitted except for passenger ves (officially those carrying 69 passengers, but exceptionally ves with fewer passengers might occasionally obtain consideration by authorities).

EQUIPMENT:

(a) *Electric Shore Cranes:* Berths 01-C to 01-A have 12 elec cranes on rails of 12 tons capacity each. Berths 10 to 15 have on rails of 6 tons capacity each. The Instituto Nacional des Pu allow 2 × 12 tons cranes to lift pieces up to 20 tons or 9 tons we At Pier 10 the arms of the cranes reach the roofing of warehouses.

Use of shore cranes is not compulsory, unless the Techn Board of the Instituto Nacional des Puertos rules to use them. O piers have no shore cranes.

(b) *Diesel-Driven Rolling Cranes:* There are a considerable numb these cranes which can lift heavy pieces of about 17 tons.

(c) *Floating Cranes:* Not available.

(d) Special lumber carriers of about 20 tons capacity.

(e) Tow trucks, fork-lifts, trucks and trailers up to 10 tons capacity

LOADING/DISCHARGING: Cargo is discharged on the pier, when it is taken away by fork-lifts and/or other mechanical equipment sup by Instituto Nacional des Puertos. The use of such equipment is incl in the handling fee for weight.

There are 2 grain towers on Berth No. 3 leading via conveyor to storage silos of 12,000 tons capacity. Average daily discharge 2,000 tons approximately.

At Berths No. 10 to 15 discharge to the roof of the warehouse or on the pier is possible.

MEDICAL: There are several hospitals in the town and all the medical attention necessary. Should medical assistance be needed on board, contact the Agent.

DENSITY: The average density of water in the port is 1025.

FRESH WATER: Available through pipeline on the pier, day or night, by water trucks of up to 10 tons capacity in day time only.

CONSULS: The following countries have consuls in La Guaira; Belgium, Germany, Mexico, Norway, Panama and Sweden. The following countries have Vice-consulates; Denmark, Italy, Portugal and Spain.

REPAIRS: All kinds of deck and engine repairs are possible.

DRY DOCKS: There are no dry docks in this port. (The nearest is at Puerto Cabello).

SURVEYORS: All Classification Societies and P&I Clubs are represented in the port.

GANGWAY/DECK WATCHMEN: The watchmen service is not necessary. It is recommended to use a seaman as watchman.

OPENING/CLOSING HATCHES: Not performed by the Instituto Nacional de Puertos but by either the ship's crew, or the assistance labour of the Agent.

REPATRIATION: There are all kinds of facilities for making crew changes and arranging any necessary repatriation.

AIRPORT: The distance to the International Airport at Maiquetia is 0 km., this is served by different regular airlines.

TIME: GMT minus 4 hours. No change.

HOLIDAYS: January 1st, (New Year); February 18th/19th, (Carnival); April 3rd/4th (Easter); April 19th, (Independence Day); May 1st, (Labour Day); June 24th, (Carabobo Battle); July 5th, (Independence Day Declaration); July 24th, (Simon Bolivar's Birthday); September 4th, (Public Funcionary Day); October 12th, (America Discovery); December 25th, (Christmas).

POLICE/AMBULANCE/FIRE: *Police:* 26148, 26347 and 27098. *Ambulance:* 22165. *Fire:* 22165 and 22587.

TELEPHONES: It is not possible to place telephones on board, however calls can be made in the "CANTV" office.

SERVICES: There are no special services available. Radar repairs possible.

SHORE LEAVE: Crew members can go ashore with shore passes issued by the Port Authorities.

IDENTIFICATION: Shore passes are sufficient to go ashore.

REGULATIONS: *Dangerous Goods:*

1. Dangerous goods should be discharged directly to trucks.
2. When goods are grain or powder in bags, these should not exceed 50 kg.
3. Cargo with damaged packing will not be discharged and it should be repacked on board.
4. Cargo should be duly identified and with their dangerous goods labels.
5. Cleaning of the piers after loading or unloading should be done by the importer or exporter, otherwise they should cover the expenses if the INP has to do this cleaning.

OFFICIALS: Once the vessel is anchored at La Guaira, Representatives of Customs, Port Captain, National Guard, Health Service, Immigration and Agency board the vessel.

DEVELOPMENTS: Increase in draft to 35 ft. expected.

AUTHORITY: Harbour Master, Capitania de Puerto, Terminal de Pasajeros de La Guaira.

GENERAL: The following "Depth Bulletin", dated June 1978, was received from a Shipmaster in February 1979.

REPUBLIC OF VENEZUELA
NATIONAL INSTITUTE OF CANALIZATIONS
ZULIA ZONE

Depth Bulletin No. BP – 6-78 Dated: 13-06-78

The following data represents the latest information reported and refer to the date shown for each section of the channel. Depths are expressed in metres and are related to the same level of the local Navigation Charts 1001, 1002, 1003 and 1004 of the M.M.M. Mean Monthly Lowest Low Water.

The controlling depths refer to the centre area of the channel demarked by parallel lines on either side at a distance of 60 m. in the outer channel and 45 m. in the rest of the channel. The Puerto Miranda Channel is of 30 m. The theoretical position of the buoys in the aforementioned navigation charts are located at a distance of 30 m. from the edge of the channel.

Main Channel

Channel	*From*	*To*	*Date*	*Depth (m.)*	*Remarks*
Outer Section	B – 1	B – 28	19-05-78	12.8	
Inner Section	B – 28	T – 56	10-05-78	12.8	
SOUTH PROLONGATION	T – 56	B – 59	28-04-78	12.8	Entrance to Puerto Miranda (B – 59)
	B – 59	B – 66	26-04-78	12.8	Entrance to La Estacada (B – 66)
	B – 66	B – 76	10-03-78	12.8	Entrance to the Port of Maracaibo

(N.B. Certain information common to all Vessels entering Maracaibo Lake is given below. For specific details of ports/terminals within the Lake, see relative Section as indicated above).

FLAG: Local authorities require that the Venezuelan ensign be flown at vessel's masthead, from the time of entering the outer channel until clear of the outer channel outbound.

DOCUMENTS: *(a) Inward Clearance for Scheduled Vessels:* Vessels arriving in ballast or with cargo in transit require following documents:

1 copy Sailing Permit from Last Port.
2 copies Ballast Certificate.
4 copies Passenger Lists.
4 copies Baggage Lists.
4 copies List of Passengers in Transit.
4 copies List of Slop Chest.
4 copies List of Personal Effects.
4 copies Stores Lists.
5 copies Crew Lists.

Vessels arriving with cargo should have, in addition to the foregoing:

4 copies Sobordos (Venezuelan Inward Manifests).
6 copies Bills of Lading.
2 copies Inward Manifests.

(b) Inward Clearance for Diverted Vessels: Vessels diverted to Maracaibo Lake Ports to load cargo, should submit all documents indicated above, except consular mail, which they will not have.

Vessels diverted at sea to Maracaibo Lake Ports which do not have a Venezuelan clearance on board, must advise loading port via radio to arrival, the name of vessel, Master's name, vessel's flag, Venezuelan net tonnage (if available, if not, the registered net tonnage), last port of call, destination port for which originally cleared, ETA San Carlos Pilot station and grade and quantity of cargo to be lifted. This information is required in order that Inward Clearance may be arranged with government officials in ample time prior to vessel's arrival. Also 3 copies of the Diversion Telegram received by vessel and signed by Master, together with copies of those documents listed under *(a)* should be presented to the Port Authorities upon arrival at Maracaibo. In the absence of this information, or of presentation of each of these documents to the Port Authorities the vessel will be subject to a fine. Please note, that the documents covered under *(a)* have to be presented upon arrival, regardless, if the vessel is not arriving with Consular Clearance or arriving after being diverted at sea.

(c) In Maracaibo 2 Clearances from Custom's authorities are needed: One for proceeding from Maracaibo to loading berth, and another after loading for proceeding from Maracaibo to destination. For this reason Custom Dispatch charges may be incurred twice.

(d) American Crew List. All non-American vessels loading for a U.S.A. port should have the American Crew List ready on arrival in Maracaibo to be visaed by the American Consulate in Maracaibo and placed aboard ship before departure. The crew list should be prepared on Immigration and Naturalization Service Form No. I. – 418 (Crew List Manifest) and should contain 2 sections:

Section 1 should list those crew members who are American or who possess individual visa documentation to the United States.

Section 2 should list, in the alphabetical order of their last names, those alien crew men who lack United States visa documentation and therefore require inclusion in the visa of the Crew List.

Only one name may be placed on each line of the Crew List. Two names should not be placed in the space of one line, nor should a full line between two names be left vacant. All copies of the Crew List presented must be legible. Occasionally the names of the crew men included on the carbon copies of some crew lists presented at the consulate are blurred beyond recognition.

The information requested under columns 1, 2 and 3 should be filled in completely. Column 1 should always contain the complete first name and middle initial of the crew man. Column 2 should show the nationality of each crew member and the number of his travel Document. Column 3 should always include the name of the port where the crew man was shipped, not simply the country.

At the time of vessel's first application for a Crew List, the Crew List must be presented in four copies: Original and 1 copy should contain only information requested under Columns 1, 2 and 3. 2 copies must include following information of those crew men to be included on Crew List Visa. Column 4 should list date, city and country of each crew man's birth. Column 5 should show place of issuance of Seaman's Travel

Document and name of Government which issued travel document. (It is not necessary to list date of issuance of travel document).

Below is a sample line correctly entered on the Master Crew List.

(1)	(2)	(3)	(4)	(5)
	Z.23455	Maracaibo	December 8, 33	
Bello, Tomas E.	Venezuelan	Venezuela	Caracas, Venez.	Cabimas, Venez

Upon subsequent Crew List applications by same vessel within same year, the Crew List need be presented in duplicate only, and the information in Columns 4 and 5 need be provided only concerning any new crew members who require visa documentation. When twelve months have elapsed since presentation of Original Crew List, a Crew List should again be prepared in 4 copies and should contain all the information required in columns 1 – 5. Such a Master Crew List is required after each 12 months' period.

APPROACHES: Also see "General" above. The channels leading to the Lake of Maracaibo are called the Outer Channel, the Inner Channel and the Lake Channel. The controlling depths of the Outer Channel, Inner Channel and the channel Southward to Buoys M1 and M2 are normally 45 ft. At certain times the controlling depth may be less. At such times suitable notices are published advising mariners of these temporary reductions of controlling depth.

Outer Channel. The Outer Channel starts at the E.M. Buoy in position 11° 13′ 47″ North and 71° 33′ 31″ West. The light characteristics of E.M. Buoy are: flashing white every 5 seconds, visibility approximately 5 miles. The distance from E.M. Buoy to the Southern end of the Outer Channel, marked by Buoys B – 27 and B – 28, is approximately 15.75 miles. The channel is 1,000 ft. wide and has a normal controlling depth of 42 ft. minimum monthly observed lowest water (MMOLW) with tidal range varying about 2 ft. 3 in. This depth is maintained by periodical dredging. Tankers are required to have a keel clearance of at least 2 ft. and dry-cargo vessels a keel clearance of at least 3 ft. Vessels navigating the channel at the maximum allowable draft are confined from 2 hours before to 2 hours after high water. There are no turns in the channel and the course is 189°.

There is a breakwater 0.5 mile East of, and parallel to, the Outer Channel and extending 1.6 miles Northward from the North side of Zapara Island. The end of this breakwater is marked with a skeleton steel tower with a light 27 ft. above sea-level. Light characteristics – flashing white light every 8 seconds; visibility about 3 miles.

On Zapara Island there is a skeleton iron tower with a height of 136 ft. above sea-level.

Cross currents are sometimes encountered near Zapara, San Carlos and Pescadero Islands, especially at low water when the cross currents are strong. Overtaking at these points should be avoided.

There is one anchorage zone in the Outer Channel which is a trapezoid on the port side when navigating inbound near the Buoys B – 14, B – 15, B – 16 and B – 18. All buoys in the Outer Channel are equipped with radar reflectors.

Caution: Masters are warned to keep adequate speed in the Outer Channel even when embarking the Pilot as strong cross currents are encountered near San Carlos and Zapara Island. Pilot boats are fast and fitted with a flying bridge.

Inner Channel. The Inner Channel continues on the same course as the Outer Channel for about 10 miles, whereafter the direction changes to 150°. Entire length of the Inner Channel is about 12 miles.

The beginning of the Inner Dredged Channel is marked by Buoys B – 29 and B – 30. Channel is marked by beacons, and terminates at beacons T – 55 and T – 56. The channel is 800 ft. wide and the normal controlling depth is 43 ft. MMOLW with tidal range varying from1.5 ft. to 2.5 ft.

The channel from beacons T – 56 to Maracaibo Harbour is a dredged channel, the end of which is marked by Buoys No. B – 73 and B – 74.

About 0.2 mile South of Buoys B – 29 and B – 30, there are located 2 towers – 1 on each side of the channel, and about 1 mile further South are 2 more towers. These 4 towers are marked E – 31 and E – 32 (North) and E – 33 and E – 34 (South). Towers No. E – 31 and E – 32 are of single steel pipe construction on a concrete pile base. Towers No. E – 33 and E – 34 are of skeleton steel construction (former oil-well derricks) each mounted on 4 concrete piles. The characteristics of these towers are:

Tower No.	*Height above LWS (ft.)*	*Light*
E – 31	43	Green – Fl.
E – 32	43	Red – Fl.
E – 33	123	Green – Fl.
E – 34	128	Red – Fl.

Vessels are not allowed to overtake each other in the Inner Channel between Buoys B – 29 and B – 30 and Light Beacons T – 25 and T – 26. Vessels may overtake each other in the Inner Channel between Light Beacons T – 39 and T – 40 after having exchanged prescribed signals with the vessels to be passed. This manoeuvre is, of course, allowed only if conditions are favourable and no vessel navigating in the opposite direction is in sight.

Lake Channel. The channel starting at Light Beacons T – 39 and T – 40 and leading to Maracaibo Roads is called the Lake Channel. This is a natural channel 3,000 ft. wide and 11 miles long.

The Main Channel through Maracaibo Lake is approximately 83 miles long, not less than 244 m. wide and with a greater depth than the outer channels.

The access channels to the various ports and terminals branch off from the main channel as described under Section for each port.

CHANNEL NAVIGATION:

(a) Inbound vessels leave to starboard side the buoys and beacons marked with even numbers and to port side the buoys and beacons marked with odd numbers.

(b) Outbound vessels shall leave to port side the buoys and beacons marked with even numbers and to starboard side the buoys and beacons marked with odd numbers.

(c) Vessels should pass as close as possible to the channel's edge on starboard side. Loaded vessels have preference.

(d) Approaching vessels are to reduce speed in order to minimi suction force of the displacing waters.

(e) Vessels must maintain a distance of 5 ship's lengths by da 8 ship's lengths by night from other vessels navigating in the direction.

(f) No vessel should start to manoeuvre to overtake another before having received clearly the affirmative signal from the ship passed.

(g) A grounded vessel is not allowed to start any manoeuvre another vessel is passing.

(h) Dredgers are frequently at work in the channels and caution be exercised in passing them. Signals used by the dredgers a follows:

Daytime

Black cylinder hoisted on side of yardarm: You can overtake the side on which the cylinder is shown.

Two black balls over the bridge: The channel is blocked.

Night

Green light on side of yardarm (a white light on mast-head he show on which side the green light is placed): You can ove me on the side on which the green light is shown.

2 red lights over the bridge: The channel is blocked.

The tidal range is 4 ft. at neaps.

(i) Maximum speed for vessels navigating in lake channels has limited to 10 knots. Masters should exercise the utmost care in comp with this regulation as heavy fines may be imposed to offending ves

PILOTAGE: (N.B. Maracaibo Pilotage Regulations require that in tankers, in ballast, while crossing the Bar, shall not have greate 8 ft. difference between fore and aft draft. The Government Pilot w take the vessel if this requirement is not met, unless he is satisfie the actual draft of the vessel will permit safe navigation throug Outer and Inner Channels).

Every Master of a vessel navigating in Lake Maracaibo who de to enter the main ship channel in Pilotage Zones No. 1 or No. 2 first ensure that said Channel is free of traffic.

The limits of the Main Ship Channel in Pilotage Zone No. 1 are Buoys B1/B2 located at the entrance to the Outer Bar Channe Buoys B73/B74, of the city of Maracaibo. Pilotage Zone No. 2 b approximately 1 mile below Maracaibo and extends Southwa Lightfloats M36/M37. All other channels are considered as a channels to their respective port zones and subject to special local Every vessel navigating to or from any port in Lake Maracaibo follow the prescribed routes through the main and access cha leading to or from such ports, (unless special permission has granted to do otherwise).

(a) Pilots are employees of the Venezuelan Government and an advisory capacity; the Master retains responsibility for the ship times. In the event it becomes necessary to disregard the instructions in order to ensure the safety of the ship, the Master prepare a full written report of the circumstances, for delivery Captain of the port.

(b) Inbound vessels have the option at present to embark govern Pilot at the following areas:

(i) In the channel off San Carlos Pilot Station between Buoys B and B – 26.

(ii) Anchorage area approximately 5.5 miles N.E. of Pilot station Carlos Island. Position 11° 04′ 22″ N., 71° 33′ 48″ W. Ea Buoy B – 17. This area is demarcated with green light equipment with radar reflector.

(iii) At the E.M. Buoy.

(iv) At Punta Cardon. See "Note", "Agent's Notice" "Shipmasters' Reports" – August 1979, July 1981, August and June 1991.

(c) The Port Captaincy of Maracaibo is unable to guarantee emba or disembarking Pilots at the E.M. Buoy or at anchorage area pos For this reason Masters should communicate with San Carlos Station for necessary instructions as to where to pick up Pilot usually embarks between Buoys B – 24 and B – 26. The communic system between San Carlos Pilot Station and vessels will be by M lamp and radio-telephone. The stand-by frequency at San Car 2182 kHz. Other existing frequencies are 2120 kHz and 2080 kHz and 156.8 MHz. Each pilot launch has a radio-telephone with 218 frequency. The launch that leaves San Carlos Pilot Station with Pi ship, takes approximately 20 to 30 minutes to cover distance distance between buoys and San Carlos is approximately 6 mile 10 km.

(d) Pilot Permit to navigate the Outer Channel without aid Government Pilot will be granted to those Masters who desire to same. In order to fill the application required, a blank sealed pape 3 copies should be signed by Master on arrival. Copy of this soli duly endorsed by Port Captain of Maracaibo, will serve the Mast temporary permit until the official one has been received. Maste possession of permits to cross the Outer Channel without a Pilot the option to enter channel either at the E.M. Buoy or between any buoy, taking into consideration the heavy traffic of the cha Government pilotage through the Inner Channel is compulsory times.

(e) Outbound vessels will receive Pilot in Maracaibo, who wi vessel up to San Carlos area approximately between Towers E and E – 33, where he will disembark. The Port Captain of Mara has instructed that all Masters should always in ample time themselves with the San Carlos Pilot Station by radio-tele regardless of time of day. While inbound – between Buoys B – B – 19 and sailing outbound – between Markers T – 42 and T These instructions are obligatory and are required in order for th service to be aware, at any moment, of any emergencies which arise, and also to avoid, especially during the night, the launch de with an official Pilot aboard believing that the ship in sight nee services, in which case, even though the launch or Pilot servi

not rendered, the same will be charged to the company owning the ship, or its representative.

Note: A Master approaching the port for the first time must pick up a Pilot in Punta Cardon before entering Maracaibo Lake Channel. In the case of contravention the vessel will be intercepted by San Carlos Pilot Station and returned to Punta Cardon with a resulting loss of at least day and the Master may also run the risk of a possible fine.

Furthermore, the Master should cable ETA via Curacao Radio 72, 48 and 24 hours before arrival in order to allow sufficient time for Agents at Maracaibo to send a Pilot to Punta Cardon.

Agent's Notice: September 1987.

Subject: Pilot Service from/to Punta Cardon.

Harbour Master's Office has issued new regulations mentioned below.

1. Pilot service from Punta Cardon is only compulsory when Masters are crossing the channel of Lake Maracaibo for the first time. If this is not the case, the pilot should be then embarked at San Carlos.
2. Upon your request this pilot service can be arranged by the agency.
3. On departure, pilot service to Punta Cardon is not required.
4. If official pilot is unable to disembark at San Carlos due to difficulties onboard or by Force Majeure, or if you decide to change the instructions given to the agency with regard to Pilot to disembark in San Carlos, a letter addressed to the Harbour Master stating your reasons should be handed to the Pilot before he disembarks in Cardon.

TONNAGE: Venezuelan Port Authorities base part of their pilotage charges on the size of the vessel, i.e.:

(a) On Registered Net Tonnage. Venezuela will accept the tonnage of ships registered in countries with which they have a reciprocal tonnage agreement. As of this date, such countries are:

Denmark
France
Germany
Great Britain
Ireland
Netherlands
Norway
Portugal
Sweden
U.S.A.

(b) On Venezuelan Nett Tonnage. Ships not registered in countries listed above, when calling at Venezuelan ports for the first time, must be measured for Venezuelan tonnage by the Captain of the Port. It is the usual practice to take ashore the ship's Panama Canal or Suez Canal Certificate, which is used as a basis for recalculating tonnage under the Venezuelan regulations, and return it before sailing. The Venezuelan admeasurement certificate, when later issued, is forwarded to the Owners. A fee is charged for this certificate, which is payable only on the ship's first call.

(c) In practice, the procedure for stating the tonnage of all ships entering the Lake of Maracaibo is as follows: The inward Pilot boarding the ship presents Master a form on which among others the Master should fill in the tonnage of ship. Pilotage charges are based on this tonnage given by the Master. Master's attention is drawn to the fact that the Venezuelan nett tonnage is usually higher than the International nett tonnage. Care should be taken if an old Venezuelan Nett Tonnage Certificate is on board, because the country in which the ship is registered might later have signed the reciprocal tonnage agreement with Venezuela. If the pilotage charges are made on basis of a higher tonnage than the one that should be applied, it is later very difficult, if not impossible, to get a refund.

CUSTOMS: *(a) Customs Watch.* While vessel is in port, Venezuelan National Guard Officials are assigned on board to ensure compliance with customs regulations. The Law requires meals be supplied to these officials during regular meal hours. Masters are requested to give them the privilege of eating in officers' messroom, to avoid difficulties.

(b) *Firearms and Ammunition.* Firearms must not exceed one per officer nor may the ammunition exceed 18 cartridges per officer. All firearms and ammunition must be carefully declared on Stores List and should be collected and held in Master's safe custody while vessel is in Venezuelan waters.

(c) *Contraband.* Strict compliance with the Customs law of the country is enforced by the authorities, and Masters are strongly advised to caution crew members against attempting to smuggle cigarettes. 1 open package per person is allowed to be carried ashore, but greater quantity will result in fine and imprisonment of the offender as well as lost ship's time. Due to very strict enforcement of the Customs regulations, it is recommended that no goods be carried which are not shown on Stores List. Any new articles (clothes, shoes, etc.) should be included in Stores List and marked as personal belongings. If during a check-up by Customs, articles considered as contraband are found, this will not only mean confiscation of these articles, but also hours or days of lost ship's time, while the case is handled at court.

CONSULS: The following nations maintain consular representative in Maracaibo:

Belgium
Chile
Colombia
Costa Rica
Denmark
Ecuador
El Salvador
France
Germany
Great Britain
Guatemala
Italy
Netherlands
Nicaragua
Norway
Panama
Peru
Portugal
Spain
Sweden
Switzerland
United States of America

TIME: Local time is GMT minus 4 hours.

VISITORS: All visitors to ships are prohibited except those company employees, petroleum inspectors, etc., whose duties require their presence aboard.

POLLUTION: The Laws of Venezuela are very strict in regard to the pollution of harbour and coastal waters by oil, and heavy fines are imposed for violations. No dirty ballast, oil or bilge slops are to be pumped or allowed to escape overboard. All overboard discharge valves from cargo tanks and bilges are to be secured before loading or discharging commences. Loading is to be conducted with greatest care and vigilance in order that errors or delays in handling cargo valves may not result in overflows. All deck scuppers should be plugged before loading to avoid harbour contamination should an overflow occur. The Authorities require a written report to be submitted by the ship involved in the event of an oil spill.

PASSENGERS: Passengers will not be permitted to disembark unless in possession of the required visa and documents. To facilitate clearance, if passengers are carried, the Master should include advice to this effect in his radio ETA.

SEAMAN LEFT BEHIND: Sailing may be withheld until all crew members are aboard with exception of those ashore for justified reasons. It is important that Masters bear in mind that the Venezuelan Law will at all times hold the vessel's Master, Agent, or Owner responsible for any seamen left behind in Venezuela.

SHIPMASTER'S REPORT: August 1979.

MARACAIBO/EL TABLAZO AND APPROACHES

Approaches: If making for the "EM" Buoy direct, positions can be a bit vague due to the low lying coast.

A distance off the coast can be obtained before the "EM" Buoy but no real firm position.

Often there is a strong N.E. wind.

Pilot: In the 'Pilot Book', etc., mention is made of picking up the Pilot at Punta Cardon.

From the Pilots and Agent I have a clearer idea of the official viewpoint and requirements.

There is NO compulsion to take a Pilot before San Carlos.

If you are unsure of the area and the visibility is poor from all sources and in my personal viewpoint it is advisable to take a Pilot at Punta Cardon, giving ETA 12 hours in advance.

If vessel is to pick Pilot up at San Carlos send cable 24 hours beforehand through Curacao "PJC" to 'Piloto San Carlos' requesting permission to use Canal Exterior, ETA at "EM" Buoy and at San Carlos. Reconfirm 12 hours before "EM" Buoy and by VHF an hour before arrival on Channel 12.

The difficulty lies in language, although there is meant to be a traffic control system in Canal Exterior it is only in Spanish and the Co-ordinator speaks little English. Little information is required or given if you only speak English.

The Punta Cardon Pilot costs about U.S.$150 extra plus transport charges and entails extra distance of 70 miles from the West and 15 miles from the East.

The San Carlos Pilot boards from a fast launch at "B28" Buoy and usually leaves just before the buoy. He will use hoist, in spite of official regulations which require gangway ladder arrangement, and leaves on port side outward (boards on starboard side inward). This is nearly always the case with situation of pilot station and wind, but may change.

Communications: Venezuelan station La Guaria (YVG – ALRS 6225). Most vessels use Curacao "PJC", very good. Agents reply through "PJC". Telex very good.

VHF: Call 'Piloto San Carlos' on Channel 16 (working Channel 12). Agent at Maracaibo on Channel 16 (works Channel 14, only during office hours). Agent at La Salina on Channel 16 (works Channel 14, 24 hour service but very distorted at El Tablazo).

Canal Exterior: Leads from "EM" Buoy to San Carlos pilot station. A speed of 10 to 12 knots essential to keep vessel in channel on account of strong N.E. winds and currents across channel. Takes about 1 hour 10 minutes from "EM" Buoy to San Carlos.

The least advertised depth at LW is 12.8 m. but shoals quickly at sides of channel. We found 11.0 m. LW to West side of channel at "B18" Buoy.

Buoys "B14", "16" and "18" had shifted about 200 m. to West (August 1979). On the outer section of channel between "B4" to "B8" Buoys a Westerly set right across channel very apparent and near Malecon Breakwater. At "B22" Buoy an Easterly set experienced. Wind N.E. 4 – 5, tide 1 hour before and 1 hour after HW Malecon both cases.

The "E 34" pylon light off Pta. Diablo is very conspicuous. A new dredger 'Wado' works this section with North end Canal Interior. A large suction dredger, pulls to side of channel to let vessel pass. Only Spanish and German spoken. The old 'Zulia' dredger has stopped working. Another dredger is being completed for the Government.

Canal Interior: About 1.5 hours pilotage to Puerto Miranda, speed above manoeuvring. This channel is generally deeper than Canal Exterior. The advertised depth of 12.8 m. seems reliable. Pilot told me they hope to get both channel Interior and Exterior deepened to 15 m. LW in the near future.

Pile Light Beacons "T46" and "T40" have been replaced by buoys.

Pratique: Given on berth.

Notice of Readiness: Can be tendered on arrival at berth. It is finally brought down with Bill of Lading on completion. This is normal practice. As we were cooling down it was received at completion of cooldown. Normally on berthing with lines connected.

EL TABLAZO:

Pilot: A Docking Pilot boards just before berthing and unberthing of vessel.

Tugs: 2 tugs of 1,800 h.p. Secure in "American" style using their lines.

Situation: For all intents and purposes part of Puerto Miranda but operated by different company.

Located just S.E. of Puerto Miranda berths. El Tablazo consists of 3 piers. Bulk, liquid and a small soda pier.

Anchorage: At El Tablazo – off berth, just East of main Maracaibo channel. Good holding – 3 shackles.

Pier: The bulk pier handles bulk and bagged urea fertiliser through 4 shiploaders fed from a conveyor. Three on the South side and 1 on the North side. Two of the loaders on the South side handle bagged urea down corkscrew chutes.

The liquid pier is to the South of bulk pier – berth both sides and handles ammonia, butane, propane, propylene.

Two Chicksans each side. The inshore being of 10 in. both sides and seaward being of 8 in. but fed by 10 in. line. Couplings are 300 ASA but 150 ASA spool pieces generally fitted.

Vapour lines are flexible stainless braided with rubber covering – ship's derrick required, 300 ASA coupling with 150 ASA spool piece. All berths – head IN. On the South side the outer edge of the dredged channel is marked by buoys.

All berths have good rubber fenders. Liquid pier outer end has two full faced mooring dolphins connected to main pier by catwalk. The least depth at all berths at LW is 6 fathoms, except small soda berth which has 2 fathoms at LW.

Moorings: 2-3-1 each end. Ship put alongside pier before moorings out. Plenty of mooring gangs. Very particular on position to within 0.5 m. Gangway no problem.

Fresh Water: At 15 t.p.h. from pipe at manifold amidships. There is a pumped supply at 70 t.p.h. used for loading small tankers to take to outports where supply is limited.

Operations: Language problems. There is one Loading Master who speaks good English. Surveyor on arrival and departure. Very co-operative. Venting allowed up riser.

Vapour return line goes to flare at ship's expense and can only be used if 100% product.

Max. rate ammonia 500 t.p.h., but initially can get plenty of stops. S.G. given at 15°C. The control of the rate is not very fine. You can get down to 20 t.p.h. but increase very broad. Usual notice for completion.

Dock Density: 1003.

Documentation: Carried out at berth inward, sometimes vessel taken off berth outward to local anchorage and clearance given there. Sometimes in the past Inward Clearance done at Maracaibo, NOT NOW.

There is much written in publications and passed around about visaed Crew Lists and deviation cables. I have tried, in talking to the Agent and to the Authorities to clarify the situation.

Visaed Crew Lists are NOT required now. But there is still a requirement that because the ship has no visaed Crew List she must have deviated on passage.

Basically what is required is that the ship should be cleared on sailing for Venezuela to say, Trinidad, for orders or Curacao not Maracaibo, then on passage receive a message deviating her to Maracaibo. If she does not have Deviation Message a fine could be imposed but the Agent says all ships have required cable so do not know of fine being imposed.

Required:
7 Crew Lists.
3 Stores Lists. Victualling only, can include bond.
3 Slop Lists. Could probably combine with above.
2 Ballast Lists. To give amount and cleanliness.
1 Vaccination List.
3 Crew Manifests.
1 Health Declaration.

I cabled in a Pratique message as a matter of practice.

Shore Passes: Given by Agent for each crew member, no photos needed. Not required to be handed back on departure. Valid 3 days. After completion there seems to be a normal documentation delay to obtain clearance of up to 12 hours.

Shore Leave: The Agent will lay on a launch, but not really necessary as at El Tablazo liquid berth vessel is near the boat pier and fast launches run frequently to Maracaibo (takes 15 minutes). Arrange through Loading Master.

Can change sterling or dollars in local hotels, rate 4.3 Bolivars to the U.S. dollar.

Films: Change Walport films at Puerto Miranda. Agent will send launch. Crew member has to go with films to change.

Agent: Only Agent on departure – no officials. Bill of Lading given by Terminal before Agent arrives.

SHIPMASTER'S REPORT: July, 1981.

Experienced following when entered Maracaibo Lake, mid-July, 1981.

Arrived EM Buoy and obtained permission from San Carlos Pilot Station via VHF to enter outer channel and pick up Pilot at Buoy No. 26. During the piloting the Pilot asked asked me whether I had previously entered outer channel, which I confirmed with the remark *many years ago.*

After berthed my Agent informed me that a new regulation required Ship Masters to pick up Pilot at Punta Cardon inward bound, unless the Master with said vessel had actually entered Maracaibo Lake *within the past 6 months,* for which he was automatically permitted to enter outer channel and pick up Pilot at Buoy No. 26.

Fines might be enforced upon Masters neglecting this new regulation.

SHIPMASTER'S REPORT: August, 1981.

If the Master of a vessel enters the channel for the first time, or even if *more than six months* since the last visit, he must embark the Pilot close to Punta Cardon. The distance between Punta Cardon and "EM" Buoy is approximately 80 miles.

If less *than six months* since the last visit, Master is authorised to pick up the Pilot when passing Buoy No. 26.

In the first case 24 hours prior notice should be given to the Pilot, and when approaching Punta Cardon vessel should call "Marina Cardon" on VHF Channel 16.

SHIPMASTER'S REPORT: June 1991.

Pilotage: At present, all foreign flag vessels bound for ports in the Maracaibo Lake have to pick up Pilot off Salina Guaranao in position Lat. 11° 40′ N., Long. 70° 15.5′ W. Call Guaranao Pilots on VHF Channel 16.

Upon departure, pilot service up to Salina Guaranao is compulsory.

The above pilot service is necessary every time a vessel is bound for Maracaibo Lake, and not just for the first visit.

Section A

BAJO GRANDE: 10.29 N. 71.38 W. (See P

(1) OPERATOR: Maraven, S.A. Oil Terminal.

(2) OPERATOR: Maraven, S.A. Natural gas liquids proce facilities.

(N.B. For important details of Documentation, Pilotage, etc., "Maracaibo Lake").

(1) **OPERATORS:** Maraven, S.A.

LOCATION:

Maracaibo: On the North-Western shore of the Lake Marac Position: Lat. 10° 40′ N., Long. 71° 38′ W.

Maracaibo is the capital of the State of Zulia and seat o Government and Consular Offices, as well as the port of entry f vessels loading at terminals in the Lake of Maracaibo. Upon arri Maracaibo, a representative of the appointed Agency will go on b to assist vessel.

Bajo Grande: Loading Pier: Position: 10° 30′ 50″ N., 71° 36′ 8 about 8 miles (12.8 km.) South of Maracaibo on the Western sho the Lake and about 9,000 ft. (2,743 m.) offshore with its centre line N South. Three vessels can berth simultaneously. Two outside at B No. 1 and Berth No. 3, and one inside at Berth No. 2, to load diff cargoes. Except for the Boscan Crude, two vessels can load at s time.

DOCUMENTS: The following documents should be presented b Master:

Clearance from Sailing Port with the following attached:
  Stores List.
  Crew List.
  Slop Chest Inventory.
  Ballast Certificate.
Special ballast report made up by Master.

The Maracaibo Port Captaincy, requires that the Masters o vessels entering this jurisdiction, deliver to the Maracaibo P Captain's representative, during his visit to ships in the Po Maracaibo, a report which must answer the following ques concerning ballast:

(1) Port or place where ballast was taken.
(2) Quantity taken.
(3) Type of ballast and condition of same.
(4) Where deballasting operation was or is to be carried o
(5) Approximate deballasting time.
(6) Any other pertinent information that may be required.

Crew List. 6 co
Stores List. 6 co
Slop Chest Inventory (Deck, engine and cabin stores listed separately). 6 co
List of Personal effects. 6 co
Derat Exemption Certificate. Orig
Venezuelan Net Tonnage Certificate. Orig
American Crew List. 4 or 2 carbon co
(If required: See under "American Crew List").

Boarding Party: The boarding party usually consists of the follo persons:

One Quarantine Official.
Two Customs Officials.
One Sanitation Department Official.
One Port Captain's Representative.
One Foreign Service Department Official.
One Vessel's Agent.

American Crew List: All non-American vessels loading for U.S.A. should have the American Crew List ready on arrival in Maracai be visaed by the American Consulate in Maracaibo and placed ab ship before departure. The Crew List should be prepared on Immigr and Naturalization Service Form No. 1–418 (Crew List Manifest) should contain two sections:

Section 1 – Should list those crew members who are American or possess individual visa documentation to the United States.

Section 2 – Should list, in the alphabetical order of their last nam those alien crewmen who lack United States visa documents and therefore require inclusion in the visa of the Crew List.

Only one name may be placed on each line of the Crew List. T names should not be placed in the space of one line, nor should line between two names be left vacant. All copies of the Crew presented must be legible (Occasionally the names of the crew included on the carbon copies of some Crew Lists presented a consulate are blurred beyond recognition).

The information requested under column 1, 2 and 3 should be in completely.

Column 1 – Should always contain the complete first name and m initial of the crewman.

Column 2 – Should show the nationality of each crew member and number of his travel document.

Column 3 – Should always include the name of the port where crewman was shipped, not simply the country.

At the time of the vessel's first application for a Crew List, the C List must be presented in 4 copies:

Original and 1 copy – Should contain only the information requ under Columns 1, 2, and 3.

Two Copies – Must include the following information of those crew to be included on the Crew List visa.

Column 4 – Should list the date, city and country of each crew mem birth.

Column 5 – Should show the place of issuance of the Seaman's T Document and the name of the Government which issued the T Document. (It is not necessary to list the date of issuance travel document).

Cargo documents:

1. *Master's copy of Bill of Lading* – The Bill of Lading form used is the usual Warshipoilvoy form. Masters wishing to use another form should furnish 20 blanks on arrival in Bajo Grande. Master is requested to sign 3 negotiable Bills of Lading (Originals).
2. *One copy of the Certificate of Quantity and Quality (Q. & Q.).*
3. *One copy of the Ullage Report.*
4. *Time Sheet.*
5. *Certificate of Origin.*
6. *Cargo Manifest.*

Outward Clearance:

Following documents are delivered on board by the local Agent before sailing:

1. *Customs Clearance* – Duplicate of "Conocimiento de Embarque" and Duplicate of "Manifiesto de Carga". (Both stamped and signed by Customs) or any other document specifically requested by the consignee or nominating source.
2. *Communication* – A letter from Maracaibo Customs Authorities to Authorities in port of destination.
3. *Zarpe* – Permission to sail signed by Maracaibo Port Captain. This is brought on board in Bajo Grande by the outbound Pilot.

Customs Guard: The Customs Guard will request Master to countersign the time on board the vessel. This is counted from the time the first hose was connected until all hoses were disconnected, regardless of whether the vessel was receiving cargo or not.

Accommodation Ladder: Vessels must provide an accommodation ladder. The use of rung ladders, pilot ladders, etc., is contrary to Port Regulations. Port authorities will board only by means of an *accommodation* ladder. it is recommended to rig this in advance in order to avoid unnecessary delays.

In order to guarantee the security and safeguard the lives of the officers that board the vessel inbound in Maracaibo, it is imperative that Masters strictly comply with the following precautionary measures:

(1) Each of the components and functional parts that holds together or supports the gangway ladder must be maintained in excellent condition.

Therefore, wire ropes, guide blocks and bolts etc., found to be defective or in bad condition must be immediately replaced.

(2) For maximum security, each time that your vessel arrives in this jurisdiction, the above mentioned mechanisms should be thoroughly checked and tested by the personnel aboard vessel before the gangway ladder is used by the boarding party.

APPROACHES:

Channels leading to Lake Maracaibo: The channels leading to the Lake Maracaibo are called the Outer Channel, the Inner Channel and the Lake Channel.

Outer Channel: The Outer Channel starts at the E.M. Buoy position: Lat. 11° 13′ 47″ N., Long. 71° 33′ 31″ W. and ends at the Zapara Island, a distance of about 14 miles. (About 22 km.).

The light characteristics of E.M. Buoy are: flashing white every 5 seconds, visibility approximately 5 miles.

There are no turns in the channel and the course is 189°. The channel is 100 ft. wide and has a normal controlling depth of 44 ft. LWS with tidal range varying about 2 ft. 3 in. Cross currents are sometimes encountered near Zapara, San Carlos and Pescadero Islands, especially at LW when the cross currents are strong. Overtaking at these points is forbidden. There is one anchorage zone in the Outer Channel which is a trapezoid on the port side when navigating inbound near the Buoys B - 14, B – 15, B – 16 and B – 18. All buoys in the Outer Channel are equipped with radar reflectors.

The Southern end of the Outer Channel is marked by Buoys B – 27 and B – 28.

Inner Channel: The beginning of the Inner Channel is marked by Buoys B - 29 and B – 30. The Inner Channel continues on the same course as the Outer Channel for about 10 miles, whereafter the direction changes to 150°, The entire length of the Inner Channel is about 12 miles. Beacons T – 55 and T – 56 mark its Southern end. The normal controlling depth is 44 ft. LWS. The channel is 800 ft. wide. Vessels are not allowed to overtake each other in the Inner Channel between Buoys B - 29 and B – 30 and light beacons T – 25 and T – 26.

Vessels may overtake each other in the Inner Channel between light beacons T – 39 and T – 40 after having exchanged prescribed signals with the vessels to be passed. This manoeuvre is, of course, allowed only if conditions are favourable and no vessel navigating in the opposite direction is in sight. From Beacon T – 56 to Maracaibo harbour the channel is 800 ft. wide, depth 44 ft., its end is marked by Buoys B – 73 and B – 74.

Navigation through Channels:

Inbound vessels leave to starboard side the buoys and beacons marked with even numbers and to port side the buoys and beacons marked with odd numbers.

Outbound vessels shall leave to port side the buoys and beacons marked with even numbers and to starboard side the buoys and beacons marked with odd numbers.

Vessels should pass as close as possible to the channel's edge on starboard side. Loaded vessels have preference.

Approaching vessels are to reduce speed in order to minimise the suction force of the displacing waters.

Vessels must maintain a distance of 1 nautical mile (1,852 m.) by day, or night from other vessels navigating in the same direction.

No vessel should start to manoeuvre to overtake another vessel before having received clearly the affirmative signal from the ship to be passed.

A grounded vessel is not allowed to start any manoeuvre when another vessel is passing. Dredgers are frequently at work in the channels and caution should be exercised in passing them. Signals used by the dredgers are as follows:

Daytime: Black cylinder hoisted on side of yardarm:

You may overtake me on the side on which the cylinder is shown.

Two black balls over the bridge:

The channel is blocked.

Night:

Green light on side of yardarm (A white light on mast head helps to show on which side the green light is placed).

You can overtake me on the side on which the green light is shown.

Two red lights over the bridge:

The channel is blocked.

The tidal range is 4 ft. at neaps. Observed squat in the channels is about 1 ft.

Maracaibo Lake Channel Guard Service Corps have had evidence of vessels travelling out of the navigation channel in the vicinity of Buoys B – 3, B – 5 and B – 7; this risky procedure is considered very dangerous to the safety of the channel buoys and its installations.

Masters of all ships are reminded that all vessels inbound or outbound *must* pass the EM Buoy on the port side. This operation will be registered and controlled by their electronic devices installed at San Carlos Pilot Station.

Violators of this regulation, in addition to being economically responsible for damages to the buoys and related accessories, will be prosecuted in accordance with Article 118, Section I of the Venezuelan Law of Navigation.

In view of the above, and keeping in mind the protection of the interests of your owners, we ask that you comply at all times with this regulation emanated from the Port Captaincy.

PILOTAGE: Compulsory. Vessels proceeding direct to the Bajo Grande Terminal must enter outer channel and embark Pilot between Buoys 25 and 27. After vessel arrives in vicinity of channel entrance, Master must contact *San Carlos Pilot Station* by radio telephone on Channel 16 requesting Pilot at Buoys 25 – 27. The launch that leaves San Carlos Pilot Station with Pilot for ship, takes approximately 20 to 30 minutes to cover distance, and distance, between Buoys and San Carlos is approximately 6 miles (10 km.).

Master must advise Maraven, S.A. and Agent ETA Buoys 25 – 27, 72, 48 and 24 hours prior to arrival there.

Masters of Vessels entering Lake Maracaibo for the first time must cable their Local Agent notifying this fact, in order that the Agent may comply with the Port Regulations. This security measure makes it necessary for the ship to pick up a Pilot at Punta Cardon.

The Master should notify Agent or contact Maraven, Punta Cardon by radio on Channel 12. As no Pilots are available at Punta Cardon, the Local Agent for the vessel requires 48 hours' notice in advance to facilitate making arrangements to fly a Pilot to Cardon and then have Maraven place the Pilot on board the ship.

The co-ordinates of Punta Cardon are approximately Lat. 11° 36′ N., Long. 70° 15′ W. Maraven will charge approximately Bolivares 1100.00 for this service. In addition, the ship will have to pay air fare, hotel expenses, and a higher Pilotage fee for this service. However, if the Master of a ship has previously entered the channel as an officer of a ship, he is not required to pick up a Pilot at Punta Cardon.

Masters are reminded that Pilots are authorised to leave the Jurisdiction, only when they are disembarked in Venezuelan ports. With this understanding, when special circumstances arise in which the Pilot cannot be disembarked at San Carlos and the ship is unable to enter the nearest Venezuelan port to disembark the Pilot, in this case the port of "Las Piedras", it is required that the Agent as well as the Master of the vessel, forward to the Port Captaincy at the earliest opportunity a detailed report giving the reasons that compelled the Master to take the Pilot abroad.

Pilots act in an advisory capacity only, and therefore the Master of the vessel retains full responsibility at all times. In the event it becomes necessary to disregard the Pilot's instruction in order to ensure the safety of the ship, Master must forward to Local Agent a full written report on the circumstances for delivery of same to port authorities.

The Venezuelan Pilotage Law stipulates that Pilots must be provided with the same lodging as is given an officer. In case no extra officer's cabin is available, suggest the hospital be used by the Pilot. Also, Pilot should be seated at the officers' mess for his meals.

In case of accident to Pilot while performing his duty on board, it is the responsibility of the Master to furnish the Pilot with a full written report on the accident before the Pilot leaves the vessel. The Pilot must be able to present such a report in case of a legal claim.

Note: According to new Port Regulations for vessels proceeding to the Bajo Grande Terminal, the Official Pilot (Conduct Pilot) will board to conduct the vessel to Bajo Grande and disembark; vessel will then pick-up the other Official Pilot (Docking Pilot) for berthing manoeuvres.

As a result of accidents that caused the loss of lives, the Maracaibo Port Captaincy issued a Regulation with the view of safeguarding human life at sea and other navigable waters; Official Pilots that must embark on or disembark from undocked ships, must use an automatic-inflated type life vest. This procedure is also compulsory for all persons from private or public entities that are required to go aboard vessels that are anchored, stopped or navigating in the waters of Lake Maracaibo. Likewise, at the side of the boarding ladder where the Pilot boards or disembarks, a hoist or boatswain's chair shall be placed there, and within it a life line and a gas light ready to be used in case it becomes necessary. The Port Captaincy will see to it that this Regulation is strictly complied with.

Docking Pilot: The Government's Pilot will assist in docking operations. It should be borne in mind that Pilot acts as adviser only. The Master retains full responsibility at all times. Any damage incurred to vessel or loading platform which may be deemed to have been caused by the Mooring Pilot's fault or negligence, may be held against the ship.

Undocking: Government's Pilot will assist in undocking. Two tugs will be used as for docking and undocking.

Pilot Ladder: All vessels with a freeboard over 9.0 m. must supply a combination of pilot ladder and gangway (SOLAS 74, Rule 17).

ANCHORAGE: The Pilot will not manoeuvre the ship into anchorage, but will indicate the proper location to anchor. Care should be taken because of small boat traffic.

MAX. SIZE: The following restrictions in size and draft upon loading exists for vessels docking at Bajo Grande:

	Maximum Loading Draft	*Maximum Vessel Size (tonnes)*	*Max. displacement upon Berthing (tonnes)*
Outside Berth (No. 1)	39 ft. 06 in.	*55,000 d.w.t.	42,000
Inside Berth (No. 2)	32 ft. 00 in.	36,000 d.w.t.	20,000
Berth (No. 3)	39 ft. 06 in.	85,000 d.w.t.	105,000

* Vessels up to 61,000 tonnes d.w.t. will be accepted as long as they do not exceed other characteristics.

Also see "Berthing".

RADIO: *Information to be cabled to Local Agents 3 days prior to arrival:*

1. *Flag:* If the vessel has loaded in Bajo Grande before or is listed in the Tanker Register published by H. Clarkson & Company Ltd., London, the nationality of the vessel need not be cabled.

2. *Sailing port and at which other port vessel will call in this area:* For clearing the vessel in and out of Maracaibo, local ship Agents must know beforehand from where the ship comes and which other port it will call in this area. Therefore, it is of importance to inform Agents whether the vessel will load part cargo or bunker, at which terminal, and whether inbound or outbound.

3. *Port for which vessel is cleared:* In case the vessel was diverted *en route* and consequently is not cleared for Maracaibo or one of the terminals in the Lake of Maracaibo, the Local Agents must obtain from authorities special permit for the vessel to enter the Lake of Maracaibo.

4. *Ballast Certificate:* If the vessel arrives in ballast a "Ballast Certificate" is mandatory. A fine against the vessel will issued by the Port Authorities if vessel does not have this certificate.

5. *Estimated Time of Arrival:* Cable ETA San Carlos Pilot Station Buoys 25 – 27 (See "Pilotage") or, if the vessel is taking part cargo or bunkering inbound, cable ETA, bunker or first loading port. Please use local time if possible (4 hours behind GMT).

6. *Tonnage:* If the vessel has not loaded at Bajo Grande before, also cable the Gross and Net Tonnages. To determine whether the International or the Venezuelan tonnage should be mentioned, see General – "Tonnage Applicable".

7. *Master's Full Name:* Please sign your first message with Master's name and surname, which is also needed to clear the vessel in Maracaibo.

8. *Changed ETA:* An additional cable should be sent about 48 hours and 24 hours prior to arrival at pilot station Buoys 25 – 27 stating ETA.

Proper use of Radio Frequencies: We have received several circulars from the Maracaibo Port Captaincy, requesting Terminal Operators to caution all Masters of vessels calling at Bajo Grande Terminal on the improper use of the International Distress Frequency of (2182 kHz) for personal conversations. This procedure is contrary to the security of vessels.

A letter containing such caution will be delivered to the Master of each vessel loading at Bajo Grande by the Agent, requesting that the Master sign a copy signifying his acknowledgement of said letter of notice.

The International Distress Frequency was established specifically and exclusively for emergency calls such as shipwreck, fire and accidents. It is also used by ships and shore stations to make first contact (VHF Channel 16) but immediately after contact is made, the operator should switch to one of the 52 Channels available.

9. *Compulsory use of Single Side Band Radio:* A circular letter from the Venezuelan Ministry of Communications, states that no licence will be granted for the installation of radiotelephone stations of modulated amplitude (A3). The installation and use of Single Side Band radiotelephone equipment is obligatory.

In consequence, the Ministry has requested that the terminal inform all users of Double Side Band (A3) radiotelephone equipment in order that they proceed immediately to install in their ships, launches and all other marine vessels Single Side Band equipment with the same frequencies that are presently in authorised use, which is VHF Channel 16.

The listening and Safety Station YXW – 3 installed at the Venezuelan Nautical School is equipped to answer any calls on the International Distress Frequency with their transmitter of 1 kW.

As a result of the foregoing, a letter containing the above information has been prepared by the Terminal which will be delivered to the Masters of all vessels calling at the Bajo Grande loading terminal. The Masters of all vessels are required to sign a copy of this letter in acknowledgement of receipt.

TUGS: The Venezuelan Government has ruled mandatory the use of 2 tugs for docking and undocking. Vessels over 60,000 d.w.t. will use 3 tugs for docking and undocking.

NOTICE OF READINESS: Masters are free to tender their ships as being ready to load at any place and time which, in their opinion, conforms with the terms of the charter party. Terminal personnel authorised to countersign the Notice of Readiness have been instructed to indicate the time vessel was all fast. This does not imperil in any way the rights of the shipowner in his negotiations with the charterer and it limits the Terminal's liability to the consignee.

BERTHING:

Berth No.	*Dock Length (ft.)*	*Vessel Nominal Length (ft.)*	*Max.Draft Arrival (ft.)*	*Minimum Depth (ft.)*
1	929	751	35.0	40.0
2	929	751	32.0	35.5
3	898	853	39.5	40.0*

* In April 1993, the Pilot advised a Master that the depth was 45 ft., but echo sounder reading indicated 42 ft. – 43 ft.

CARGO OPERATIONS:

Loading Arm System:

Berth No.	*Loading Arm No.*	*Diameter in.*	*Boscan Crude and Products*	Conne
1 and 2	1 Black	8	Asphalt Cement (PAS), Boscan Crude, High and Low Viscosity Residuals, Bunker "C", Vacuum Gas Oil, Distillated Oils.	Flange 150 AS
	2 Black	8	Boscan Crude, High and Low Viscosity Residuals, Bunker "C", Cutback Asphalt, Ballast.	Flange 150 AS
	3 Black	8	Boscan Crude, High and Low Viscosity Residuals, Bunker "C", Cutback Asphalt, Ballast.	Flange 150 AS
	1 White	8	Leaded Gasoline, Catalytic Gasoline.	Flange 150 AS
	2 White	8	Gasoline Leaded, Light and Heavy Naphtha.	Flange 150 AS
	3 White	8	Light Gas Oil, Industrial Gas Oil, Jet A-1.	Flange 150 AS
	Bunker	6	Bunker "C", Intermediate Bunker Fuel (IBF), Marine Gas Oil (MGO), Diesel.	Flange 150 AS
3	1+2	10	Boscan Crude, High and Low Viscosity Residuals, Bunker "C", Cutback Asphalt, Ballast.	Flange 150 AS
	Bunker	6	Bunker "C", Intermediate Bunker Fuel (IBF), Marine Gas Oil (MGO), Diesel.	Flange 150 AS

Inert Gas System: The use of an inert gas system will be compu for all vessels fitted with the system, whilst operating at the Term

Deballasting Facilities: A Circular letter from the Venezuelan Minis Communications, Maracaibo's Port Captaincy, states that as of Oc 1976, no ballast (either clean or dirty) can be discharged into Maracaibo waters. Therefore, all ballast must be pumped ashore t petroleum terminal on which vessel is to take cargo. Heavy fine assessed for vessels violating this law and therefore we st recommend Masters to be particularly careful in this regard.

Shore deballasting facilities are available at Bajo Grande an subject to no special regulations and procedures as yet. Tanker b water is pumped through 2×8 in. hose connections into 1×24 in. about 9,000 ft. in length to a 90,000 bbls. receiving basin situat shore at a maximum rate of 2,000 tonnes/hr.

The deballasting basin is limited to receiving *only* petro hydrocarbons and petroleum hydrocarbons derivates. Emuls caustics, acids and chemical slops are absolutely unaccep Contamination of Lake Maracaibo waters with oily or chemical ma of any nature is strictly prohibited by Venezuelan Laws. The term required to report to the Authorities any such contamination by ve docked at Bajo Grande. HEAVY FINES ARE THEN ASSES AGAINST THE SHIPS. Vessel's cooperation is requested to pr contamination from tank overflows, bilge oil, line leaks or from any source.

Tank Cleaning and Drying: Precautions as are common for any oil should be taken to ensure that no ballast is left in any tank. cargo is contaminated with water, the water will not separate fro oil. The salt content of the oil will be raised approximately 10 lb 1,000 bbls. for every 0.10% contamination by sea water. All compartments must be stripped extremely dry.

Cargo pipeline should be drained and or purged of water. On sta T – 2 type vessels, this can be done by draining the fore and aft cargo lines, both suction and discharge sides, into the pump room followed by opening of main suction valves on each indi compartment, thereby releasing water retained in dead and trans lines. After this procedure is completed, each compartment shou restripped with stripping pumps and lines, followed by draining stripping line to pump room bilges. On other ships equipped with lo systems it is possible to blow the system with air and drain wate the bilges. In other situations, fresh water might be used to flush piping systems of salt water and in turn strip salt water and fresh as outlined for T – 2 vessels. All deck scuppers should be sec plugged and all precautions should be taken to avoid pollution of

Inspection of Tanks: Before loading can commence, tanks and lo system must be inspected and passed. This is usually done b Terminal's own Cargo Inspector but, if consignee so requests, third inspection can be arranged.

Inspection Companies available in Maracaibo are the following:
E. W. Saybolt & Co., S.A.
Redwood Petroleum and Petrochemical Division
Analistas e Inspectores Venezolanos de Petroleo C.A.
Inspecciones, S.A.
Caleb Brett Venezuela, C.A.

Line Displacement: When a vessel is loading crude and products usually necessary to displace lines once or twice during loading. Ma will be advised of necessary line displacements before loading s and are required to take note because NOTICE HAS TO BE GIVEN VESSEL when pumping should be stopped and tanks changed. O shore tanks have been changed, it will not be possible to chang quantity of the product already in the ship, as shore lines will then co a product different from the one already loaded. *Ship's gauges a draft should be carefully checked when calculating required qua*

Spillage: In case spillage occurs, the Terminal Port Supervisor mu advised immediately, as any spillage must be reported to the Auth without delay.

There has been considerable discussion in Venezuela concerning oil pillages resulting in contamination of Lake Maracaibo. Considerable essure is being exerted by Government agencies to eliminate all illage, and the Terminal is making every effort to avoid contamination Lake Maracaibo.

While vessel is at Bajo Grande take special precautions to avoid dirty last, bilge water or any other contaminant entering the Lake.

a spill should occur and Terminal representative, the Government's esentative of the National Guard observes that the waters of the ke are being contaminated by any substance from the vessel the minal will request that vessel suspends deballasting, loading or scharging operations immediately and all consequences that might se from this operation such as short loading, the unmooring of your essel, fines, damages to fishermen, clean up costs, etc., *will be strictly, vessel's account.*

We strongly recommend to Masters to emphasise to the officers on ck to endeavour to avoid spillages and to make certain that the pper plugs are installed prior to commencement of loading operations rder to withhold on deck any spillage that might occur.

Loading: All Butterworth plates, tanks tops and ullage plugs should spected to ensure against entry of water. Inspection of ullage plugs uld follow on completion of temperature readings because of the essity of taking temperatures en route. Sea suction valves should secured by positive means until all cargo has been discharged. This y be accomplished by numbered seals, chains and padlocks. The thod of securing should be noted on the inspection documents. gardless of which method is used, appropriate log entries should be ade indicating the date, time and method used and under whose pervision, both vessel officer and/or Cargo Inspector, such method as applied.

About 2 hours is required for the preparation of the cargo documents ich are normally delivered on board before sailing.

mperature of Boscan Crude and Boscan Products at Sea: On short yages, as for instance to the U.S.A., it has proved most practical to intain the loading temperature. On longer voyages, as for instance Europe, the temperature may be dropped to 130°F., which does no arm as long as sufficient time is given to bring the temperature up again that required for discharging. Masters should, however, not expect a mperature rise of more than 5°F. per day, especially if the sea mperature is low. The heat transfer properties of Boscan Crude are ry poor as are those of the heavy products made from this crude. any ships have been delayed in the discharge port due to too low rgo temperature. A temperature of 160°F. is suggested for discharging oscan Crude, Topped Boscan and Cutback Asphalts.

scharge Cargo: Boscan Crude has a flash point of 110°F. – 160°F. d a maximum viscosity of 1400 SSF at 140°F. The viscosity at other mperatures follows the pattern of other petroleum products. Boscan ude has been successfully handled in ships fitted with both eciprocating and centrifugal type pumps with forward and after umprooms respectively. It is generally found that this crude can best e handled at a temperature which brings its viscosity to about 600 SF-160°F. Vessels with forward pumproom should control stern trim that it does not exceed about 4 ft. while stripping the after tanks. Also list is very helpful when stripping. Once the cargo gets below heating ils, tanks must be pumped empty as fast as possible. At times it has en found helpful to gather tanks strippings into a single tank for scharge ashore, as it is very difficult to strip against heavy back essures. Watch reciprocating pumps for vapour lock. Because of high scosity, proper care should be taken that no oil is left in vessel scharge lines at low temperature.

ank Cleaning After Discharge Cargo: Many Masters have expressed ncern over tank cleaning after discharge. Assuming that the ship oceeds to sea for this operation and has sufficient time for proper ecution, vessel may be cleaned quite thoroughly using the Butterworth stem. However, it is of vital importance that the system be used at aximum pressure and temperature (not below 160 p.s.i. and 170°F spectively). At these conditions and with 2 machines, it has been found at about 4 hours are required for each tank. It is of importance to keep he tanks well stripped during the Butterworthing. Some prefer to steam ut the tanks before Butterworthing. If this course is adopted care should e taken that the steaming does not last more that 1 hour as the heat ll drive off the light ends of the oil and leave a rubbery residue that is ery difficult to remove.

It has been found helpful to keep the machines in LOW position for bout 1 hour and the HIGH – MIDDLE and LOW in order, in the usual anner.

oscan Crude and Products/Light Products:

Loading Product	*API Gravity*	*Tempera- ture °F*	*Loading Lines used*	*Unloading Rate (bbl./hr.)*
Boscan Crude	10.0 – 11.0	165	2×18 in.	15,000*
Cutback Asphalt	11.0 – 15.0	170	2×18 in.	15,000
Asphalt Cement (Pas)	5.0 – 6.0	300	1×14 in.	5,000
High and Low Visc. Residue	10.0 – 19.0	160	2×18 in.	16,000
Bunker "C"	10.0 – 16.0	160	2×18 in.	16,000
Gasoline	61.0 – 67.0	85	2×12 in.	6,200
Ind. Gas Oil	29.0 – 31.0	95	1×12 in.	6,200**
Light Gas Oil	32.0 – 38.0	95	1×12 in.	6,200
Light Naphtha (LSR)	70.0 – 73.0	85	2×12 in.	6,200
Heavy Naphtha (HSR)	52.0 – 55.0	85	2×12 in.	6,200
Jet A-1	45.0 – 51.9	85	1×12 in.	6,200

* Loading Rate.

** Loading and unloading rate.

DENSITY: 0.977 – 1003.

FRESH WATER: Delivery of boiler and potable water is made by barge, minimum *quantity 100 tons.* The barge holds about 160 tons and the pumping rate is about 25 t.p.h. Requirements should be cabled in advance to the Agent of the vessel in Maracaibo.

FUEL:

Advance Notice of Requirement: Should a vessel arriving at Bajo Grande require any bunkers, Owner or Operator must place their nomination with Maraven, S.A. via Telex No. 23535 Mara Vc as much in advance of the delivery date as possible. Telex should indicate name of vessel, ETA at Bajo Grande and quantity and quality of Marine Fuels required. A cash deposit in U.S. Dollars covering the nomination must be made prior to the delivery date into the following account:

Chase Manhattan Bank,
Chase Manhattan Plaza,
34th Floor, New York, N.Y.
Current Account No. 001-1-992773.

Owner or Operator must also request Chase Manhattan Bank to confirm via Telex to Maraven, S.A. that such deposit has been made in order to cover the cost of bunkers to be delivered to vessel arriving at Bajo Grande at the current ETA. Only after this Telex has been received will delivery actually proceed.

Bunker Facilities: Bunkers are available from pipeline at Bajo Grande Terminal for vessels loading and unloading cargo at Berths No. 1, 2 and 3. Bunkering rate is about 2,500 bbls.p.h. for Bunker "C", intermediate bunker fuels and marine gas oil.

Marine Fuels and Lubricants Available: Bunker fuel (sometimes called Bunker "C"), intermediate bunker fuels and marine gas oil.

Lubricants are generally available in the Maracaibo area. Should you require any, we recommend that vessel's local Agent be contacted.

Lighterage: Bunker fuel, intermediate bunker fuels, marine diesel and gas oil are also available for ships in the Maracaibo area. 72 hours' advance notice is required for barge deliveries of all products.

CONSULS:

Following countries have consular representation in Maracaibo:

Argentina
Austria
Belgium
Bolivia
Colombia
Costa Rica
Denmark
Dominican Rep.
Ecuador
El Salvador
France
Germany
Great Britain
Guatemala
Italy
Mexico
Netherlands
Nicaragua
Norway
Panama
Peru
Puerto Rico
Spain
Sweden
U.S.A

REPAIRS: No major repair facilities are available in Maracaibo but small repairs can be undertaken by local machine and electric shops. Shore labour can be furnished if required. Technicians are available for minor radio repairs. Nearest dry docks are at Curacao for vessels up to 30,000 d.w.t. and at Puerto Cabello, Venezuela for vessels up to 18,000 d.w.t.

CUSTOMS: *Contraband:* Strict compliance with the Customs Law of the Country is enforced by the Authorities and Masters are strongly advised to caution crew members against attempting to smuggle cigarettes. 1 open package per person is allowed to be carried ashore, but a greater quantity will result in fine and imprisonment of the offender as well as lost ship's time. Due to the very strict enforcement of the Customs Regulations, it is recommended that no goods be carried which are not shown on the Stores List. Any new articles (clothes, shoes, etc.) should be included in the store list and marked as personal belongings. If during a checkup by Customs, articles considered as contraband are found, this will not only mean confiscation of these articles, but also hours or days of lost ship's time, while the case is handled at court.

SURVEYORS: American Bureau of Shipping and Lloyd's Register have Agents in Maracaibo. Their services may be procured by cabling requests to the local Agent at Maracaibo.

HOLIDAYS: The Terminal office will be closed on the following days. New Year's Day (January 1st); Easter Thursday/Friday (March/April); Declaration of Independence (April 19th); Labour Day (May 1st); Battle of Carabobo (June 24th); Independence Day (July 5th); Birthdate of Simon Bolivar (July 24th); Columbus Day (October 12th); Chiquinquira's Day (November 18th); Christmas Day (December 25th); All Saturdays; All Sundays.

SHORE LEAVE: Shore Leave is permitted at the discretion of the Port Authorities; required number of shore passes will be brought on board on arrival in Maracaibo and have to be returned to the Customs Guard again before the vessel leaves Bajo Grande.

GENERAL:

Tonnage Applicable on Fees: On ships registered in countries which have a reciprocal tonnage agreement with Venezuela, the gross tonnage registered in such countries will be applied for calculating pilotage fees. Such countries are:

Denmark
France
Germany
Ireland
Netherlands
Norway
Portugal
Sweden
United Kingdom
U.S.A.

On ships registered in countries not listed above, such ships calling at Venezuelan ports for the first time must be measured for Venezuelan tonnage by the Port Captain. It is usual practice to take ashore the ship's Panama Canal or Suez Canal International Gross Registered Tonnage Certificate, which is used as a basis for recalculating tonnage under the Venezuelan regulations, and return it before sailing. The Venezuelan Admeasurement Certificate, when later issued, is forwarded to the Owners. A fee is charged for this certificate, which is payable only on the ship's first call.

Firearms and Ammunition: Firearms must not exceed 1 per Officer nor may the ammunition exceed 18 cartridges per Officer. All firearms and ammunition must be carefully declared on the Store List and should be collected and held in Master's safe custody while vessel is in Venezuelan waters.

Guards: Customs Guards are stationed on the platform at Bajo Grande. They must be provided with sleeping quarters on the ship and seated in the Officers' mess for their meals. Non-compliance may cause cargo stoppage and fines. Masters are reminded that these guards are representatives of the Venezuelan Government and any uncourteous action on the part of the crew or passenger will be regarded as a slight against the Country itself.

Gangways: The ship is to supply a safe gangway, which allows easy access to the vessel. The Terminal has a gangway which may be used on request with the understanding that any damage to the gangway or ship or shore personnel through its use may be held against the ship.

Safety: Vessel must be in readiness to move at all times. The attention of Masters of turbine steamers are called to this regulation.

Ship's fire fighting equipment must be ready for instant use while vessel is alongside. Shore personnel will render assistance in an emergency but, since no fireboats are stationed in the immediate area, vessels should be prepared to combat fire without outside assistance. It is necessary to obtain Terminal's approval for repairs of propelling machinery.

Normal safety precautions apply. Smoking is not allowed on the pier. No hotwork is permitted on vessels alongside without *written* permission from the Port Supervisor. *Swimming alongside pier is dangerous and absolutely prohibited.*

Launch Service: The launch is primarily for the use of the port staff.

Taxi: Taxi service will be generally available upon request to vessel's Agent.

Visitors: According to Port Regulations concerning access to ships and loading terminals and in the interest of industrial safety, only persons directly concerned with loading operations will be permitted to board vessel or visit the loading platform at Bajo Grande.

Plimsoll Marks: The Port Captaincy requires that Plimsoll Marks be readily visible. If they are not clearly legible, permission to sail may be withheld and a fine imposed. This is applicable to inbound and outbound vessels.

We therefore, request your full compliance with this Regulation from the Maracaibo Port Captaincy.

Marine Stores/Charts: Marine stores are available in limited supply. Marine charts are not available.

Compass Adjusters: There are no compass adjusters in Maracaibo.

Seamen Left Behind: Sailing may be withheld until all crew members are aboard with exception of those ashore for justified reasons. It is important that Masters bear in mind that the Venezuelan Law will at all times hold the vessel's Master, Agent, or Owner responsible for any seamen left behind in Venezuela.

Crew in Transit: In case a crew member is left ashore for a justified cause, such as hospitalisation, repatriation, etc., his documents and personal effects are to be delivered to the vessel's Agent before sailing. A letter is required from the Master with detailed instructions as to maximum cash advance, etc. All expenses incurred by such members are for vessel's account.

Port Supervisor: Masters or their representatives are invited to call at the Port Supervisor's Office on shore in Bajo Grande or over the telephone on the pier, for any further help, information or complaints.

Terminal: Cable Address: Maraven, S.A., Maracaibo.

NOTICE: Issued by Maraven, S.A., Bajo Grande Refinery, Maracaibo.

PROCEDURE FOR BERTHING AND UNBERTHING MANOEUVRES

To the Masters of all the tanker ships arriving at Maraven's Refinery, Bajo Grande Marine Oil Loading Terminal, Lake Maracaibo, Venezuela.

Instructions concerning approaching and manoeuvres for berthing/unberthing at this Terminal.

With a view to prevent any possibility that your ship may cause damage to our installations, we shall highly appreciate it if Masters pay attention and respect to the following procedures:

1. Entrance Bajo Grande Refinery Terminal (Lat. 10° 30′ 50″ N., Long. 07° 36′ 08″ W.) is between the Main Navigation Channel Marker Buoys B86 – B88 and leaving between the Buoys BG2, BG1 and B86.

2. On ship's arrival at the Terminal Entrance Buoys, the Official Pilot, a Marine Officer, acting as a Liaison Officer of Maraven, will board the ship in order to assist her Master and the Official Pilot in all matters concerning inter-communications and co-ordination with the Terminal and on basis of his technical and local knowledge and experience give advice relative with the vessel's safe berthing/unberthing and safe mooring/unmooring to/from the pier.

3. For best manoeuvrability, ships arriving on ballast or partially laden, must arrive with a draft forward which should not be less than given in the following table and a trim by the stern of about 0.75% of ship's length on ships of 400 ft. length or more.

Length	*Draft Forward*	*Trim by Stern*
400 ft.	10 ft.	3 ft. 00 in.
500 ft.	12 ft.	3 ft. 09 in.
600 ft.	14 ft.	4 ft. 06 in.
700 ft. ideal	16 ft. (nor less than 14 ft.)	5 ft. 03 in.
750 ft. ideal	17 ft. (nor less than 14 ft.)	5 ft. 08 in.

The ship's total displacement in any case should not exceed 42,000 tons for ships mooring at Berth No. 1 and 20,000 tons for ships berthing at Berth No. 2.

4. For more information please consult the instructions and information for the port which will be issued to you opportunely on your arrival for first time to this Terminal, please comply with them, and see that they are complied with.

5. *Mooring Lines:* Prior to arrival at the Terminal, the vessel shall have all the necessary mooring lines ready for use together with a sufficient number of heaving lines and the equipment and the personnel required for mooring. All the lines used for securing the ship to the berth should be of the same material, construction and of approved characteristics.

5A. *Recommended Mooring Lines:*

Forward	Aft
3 head lines	3 stern lines
2 breast lines	2 breast lines
2 springs	2 springs

5B. *Winches:* The use of tension winches is not allowed.

6. *Tugboats:* Minimum 2 twin-screw tugboats of adequate horsepower for the size of ships ordinarily berthing at this Terminal will assist the vessel in the berthing/unberthing manoeuvres. If the Master so request or in the case of the size of vessel and wind and/or current conditions so require, the Terminal may order the use of 3 tugboats for the manoeuvres. The tugboats, on arrival, will come alongside th before entering in the Terminal.

The first communication with the tugs is via VHF Channel 16 a contact and then changed as per instructions.

7. *Berthing:* At Bajo Grande ships berth bow to North.

On approaching the berth, approaching bow to or at any ang the berth is to be avoided.

No. 1 Berth (Outer Berth): The ship will be put in a position pa and abeam to the berth at a minimum distance of about 50 m. or depending upon the prevailing conditions of wind and current.

Once in this position and with the ship motionless or a motionless, the Liaison Officer will assist you and the Official Pilo manoeuvres to nurse the ship alongside sideways with the tugs w generally, will be alongside the ship's side opposite to the side th will berth, already made fast and ready to push.

When the manoeuvre is carried out for berthing to No. 1 or Berth, the starboard anchor will be in cockabill position ready for case needs arise and in such case the aft tugs or both imme ordered to pull on reverse.

It will be avoided to haul the mooring ropes secured to the platform bollards in order to pull the vessel forward. If need arise ship's engines may be used to move the ship.

8. *Unberthing:* The use of spring lines must be avoided in or veer the ship on the mooring platform for clearing the vessel's b stern while unberthing. These spring lines will be only used in ca extreme emergency.

After all the mooring lines have been cast off, the ship will be sideways away from the berth to a distance where she can proceed under own power.

The Official Pilot for manoeuvres and Liaison Officer will disen when the ship is safely free away and offering no risk to the doc

Maraven will not permit berthing or unberthing without a Ma Liaison Officer being onboard.

Note: According to new Port Regulations for unberthing, 2 O Pilots will board; for unberthing manoeuvres and to conduct the v to the Outer Channel, respectively. The undocking Pilot disemba Bajo Grande.

9. *Berth No. 2* (Inner Berth): The same procedure herein described for berthing at Berth No. 1 will be followed for berthing at No. 2. The ship will be put first parallel to the berth and then the v nursed alongside with the tugs. For unberthing, manoeuvres will b reverse. During berthing and unberthing manoeuvres, ship's eng will be used only when it becomes necessary.

At this berth anchors must not be used because of subm pipelines laid there. In this berth the distance from it must not be than 50 m.

10. *Emergency Towing-Off Wire:* Whilst berthed alongside platform, emergency towing-off wire-ropes should be rigged both o offshore bow and quarter of the ship, with their loops kept nea waterline at all times where the tugs can easily and quickly pick up.

The wire-ropes should be in good condition and of suitable stre for the ship's size. The wires should be properly led outboard thr the nearest fairleads leaving sufficient wire-rope coiled on deck and to go when the tug hauls and of adequate length to tow her safe the Terminal.

The overboard length of rope should be adjusted as the t decrease or increase.

11. *Mooring Lines Whilst at Berth:* Mooring lines shou periodically inspected and attended to ensure that they are kept ta order to minimise and movement of the ship along or away fro berth.

In the case of ships equipped with automatic tension winches brakes of the winches should be applied and the mooring lines ha on manual operation when required to take up slack or pull them

12. *Safety Practices:* While the ship is lying at the Terminal the M will ensure that all the safe practices in loading or dischargi products and related operations are complied with on his ship and ensure the maximum co-operation between the vessel's crew an Terminal personnel in their mutual interests of safe and eff operations.

AUTHORITY: Maraven, S.A. – Bajo Grande Refinery, P.O. Bo Maracaibo, Venezuela 4033A. *Tel:* (061) 202673. *Telex:* 61254, 6

Contact: Captain N. Arceo, Terminal Supervisor.

Head Office: Maraven S.A., Apartado 829, Codigo Postal 10 Caracas, Venezuela. *Tel:* 908-2111. *Telex:* 23535, 23536.

(2) OPERATORS: Maraven, S.A.

LOCATION: S.W. of channel Buoys B – 87 and B – 88.

The installations for processing natural gas liquids at Bajo Gr processes liquids for Maraven, S.A., and they are known as Pr Owners. The Plant is situated in Bajo Grande, approximately 10 to the South of the Port of Maracaibo, on the West bank of Mara Lake.

FLAG: The local authorities require the Venezuelan flag to be ho to the top of the vessel's mast from the time it enters the outer ch on arrival, until it leaves the outer channel on departure.

OCUMENTS: *Customs Clearance for Programmed Vessels:*
Vessels which arrive in ballast or with cargo in transit, require the owing documents (with additional file copies if these are required):
Clearance from the last port
2 copies – 1 visaed Ballast Certificate
4 copies – 2 visaed Passenger List
4 copies – 2 visaed Lists of Equipment
4 copies – 2 visaed List of Passengers in Transit
4 copies – 2 visaed List of Mess Equipment and Spares
4 copies List of Personal Effects
4 copies – 2 visaed List of Stores
6 copies Crew Lists.
Vessels which arrive with cargo must have, apart from the foregoing:
4 copies – 2 visaed Venezuelan Entry Manifests
6 copies – 2 visaed Bill of Lading
2 copies visaed Entrance Manifests.
In the absence of a Venezuelan Consul at the last port, the Customs earance documents must be signed by the Consul of a friendly nation, e of the Port Authorities, Notary Public, the Chamber of Commerce, y two recognised signatories.
arance *Through Customs of Diverted Vessels:*
essels diverted on the high seas to Maracaibo to load at Bajo Grande st present all the documents indicated in (A) above, except the sular correspondence, which they will not have.
essels diverted on the high seas to Maracaibo (Bajo Grande) which not have a Venezuelan Customs Clearance on board, must advise r Agents by radio prior to their arrival, the name of the vessel, the me of the Master, nationality of the vessel, net Venezuelan tonnage available, if not, the net registered tonnage), last port of discharge, rt to which it was originally sailing and the ETA at the Pilot station at n Carlos. This information is required to obtain the Entry Permit prior the arrival of the vessel. Three copies of the diversion telegram ceived by the vessel, signed by the Master, together with those cuments detailed above, must be presented to the Port Authorities arrival at Maracaibo. Non-presentation to the Port Authorities of the cuments or the information mentioned will occasion a fine to the essel.
spection by Customs: All vessels arriving from foreign ports destined the dock at Bajo Grande must anchor in the Port of Maracaibo for ustoms inspection by the Port Authorities before proceeding to Bajo rande. The vessel's gangway must be in position prior to arrival at aracaibo.
A member of the National Guard of Venezuela will come on board ery vessel at Bajo Grande to observe the activities in connection with e operations of loading and unloading. This official is authorised as presentative of Customs and is known as the "Vigilante de Aduana". e must be fed and lodged at the same standard as ship's officers.
oading Documentation: The loading and Customs papers will be elivered to the Master by the Agent of the ship on his arrival at the Port of Maracaibo, on his voyage outwards.
ILOTAGE: Vessels entering currently have the option of taking on the ficial Pilot at:
(a) The channel in front of the pilot station at San Carlos, between e Buoys B – 24 and B – 26.
b) In front of Amuay Bay or Punta Cardon. However, to arrange this rvice, Agents must be advised at least 48 hours in advance of this quirement.
The Pilot who boards the vessel in front of San Carlos will take it to Maracaibo, where he will disembark.
Due to weather conditions, the Port Captaincy of Maracaibo cannot uarantee the embarkation or disembarkation of the Pilots at the "EM" uoy. For this reason, Masters must communicate with the pilot station f San Carlos to receive necessary instructions as to where the Pilot ll be embarked, the latter usually coming on board between Buoys B – 24 and B – 26. The system of communication between the pilot tation of San Carlos and the vessels will be via radio-telephone. The an Carlos frequencies are: 2182 kHz. and 156.8 MHz. (VHF Channel 6). Other frequencies are: 2122 and 2080 kHz. and 156.6 MHz.
Pilotage to navigate through the inner and outer channels is ompulsory at all times. The maximum speed of navigation in the redged channels is 10 knots.
Vessels leaving will take the Lake Pilot on board at Bajo Grande and n reaching the Port of Maracaibo the Pilot will be changed for another to take the vessel through the channel. The Channel Pilot will pilot the essel up to the San Carlos Bank, generally between Towers E – 31 and E – 33, where he will disembark. The Port Captain of Maracaibo has issued instructions to all ships' Agents so that they may inform the Master and/or Owners of the vessels that all vessels must identify themselves with the pilot station of San Carlos by radio-telephone, regardless of the time of day, when they are entering between Buoys B – 17 and B – 19 and when they are leaving between Buoys T – 42 and T – 40.
Every time a launch with an official Pilot on board leaves to attend to a vessel in sight, the costs will be charged to the company which owns he vessel or to its representative, even when service has not been given.
A government Pilot will assist each vessel from Maracaibo to Bajo Grande and on the outbound trip to Maracaibo. The government Pilot will also assist in the berthing and unberthing operations. The ship's Agent will inform the Master of each vessel, as well as the government Pilot, the schedule for berthing the vessel.
The Plant Mooring Supervisor will board each vessel prior to approaching the dock. Mooring Supervisor will assist in the mooring and unmooring operations. It should be understood that the Mooring Supervisor acts only in an advisory capacity to the Master. The vessel's Master retains full responsibility at all times. The Plant assumes no responsibility in connection with any acts or advice given by the Mooring Supervisor.

APPROACHES: The buoy which marks the entrance to the outer channel (Buoy "EM") is situated in approximately position 11° 13′ 47″ N., 71° 33′ 31″ W. The characteristics of the light of the "EM" Buoy are: white flash every ten seconds, visibility approximately 5 miles. The distance between the "EM" Buoy to the Southern extremity of the outer channel, marked by the Buoys B – 27 and B – 28, is approximately 15.75 miles. The channel is 1,000 ft. wide and normally has a depth of 42 ft. minimum at low tide observed at the time of neap tides with a tidal amplitude varying 2 ft. 3 in.

There is a breakwater 0.5 miles to the East of and parallel to the outer channel which extends 1.6 miles to the North from the Northern side of the Island of Zupara. The end of this breakwater is marked by a steel frame tower with a light 25 ft. above sea level. Characteristics of the light are: white flash every 8 seconds, visibility about 3 miles.

Commencement of the inner dredged channel is marked by the Buoys B – 29 and B – 30. The length of this channel, which is marked by buoys, is approximately 12 miles, and ends at Buoys T – 55 and T – 56. The channel is 800 ft. wide and the normal checked depth is 43 ft. neap tides with a tidal amplitude varying between 1.5 ft. to 2.5 ft.

The channel from the Buoys T – 56 as far as the Port of Maracaibo is a dredged channel, whose end is marked by Buoys B – 73 and B – 74. It is some 800 ft. wide and has a depth of at least 43 ft. The distance is about 11 miles and the tidal amplitude range is insignificant.
RESTRICTIONS: Bridge clearance at MHHW 146 ft.
MAX. SIZE: The maximum permissible fresh water draft at the dock is 36 ft. and the maximum overall length vessel the dock will accept is 700 ft. Vessels with a berthing displacement up to 20,000 long tons will be accepted, providing the approach velocity can be controlled to 0.3 ft. per second or less.

Vessels with an overall length greater than 700 ft. or with a fresh water draft of more than 26 ft. or a displacement greater than 20,000 long tons will not be accepted for loading at Bajo Grande, unless they have obtained the prior authorisation of Maraven, S.A. If the vessel is not equipped to moor, load and unmoor in a safe manner, the vessel will not be loaded. In such cases, there will be no responsibility on the part of Maraven, S.A.
RADIO: Maraven, S.A. Export Department also has radio-telephones with the following frequencies: 2080, 2120, 2182 (stand-by), 2638 and 2738 kHz and 156.8 (stand-by) and 156.6 MHz. operated in accordance with the following schedule:

Monday – Friday:	From 0730 until 1130
	From 1300 until 1700
Saturday, Sunday and Holidays:	From 0730 until 1030 approx.

Any tanker or vessel bound for Bajo Grande shall cable Maraven, at least 5 days in advance of its scheduled arrival time in Maracaibo, giving notice of its estimated time of arrival, loading capacity, amount and type of product to be lifted and condition of ship's tanks.

At least 48 hours in advance of arrival at the San Carlos Pilot Station, the vessel's estimated time of arrival, nationality, Venezuelan net tonnage (if available, otherwise its registered tonnage), quantity and type of cargo required, condition of ship's tanks, name of Agent, last port, Master's name and all requirements of the vessel while in port should be cabled to "Maraven, Maracaibo" and to the ship's Agent. As the cable office in Maracaibo is not able to communicate directly with vessels at sea, messages to "Maraven, Maracaibo" and to Agent should be routed via PJC Curacao, and should be prefixed "Via AAC" (All America Cables and Radio Inc.). Failure to give such proper notices shall absolve the Plant from any claim for delays or demurrage.
TUGS: 2 × 1,600 h.p. tugs used for mooring and unmooring operations.
BERTHING: The dock proper may be identified by the overwater pipeline trestle that connects the dock with shore.

The dock is located approximately Lat. 10° 30′ N., Long. 71° 36′ W., which is 2 miles off shore from the Bajo Grande Natural Gas Liquids Processing Plant and S.W. of channel Buoys B – 87 and B – 88 on the Maracaibo channel. The dock is single sided and consists of 4 breasting pilings, 4 mooring dolphins and a loading platform.

The dock is equipped with a compressor and auxiliary equipment to assist the ship in compressing and re-condensing the ship's vapours. No liability will be assumed by the Plant Operator for unavailability of the Dock's vapour compressor. The dock is also equipped with a vent system to dispose of contaminated vapours.

A tie-up crew will handle all mooring lines before and after loading.

The Plant tie-up crew will assist the ship's crew in positioning and connecting the cargo loading arms and in removing same on completion of loading. The dock loading arms are equipped with 10 in. ASA 300 lb. RF flanges. It shall be the responsibility of the ship to furnish its own fittings to mate with the dock's 10 in. ASA 300 lb. FR flanges.
Mooring Procedure: Any vessels calling at Bajo Grande must be equipped with mooring hawsers of sufficient length and strength to run a line to each of the 2 bow and 2 stern mooring dolphins and shall use such equipment while at the dock. Vessels equipped with tension winches and cables shall utilise these in addition to the mooring hawsers or alone if the vessel has sufficient cables to meet the minimum requirements of running a cable to each of the bow and each of the stern mooring dolphins. For added security of those vessels not equipped with tension and/or cables, 1 steel cable will be furnished for a bow and another for a stern mooring dolphin by the Plant. It should be recognised by all parties that while the use of these cables is strongly recommended, the Plant accepts no responsibilities for loss or damage to any vessel or to any facility or to any person that may result from the failure of this equipment.

For the convenience and safety of all personnel boarding or disembarking while at Bajo Grande it is recommended that the vessel's accommodation ladder be rigged on the port side, this being the side normally laying against the dock. The ladder should be suspended after the Mooring Master boards and during docking operations to avoid being fouled.

BALLAST: There are installations for unloading dirty ballast. Vessels which arrive at Bajo Grande with dirty ballast must advise 48 hours in advance with regard to any emulsifiers, detergents or chemicals which may be present in the ballast and which are going to be unloaded. If these emulsifiers, detergents and chemicals are not acceptable, Maraven will advise the ship and the latter must arrive at Bajo Grande with clean ballast.

The ballast will be unloaded at a rate of approximately 5,000 bbls.p.h., nevertheless in the case of unexpected damage or malfunction of the system at Bajo Grande, Maraven will give instructions to the Master of the vessel so that he may arrive with clean ballast and Maraven will not be responsible for the delays which may be suffered by vessels in cleaning their tanks prior to arrival.

It is strictly prohibited to discharge into the lake any liquid or solid waste resulting from tank cleaning. Therefore it is recommended that the Master gives instructions to all personnel so that they avoid any possible leak or contamination in the lake.

In the event that the representative of the Plant or the National Guard observe that dirty ballast is being discharged into the lake, or even residues or other contaminatory organisms whilst clean ballast is being unloaded, such operations will immediately be suspended and the consequences will be strictly for the account of the ship.

LOADING: *Notice of Readiness:* On arrival at Bajo Grande and after inspection by the Customs Authorities, and having obtained any other official approval required before loading, the Master of the vessel will notify Maraven in writing that the vessel is ready to load. This notification must include a report of the conditions of the tanks of the vessel, specifying in detail the temperature, pressure, last loading, list of vessel and trim, possibility of contaminatory organisms and any other conditions which may affect the loading.

The Master of the vessel may request any equipment and/or service which he considers necessary for the safe and efficient loading of his vessel and Maraven will make every effort to fulfil this request.

It will be the responsibility of the vessel to provide its own connections to join up with the RF 10 in. 300 ASA flanges of the dock.

It will be the responsibility of the ship's Master to ensure that prior to commencement of loading, the atmosphere inside the tanks, which are to receive products are within the safety limits stipulated. Nevertheless, Maraven reserves the right to inspect at any time, to verify the fulfilment of these safety precautions and to refuse to load any vessel which in the opinion of Maraven does not fulfil the safety requirements stipulated.

LPG refrigerated vessels will not be considered ready to load at Bajo Grande unless all the LPG tanks contain LPG vapours and are sufficiently cooled to permit shipment of the nominated products.

Vessels which receive completely refrigerated products must be capable of receiving at their boiling point from 0.5 to 2.5 p.s.i.g. Such vessels must have a refrigeration system capable of liquefying all the vapours resulting from the shipment at the rate specified and including those vapours which form as a result of the heat gained by the vessels' tanks.

Loading Procedure: The positioning and connection of the loading arm must be effected to the satisfaction of the personnel in charge of the vessel. After approval of the personnel in charge of the vessel, the loading valves may be opened to check that the connections do not have leaks and loading may commence.

The maximum loading rate is 8,000 bbls.p.h. (750 – 775 tonnes p.h for completely refrigerated products and petrol) and a minimum loading rate of 250 bbls.p.h. (23 tonnes p.h.).

The pumps are designed to supply a minimum flow of 250 bbls.p.h. at a pressure of 225 p.s.i.g. and, since the installations at the Bajo Grande Dock do not have facilities for controlling the pressure of LPG which is being loaded, they are not responsible for any damage or delay which may occur due to the request for reduction in flow and pressure of LPG in order to cool or purge the vessel's tanks.

There are no installations for generation of inert gases. LPG vessels which require cooling, purging or any other assistance in Bajo Grande can be accepted after prior request in writing from the Master of the vessel; however, these services will be charged to the vessel. The responsibility for helping to effect purging and/or cooling is charged at 733 Bolivares per hour, during the time that such operation of purging or cooling causes the vessel to exceed the permitted period of stay.

The quantity of products used in such purging or cooling will be for the account of the vessel.

In the event that the dock vapour compressor is operated at the request of the vessel's Master for a purpose other than for purging or cooling, this will be charged at the rate of 500 Bolivares per hour to the ship.

All loading and unloading operations must be suspended whilst there is bad weather and the tank covers of the vessel must be closed and secured. During periods of calm, petrol or other products with a low flash point can be loaded at reduced rates or the loading operation can be interrupted if the heavy vapours are not being dispersed with sufficient speed to avoid dangers of gas accumulation. Officers on the vessel must be alerted so that they may be on watch whilst such conditions apply.

Under normal operational conditions it may be necessary to displace the loading line. This will require the person in charge of the vessel advising the representative of the Plant when the loading is nearing completion in order to complete an equal quantity to the capacity of the loading line.

Permitted Period of Stay: (a) The permitted period of stay, as is defined hereunder, shall commence to be counted from 6 hours after arrival of the vessel at Bajo Grande. The permitted period of stay will be terminated when the final mooring cable has been withdrawn from the quay.

For the purpose of these instructions, the Notice of Readiness, may be delivered after the vessel has tied up at the dock; nevertheless, the arrival at Bajo Grande shall be defined as the time when the vessel passes between Buoys B – 87 and B – 88, which mark the Maracaibo navigational channel and are situated approximately 1,000 m. of the Bajo Grande Dock.

(b) In the event that a vessel arrives at a different time to that con in the shipping programme, and unless Maraven has appro different arrival time, vessel must await mooring of other progra vessels before arriving and which vessels may have arrived at the and the permitted period of stay will commence when the lo operation commences, or 6 hours after receiving Notice of Read whichever is the later. It is agreed that a vessel shall be included loading programme if it arrives at Bajo Grande between the ho 12.01 hrs. on the accepted date and 0600 hrs. of the following d

(c) Except for the provisions in (b) above, all vessels arriv Bajo Grande will have the right to moor in the order in which they a in the shipping programme. Maraven at their discretion may chang order of shipment when it may be necessary for reasons of sa for the purpose of obviating a closure of the Plant or reduc production.

(d) The waiting time permitted shall be 24 hours, plus one (1 for each 6,000 bbls. of product loaded in excess of 114,000 bbls waiting time shall be that permitted to load the complete cargo o of the cargo of the vessel, it being understood that any time sp deballasting operations will not be taken as waiting time. If the lo operations are delayed or interrupted by *force majeure,* which include the closure of the shipping terminal due to bad weather, the thus lost will not be counted as permitted waiting time.

(e) The loading operations shall be considered as terminated the loading hoses are disconnected. Every vessel will leave the as quickly as may be practically possible after having com shipment of the cargo and the personnel of the vessel and tho land have arrived at an agreement as to the quantity of products sh

(f) In the event that a vessel is moored at the quay for 6 conse hours after Maraven has notified the Master of the ship tha installations are ready to deliver the product, if the vessel on comp of this time is not in a position to receive products, then at the disc of Maraven the vessel may be withdrawn from the quay, to preve products burning or a reduction in production.

A vessel may be withdrawn from the quay at any time for reaso safety.

Verification and Measurement: Determining factors to arrive a official figures of a shipment:

(A) Petrol and Butane:

(1) Correction factors of the individual meters less than 1%. I event the terminal shall always use the figures of the meters as d (and not take into account the absolute difference in barrels) t always the precaution of carrying out a comparison between the fi of the ship and those of the land.

(2) Factor of correction in any of the meters greater than 1%. I event the vessel's figures will be used, comparing them in all as with the figure of the meters without applying the correction facto with the land tanks.

In those cases in which the vessel's figures are used, it is approp to suggest that they check their figures.

(3) In the event of the measuring system not operating, and the ve cannot give its own figures, as a last recourse the figures of the s tanks will be used.

(B) Propane:

(1) The vessel's figures will be taken proceeding in exactly the s way as in point (2) of sub-section (a) above.

(2) In the event that the vessel cannot supply figures, the figu the shore tanks will be used.

All volumes will be adjusted to the volume equivalent to 60 accordance with the applicable sections of Standard API 2534 an corresponding tables of the Measurement Tables of Oil ASTM (edition) or other methods or standards selected by Maraven.

If the product delivered is LPG, the content of the ship's tank include the quantity of the product in the form of vapour.

All volumes will be calculated in U.S. liquid barrels at 60°F an adjustments at this temperature will be made in accordance with th Measurement Tables ASTM – 1P, American Edition 1952 (or the tables which may replace these).

In the event of the products being loaded in a vessel whose t pipes and equipment are empty when loading commences, the volume of products which may remain in the pipes and equipme completion of shipment and at the time of final measurement, sha calculated on the basis of the volumetric capacity of those pipes equipment, adding the calculated volume loaded in the vessel's t and including in the total volume delivered to and received by the ve at that time. In the event that the procedure described is use determine the volume of products delivered and if during the time o delivery vapours from the vessel's tanks be vented then the quan vapours vented shall be determined as shall also be the liquid vo equivalent to these vapours in normal conditions and this will be a to the quantity determined in (a) and (b) above.

Permissible Composition of the Atmosphere of the Tank for Pur Maximum percentage per volume of air or oxygen permissible fo safe shipment of the product when the vessel's tanks are purged CO_2 or N_2:

	%Air		*%Oxygen*	
Product	(CO_2)	(N_2)	(CO_2)	(N_2)*
LPG	50	40	8	7
Petrol	50	40	8	7

*The percentages of nitrogen do not include the nitrogen of the the mixtures.

Example: If a vessel is going to load LPG and it is going to be p with N_2, it must add sufficient N_2 to ensure that the mixture do contain more than 40% by volume of air. The other 60% will be N

Ref. Principles & Practices of Purging, 1954. American Gas Ass Chapter 2, page 28.

FRESH WATER: Available at Maracaibo Harbour.

UEL: Heavy and medium marine diesel, intermediate fuel, and bunker fuel oil are available in the area. Lubricating oils in limited quantities e also available from local contractors. All bunker, lubricating oils, er and other requirements should be cabled to the ship's Agent. For sons of safety, no bunkers may be taken on the vessel while berthed Bajo Grande.

DICAL: Complete medical services are available in Maracaibo.

NSULS: The following nations have Consular representation in racaibo:

Belgium
Chile
Colombia
Costa Rica
Denmark
Ecuador
El Salvador
France
Germany
Great Britain
Guatemala
Italy
Netherlands
Norway
Panama
Peru
Spain
Sweden
Switzerland
U.S.A.

PAIRS: Maracaibo: No major repair facilities are available, minor ar jobs can be taken care of through local machine and electrical ops. Shore labour can be furnished if required. Radio, radar and gyro mpass technicians are available upon request.

jo Grande: No repair facilities are available, but when required, sonnel from shops in Maracaibo will travel to Bajo Grande to effect airs.

ORE LEAVE: Launch service for official business purposes and ergencies is readily available in Maracaibo. Launch service for shore ave can be arranged through contact marine service and will be the sponsibility of ship's personnel. Arrangements for shore leave nsportation can be made through the ship's Agent. No shore leave lities are available at Bajo Grande.

ASSIFICATION SOCIETIES: American Bureau of Shipping and oyd's Register of Shipping, U.S. Salvage Association, Salvage sociation of London, Det Norske Veritas, Bureau Veritas, Registro aliano Navale, and Germanischer Lloyd have Agents in Maracaibo. rveyors are available by appointment from any of these Agents.

RRENCY: The Venezuelan unit of currency is the Bolivar (Bs) and the only currency recognised as legal tender within the country. asters desiring a cash advance should make the request to their Agent hen advising ETA.

AIL: Outgoing mail for ship's account may be given to the Agent's presentative who boards the vessel on arrival at Maracaibo inbound. ersonal mail will be accepted only if carrying the correct amount of enezuelan postage, or if postage is authorised by the Master for the essel's account.

ENERAL: *Maracaibo Port Captaincy:* Directive which must be bserved by vessels entering and leaving Maracaibo Lake:

BJECTIVES:

To increase the safety of Human Life at Sea, to take all necessary easures to avoid marine accidents in general and to ensure that essels are navigated with safety in the navigable channels and waters f Maracaibo Lake.

1. All radio-telephone communications between the Control Offices of aritime Transit under the control of the Port Captaincy of Maracaibo nd vessels, shall be made, for the first contact, via Channel 16 56.8 MHz) and immediately it shall be agreed that for the transmission f required information they will change to Channels 12 or 14. Also this rocedure will be adopted in communication from ship to ship.

2. Any vessel which navigates in the vicinity of the Buoy "EM" of the uter channel being 10 miles from the latter shall call the pilot station t San Carlos, requesting permission to enter the zone and will supply he following information:
(a) Name and type of the vessel.
(b) Nationality.
(c) Draft.
(d) Last port of call
(e) ETA at the "EM" and "B – 26" Buoys.

3. The Port Captaincy will authorise by radio, via the pilot station of San Carlos, to Masters of vessels who have reported to that station equest to cross the outer channel, or part of it, with the assistance of he Official Pilot, in accordance with the sequence of arrival.

4. Every 5 miles, the Master of the vessel will call up San Carlos, ndicating any information which he may have and giving his position within the channel, by reference to the buoys which are on his starboard side.

5. When communication in item 1 has occurred, San Carlos will inform he vessel as follows:
(a) The location of any dredger (mobile or stationary) which is perating in the outer channel, buoys whose lights are out, changes in buoys' positions or where buoys have disappeared, vessels which have sunk, etc.
(b) If there are vessels leaving the port, to give the position of these by reference to the odd numbered buoys.

6. Vessels shall establish radio-telephone communications with the redger when they are 5 miles from it. In this communication, they will ndicate the place they estimate that the vessel will meet the dredger and any other information which they consider necessary for the safety f navigation of both.

7. San Carlos will keep vessels informed of all the circumstances entioned above, especially the time and place that each of them stimate to pass close to any dredger which is operating in the outer hannel, and in order that they do not meet the dredger simultaneously.

8. Masters of vessels will inform the pilot station at San Carlos of any ther information which the latter may request.

9. Masters of vessels will keep a watch on Channel 16, on the order of the Official Pilot, until their arrival at port of destination in Maracaibo Lake and on leaving until the Pilot has left the vessel.

10. Pilots, when they are bringing a vessel into the port, at the level of the parallel of Palmas del Norte Point (Buoys T – 55 and T – 56), will call up the Port Captaincy and transmit the following information:
(a) Name of vessel
(b) Time
(c) Port where operations will be effected
(d) Name of Pilot calling.

11. When the vessel continues to navigate to the South of General Rafael Urdaneta Bridge, the Pilot will inform the Control Office of Maritime Transit in Maracaibo, the time at which the vessel will pass Buoy "B – 79".

12. The average speed of vessel in the navigable channels will be ten (10) knots, Masters being authorised as are also Official Pilots, to alter this, when the safety of navigation may require it.

13. San Carlos will check by radio-telephone the transit of vessels from the Entrance Buoy "EM" to the level of the parallel which passes in front of Palmas del Norte Point (Buoys T – 55 and T – 56 and vice versa).

14. Loaded vessels navigating outwards, and being in the outer channel, will have priority over vessels coming in to the same channel, provided that these do not meet with those coming out in the critical zone, included between Buoys B – 21 and B – 22 and E – 33 and E – 34. For this purpose, the San Carlos Pilot Station will inform entering vessels the situation of leaving vessels so that they may take necessary measures to avoid meeting those vessels coming out in the referred zone.

15. The Port Captaincy will check via the office of Control of Maritime Transit, the Navigation of vessels, from the parallel passing Palmas del Norte Point (Buoys T – 55 and T – 56), as far as the terminals and ports to the South of General Rafael Urdaneta Bridge and vice versa.

16. Every Official Pilot navigating outwards when passing the Buoy B – 72, will call up San Carlos by radio-telephone and will supply the following information:
(a) The time that he is passing Buoy B – 72.
(b) The time that he is arriving at San Carlos.

17. When the dredger receives any call from a vessel it will give information as follows:
(a) Location where it is at that time.
(b) Direction of dredging (South North or North South).
(c) The side on which the vessel must pass.
(d) Time necessary to make the manoeuvre indicating on which side of the channel dredging will continue after the manoeuvre.

18. The pilot station at San Carlos will be attentive to all communications made and will take note of them, in the event that their intervention may be required by dredgers or by vessels.

19. Any vessel sailing from any port in the No. 2 Pilotage Area of Maracaibo, will inform the Port Captain as follows:
(a) Type and name of vessel.
(b) Where from and time of leaving the port.
(c) Speed and port of destination.
(d) Estimated time of passing Buoy B – 72.

Signed – Port Captain.

AUTHORITY: Maraven, S.A. – Bajo Grande Refinery, P.O.Box 93, Maracaibo, Venezuela 4033A. *Tel:* (061) 202673. *Telex:* 61254, 61161. *Contact:* Captain N. Arceo, Terminal Supervisor.

Head Office: Maraven S.A., Apartado 829, Codigo Postal 1010A, Caracas, Venezuela. *Tel:* 908-2111. *Telex:* 23535, 23536.

Section B

LA ESTACADA: 10.42 N. 71.32 W.

TERMINAL NOT IN USE. BUOYS HAVE BEEN REMOVED.

Section C

LA SALINA (Lacustre): 10.22 N. 71.28 W. **(See Plan)**

(N.B. For important details of Documentation, Pilotage, etc., see "Maracaibo Lake").

OPERATORS: All terminal facilities are under the control of Lagoven, S.A.

APPROACH: Entrance and leaving this terminal is made between Buoys B – 97 and B – 98.

LOCATION: La Salina located on Eastern shore of Lake Maracaibo, in Lat. 10° 22′ 18″ N., Long. 71° 27′ 49″ W. about 60 miles from the Entrance Buoy "EM".

DOCUMENTS: These are generally placed on board prior to departure. Vessels whose Master accepts the early departure procedure may sail with documents in blank. Figures are then radioed for inclusion in blank documents. Outward Clearance documents are placed on board the vessel prior to departure.

PILOTAGE: In the event that no contact can be made with San Carlos Pilotage Station, or if there is a language problem, contact should be made with Vensport, at La Salina by voice radio on VHF Channel 16 (156.8 MHz).

The Docking Master boards by tug or launch at the waiting anchorage or in the outer part of the navigation channel leading to the terminal.

ANCHORAGE: The waiting anchorage off La Salina is located immediately Eastward of Buoys B – 97, AS – 1 and AS – 3 (Old numbers M – 1, M – 1a and S – 1); it has a depth of between 40 ft. and 41 ft. and fair to poor holding ground in soft mud.

RESTRICTIONS: None. The port is open for navigation during the day and night, allowing ships to enter and sail at any hour.

MAX. SIZE: Up to 112,000 d.w.t., LOA 900 ft. and max. draft 39 ft. (brackish water) at Berths No. 6N, 6S, 7N and 7S. Max. distance bow to manifold 450 ft.

Pier No. 3 (West Side) LOA 690 ft., draft 26 ft. and 36,000 d.w.t.

Pier No. 3 (East side) LOA 575 ft., draft 26 ft. Max. 18,000 d.w.t.

No restrictions on vessel's beam at any of the berths.

The access channel to La Salina has a least depth of 41 ft.

Special Note: Maximum draft for loading vessels at La Salina Lacustre Terminal is actually restricted to 39 ft. Vessels loading at this maximum draft of 39 ft. must cross the outer bar channel at HW.

RADIO: The cable and telegraphic address for the Lagoven, at La Salina is "Lagoven La Salina". Radio messages to and from ships at sea are routed through the Government radio station at Maiquetia (La Guaira) call letters YVG. This station operates on a 24 hour continuous watch on 500 kHz and 2182 kHz.

Listening frequencies: long wave: 500 kHz; medium wave 2182 kHz; short wave Channels 5 and 6.

Working frequencies: long wave 417 kHz and 464 kHz; medium wave 2120 kHz; short wave 4222 kHz, 6351.5 kHz, 8461 kHz and 17141.5 kHz.

Answering frequencies: long wave 500 kHz.; medium wave 2182 kHz.

Hours of watch:

4222, 6531.5 kHz	0100 – 1300 hrs. GMT
8461, 17141.5 kHz	1300 – 0100 hrs. GMT

Cables for vessels may also be routed via Curacao Radio, call sign PJC.

Radio notice of arrival should be sent 72 hours prior to arrival at La Salina and corrected if weather or other conditions delay the vessel.

Vensport La Salina handle all communications between vessels and Lagoven Terminal control tower. VHF radio-telephone Channel 16 (156.8 MHz) may be used for initial contact. Channels 6, 10, 13 and 14 are also available on a 24 hour basis.

All vessels en route to La Salina may also communicate with Lagoven Amuay or Caripito Marine Offices and request that messages dealing with corrected ETAs, Pilots and other business be relayed to Vensport La Salina.

VHF: Transmit on VHF when passing Aruba or Amuay Bay updated ETA messages to either Lago Marine or Amuay Marine for relay to La Salina. Contact Vensport La Salina on VHF when within reach (normally after passing General Urdaneta Bridge) for latest berthing instructions.

TUGS: Lagoven S.A. maintains one 3,000 h.p. diesel tug and one 1,300 h.p. diesel tug. Tug-boat assistance is considered essential and is afforded to all vessels entering, leaving or shifting in the harbour.

Additional tugs can, in an emergency, be ordered from Maracaibo. The tugs are usually employed in the alongside mode and are made fast using their own ropes (2.5 in. diameter nylon).

BERTHING: At La Salina, Lagoven maintains a deep-water terminal (Lacustre) consisting of an island where are located 2 finger piers, each 1,100 ft. in length and 500 ft. between piers, providing 4 berths to accommodate tankers up to 112,000 d.w.t. Berths are numbered 6N, 6S, 7N and 7S, from North to South. At these berths various products can be loaded simultaneously namely – 6N and 6S – Crude, Naphtha and Butane; 7N and 7S – Crude; Pier No. 3 (West side), Propane and Butane; Pier No. 3 (East side), same as West side but not concurrently with West side. In addition there is an offshore platform (Pier No. 3) where liquefied petroleum gases (Butane and Propane) can be loaded.

Instructions concerning berthing are given by Vensport La Salina by means of radio-telephone.

The use of an anchor when docking is permitted at all berths. It is considered prudent to have the outboard anchor hove-out prior to entering the harbour in order to facilitate speedy release if necessary while docking. The Pilot will advise whether the ship is to be berthed port or starboard side to the dock.

The tugs are made fast on the seaward side, one forward and one aft. Vessels berth under normal circumstances always with head in, which is a relatively simple manoeuvre. Vessels are berthed starboard side alongside Berths 6 North and 7 North; portside alongside at Berths 6 South and 7 South.

When the vessel's bow is between two and three ships' lengths from the head of the pier, the engines are stopped or reversed. The vessel then slowly enters the berth parallel to and about 40 ft. from the continuous fender face. When the vessel's bow is just past the berth's manifold area, the forward spring line is sent in by heaving line. The vessel is then positioned by using its ropes and is pushed alongside by tugs. The current sets mostly in a general Northwesterly direction with a velocity between 0 and 2 knots. This should be taken into account, particularly when berthing at the South facing berths where the vessel may be set onto the pier.

Moorings: Mooring bollards spaced with 80 ft. intervals are located on both sides of the pier, and provide the basis for a potentially excellent mooring configuration consisting of:

3 Head lines
3 Stern lines
2 Breast lines
1 Forward, Spring line and
1 Aft Spring line.

BALLAST: Vessel should arrive at La Salina with sufficient ballast to permit safe handling. Government Pilot requirements in this connection under normal weather conditions are interpreted as drawing approximately 8 ft. forward, 18 ft. aft, on a T – 2 or similar type tanker, and 11 ft. forward, 20 ft. aft on a 26,000 d.w.t., on larger type vessels the minimum draft required is 14 ft. forward and 22 ft. aft.

Ballast should be carried in a minimum number of tanks, and all other tanks stripped, so as to minimise deballasting time.

It has been established that one of the major causes of contamination of crude oil is the relatively small amount of salt water remaining in the ship's tanks, pumps, and ballast lines after ballast discharge. This very small amount of salt, nevertheless, frequently results in costly damage and downtime to refining equipment, besides presenting many other processing problems.

It is therefore requested that the full co-operation of the Maste Officers of ships loading for Aruba, be given to ensure that all tanks and lines are flushed with lake water and stripped as possible.

Vessels equipped with a separate and completely segregated of ballast tanks, lines and pumps, will be permitted to discharge and load cargo simultaneously, providing approval of both the foreman and Petroleum Inspector is secured.

A Pier Supervisor who is in direct communication with the pumphouse is stationed at each pier during the entire time the is discharging ballast or cargo or receiving cargo.

All dirty ballast must be discharged ashore. The terminal 100,000 bbl. reservoir connected to two high capacity separator Max. ballast discharge is 40,000 bbls./hr. with max. 130 p.s.i. One or two hard arms (12 in.) are usually connected for discharge.

If it is desired to follow the "load-on-top" procedure it is requ that the marine representative be informed on arrival.

POLLUTION: There are no shore facilities to recover an oil spil Venezuelan authorities take a very serious view of oil pollution and fines are imposed for violations of the strict pollution rules. A gover representative is stationed at the terminal. It is therefore importa all precautionary measures be taken and spills avoided. In case spill, the port services section should be informed immediately b or telephone, which is located on the pier. The use of dispersa detergents on the water is not permitted.

LOADING: Instructions as to grade or grades of cargo, an approximate loading rate anticipated, will be given to the Maste arrival. Supplementary information including number and size of and Chicksan arms will be furnished to the Chief Officer before lo commences. Loading rates will be reduced as required when to off. If vessel's loading orders from owners or charterers do not with the terminal's orders, either as to grades or quantity, the m representative should be advised immediately. The termin authorised to load 10% more or less than the quantity nominated

A terminal employee is stationed at each pier during the entire the ship is discharging ballast, bunkering, or loading cargo. F minutes "standby" notice should be given to this man prior to comp of ballast, bunkers, or cargo.

Shut-down controls for all crude oil pumps are available at loading berth at ship's rail of loading vessels for use in cas emergency only.

LOADING RATES: Loading operations at La Salina Termina normally carried out at relatively high pumping rates; up to an ave of 40,000 bbls.p.h. Ship's officer will be advised by the pier super at what rate the cargo will be loaded. LPG is loaded up to an ave max. rate of 7,500 bbls.p.h. at Platform No. 3.

During periods of calm, loading of gasoline or other similar low products may be at lower rates or loading stopped if the heavy va are not being dispersed quickly enough to prevent hazards accumulated gas pockets. Ships' officers are cautioned to be on guard during such conditions.

Loading rates will be reduced when topping off, if requested b ship's officer.

Cargo Handling: The terminal is mainly a crude exporting facility also LPG, bunkers, condensate and gasoline are handled.

The cargo transfer facilities are:

Berth 6 North and South:
3 × 12 in. Chicksan arms for crude loading.
1 × 8 in. Chicksan arm for bunkers (located aft of manifold).

Berth 7 North:
4 × 12 in. Chicksan arms for crude loading.
1 × 8 in. Chicksan arm for bunkers (located aft of manifold).

Berth 7 South:
4 × 12 in. Chicksan arms for crude loading.
3 × 12 in. Chicksan arms for pressurised gas loading (located fo of crude loading manifold)
1 × 8 in. Chicksan arm for bunker (located aft of manifold).

Gasoline, condensate and pressurised butane are handled at Be at both sides of the manifold.

All connections are standard 150 ASA bolt hole flanges.

The emergency cargo stop button is located in the operators' sh on both piers.

Crude loading rates up to 50,000 bbls./hr. can be provided.

The loading and discharging of all crude petroleum and its pro will be stopped during the passage of an electric storm and ullage co must be closed and dogged down.

Cautionary Advice: Whenever non-matching flange sizes neces the use of reducers (spool pieces), Masters should insist that the re or hard arm be adequately supported by a proper jack, and should n to let cargo transfer operations commence before a satisfactory w manifold and hard arm connection has been provided.

MEDICAL: Complete medical, dental and hospitalisation facilities available at La Salina. Medical treatment is provided at a private Authorisation forms for medical treatment are provided which re the Master's signature. Transportation will be supplied by Vens La Salina.

If the patient does not speak Spanish or English, an interpreter sh accompany him.

DENSITY: Average density at the berth is 1002 but varies depe upon amount of rainfall. The temperature ranges from 82°F. to 8

FRESH WATER: A limited supply of fresh and boiler water is ava at La Salina Lacustre Terminal. Delivery is made through 2.5 in. Na Standard Fire Hose Thread hydrants. Ship's personnel must p hoses and connect up.

FUEL: Bunker C fuel oil, marine diesel and intermediate fuels are available at La Salina Terminal Lacustre. Delivery is made alongside Piers 6 or 7 by 8 in. diameter Chicksan hose, located about midships. *Loading Rates:* Bunker "C" and intermediate – 3,000 bbls.p.h.Diesel – 1,000 bbls.p.h.

It is the responsibility of the ship's engineer to give "stand-by" notice to the terminal employee and advise him when to shut down.

Supplies of lubricating oils in drums are available. Delivery will be effected while loading and requirements should be incorporated in the radio ETA.

FIRE PRECAUTIONS: The recognised fire alarm signal is 4 long blasts with ship's or tug's whistle. An 8 in. fire water main line runs alongside all 4 berths with numerous double 2.5 in. outlets for connection to ship's hoses. Four elevated water/foam monitors are located on each pier providing relatively good fire fighting protection for the main deck area. The 2 tugs are also equipped with elevated fire water/foam monitors, though on board foam storage capacity is relatively limited.

CONSULS: The following countries have consular representatives in the area:

Belgium
Chile
Colombia
Costa Rica
Denmark
Dominican Rep.
Ecuador
El Salvador
France
Germany
Great Britain
Guatemala
Italy
Netherlands
Nicaragua
Norway
Panama
Peru
Spain
Sweden
Switzerland
U.S.A.

REPAIRS: Vensport's Port Staff will assist with emergency repairs as may be required in each case depending upon availability of competent personnel and equipment. The company's shop facilities while not equipped for extensive ship repairs, may be made available to fabricate or repair items that are urgently required.

The nearest dry docks are those at Puerto Cabello and Curacao, N.A. Several contractors in the area provide labour for hull painting and for tank cleaning. Contracts for these services are made by the ship's Master directly with the contractor.

Radio technicians are available for minor repairs. With sufficient advance notice a radar specialist can be arranged to board the ship at La Salina.

TIME: GMT minus 4 hours.

SHORE LEAVE: Shore leave is permitted and a representative of the Captain of the Port boards on arrival and issues the required number of passes. Shore passes are to be collected prior to sailing, and given to Pilot undocking the vessel. Vessels are not permitted to sail until all crew members are on board, unless hospitalised or prior arrangements made for disembarking. No launch service for liberty parties is available while vessel is anchored off La Salina awaiting berth.

GENERAL: Representatives of Vensport La Salina board vessels immediately on arrival, and it is particularly requested that Masters indicate at that time all ships' requirements. The office building is located at the Pier Head Trestle and personnel are available for assistance at all hours.

(a) *Bonded Stores.* Cigarettes or other stores in bond are not obtainable in La Salina.

(b) *Cash Advances.* Cash advances are made in local currency, the Venezuelan Bolivare. Cash requirements should be included in the radio ETA.

(c) *Charts.* On first arrival of each tanker, the Agency Dispatcher will furnish a set of local charts if required. No supplies of U.S. Hydrographic or British Admiralty charts, or sailing directions, are available.

(d) *Classification Societies.* American Bureau and Lloyd's Register have non-exclusive Agents in Maracaibo, and qualified Masters and Chief Engineers are available for appointment as Surveyors when required.

(e) *Gangways.* All vessels using the Port of La Salina must provide a safe gangway. The use of rung ladders, pilot ladders, etc., is contrary to Port Regulations and Port Authorities will not board except by means of a safe gangway or accommodation ladder.

(f) *Plimsoll Marks.* The Captain of the Port requires that the Plimsoll Marks of all vessels using the port be clearly visible. Vessels may be checked on completion of loading, and if the Plimsoll Marks are not readily legible, permission to sail may be withheld.

(g) *Port Services.* On arrival at La Salina Terminal, a company representative boards vessels, so it is particularly requested that Masters make known to him all ship's requirements. Master should bear in mind that while vessels are within Venezuelan territorial waters, Government Authorities do not permit the use of ship's radio equipment. Cables and radiograms should be handed to the company representative for transmittal via shore radio communication system. La Salina also has radio telephone communication with North and South America and Europe. For further information contact Vensport in the terminal building, Tel. 88491 and 88492.

(h) *Rat-guards.* By order of the Port Authorities, vessels are required to use ratguards on all mooring lines.

(i) *Personnel – Seamen left ashore:* In the case of seamen left ashore for hospitalisation, repatriation or other reason, documents and personal effects are to be delivered to the Vensport Office in La Salina before sailing. A letter is required from the Master advising maximum advances to be made to seamen if any, and instructions concerning repatriation. All expenses incurred by seamen left ashore, including cost of repatriation, are for ship's account.

It is important that Masters bear in mind that the Venezuelan law will at all times hold the vessel, her Master, Agent or Owner, responsible for any seamen left behind in Venezuela.

(j) *Provisions and stores.* Fresh and dry provisions are supplied by various Ship Chandlers in Maracaibo and Cabimas (La Salina). Master should deliver his signed requisition to the Vensport Office representative who boards on arrival. Provisions would then be delivered to the vessel while loading. The prices and quality of some items, such as fresh fruit, fish, shrimps, vegetables, etc., are competitive; dry stores are considerably higher than in most ports. The Fleet Steward will assist in filling requisitions. It is important that the Master sign the Ship Chandlers invoice as authorisation for the Marine Department to make settlement.

(k) *Mail.* Any pending ship's mail will be delivered on board by the Vensport Dispatcher on arrival at La Salina. At same time he will receive ship's mail to be dispatched. The Vensport Dispatcher will accept personal mail only if it carries the proper amount of Venezuelan postage, or if Master authorises the postage by signing 7 copies of the Company Postal Transmittal form. Masters interested in knowing the individual postage amounts to be paid by each crew member, should provide a list, in duplicate, of the senders, and number of letters sent by each one identified by a number written on each letter.

Copy of this list will be returned aboard the vessel when leaving this port outward bound. If not ready on time, it will be airmailed to the vessel's next port of call.

(l) *Inspection of Petroleum Products and Crude Oil.* Chas. Martin & Company and E. W. Saybolt petroleum inspectors are available if specified.

(m) *Laundry.* Laundry service is available between 0700 hrs. and 1700 hrs. on week-days. No guarantee can be given on time of delivery.

AGENT'S NOTICE: December 1987.

TO ALL MASTERS CALLING AT LA SALINA

We would like to draw your attention to the following:

(a) Terminal of La Salina is an artificial island. For safety reasons during your vessel's call, a permanent (24 hours) taxi service has been arranged to take you and your crew from island to main gate and vice-versa.
(b) This taxi service MUST NOT be paid for by you or your crew.
(c) No idling or walking around the island and/or terminal is allowed.
(d) It is impossible to go through La Salina's main gate without the Harbour Office Shore Pass duly filled in with name, nationality, vessel's name, passport number and date.
(e) Your agent's call name at branch office of La Salina is "Agemar La Salina", standing-by 24 hours on VHF Channel 16, telephone numbers 45665 and 43089, direct line of Lagoven 3235. Agency's call name at main office also standing-by 24 hours on VHF Channels 12, 14 and 16 is "Agemar Maracaibo".
(f) Whenever calling "Agemar La Salina" and no reply is obtained, please contact "Agemar Maracaibo" and leave your message.
(g) If an emergency arises concerning bunkers or cargo, you must contact Lagoven's employee-in-charge of the pier at the small house beside the vessel or call by the telephone of the pier to the Loading Master, Tel. No. 3587, 3304 or 3258.
(h) Launch operator's call name is "Servicios Portuarios" on VHF Channel 16 (24 hours), Tel: 3491 and 3492. In case you need to contact Lagoven, there is always an employee on the pier with a telephone. Bunkers or water facilities are available at this pier.
(i) Water and bunkers are available at Piers No. 7 and No. 6. Water is taken through vessel's hose while bunkers by shore's Chicksan or rubber hose.
(j) Two hours before loading operation finishes, a radio call should be made to "Agemar La Salina", so that arrangements for pilot, tugboats and other sailing procedures can be made. (*)
(k) In case of oil spillage, an immediate call should be made to "Agemar La Salina" or "Agemar Maracaibo", giving the name of your P & I Club. We will contact the area representative and request their assistance.
(l) It is recommended that a crew member stands-by on VHF, one hour after vessel finishes loading.
(m) Maximum sailing draft is 39 ft. 00 in. even keel – NOT ONE INCH MORE.
(n) Crew Disembarking – In order to obtain 25% discount on air tickets and to cover IATA Regulations, Master must issue a letter addressed to Agemar requesting the tickets and mentioning name, destination, passport number, nationality, age. If any excess luggage (only 40 kgs. allowed per person), Master has to authorise same and inform agents. Our agent at Maiquetia Airport will take charge of this expense on behalf of Owners. Weighing of baggage should be done onboard and letter must be done on vessel's official paper, signed by Master and with the vessel's stamp on it. Crew members disembarking have to keep their Shore Passes. *All other shore passes must be returned to the Agent and he must be informed whether all crew members are on board.*
(o) Medical Attendance – Call immediately "Agemar La Salina" and send the person that is sick to the hospital, by the taxi, also call Lagoven's Control Tower. Taxi has a visible identification that says "Linea Zulia". Taxi driver will not only take the crew member to the hospital but will also pick up Agemar's agent and service order as well.
(p) No external painting of vessel (hull) is allowed while berthed or anchored. It is forbidden to deballast from cargo tanks (clean or dirty) into the lake. Heavy fines will be imposed on those not complying with these regulations. Smoking is not allowed on all piers.

(*) Please call by VHF Channel 16 to "Agemar La Salina", today at 1800 hours local time, informing the estimated time of completion of loading.

MARACAIBO: 10.42 N. 71.39 W.

On the N.W. shore of the Lake Maracaibo.

Maracaibo is the capital of the State of Zulia and seat of all Government and Consular Offices, as well as the port of entry for all vessels loading at one of the Terminals in the Lake of Maracaibo. (N.B. For information details of Documentation, Pilotage etc., see "Maracaibo Lake").

Also see "Shipmaster's Report" before Bajo Grande.

ANCHORAGE: The Pilot will not con the ship into the anchorage, but will indicate the proper location to anchor. Care should be taken because of small boats and ferry traffic.

ACCOMMODATION LADDER: Vessels must provide an accommodation ladder. The use of trunk ladders, pilot ladders, etc., is contrary to port regulations. Port Authorities will board only by means of an accommodation ladder. It is recommended to rig this in advance to avoid unnecessary delays.

BOARDING PARTY: The boarding party usually consists of the following persons: One Quarantine Official, Two Customs Officials, One Port Captain's Representative, Two representatives (Agent and Mooring Master).

RADIO: "Radio Marina" transmits information of interest to navigation every day from Monday to Friday from 1000 hrs. to 1015 hrs. and from 1600 hrs. to 1615 hrs. on frequency of 4,420.7 kHz in the 60 m. band, output 1 kW. All bunker, lubricating oils, water and other requirements should be included in the cable giving ETA of the vessel.

TUGS: Service not compulsory, assistance is rendered if required by the Harbour Master.

BERTHING: The manoeuvring area within Maracaibo harbour has a depth of 26 ft.

	Length	*Depth alongside*
Wharf No. 1	106 m.	15 ft.

REPAIRS: No major repairs facilities are available; however, repair work can be done through local machine and electrical shops, and shore labour can be furnished if required. Radio and radar technicians are also available.

AIRPORT: International Airport "Granode Oro" situated N.W. of Maracaibo City served by many national and international airlines. A second airport with cargo and passenger services is situated at Santa Barbara del Zulia, on the banks of the Escalante River.

HOLIDAYS: All Sundays; 1st January; Good Thursday and Friday; 19th April; 1st May; 24th June; 5th July; 24th July; 12th October; 24th October; 18th November; 17th December; 25th December.

POLICE/FIRE/AMBULANCE: Police tel. 3821; Fire tel. 6585; Ambulance tel. 2209.

TELEPHONES: There is no service for connecting telephones on board vessels. Public telephones are situated in the warehouses adjacent to all wharves.

PROVISIONS: Fresh and dry provisions are available through ship chandlers in Maracaibo for delivery at Maracaibo Harbour or at the terminal.

SHORE LEAVE: Launch service in the Maracaibo harbour is readily available for official ship business. For personnel shore leave, depends on launch availabilities on arrival.

SHIPMASTER'S REPORT: 1976

Communication: Considerable difficulty was experienced raising La Guaira Radio Station (YVG) for transmitting the necessary ETAs. Our messages were transmitted via Portishead (GKR). Agents, however, advised that messages are normally transmitted through Curacao (PJC).

Pilotage: Masters making their first visit to the port are to embark the Pilot at Punta Cardon (Paraguana Peninsula). Ample notice must be given to the Agents as the Pilot has to be flown there from Mara Masters making their first visit to Maracaibo must also disemba Pilot at Punta Cardon on departure. Masters may thereafter pro directly to San Carlos pilot station.

Communications can be made through the Harbour Master's O Punta Cardon.

Delays experienced off Punta Cardon did not occur on this part occasion. Pilot boards and normally rests in the pilot's cabin 30 minutes from the "EM" Buoy.

Berthing: 2 tugs are compulsory for vessels berthing/unberthing w the vessel's length exceeds 476 ft. All other vessels 1 tug compu

Stevedoring:

Normal working hours

(Monday – Friday)	0700 to 1100 hrs.
	1300 to 1700 hrs.
	1800 to 2300 hrs. (Overtime)
(Saturday)	0700 to 1200 hrs.
(Sundays & Public Holidays) *No work.*	

Vessels must be fully rigged and hatches open and ready i respects to load or discharge at least 15 minutes before steved arrive. If necessary shore labour is available to assist.

SHIPMASTER'S REPORT: 1975.

Arrival Messages: Cable Agent – Maracaibo via La Guaira Radi departure Cristobal with ETA Punta Cardon, draft, cargo stowage, ga required and requirements. (For subsequent calls vessel wi permitted to proceed to San Carlos pilot station to embark Pilot).

24 hours prior to arrival repeat ETA Punta Cardon, to be se described above.

2 hours before arrival at pilot station – Punta Cardon call on Cha 12 VHF to update time of arrival.

Pilotage: Pilot boards at Punta Cardon about 1 mile off the tanker be from a launch with a "roof landing", therefore the pilot ladder mus about 6 ft. from the water. This Pilot travels from Maracaibo to mee vessel at Punta Cardon and takes the vessel all the way to Marac Punta Cardon to "EM" Fairway Buoy – 78 miles. "EM" Buo Maracaibo – 35 miles.

Once the vessel has made a call at Maracaibo the Master is t exempt and may take his vessel direct to the "EM" Buoy and nego the buoyed channel for 12 miles to San Carlos Pilot Station. The cha is straight, wide and the buoys are well lit and marked. A Wester is said to prevail across this channel from the "EM" Buoy to San Ca Pilot Station but it was not evident on our passage in or out. How a strong ebb tide was noticed running out to sea off San Carlos P Station. The channel from the "EM" Buoy to Maracaibo is dredge 41 ft. but off the berths at Maracaibo the maximum draft is 26 ft. T had been a lot of unseasonal rain prior to our call and we noted the density of the dock water was 1001.

Documents:

1 Health Declaration.
8 Stores Lists.
8 Crew Lists.
6 Passenger Lists (If no passengers these papers have to b entered as "Nil" passengers).
8 Crew Declaration Lists.
2 Venezuelan Manifests (Sent from N.Z.).
2 Sets Bills of Lading (Sent from N.Z.).
12 Sets Tally Books (Sent from N.Z.).

Stevedores: "Servicios Portuarios de Maracaibo".

They have 24 gangs in the port and mechanical equipment to su 16 gangs. Normal working hours are 0700 – 1130 and 1300 – 1630 Overtime 1800 – 2230 hrs. Saturday 0700 – 1200 hrs. No wor Sunday.

The labour works well but is not accustomed to working refriger ships and when the gangs work into the wings the Agent had to su the men with warm clothing and hot coffee. Their discharge ra cartons of frozen cream was 18 t.p.h. In hindsight I would sugges it would be advisable to stow frozen cream for Maracaibo in a h square if possible to obviate the need for the labour to go into the w as the complaint about the "cold" does not arise until this happens. T had 14 open trucks laid on to take the cartons of cream direct to butter works and they had an unbroken flow so the "hook" was no up on this account.

Berthing: There are berths for 6 ocean going ships and they sa can berth these ships up to 26 ft. Tugs are available and becau berthing starboard side to we used 2 tugs. The berths are concret rubber fenders and there is plenty of working space for the mecha vehicles. The Pilots speak a little English but sufficient to m themselves understood and are capable. Fresh water is avai alongside but I understand if bunkers are required they have t brought by barge and there is a minimum charge of $1,000 irrespe of the amount of fuel required. They have a repair facility which is i hands of a local engineering company. Fresh vegetables are avai and can be recommended, supplied by the only providore. He mai a listening watch on Channel 16 VHF and has a liaison with Agen any messages sent prior to arrival at the berth. His station is a Automercado Venezia.

EL TABLAZO: 10.45 N. 71.32 W. (See Plan)

(N.B. for important details of Documentation, Pilotage, etc., see "Maracaibo Lake".)

Also see "Shipmaster's Report" before Bajo Grande.

LOCATION: S.E. part of Puerto Miranda. Entrance by Buoys 63 and 64.

Distance from San Carlos Pilot Station 16.5 miles.

South Berth: Three urea in sacks conveyors.
Cargo capacity 2,400 sacks of 50 kg. each per hour.

DENSITY: 997 – 1003.

FRESH WATER: Available, 8 t.p.h., but expensive.

OPERATOR: Petroquimica de Venezuela, S.A., (Pequiven) – El Tablazo, Apartado 159, Manejo de Productos, Maracaibo, Estado Zulia, Venezuela. *Tel:* 311-388. *Telex:* 23206. *Contact:* Captain Antonio Parcero.

PUERTO MIRANDA: 10.46 N. 71.34 W. (See Plan)

(N.B. For important details of documentation, Pilotage, etc., see "Maracaibo Lake").

LOCATION: Situated at Eastern shore of entrance to Lake of Maracaibo, in position Lat. 10° 46′ N., Long. 71° 34′ W.

OPERATOR: Maraven, S.A.

DOCUMENTS: On arrival the Master must present to the Port Authorities the following documents:

1 copy Clearance (Note: If the vessel was diverted, Master has to present a telegram in which vessel received instructions to proceed to Puerto Miranda).
8 copies Crew List.
3 copies Stores List.
1 copy Vaccination List.
3 copies Personal Effects Lists.

Vessel sailing for U.S. ports requested to have American Crew List ready on arrival so it can be forwarded to U.S. Consulate without delay.

PILOTAGE: Compulsory. On arrival Puerto Miranda under Government Channel Pilot's assistance, the vessel will be boarded by Government Berthing Master, who will assist Master in docking and undocking.

For Channel Pilot see "Maracaibo Lake".

ANCHORAGES: North anchorage area is situated at Northern part of the exit channel and is marked by the Buoys No. B57B, AP1, AP2 and AP4. Maximum depth 10.0 m.

South anchorage area is situated at Southern part of the exit channel and is marked by Buoys No. B59, AP3, AP5 and B63. Maximum depth 10.36 m.

RESTRICTIONS: There are restrictions for docking and undocking when strong currents are running.

MAX. SIZE: Length 910 ft., breadth 147 ft., draft 39.5 ft.

HEALTH: On arrival, when Pratique is requested, all vessels should fly international flag signal "Q", or show a yellow light during hours of darkness. Customs will grant Free Pratique only when they are on board.

RADIO: All information such as ETA, ballast, etc. may be sent through Curacao Radio. Telex No. 1143-6472.

Puerto Miranda can be contacted by Telex No. 61115.

VHF: Channels 16 and 12. Vessels are requested to call Puerto Miranda about 3 hours before arrival at the port. Calls made in Spanish language will be answered promptly, as there is always a Spanish-speaking clerk on duty. Calls in English will be answered by the Supervisor on duty, except when he is occupied, in which case the call should be repeated later. As an alternative, the Master could ask Government Pilot to report in Spanish his arrival to Puerto Miranda.

TUGS: 2 motor tugs of 4,200 h.p. assist all vessels in docking and undocking. Tugs always used as required by pilots.

BERTHING:

Jetties/Berths	*Depth M.M.O.L.W.* (ft.)	*Maximum Permissible Draft* (ft.)	*Maximum Permissible Length* (ft.)	*Maximum Permissible Displacement* (tons)
Jetty No. 2				
1 (North Outer)	42	39.5	910	90,000
2 (South Outer)	42	39.5	910	90,000
3 (North Inner)	35	34	†575	62,000
4 (South Inner)	28	27	‡575	62,000
Jetty No. 3				
5 Inshore (North Seaward)	42	39.5	910	90,000
6 Inshore (South Seaward)	42	39.5	910	90,000

Remarks: Alongside UKC for ships up to 700 ft. LOA = 1 ft.
Alongside UKC for ships over 700 ft. LOA = 2 ft.

(†) LOA in Berth No. 3: This can be increased up to 620 ft. whenever vessel on Berth No. 1 has LOA up to 555 ft.

(‡) LOA in Berth No. 4: This can be increased up to 610 ft. if Berth No. 2 or 5 are empty when vessel arrives, then Berth No. 2 has to be temporarily restricted to vessels up to 665 ft. LOA

The alongside drafts are subject to reduction owing to depth in inner and outer channels.

Vessels drawing over 37 ft. 06 in. will proceed according to monthly sailing draft table issued by Maraven, S.A.

MEDICAL: Written request for medical attendance, as well as a shore pass, is always required. Master must inform by telex how many crew members will be sent to Maracaibo through the Agent. Ample hospital facilities available at Maracaibo.

TANKERS: Discharge lines 12 in.

Tank cleaning and dirty ballast facilities up to a maximum of 25% of vessel's deadweight.

Discharge of waxy slops and sewage water is forbidden.

Maximum receiving rate for ballast discharge 1,000 t.p.h.

Maximum loading rate 6,000 t.p.h.

Winds are mainly from the N.E. quadrant.

Vessels of any deadweight must secure with at least:

Forward: 4 headlines; 4 breasting fibre ropes and 1 spring in Berths No. 1 and 2.

Aft: 2 stern lines; 4 breasting fibre ropes and 1 spring in Berths No. 1 and 2.

In Berths No. 3, 4, 5 and 6. Forward: 2 head lines; 4 breasting lines and 1 spring.

A suitable gangway will be provided by the shore installation. When it is out of order vessel's gangway has to be used.

The terminal assist in the event of any vessel spillage; but the Master is obligated to make his own arrangements to control the spillage.

BALLAST: *Agent's Notice:* September 1987.

For your guidance please note Maraven's tariff stipulates an additional charge of U.S.$515.00 per hour for extra berth occupation covering any delays attributable to the vessel (tank cleaning, repairs, etc.).

It is important that vessel arrives with tanks in suitable condition to load as per charter party.

If tanks are not accepted by Inspector, the Terminal will charge additional berth occupancy as per above, and if vessel proceeds to anchorage for further cleaning, Terminal fee (tugs and launch for running lines) will be charged again in full for second docking.

The volume of ballast accepted without extra charge to the vessel is up to 25% of her Summer deadweight.

For vessels over 115,000 S.D.W.T., volume in excess of 28,750 tons ballast also applies.

DENSITY: Density of water at berths 997-1003.

Density of water in outer channel 1015-1025.

FRESH WATER: Available at all jetties at a loading rate of between 20 t.p.h. to 30 t.p.h., depending on number of vessels being supplied at any one time. Approximate cost is U.S.$4.0 per ton.

FUEL: Available ex-wharf: Bunker "C", thin fuels from 200 to 3,500 seconds Redwood, and marine diesel. Delivery rate 400 t.p.h. and 80 t.p.h. respectively.

Gas oil, fuel oil and thin fuels may be supplied by barge ex-Maracaibo, delivered at anchor at a maximum rate of 110 t.p.h. and 140 t.p.h.

Notice in advance is requested for delivery.

FIRE PRECAUTIONS: Any hot work is forbidden whilst alongside the Pier. Terminal approval is compulsory for any special requirements.

CONSULS: On all Italian vessels, the Consul comes on board on arrival. Other Consulates are at Maracaibo: Colombia, Netherlands, Panama, Peru, Spain, Great Britain, Guatemala, Switzerland, U.S.A., Chile and Portugal.

REPAIRS: There are small workshops in the area. Contact Agent on arrival.

SURVEYORS:

(1) Cargo Inspectors:

Chas. Martin. Telex 62451 Maracaibo. Tel: 78651.
S.G.S. Telex 23324 Caracas. Tel: (02) 338569.

(2) Surveyors:
Lloyd's Register, American Bureau, Bureau Veritas and Norske Veritas.

CUSTOMS ALLOWANCES: One opened packet of cigarettes allowed to be taken from vessel by each crew member when going ashore. When a crew member signs off, he must present his personal effects to the Customs.

REPATRIATION: Crew changes and repatriation possible. All the arrangements are made by the Agent.

AIRPORT: An International Airport is situated in Maracaibo City. It is served by National and International Airlines. All arrangements through the Agent.

TIME: GMT minus 4 hours.

HOLIDAYS: Do not affect port operations, port works throughout 24 hours, 7 days a week.

POLICE/AMBULANCE/FIRE: All contact must be made in Spanish language. The supervisor will assist in making contact.

Telephones: Police 169. Fire 166. National Guard 168.

EMERGENCY CO-ORDINATION CENTRE: Port Captaincy at Maracaibo, Tel: 9-0-223279 or VHF Channel 16.

TELEPHONES: Whilst alongside, a telephone is placed on board for operational purposes, emergency and internal communication with Maraven telephones. There is no charge.

SERVICES: Radar repairs, R/T repairs, gyro-compass adjusting and all types of electronic repairs.

BANKS: The nearest bank is located at Los Puertos de Altagracia or at Maracaibo City.

STORING: Vessel can be stored by barge or truck; but it is strictly prohibited by barge during loading or discharging, likewise it is prohibited for truck to proceed alongside the ship during loading or discharging.

SHIP SUPPLY SERVICES: Available in Maracaibo. Contact to be made through the Agent.

SHORE LEAVE: Not granted until shore passes are stamped and signed by Authorities. Passport and shore pass required by all crew members going ashore. Passes must be shown to guards at gangway and gates. Crew members must be properly dressed before proceeding ashore. Master must collect all passes and return them to Agent before vessel's departure.

DELAYS: Delays can be expected during deballasting if the levels in the pits are high.

GENERAL: *(a) Tides:* In view of the changing depth in the channels which allow navigation to vessels up to about 70,000 d.w.t. fully laden at high water, permanent predictions of sailing draft tables have been prepared by Maraven S.A., and they will send these on board ships of over 47,000 d.w.t.

(b) Currents: The tidal current (Lunar tide) at this port can at times be very strong and subject to changes. Usually the outgoing tide runs for 7 to 8 hours against 4 to 5 hours for incoming tide. Direction approx. at right angles to jetty.

(c) Movement of Passengers: Embarkation or disembarkation of passengers through this port is not allowed by Venezuelan Law, as this Terminal is only authorised by the Treasury Ministry (Ministerio de Hacienda) exclusively for exporting crude oil.

(d) Failure to Rejoin Vessel: If any member of crew is not aboard at sailing time, Authorities will not clear vessel although permission may be given to proceed to anchorage if the berth is required. If sailing permission is granted, Master is required to sign letter accepting all costs in connection with this matter being for Owner's account.

(e) Launch Service: Masters who have to go on business to Maracaibo can make use of public service launches. Please contact your Agent.

(f) Guards: Custom Guards (Guardia Nacional) will be posted on all vessels and Masters are reminded that these guards must be accommodated and treated in the same manner as ships' officers. Non-compliance entails not only a fine but will result in delays in clearance and cargo operations.

(g) Visitors: Only persons on business allowed on piers. Visito guest of Master, allowed to board vessels provided a written and request presented by Master to Port Services Department. particulars covering procedure for obtaining permits for visitors obtained from Port Services Office.

(h) Charts – Nautical Publications: On arrival of each tanke Agency Representative will furnish a set of lake charts if req No supplies of U.S. Hydrographic or British Admiralty charts or Directions, Nautical Almanac, etc., are available at this port.

(i) Films Exchange: Films may be exchanged at Maracaibo.

(j) Fire Alarm: Each Thursday morning at 1100 hrs. there wil test of fire alarms including sirens at the wharves.

(k). Cash Advances: Local currency is Venezuelan Bolivar and advances are made only in this currency. It is requested tha requirement for cash advances be included in vessel's radio ET permit delivery on board on arrival.

REGULATIONS: Following regulations should be strictly observ the vessel's crew whilst alongside or at anchor. Non-complianc these instructions entails not only a fine but delays in cargo opera

1. Use of rafts for painting the ship's sides is strictly prohibited.
2. Lifeboats should not be lowered without the special permiss the Government Port Captaincy.
3. Swimming in the harbour is strictly prohibited.
4. Waste water, sanitary or other must not be discharged on je
5. It is strictly prohibited to paint ship's name or others on je When this occurs the vessel will be charged for the cleaning.
6. Painting in ships alongside is strictly prohibited.
7. Before start of cargo operations it is compulsory to execu requirements established in the Check List.
8. It is necessary to keep a close and constant watch on moo and to adjust when necessary. When adjusting, call for assistan tugs before slackening off any mooring lines, if the current is settin vessel off the pier.

SHIPMASTER'S REPORT: December 1992.

Gangway: It is advisable to ask Agent if gangway available, as are not in working order.

Moorings: Normal tie-up is 2-5-2. Springs are sent first, followe breasts by shore messenger and finally head and stern lines.

AUTHORITY: Maraven, S.A. Apartado 829, Codigo Postal 10 Caracas, Venezuela. *Tel:* 908.2111. *Telex:* 23535, 2 *Cables:* Maraven Caracas.

LOCATION: The terminal is located at Punta de Palmas del approximately 13 miles South of the Port of Maracaibo on the shore of Lake Maracaibo. The terminal proper may be identified 300 ft. radio tower, having 2 small red lights 200 ft. from the base 1 large red light on top of tower. The top light flashes every 2 sec

PILOTAGE: Vessels which arrive have the option of taking on the O Pilot at the following places:

(a) In the outer channel of the Lake of Maracaibo, between B B-24 and B-26.

(b) In the anchorage area, located approximately 5.5 miles to the of the Island of San Carlos and to the East of the Buoy B-17. This is identified by a green light buoy, equipped with a radar refl (position: Lat. 11° 04′ 22″ N., Long. 71° 33′ 48″ W.).

(c) On the "EM" Buoy (i.e. Entrance to Maracaibo), there is a radar reflector (position: Lat. 11° 13′ 47″ N., Long. 71° 33′ 31″ W.).

The Official Pilot who comes on board at San Carlos will tak vessel to Maracaibo. At times, due to bad weather, the Maracaibo Captaincy cannot guarantee the embarkation or disembarkation of at the "EM" Buoy or in the anchorage at Lat. 11° 04′ 2 Long. 71° 33′ 48″ W. For this reason, Masters must contact the station at San Carlos so that they may give him appropriate instru as to the place of boarding or disembarkation of the Official Pilot, generally speaking embarks between Buoys B-24 and B-26.

The system of communications which vessels use with the station of San Carlos will be the morse lamp, radio-telephone or

The frequencies on which San Carlos listens out are: Radio 2182 Radio-telephone 156.6 MHz. It also operates with frequencies 2120, 2638, 2738 kHz R/T and 156.8 MHz VHF.

Vessels sailing from Punta de Palmas will take on the Official the mooring where they are located after having terminated their operations. This Pilot must be requested one hour and forty-five m before the estimated time of being ready to sail. Vessels which e their Official Pilot at Punta de Palmas to sail to Maracaibo will c their Pilot again on arriving at that port. The Pilot who embarks wil the vessel to the proximities of the Island of San Carlos, betwe towers E-31 and E-33, where he will disembark onto a pilot launc Port Captaincy of Maracaibo has given instructions to shipping for the purpose of informing Masters and Owners of vessels that Master must identify himself in advance to the pilot station at San at any time of the day, when they are arriving at Buoys B-17 and and when they are sailing at T-42 and T-40. These instructions an obligatory nature in order to keep the Pilots' service informed times of any emergency that may arise. Also to avoid an Officia going out unnecessarily from his base, especially during the nigh belief that the vessel which is in sight requires his services; in th both the service of the launch and that of the Pilotage not given charged to the ship's Agent or Representative.

Lake Pilotage: An Official Government Pilot will assist every ship in crossing from Maracaibo to Punta de Palmas and in its exit voyage from Punta de Palmas to Maracaibo. This Pilot will also assist in the operations of mooring and unmooring. The Agent will inform the Master and the Official Pilot of the time determined for berthing the vessel when it arrives at Maracaibo. Vessels which load in Punta de Palmas must request a Pilot for their exit journey at least 1 hour 45 minutes in advance of the time at which they consider the vessel will sail.

CARGO DOCUMENTS: Vessel's clearance and cargo papers will be delivered to the Master on arrival in Maracaibo Harbour outbound. Maraven will accept no responsibility for delay in clearing a vessel due to unavailability of personnel from offices of the Port Authorities.

APPROACHES: The buoy which indicates the entrance to the outer channel ("EM" Buoy) is located in the geographical position: Lat. 11° 13′ 47″ N., Long. 71° 33′ 31″ W. The light of the "EM" Buoy has the following characteristics: white light, with 1 flash every 10 seconds, visibility approximately 5 miles. The distance between the "EM" Buoy and the inner extremity (South) of the inner channel, marked with Buoys B-27 and B-28 is approximately 15.75 miles. The outer channel has a width of 300 m. between the limit on both sides. The navigable portion for loaded vessels is 240 m. wide. The average depth which has been checked at low tide is 13.72 m. (45 ft.) and the tidal amplitude is up to a maximum of 1.49 m. (4.9 ft.). There is a breakwater located a half a mile to the East and parallel to the external channel which extends for 2,574 m. (1.6 miles) to the North from the Northern coast of the Island of Zapara. In its outer extremity there is installed the lighthouse of the steel lattice type construction, with a height of 7.62 m. (25 ft.). The characteristics of its light are: white, with 1 flash every 8 seconds, visibility approximately 5,556 m. (3 miles).

The commencement of the internal dredged channel is marked by Buoys B-29 and B-30. The extension of this channel is 19.31 km. (12 miles) approximately and ends at Towers T-55 and T-56. The channel is 244 m. (800 ft.) wide and its normal checked depth is 13.72 m. (45 ft.) at average low tide, with a tidal amplitude which varies between 0.49 m. and 0.89 m. (1.5 ft. and 3 ft.), at Tower T-66, and from 0.82 m. to 1.46 m. (4.5 ft.) at Buoy B-29.

The channel from Tower T-56 as far as the Port of Maracaibo is dredged and its termination is marked by Buoys B-73 and B-74. It is 244 m. (800 ft.) wide and has a depth of 13.72 m. (45 ft.). Its distance is 17 km. (11 miles).

The depth in all the channels may vary in accordance with the sedimentation to which they are subjected and the formation of sand banks. The Port Captaincy at Maracaibo issues Notices to Mariners keeping them informed as to changes in depths in the channels. Navigators are advised to keep themselves up-to-date with these notices of variations of depth when they calculate their exit draft of their respective vessels.

MAX. SIZE:

Berth	*Max. LOA*	*Max. Draft*	*Max. d.w.t.*
No. 1	835 ft.	38 ft.	80,000 tons
No. 2	835 ft.	37 ft. 6 in.	80,000 tons
No. 3	890 ft.	42 ft.	100,000 tons

Also see "Berthing".

RADIO: *Time of Arrival (ETA):* When a vessel leaves its previous port destined for the Terminal of Punta de Palmas, it must inform both its Agent and Maraven S.A. in Maracaibo as to its best estimate of the date and time of arrival in Maracaibo. Then at least 24 hours prior to arrival at the San Carlos pilots' station, it must send another message to confirm the time of arrival at Maracaibo. The nationality of the vessel, name, nett Venezuelan tonnage (if it does not have this, its registered tonnage), last port, name of Master, permanent ballast or cargo in tanks or both, and any other information which is pertinent must be included in this message. The cable address of Maraven S.A. is as follows: Maraven, Maracaibo, Telex 61126. By virtue of the circumstances that the Cable Office in Maracaibo is not equipped to communicate with vessels on the high seas directly, messages sent to Maraven S.A. and to the Agent of the vessel must be transmitted through "PJC" (Curacao), with the prefix "Via ACC" (All American Cables and Radio, Inc.).

We wish to emphasise that by virtue of the fact that our undertaking rents a part of its equipment which it uses for mooring vessels in accordance with the last message of arrival of the vessel, this message must be compiled with the greatest accuracy possible. Any alteration in the time and date of arrival affecting the vessel before or after the time indicated in its message, will be for the account of the vessel as will be the cost of rental of the equipment used.

Maraven S.A. is in no way obligated to carry out the mooring of any vessel, except at the estimated time of its arrival at Punta de Palmas, although exception is made where the vessel may have been delayed in Maracaibo by virture of reasons beyond the control of the Master.

TUGS: Tug service consisting of 2 tugs of not less than 1,600 h.p. each is provided by the terminal operator for all vessels. Both tugs will assist all vessels in mooring and unmooring operations. Should it be deemed necessary by the terminal operator to require a tug in addition to the 2 terminal tugs for mooring or unmooring vessels exceeding 750 ft. in length, charges for this additional service will be for the account of vessel.

Vessels which exceed 835 ft. overall length, and destined for Berth No. 3, require the assistance of at least an additional tug. This additional tug will remain at the convenience of the Terminal for the time that the vessel remains at the berth.

In all cases where there are adverse weather conditions, without taking into account the size of the vessel, the Operator of the Terminal, at his convenience, may request the services of an additional tug to protect the installations of the Terminal and the ship, which will be for the account of the vessel.

The Terminal Department will make the necessary arrangements through the intermediary of the ship's Agent, for contracting additional tugs. These services will be charged to the ship's Agent by the tug operator who is contracted.

MOORING: *Berth No. 1:* Located approximately 8.85 km. (5.5 miles) from the Terminal and 2 km. (1.25 miles) to the West of Buoys D-95 and D-96 in the Maracaibo Channel. Distance between the bow and stern buoys is 364.90 m. (1,200 ft.).

This berth is equipped, apart from the mooring buoys, with a transversal mooring pile on its Eastern side, submerged, with chain and cable the same as those of the Buoys. This does not interfere with the operations of mooring and unmooring.

Berth No. 2: Located approximately 8.85 km. (5.5 miles) from the Terminal and 2 km. (1.25 miles) to the East of the Buoys D-95 and D-96 and to the N.E. of Berth No. 1. Distance between the bow and stern Buoys is 350.50 m. (1,150 ft.).

This berth is equipped, apart from the mooring buoys with a transversal submerged mooring pile equal to that of Berth No. 1.

Berth No. 3: Located approximately 9.65 km. (6 miles) from the Terminal, 1.2 km. (0.75 mile) to the West of the Buoys D-95 and D-96 and approximately 914 m. (3,000 ft.) to the East of Berth No. 2. Distance between the bow and stern buoys is 365.76 m. (1,200 ft.).

This berth is equipped similarly to Berths No. 1 & 2 with a transversal submerged pile on the Western side of the berth.

Conditions applicable to all berths: (a) Vessels which have a total overall length of 239.26 m. (785 ft.) or more must be equipped with 2 tension capstans at the bow and on the after deck, with sufficient cable to reach the stern and bow buoys respectively.

(b) Every vessel loading at any of the berths must take into consideration that due to Government regulations, the vessel must have a minimum clearance of 0.984 m. (3 ft.) below the keel at any point during its transit through the Maracaibo Channel, without taking into account the limitations of the channel assigned to the 3 berths by the Terminal Operator. In view of this regulation and the constant variations of the depths of the channel, Masters must be guided by the most recent "Depth Bulletins" which are issued by the National Channel Institute, and by the tide tables when they are planning their transit time through the channel, and the maximum draft to which they may load their vessel.

Mooring procedures and rules applicable to mooring points: Every vessel carrying out mooring operations at any of the 3 berths must arrive with a minimum draft of 3.65 m. (12 ft.) forward and respect the following procedure and rules for berthing:

(a) Anchor: Vessels approaching the berths from the East, in the most convenient manner and safely as possible they must drop their starboard anchor in its location once the vessel has been berthed, the chain facing East, with a length of not less than 137.16 m. (450 ft.).

(b) Mooring cables: One of the following alternatives for mooring cables at each side of the vessel must be fulfilled:

1. Two cables of synthetic fibre (Nylon or Polypropylene) with 9 in. circumference and 1 steel cable which has a minimum diameter of 1.25 in.
2. One cable of synthetic fibre (Nylon or Polypropylene) with 9 in. circumference and 2 steel cables also supplied by the vessel and which have a minimum diameter of 1.25 in.
3. One cable of synthetic fibre with a 9 in. circumference and a safety cable of 1.5 in. diameter which will be supplied by the Terminal.

(c) Countertension cables: A countertension cable will be attached to the stern or fore deck. Vessels which have a length exceeding 800 ft. must use countertension cables on both sides of the deck simultaneously.

(d) Transversal cable: The transversal cable which will be supplied by the Terminal will be attached to the after deck on the starboard side. Vessels mooring at Berth No. 3 must also attach an additional transversal cable to the after deck on the port side.

(e) All cables which are attached to vessels must have 6 turns around the bitts, and these must be secured so as to prevent them from unwinding.

(f) The pressure capstans must be secured in the braked position, once all other cables for mooring the vessel have been secured. These mooring cables must be maintained tight as the vessel goes down in the water whilst it is being loaded.

(g) Vessels must be supplied with sufficient cables as spares which can be used as the Terminal may require. All cables must be maintained in good condition and are subject to acceptance by the representative of the Terminal. Vessels must maintain sufficient personnel on deck during the whole time that the vessel is at the berth to attend to the cables for mooring purposes whenever this may be required by the Terminal.

It is understood by both parties that, when the Terminal may require safety cables to be used, and where such are required, Maraven S.A. accepts no responsibility for damages or losses occasioned to any vessel, installation or person due to the use or failure of this equipment.

The vessel's gangway must be in position so that the mooring supervisor or other personnel from the Terminal can come on board the vessel when it arrives at Punta de Palmas.

This gangway must be suspended whilst manoeuvres are being carried out, this for the purpose of obviating any damage to it occasioned by tugs or launches.

Berthing Supervisor: The Berthing Supervisor of Maraven S.A. will come on board every vessel prior to its entrance to the berth to establish radio contact between the vessel, the Marine equipment and the Office at the Terminal.

Mooring gangs and equipment: The mooring equipment will be handled by the launches employed in the manoeuvres. The tug service will be available 24 hours of the day through the intermediary of the Terminal Port.

The mooring gangs will assist the vessel personnel in the operations of hoisting, connecting and disconnecting the 2×12 in. diameter loading hoses. The approximate weight of the loading hoses is 4 tons.

The launches used for the manoeuvres will place on board equipment to facilitate the work of connecting the hoses. This equipment will be at the disposal of the vessel's personnel when required as are also the launches to transport personnel.

Responsibility: The Master may request any equipment or service which he may consider necessary for a safe and efficient operation of his vessel and the Terminal Operator will do everything within his power to fulfil this requirement. Therefore all owners and operators of vessels arriving at Punta de Palmas will accept the responsibility of the safety inherent in the manoeuvring of their vessels and their movements to and from the Terminal. Maraven S.A. will accept no responsibility for losses or damages occasioned to the ship, its installations and others unless such loss and damage be occasioned due to the faults in the installations belonging to the Terminal or operated by the Terminal with the exception of the security equipment.

Operational check list: At the time when the vessel is moored and the hoses are connected, prior to the commencement of the operations of loading, the representative of Maraven S.A. on board will deliver to the Master an operational Check List. The Master is required, or whomsoever he may appoint to carry out this work together with Terminal representative, to check very carefully that all the safety regulations have been fulfilled.

Berthing Supervisor: The Berthing Supervisor will have charts and plans which will be at the disposal of the Master and his advice if he should require it. The representative will also be available to inspect the vessel's tanks and to act as liaison between the Master of the vessel and the Agent or with the Terminal of Punta de Palmas, to transmit any information relative to the ship. This supervisor must receive lodging and treatment at the same level as the ship's officers.

Unmooring procedure: When the loading operations are completed, the launches will proceed to remove all mooring cables from the buoys under the supervision of the official entrusted with the vessel or the Official Pilot, assisted by the Berthing Supervisor of Maraven S.A.

Documentation: The departure and loading documents will be delivered to the Master by his Agent or his representative, when he passes through the Port of Maracaibo.

BALLAST: *Deballasting:* It is understood that it is not permitted to discharge ballast in the lake, even though this may come from tanks used solely for ballast. Ballast will be discharged with the pumps of the vessel to the deballasting system which exists at the Terminal. As soon as the loading hoses are connected, the personnel of the Terminal will align the system with its respective valves. Once these operations are completed the Berthing Supervisor on board will inform the Master that he may commence deballasting and in turn will keep him informed as to the pressures which will be used in the operation. Once the deballasting operation has been completed, the personnel of the Terminal will align the system again and its valves so that the vessel can receive cargo through the same hoses which are used for unloading ballast and simultaneously the personnel of the vessel will align their systems on board to receive cargo. The personnel of the vessel responsible for receiving the cargo will inform the Representative of Maraven S.A.(Berthing Supervisor) when the vessel is in a condition to receive and he in turn will inform the personnel of the Terminal that they may commence pumping.

LOADING: *Oil leakage:* In order to obviate contamination of Maracaibo Lake and possible legal actions, we recommend strongly that Masters of vessels emphasise to their deck officers in order to obviate leakage that they make sure that all necessary measures have been taken on board to this end prior to commencing the loading operations. The purpose of this is to maintain on deck any leak or wastage which may occur in the vessel.

Guarantee of responsibility: In the event of an oil leakage or any other contamination or any other damages to installations caused by a vessel, the operator of the Terminal, prior to the vessel sailing, will require the Agent to deposit bond in favour of Maraven S.A. to cover the fine or other charges which may be incurred in collecting, cleaning, repairing the installations of the Terminal and also to cover any claims from third parties.

Loading procedure and pumping rates: The position of the loading hoses, supports and connections must be to the satisfaction of the personnel on board. The valves of the hoses for loading purposes will be opened in order to test the connections, detect leaks and then ultimately to commence operations.

The responsibility and custody of the cargo passes to the personnel of the ship from the moment when the cargo arrives at the connection which is the property of the ship.

The minimum loading rate at Berths No. 1 and 2 is 4,000 b.p.h. The average pumping rate, under normal conditions is 13,000 b.p.h. Sudden stoppages in loading will not be permitted during loading except in cases of emergency.

Personnel on board, responsible for the loading operations, must notify the Terminal representative, not less than 30 minutes in advance of the completion of loading. This will enable the representative to instruct the operator to reduce the rate of pumping or to continue loading by gravity as he sees fit.

For reasons of security, loading may be suspended and the hoses disconnected from the vessel's manifold when weather conditions are not favourable or at any time that the Terminal considers it convenient to do so due to *force majeure* or other reasons.

Displacement of the line: Sometimes it will be necessary to displace the submarine line in combination with the loading operation. To carry out this operation it is required that the personnel responsible for receiving the cargo notify sufficiently in advance the Berthing Supervisor when the amount of cargo lacking is equal to the capacity of the line.

The capacity of the line is a fixed quantity. Therefore it must not be considered with shortcomings or excesses.

Therefore when it is necessary to effect a displacement, the loading must be calculated carefully by the vessel personnel responsible for this operation.

It is understood that any error or negligence on the part of the vessel personnel in calculating the initiation point of the displacement of the line, will require a land pump to correct the displacement. Due to the submerged manifold it will be necessary to employ a diver to operate the valves and this operation may result in a fairly costly procedure and involve a lot of time. All costs involved in fulfilling this operation, tog with the time lost will be for the account of the vessel.

Increase in pumping rates: At the request of the Master and subje the approval of Maraven S.A., it is possible to suppy a pumping ra 17,000 b.p.h. up to a maximum of 30,000 b.p.h., provided the opera of the Terminal permit this to be done.

MEDICAL: *Maracaibo:* Complete services are available.

Punta de Palmas: Emergency cases only will be transferre Maracaibo for treatment, at the request of the official in charge o vessel.

FRESH WATER: Available from local contractors with barges. Pum will be affected during daylight hours and with prior permission o Terminal.

FUEL: Heavy and medium marine diesel, intermediate fuel, and bu "C" fuel oil available. Lubricating oils also available. Pumping wi affected during daylight hours and with prior permission of the Term

STORES: Fresh and dry provisions procurable through ship chand in Maracaibo for delivery at the Terminal.

CONSULS: See "Maracaibo".

REPAIRS: *Maracaibo:* There are no facilities available for carrying major repairs. Nevertheless, repair work may be carried out thro local workshops and labour can be supplied if this is requ Technicians in radio, radar, gyro compass repairs are also availab

Punta de Palmas: No type of repair will be effected here, which prevent the unmooring of the vessel without the authority of the Ma Supervisor. Neither may boiler tubes be "blown" whilst the vess moored.

SHORE LEAVE: Launch service for business purposes emergencies is readily available. Launch service for shore leave ca arranged through contract marine service and will be responsib ship's personnel. Arrangements for shore leave transportation ca made through Loading Master on board.

CUSTOMS: All vessels entering from foreign ports and bound for P de Palmas Terminal are required to anchor in Maracaibo Harbou formal customs clearance and visit of government port authorities to proceeding to destination.

The vessel's accommodation ladder should be rigged prior t vessel's arrival at Maracaibo. A member of the National Guard will b each vessel at Punta de Palmas to observe all activities connected loading or unloading operations. This official is authorised as customs representative, and is referred to as Customs Watch. Food accommodation similar to officers should be made available to hi vessel.

GENERAL:

Transportation: Transportation will be supplied by launch betw vessel and Punta de Palmas to the following persons, without excep

1. Master of the vessel or the Chief Engineer, to attend to ma relating to the ship.
2. Sick personnel who require emergency medical attention.
3. Official Pilot.
4. Members of the National Guard and other Government Offi whose services relate to the tanker.
5. Doctors, when these may be required by Master, in the eve emergency only.
6. Inspectors of the oil industry.

Consular representatives, ship's suppliers, engineers, naval exp representatives of the oil companies, suppliers of fuel and water any other person who requires to come on board tankers when they in Punta de Palmas must make their own arrangements transportation to and from the ship through the intermediary of the s Agent. Also Agents must make their own arrangements for their transportation.

Personnel of the ship with licence to disembark: The transportatio personnel with licence, when this is required by the Master, mus arranged through the intermediary of the Agent. Also passengers embark and disembark at the Port of Maracaibo.

Personnel with licence are not permitted to go ashore at the Term of Punta de Palmas.

Classification Societies: American Bureau of Shipping, Lloyd's Reg of Shipping, Salvage Association of London, Det Norske Veritas, Bu Veritas, Registro Italiano Navale and Germanischer Lloyd have Ag in Maracaibo or in Caracas. There are experts available throug intermediary of the Agents mentioned above.

Monetary System: The monetary system of Venezuela is the Bo (Bs.), and is the only money legally recognised in the country. A Ma who requires a cash advance must request same from his Agent w he notifies his ETA. Payment of all invoices for Terminal charges be made in Bolivares at the Office of Maraven S.A. in Maracaibo, u other instructions are given.

Mail: Mail for the vessel can be delivered to the representative o Agent who comes on board the vessel at the time of its arrival or sa from Maracaibo.

AUTHORITY: Maraven S.A.

Capitania de Puerto, La Ciega – Maracaibo, Venezuela. *Tel:* 22

SAN LORENZO: 09.47 N. 71.05 W.

OPERATOR: Maraven, S.A.
LOCATION: S.E. side of Lake Maracaibo.
APPROACHES: Vessels have to arrive at Maracaibo Roads through a dredged channel with controlling depths of 45 ft. in outer bar, inner channel and Punta Palmas area. In vicinity of terminal the controlling depth is 36 ft.
PILOTAGE: It is compulsory from San Carlos to Maracaibo. Pilot normally boards vessel at Buoy B–26 (Position Lat. 11° 01′ N. Long. 71° 35′ W.). It is also compulsory for all vessels which have to load at any terminal located South of the bridge Rafael General Urdaneta. This bridge has a horizontal clearance of 656 ft. and a vertical one of 148 ft. at 45 ft. MMOLW level. Pilots have to embark and disembark at Maracaibo.

When Masters have no Pilot exemption Certificate for crossing outer bar, permission has to be requested by VHF or 2182 kHz prior to arrival, which is being granted on request.
ANCHORAGES: Masters may use the following:
(a) Near E.M. Buoy, (not recommended because of the distance from San Carlos. The pilot launch never reaches this point).
(b) At Maracaibo Roads.
(c) At terminal approaches, in accordance with depths available in the area, and ship's draft.
LIGHTENING POSITION: In the Southern lake Area, arrangements have to be made in advance. Also at Maracaibo.
HEALTH: Quarantine officials board vessels at Maracaibo Roads. Pratique cannot be granted by radio.
RADIO: San Carlos Pilot Station on VHF Channels 12 and 16. Emergency call 2182 kHz. Terminal has VHF Channel 12.
TUGS: Compulsory. When vessel is over 25,000 d.w.t. a second tug is required, which is available in the area, 1,200 h.p. each. There is also a launch to assist the vessel during manoeuvring.
BERTHING: Continuous wharf 2,340 ft. in length with dolphins. This terminal is only for handling crude and its products. Maximum berthing displacement: 20,000 tons.

	Berth No. 1	*Berth No. 2*	*Berth No. 4*
Max. LOA	560 ft. 00 in.	665 ft. 00 in.	
Max. Depth	24 ft. 06 in.	35 ft. 06 in.	Out of Service
Max. Draft	23 ft. 06 in.	34 ft. 06 in.	
Loading Rate	1,450 t.p.h.	2,000 t.p.h.	

These depths are referred to the minimum monthly observed lowest water level (MMOLW).
DENSITY: At berths 998 and at outer bar between 1020 and 1025.
FRESH WATER: Available ex-barge at Maracaibo Roads.
FUEL: Any grade. In case vessels require grade not available at berth it may be supplied ex-barge at Maracaibo, which has mixing equipment able to supply the grade involved. Rate 20 – 140 t.p.h.
MOORING-UNMOORING: Carried out by Official Pilots. Mooring is Head-out to facilitate departure.
DEBALLASTING: Installations have ballast pit with capacity 650 cu.m. Max. discharge rate 600 t.p.h.
TANK CLEANING FACILITIES: Carried out by outside contractor.
REPAIRS: Minor repairs only, including electronics.

LA CEIBA: 09.28 N. 71.04 W.

SHIPMASTER'S REPORT: 1979.

BERTHING: There is a cement loading installation about 2 cables South of the 160 m. long pier at La Ceiba suitable for vessels up to 120 m. in length.

The approach channel is dredged to 9 m.

END OF MARACAIBO SECTION.

MORON: 10.32 N. 68.11 W.

This Terminal finished operations in 1981. All installations are being dismantled.

Vessels loading/discharging operations are now performed at El Palito Marine Terminal operated by Corpoven, S.A.

ORINOCO RIVER

Including Section A – MATANZAS
Section B – PALUA
Section C – PUERTO ORDAZ
(CVG Ferrominera Orinoco)
Section D – PUNTA CUCHILLO
(Lagoven S.A.)
Section E – VENALUM TERMINAL

IMPORTANT: VHF compulsory. Vessels without at least a VHF radio aboard will not be attended to by the Pilots at the Barima pilot station and so will not be allowed to enter the Orinoco River.

GENERAL:

1. As early as possible, advise Puerto Ordaz Radio Station, (Radio Marina) call letters YVM, giving ETA at Buoy 0.1 of South (dredged) Channel.

Shipmaster's Report: October 1982 (Updated 1988).
Contact with YVM was made 48 hours before arrival Buoy 0.1; accordingly, 72 hours ETA sent via Curacao Radio.

2. 24 hours prior to arrival, send another ETA to YVM.
3. Upon arrival, adhere to following procedure:
   (a) Request permission to enter from "Barima Pilot", via Channel 16. *Do not enter* until granted permission; while awaiting, lay to or anchor at least 1 mile outside of Buoy 0.1.
   (b) All vessels must also communicate with the Point Barima pilot station, call sign "Barima Pilot" 2182 kHz HF or 43.18 VHF to be informed of traffic.
4. While navigating waterway, inbound or outbound, report position to YVM hourly on the hour.
5. No Pilot required nor available for navigation along channel at the Boca Grande of the Orinoco River.
6. The International Rules for Preventing Collisions at Sea apply outside of Buoy 27.
7. Anchoring in channel is forbidden.
8. Throughout Orinoco waterway, the down-bound loaded vessel is the privileged vessel.
9. It is compulsory to fly Venezuelan ensign inside of Buoy 0.1.
10. Vessels can only carry clean ballast within Orinoco Waterway.
11. Pilotage compulsory within Pilotage Zones No. 1 and No. 2 of the Orinoco. Pilots board at outer boundary of said pilotage zone in upstreamward vicinities of Buoy 27 up to Mile 128.1. Zone No. 2 is from Mile 128.1 up to Matanzas.
12. Regulations for the Pilotage Zone No. 1 of the Orinoco apply inside of Buoy 27.

APPROACHES: (Also see "Radio" – paragraphs *(b)* and *(c)*).
1. *The Waterway*
A Radio Direction Finder (non-operational October 1982), located at Lat. 08° 03′ 45″ N., Long. 60° 28′ 28″ W., transmits following signal continuously: YV – AYV. The transmitter has an output of 500 watts with a range of about 200 miles and operates on a frequency of 305 kHz. While navigating the waterway, ships should favour the shore on their starboard side to the extent possible, giving preference of manoeuvre to loaded vessels in all cases. Ships navigating upstreamward (inbound), upon approaching narrow channels should await the passing and give way to downbound vessels. It follows, therefore, that downbound loaded vessels are the privileged vessels.
2. *The Boca Grande (Barima Bar) Channel*
There is 1 navigable channel across the Boca Grande (Barima Bar). Vessels navigating the dredged channel are privileged, regardless of the direction in which they travel.
The Dredged Channel
The channel is a 400 ft. wide dredged channel. Depths therein accommodate the maximum draft authorised by the Port Captain. The approach from the sea is marked by a battery-operated electric flashing black buoy, identified with the number 0.1. This buoy is located in 45 ft. of water at Lat. 08° 55′ 52″ N., Long. 60° 11′ 17″ W. Its characteristics are: colour of light, white; flash, 0.5 seconds; eclipse, 11.5 seconds; height above water, 25 ft.; visibility, 11 miles. From Seabuoy 0.1, the channel develops along 4 different courses over a total distance of 27.7 Miles to Buoy 27. The course reduces by about 7° True at each of 3 turning points, located at Miles 9, 15 and 21 respectively. The initial course of 234° 18′ True continues to Mile 9 where it changes to 227° 07′ True. Upon reaching Mile 15, the course again changes to 219° 51′ True to Mile 21. At Mile 21, the course changes to 212° 45′ True to Buoy 27 at Mile 27.7. The centreline of the channel on all courses is visually marked by range structures fitted with green flashing, directionally beamed lights. The West (right ascending) side limit of the channel through Mile 21 is also visually marked by range structures fitted with amber flashing, directionally beamed lights; the alignment given by the side ranges develops 200 ft. to the West and parallel to the centreline of the channel. Battery operated electric flashing navigation aids are located along both sides of the channel. All navigation aids along the East (left ascending) side of the channel are located 325 ft. from centreline or 125 ft. outside of the channel lateral limit. White flashing navigation aids are located at 1 mile intervals through Mile 25.1; all aids along this side are black buoys, except Beacons 8.1, 9.1, 14.1, 15.1, 20.1, 21.1, 22.1, 23.1, 24.1, 25.1, 27.1 and 27.7 (Buoy 27). All navigation aids along the West (right ascending) side of the channel are located 200 ft. from centreline or on the exact lateral limit of the channel. Red flashing buoys painted red are located at 1 mile intervals from Mile 1.6 to Mile 11.6. From Mile 11.6 to Mile 27.7, there are only 2 aids; red buoys 13.6 and 26.0.

3. *The River Channel*
From Mile 27.7, the navigable channel develops upstream. The river channel is generally deep and wide, except for the following 12 reaches which require periodic dredging: Miles 27.7 to 36.5; Miles 37.3 to 38.6; Miles 53.1 to 54.2; Miles 99.0 to 106.5; Miles 109.1 to 111.0; Miles 131.7 to 131.9; Miles 136.6 to 139.0; Miles 141.2 to 145.8; Miles 146.2 to 149.4; Miles 167.6 to 170.8; Miles 178.4 to 182.4; Miles 183.5 to 184.1. Dredged channels are normally 300 ft. in width, but occasionally can be restricted to a minimum of 250 ft. The depth maintained therein can accommodate the maximum draft authorised by the Port Captain. By Notice to Mariners, the Port Captain has instructed all Masters and Pilots to reduce speed and to proceed with caution while navigating the aforesaid reaches, especially during the low water season.

4. *River Stages*
In response to the cycle of wet and dry seasons, the flow of the Orinoco River follows a relatively regular pattern of rise and fall each year. The river normally begins rising in late March or early April and continues to rise until it peaks at crest in late August. In September, the river begins a fairly steady recession until the extreme low-water stage is reached, generally in March. The amplitude of stage variation above the low water plane of reference (0.0 ft.) at Palua (Mile 181.7) averages about 35 ft. with min. variations of 31 ft. and max. variations of 39 ft. The effects of the flood rise decrease progressively below Palua and practically vanish in the upstreamward vicinities of the Boca Grande.

5. *Tides and Currents*
- *(a)* The indicated mean tidal range is 5.4 ft. Tidal influence is not experienced above Mile 60 during high river stages. At low river stages, a tidal effect can be observed throughout the waterway, although it progressively diminishes, moving upstreamward. However, the tidal effect is still significant at Puerto Ordaz, Mile 184, where a max. semi-diurnal change of 1.7 ft. has been recorded.
- *(b)* The strength of river currents is generally commensurate with flow, the strongest currents occurring at high river stages. The velocity of currents at any one time generally decreases moving downstreamward. However, in certain locations, this pattern is affected by particular characteristics of river width and shape as well as by bottom gradient. Max. velocities of about 6 knots have been recorded.

6. *Navigation Aids*
- *(a)* The navigation aids installed along the waterway consist of buoys, beacon and ranges. All aids are lighted. Identification is provided by means of numbers representing the approximate mileage of each aid, to the nearest one-tenth of a mile. The last digit of numbers identifying green lighted aids is odd, while the last digit of numbers identifying red lighted aids is even. Green lighted aids mark the left ascending limit of the navigable channel, while red lighted aids mark the right ascending limit. Aids are placed as to be intervisible, to the extent that — when abreast of any one aid — the preceding and following ones can be sighted. Consecutive aids always carry different light characteristics. Buoys are normally placed on the exact lateral limit of the channel (except for black buoys along the South Channel at the Boca Grande); beacons, instead, are located at variable distances outside of the channel.
- *(b)* During the execution of dredging along any of the reaches which require periodic maintenance, buoys are generally moved 100 ft. outside the channel lateral limits. This information is made available to ships by YVM.
- *(c)* The Ministerio de Comunicaciones, Direccion de Transporte Aguatico, publishes semi-annually a complete list of navigation aids. Monthly lists of changes are also published so that the complete current list can be maintained up to date.
- *(d)* Upon encountering damaged, inoperative, or misplaced navigation aids, vessels should immediately notify YVM.
- *(e)* Vessels are forbidden to make fast to any navigation aid.

7. *Dredging Aids*
Range structures, generally located close to shore or over the bank, are normally used to mark the lateral alignments of the channel along the reaches which require periodic dredging. These ranges are generally fitted with amber flashing, directionally beamed lights. The lights are extinguished except during execution of dredging. Dredging ranges *are not* to be used for navigation.

8. *Navigation Charts*
Navigation charts of the Orinoco Waterway should be aboard vessels for use by the Master. These charts are sold by the Instituto Nacional de Canalizaciones and are also available for purchase from the CVG Ferrominero Orinoco. If requested, CVG Ferrominero Orinoco will, if possible, arrange to make the charts and latest revisions available through the Pilot who boards at Punta Barima, provided such request is received by radio (YVM) at least 48 hours in advance of the Pilot's boarding. A set of navigation charts, corrected to latest revisions, is maintained in the office of the Traffic and Ships' Agency of CVG Ferrominero Orinoco in Puerto Ordaz. Masters may use this facility to keep their charts up to date.

Report: 1986.
Deficient Navigational Aids:

The deep draft New Barima (South) dredged channel is officially a 400 ft. wide dredged channel, but in reality it is considerably less in portions. Many of the red buoys showing a flashing red light which should be placed 200 ft. from the centre of the channel or exactly on the lateral limit, are either missing, out of position or unlit. The light on the black buoy which marks the entrance of the channel is inoperative. Several of the gauge structures fitted with green, flashing, directionally beamed lights, are inoperative. This makes it hazardous for a deep draft vessel to navigate the narrow and shallow channel during the hours of darkness. During the rainy period the authorised drafts declared by the Port Captain are in excess of the depths in certain portions of the channel.

We have been informed that about 20 vessels grounded in this area during the first 6 weeks of this year (1986).

DOCUMENTS: (Clearance, documentation and other requirements).

1. *Consignment of Inbound Vessels*
The official documents of all vessels proceeding to Puerto Ordaz and Palua should show the following consignment: to: CVG Ferrominero Orinoco, Ciudad Guayama.

2. *Customs Requirements*
Vessels bound for Venezuela in ballast, without passengers, from foreign ports outside the West Indies or Guianas, require the following documentation:

The vessel must have a Clearance Certificate (Certificade de Zarpe) or sailing authorisation issued by the Customs Authorities of the port of departure, representing the government of the country the vessel is departing from. No consular certification need be placed upon the document.

Spare Parts List (Lista de Repuestos). It must contain a note of all the spare parts and objects for the service of the vessel, including fuel. To be signed by the Master and to be current as of the day of entering the Venezuelan port.

List of Effects for use of Captain and Crewmen (Lista de efectos personales de la dotacion). To be signed by the Master and to be current as of the day of entering the Venezuelan port. The Customs are very strict and will confiscate any article that appears new.

3. *Health, Immigration, and Police Requirements*
Vessels bound for Venezuela in ballast, without passengers, from foreign ports outside the West Indies or Guianas, require following documentation.
- *(a)* Current individual International Vaccination Certificates for each member of the crew.
- *(b)* Derat Exemption Certificate.
- *(c)* Crew Lists (original and seven copies).
- *(d)* Panama or Suez Canal or any comparable type measurement certificate.

Contraband: The Venezuelan law is very strict on this subject. It cannot be emphasised too strongly that all new articles, clothing, cigarettes, liquor, etc., must be declared and sealed-up upon arrival.

Meals for Pilots and Government Officials. It is requested these men be granted the privilege of eating in the officers' dining salon.

N.B. Masters of vessels calling at Trinidad for bunkers before proceeding to Venezuela must also have the documents stamped by the Venezuelan Consulate at Port of Spain.

PILOTAGE: In order to expedite the movement of shipping in the waterways, Masters are requested to establish contact with YVM station as soon as possible, giving ETA Seabuoy 0.1. At the same time a radio-telegraph message must be sent to Agents giving ETA Barima and cargo required. When vessels is 24 hours from pilot station, send another ETA via YVM.

After reporting the ETA in advance of arrival, try to contact directly by VHF, "Barima Pilot" when the ship approaches Seabuoy 0.1 off the bar entrance (about 2 hours before arrival at the pilot station). (It is possible to contact Pilots 100 miles before arrival Seabuoy 0.1.)

After taking the Pilots aboard, report to Radio Marina (YVM) and continue giving the ship's position according to the mile, up-river, at exactly every hour on the hour, and receive from Radio Marina the pertinent information concerning the traffic in the river waterway. If no communication can be established by voice radio aboard, comply by radio-telegraph by way of the YVM station. See "Ship's Officer's Reports" in 1st Section – "General" and "Shipmaster's Report", June 1991.

Ship's Officer's Report: July, 1980.

Hourly position reports are made on W/T to YVM when the Pilot is aboard (He writes the telegrams in Spanish).

Pilots are the employees of the Venezuelan Government and act in an advisory capacity. The Master retains responsibility for the ship at all times.

(1) Pilotage is not required and Pilots are not available for navigation outside the pilotage zone. Masters will take charge of inbound and outbound navigation on the South Channel outside Buoy 27 at the Boca Grande, without Pilot's assistance.

(2) Pilotage is mandatory within the Pilotage Zones No. 1 and No. 2 of the Orinoco. Inbound vessels will embark the government River Pilot in the upstreamward vicinities of Buoy 27. It is important that vessels pass Buoy 27 and be in sight of the pilot station at Barima in order to avoid any delay, as Pilots may not proceed until vessel is sighted. The government River Pilot will pilot the vessel while navigating the waterway; a special government Docking Pilot will generally take the vessel into and out of the Puerto Ordaz harbour.

Signals

(1) All signals used outside of the Pilotage Zone No. 1 (that is to say, seaward of Buoy 27 – Mile 27.7) shall conform to the International Rules for Prevention of Collisions at Sea.

(2) Within the Pilotage Zones (that is to say, inside of Buoy 27 – Mile 27.7) the signals used shall be in accordance with the "Regulations for the Pilotage Zones No.1 and No. 2 of the Orinoco". It should be noted that these signals are peculiar to the Orinoco Waterway, and are not necessarily in conformance with the International Rules.

(3) Within the Pilotage Zone, special signals are used for passing dredgers at work along the waterway.

Speed

The Captain of the Port has the authority to impose speed restrictions. By means of "Notices to Mariners", the Port Captain has ordered that all vessels reduce speed while navigating by the following locations: San Felix Dock, Mile 179.8; El Toro, Miles 95.4 to 96.6. It is recommended that speed be also reduced while navigating by the Palua Dock (Mile 181.8), Barrancas (Mile 143.2), and Curiapo (Mile 60.4). At the inception of the low water season each year (generally in early January), the Port Captain has in the past issued a "Notice to Mariners" instructing all vessels to reduce speed and proceed with caution while navigating the following river reaches: (1) Miles 184 to 178, (2) Miles 171 to 167, (3) Miles 150 to 141, (4) Miles 140 to 137, (5) Miles 133 to 131, (6) Miles 112 to 109, (7) Miles 106 to 98, (8) Miles 55 to 53, (9) Miles 39 to 36.

ANCHORAGES:

(1) No ships are permitted to anchor in the South Channel at the Boca Grande. Vessels are to anchor at least 1 mile outside of Buoy EO or Buoy 0.1.

(2) Within the Pilotage Zones, no vessel is allowed to anchor in narrow channels, nor close to a turn.

(3) Between Buoy 27 — Mile 27.7 and Mile 137, vessels which need anchoring may do so by coming as close as possible to shore on the ship's starboard side.

(4) Between Mile 137 and Mile 184, the Pilotage Regulations provide for 3 permanent anchorages and 1 seasonal anchorage, as follows: Area No. 5 (permanent); Miles 139.3 to 140.4. Area No. 6 (permanent): Miles 150.1 to 151.7. Area No. 7 (permanent): Miles 178.0 to 179.0. Area No. 8 (seasonal): at the junction of the Caroni and the Orinoco. It should be observed that Area No. 7, as determined in the Pilotage Regulations, partially encroaches on the narrow (dredged) channel and on shore. Vessels are to anchor in the naturally deep and wide part of the area.

(5) The low-water anchorage (for 1 ship only) previously established by the Port Captain between Miles 182 and 183 is no longer in use. This area is currently used as the turning basin for vessels exiting the Palua Channel, upon sailing from the new Palua dock at Mile 181.8.

(6) If due to emergency a ship is required to anchor in places other than the designated areas, it should do so in such a way as not to obstruct the channel and by taking the necessary precautions to avoid swinging around.

(7) Upon anchoring vessels should notify YVM.

MAX. SIZE:

(1) *Max. permissible draft.* The Port Captain of Ciudad Guayama can establish the permissible draft for the Orinoco waterway to a maximum of about 44 ft.

(2) *Controlling Depths and Authorised Draft*

The draft authorised by the Port Captain for the Orinoco Waterway is made public by means of a "Daily Bulletin of Depths and Draft" (Boletin Diario de Profundidades y Calado). Each daily bulletin issued by the Port Captain carries the following information, in Spanish and English:

(a) Controlling (minimum) depth between Miles 194 and 0, and corresponding location.

(b) Authorised draft, in feet and decimals of feet.

The controlling depths given for locations comprised between Miles 184 and 42 are actual depths, and reflect depth conditions as of the date of the bulletin. The controlling depth given for locations comprised between Miles 42 and 0 is referred to MLWS and does not include the height of tide at high water.

The authorised draft may be predicted either on the controlling depth existent between Miles 184 and 42 or between Miles 42 and 0, dependent upon whichever is the least.

When the controlling depth between Miles 184 and 42 is the significant factor, the permitted draft authorised is at least 2 ft. less than the controlling depth in this sector.

When the controlling depth between Miles 42 and 0 is the significant factor, the permitted draft authorised is generally less than the mean low water springs controlling depth but occasionally can be equal to the mean low springs controlling depth.

Whenever the MLWS controlling depth existing between Miles 42 and 0 does not provide sufficient clearance under the keel of the vessel at low water, the Master is expected to navigate by the site where the controlling depth is located only at times when the height of tide will assure a safe passage.

(3) *Variations in authorised draft:*

(a) The authorised draft is generally increased or decreased by multiples of 6 inches.

(b) Throughout the year the authorised draft is susceptible to variations, according to the conditions of the depth and width existing in the channel at any one time. On the basis of average river stages it is estimated that the authorised draft should be about 33 ft. in the dry season from December to May.

During the rainy season, from June to November, the max. permissible draft may be as high as 44 ft.

HEALTH: Radio Pratique may be obtained by sending a message, after picking up Pilot, to the Port Health Officer, advising that there is no sickness on board, name of last port, ETA, number of crew and nationality of vessel and name and nationality of Master (This does not apply at Palua).

RADIO:

(a) *Communications:* Communications are generally handled through the radio-telegraph station at Puerto Ordaz, call letter YVM. This station is operated on a 24 hour basis. The operating frequencies are: 440 kHz; 472 kHz; 4322 kHz; 6505.5 kHz. The GMT — CQ times and frequencies are: 0900 hrs., 4322 kHz; 1200 hrs. 6505.5 kHz; 1430 hrs. 8722 kHz; 2000 hrs. 8722 kHz; 0030 hrs. 8722 kHz; 0300 hrs. 4322 kHz.

There is no charge for messages from ship to shore or from shore to ship handled directly through YVM. A VHF frequency modulated radio system provides voice communications along the Orinoco Waterway. Master sets for the system are installed in the Puerto Ordaz Radio-telegraph Station (voice call: "Master Radio"); Marine Radio handles shipping matters exclusively, The system consists of a high-band VHF frequency modulated voice radio network. To ensure a more efficient and satisfactory coverage, this system operates on dual frequencies alternating according to location, so that ships can either transmit on 161.700 MHz receiving on 159.000 MHz, or transmit on 161.150 MHz receiving on 159.850 MHz. For best results, ships should select frequencies according to the following: From sea to Mile 50: transmit on 161.700 MHz, receiving on 159.000 MHz; From Mile 50 to Mile 112: transmit on 161.150 MHz, receiving on 159.850 MHz; From Mile 112 to Mile 159: transmit on 161.700 MHz, receiving on 159.000 MHz; From Mile 159 to Mile 184: transmit on 161.150 MHz, receiving on 159.850 MHz.

Pilot station at Barima Bar, Palua and Matanzas are equipped with this system. For the Puerto Ordaz area, ships will transmit to Marine Radio on a frequency of 43.02 MHz and to others on a frequency of 43.18 MHz, receiving in both cases on a frequency of 43.18 MHz.

Ship's Officer's Report: July, 1980.

The VHF Channels listed are not available on standard marine sets. All VHF work is done on Channel 16 (Pilot to Pilot), and reporting on W/T to Radio Marina.

(b) *Control of Navigation:*

(i) Navigation on the Barima Channel at Boca Grande is free. However, vessels are requested to notify the Port Captain, Ciudad Guayama, via "Barima Pilots" on Channel 16, upon arrival at Buoy EO, giving ETA at Buoy 27, Mile 27.7.

(ii) Simultaneous navigation in opposite directions by 2 or more vessels is not permitted on the South (dredged) channel at the Boca Grande. The restriction is placed on inbound traffic, to the extent that any vessel wishing to enter the South channel requires prior authorisation from the Port Captaincy of Ciudad Guayama. The request for permission to enter the South channel is to be addressed to the Port Captain, Ciudad Guayama, via "Barima Pilots" on Channel 16. and is to be transmitted before the vessel reaches Buoy 0.1. Upon receipt of the request, the Port Captain will notify the vessel via "Barima Pilots" on Channel 16, whether permission is or is not granted, indicating, in the latter case, the approximate waiting time. Until permitted to enter, vessels are to anchor at least 1 mile outside of Buoy 0.1. Once that authorisation has been granted, vessels are to enter the South channel at the earliest opportunity.

(iii) While navigating the Orinoco Waterway inbound or outbound vessels are to report their position to YVM hourly on the hour. Seaward of Punta Barima, to "Barima Pilots".

(c) *Accident, Stranding, etc.*

(i) Should a collision, stranding or other accident occur in the waterway, or should it be found necessary to take control of the vessel away from the Pilot for any reason, the Venezuelan law requires that a written report be made to the Captain of the Port by the Master of the vessel involved within 24 hours. The report is to be addressed to the Captain of the Port and may be handed to the Pilot or the ship's Agent for delivery. The Master need not appear in person before the Captain of the Port unless specifically ordered to do so.

(ii) Slight groundings or touching of banks and bottom may simply be noted on the reverse side of the receipt for pilotage signed by the Master.

(iii) In case of collision, stranding, slight grounding, touching of banks and bottom, or other accidents, vessels should immediately notify YVM.

SHIPMASTER'S REPORT: January 1989.

Vessel proceeding to Matanzas.

Apparently the entrance to the River Orinoco at Boca Grande had been upgraded.

All the buoys now have solar energy cells as well as photo-cells to activate them at dusk.

The North entrance no longer exists, only the South Dredged Channel is used. A Racon had been installed on Mile 0.1 (Sea Buoy). Current entrance information is given by Puerto Ordaz Radio Station (YVM), with which vessels should make contact as soon as possible. As usual, pilots board the vessel between Miles 27-28. It is advisable to reduce speed beforehand, to be able to embark the pilot before Mile 28, as pilot boat is not fast and there is a considerable bend at Mile 28. Also it is advisable to familiarise yourself with the buoys and ranges up to Mile 30 while entering, as the down-bound pilot usually disembarks between Mile 30-31 and there are 3 short distance bends before Mile 28. On our passage as many as 4 buoys were out of position, one buoy was unlit at the first range, and Sea Buoy (0.1) Racon was inoperative.

SHIPMASTER'S REPORT: June 1991.

Boca Grande Bar:

(a) Pilotage has become compulsory through Boca Grande Bar (i.e. starting from Buoy No. 0.1) for the ships having LOA more than 200 m., since March 1991. Therefore, Orinoco River traffic is applicable through the Boca Grande Bar as well.

(b) Pilots board at Fairway Buoy (Orinoco No. 0) by means of a helicopter.

(c) The Bar has recently been dredged to sufficient depth. There was 10 ft. – 15 ft. keel clearance experienced up to Buoy No. 13.1 (disregarding moving mud), and became shallower up to Buoy No. 0.1.

Section A

MATANZAS: 08.17 N. 62.52 W. (See Plan)

N.B. See "Orinoco River" for all important entry requirements.
LOCATION: At Mile 195 from sea on Orinoco River.
ANCHORAGES: Between Miles No. 195 and 197, Orinoco River.
MAX. SIZE: Length 600 ft., breadth 74 ft., distance between rail and hatch coaming 23 ft., max. draft 41 ft. in rainy season May to November, and 28 ft. in dry season.
Note: A vessel with LOA 738 ft. has berthed at Matanzas.
RADIO: See "Orinoco River". Cables address of Matanzas terminal operators is "Sidor Matanzas – Telex 86366" and cables may be routed through Caracas, Curacao or Trinidad Radio.
TUGS: Every vessel over 2,000 registered tons is required to use a tug when berthing. Tug is 1,600 h.p.
BERTHING: Reinforced concrete structure consisting of 3 different sections running in a straight line, bearing 065°.

From West to East, 3 sections should be pointed out:

The first section, some 320 m. long, is used mainly for unloading bulk cargoes. Depth 10 m. below MSL.

The second section, 400 m. long, is for handling steel products. Depth 11 m. below MSL.

The third part, some 280 m. long, is for general cargo. Depth 11 m. below MSL.

The level of the river fluctuates from 0.6 m. over MSL at low river water in the dry season (February – March) to 14 m. over MSL at high river water in the rainy season (July – August).

The river bed drops sharply from the edge of the pier to the navigation channel where the depth reaches 30 m. below MSL.

Berth No. 1: Runs from bollard No. 1 to No. 7, length 155.30 m.
Berth No. 2: Runs from bollard No. 7 to No. 14, length 176.38 m.
Berth No. 3: Runs from bollard No. 14 to No. 24, length 204.25 m.
Berth No. 4: Runs from bollard No. 24 to No. 33, length 182.75 m.
Berth No. 5: Runs from bollard No. 33 to No. 39, length 160.45 m.
Berth No. 6: Runs from bollard No. 39 to No. 44, length 158.85 m.

In addition there is another berth, length 149 m., South of No. 6, with 24 ft. of water under MSL, that runs from bollard No. 38 to No. 44.

The reinforced concrete platform is 25 m. wide at the first section and 20 m. at the second and third sections. The surface of the pier is 15.5 m. over MSL.
CRANES: Berths No. 1 and No. 2 are served by 2 "Ceretti Tanfani" bulk unloaders of 22 tonnes capacity, able to handle clamshells of 4.5 cu.m., for iron ore, lime stone and other heavy bulk, 10 cu.m. clamshells for coke and other light bulk and orange peeler and magnets for unloading scrap iron.

The reach of these cranes is 10 m. from the pier edge. The working field is from bollard No. 2 to bollard No. 13.

Berths No. 3 and No. 4 are served by 6 "CMI" gantry/trolley cranes fitted with 2 hoists of 15 tonnes each, with a total capacity of 30 tonnes with the 2 hoists in tandem. The working field is from bollards No. 15 to No. 31.

Berths No. 5 and No. 6 are served by 3 "Ansaldo" gantry/trolley cranes of 16 tonnes capacity. The working area is from bollards No. 35 to No. 44.

At bollard No. 34 there is a stationary rotary derrick of 400 tonnes capacity and a reach of 18 m.

In addition, there are 3 "Grove" auxiliary moving cranes, of the telescopic type, with a rated capacity of 80 tonnes able to work at any part of the pier.
WAREHOUSES: From bollard No. 14 to bollard No. 29, running along the South edge of the pier, there are 10 adjoining warehouses, 30×100 m. each, 3 of them open at either end and the four in the middle roofed. All of them are provided with 1 gantry crane of 25 tonnes each.
STEVEDORES: Operations are round the clock, 7 days a week.
MEDICAL: Private hospital and several doctors available.
FRESH WATER: Available at rate of 12 t.p.h.
FUEL: Available ex-barge.
REPAIRS: Local workshops undertake minor repairs.
CUSTOMS ALLOWANCES: 200 cigarettes and 1 bottle spirits allowed per crew member for personal consumption.
AIRPORT: Matanzas is served by Puerto Ordaz Airport with several daily flights from Caracas.
POLICE/AMBULANCE/FIRE: The entire length of the pier is fitted with fire hydrants and at the steel mill, about 6 km. away, there is a well equipped fire brigade with firetrucks, ambulances and rescue vehicles.

A first aid centre is located close to the fire station.
TELEPHONES: No telephones or telex services are available at Matanzas for the use of vessel's personnel. Local telephones only available at the pier and dock supervisor's office. Recommend vessels use their VHF to communicate with their Agents while at anchorage and when alongside.
IDENTIFICATION CARDS: Provided by authorities, and necessary if crew going ashore.
REGULATIONS:
Pollution: Venezuelan law and Sidor's port regulations are very strict on air and river water pollution, the following restrictions being in force:

1. No smoke to be ejected from vessels' funnels while moored at Sidor's pier.
2. No waste, refuse or garbage to be dumped in the river while in the river channel, at Matanzas roads or laying alongside the pier.
3. All waste, refuse or garbage kept on deck, to be sprayed with anti-vermin and kept covered.
4. No salt water ballast, bilge water, oils, refuse water from galleys and lavatories, etc., to be pumped into the river.

In addition to whatever penalty the vessel shall incur under Venezuelan law, Sidor reserves its right to place the offending vessel "off hire" until she has complied with the regulations.

Safety: Under Sidor's security norms, every person which, whatsoever the reason or business, has to transit or stand on the pi platform is bound to use a hard hat. People doing any kind of wor the pier have also to use safety shoes.
GENERAL: Sidor's pier will discharge and/or load cargoes for ot industries of the area provided a berth is available and no Sidor vess are waiting. Permission for such operations must be requested pri vessel's arrival.

Sidor require Agents to provide stowage plan and cargo documen prior to vessel's arrival otherwise Notice of Readiness will no accepted.

SHIPMASTER'S REPORT: January 1990.
Approach: The approach is through Boca Grande South Channel fr Buoy 0.1 without a pilot, to the Barima Pilot Station which is up-stre of Buoy No. 27.0.

Prior to arrival call "Amacuro Pilot" on VHF Channel 16 when wi range, up to 100 nautical miles.

Vessels only enter the channel after having been granted permissi by the pilot station.

The Racon on the Fairway Buoy is inoperative.

B.A. Chart No. 3322, addition 1971, last correction 1170 of 198 not up-to-date.

The numbers on the buoys indicate the distance in miles from t entrance of Matanzas (Mile 194.5).

The pilot who boards the vessel at Buoy No. 27.0, takes the ves to Matanzas where he hands over to the harbour pilot.

Also see "Shipmaster's Report" below.
Loading: Gangs are available throughout 24 hours.

The working hours are 0730 – 1100, 1200 – 1500, 1500 – 1800, 18 – 2230 and 2300 – 0630 hrs.

We worked with 2 gangs and the rate was 300 tons – 500 tons p shift/gang. We loaded bundles of re-bars which weighed about 1.8 to each. The tally is carried out ashore and vessel has to ask for cop of the tally sheets.
Garbage: Garbage has to be stored on board in bags and can b removed by lorry via the Shipchandler.
Stores: Stores are available but it is advisable to get quotations. Th are department stores and shopping centres in the vicinity.
Transport: Taxis are available to take personnel to the town, but on licensed taxis are permitted to enter the plant.

SHIPMASTER'S REPORT: July 1993.
Buoyage: The red buoys, when proceeding inwards, are and must b left on starboard side.

The red buoys are numbered 1.0, 2.0, etc. up to 27.0, where the pil of Punta Barima board the vessel when going to the Orinoco ports, a the pilots leave ships at Buoy 32 when coming from Orinoco ports t sea.

OPERATOR: C.V.G. Siderurgica del Orinoco C.A., Codigo Postal 80 Matanzas, Ciudad Guayana, Estado Bolivar, Venezuela. *Tel:* 9911 and 991118. *Telex:* 86366 and 86229 (Sidor). *Cables:* Sidor Matanza *Contact:* Superintendent, Port Services.

Section B

PALUA: 08.21 N. 62.41 W.

N.B. See "Orinoco River" for all important entry requirements. Speci details, relevant to Palua only, are as follows:
SUPPLIER: The ore supplier is CVG Ferrominera Orinoco C.A., cab address "Ferrominera". Their Palua office is fitted with VHF radi telephone on 161.150/159.850 MHz and 2182 kHz (call).
CLEARANCE: Agent will secure the Clearance dispatch.

Note: The Palua dock and facilities are the private property of CV Ferrominera Orinoco C.A. All Company regulations must be obeyed b vessels and vessels' personnel.

The Bill of Lading will be prepared by CVG Ferrominera Orinoco C.A. also the Commercial Invoice on the Consular Invoice form 138. Th Inward Foreign Manifest, U.S. Customs form 7527–B, should b prepared by Master after sailing from Palua.
MAX. SIZE: Max. d.w.t. 100,000 tons. Max. LOA 274.32 m. Max. bea 33.53 m.
HEALTH: The vessel will be boarded by the Public Health Doctor af docking at Palua; unless instructions to the contrary.

In the event that the Authorities have to board the vessel anchor out in the stream, an accommodation ladder should be rigged, prefera on the starboard side, to keep the port side clear for docking. Venezue authorities and workmen will not use Pilot ladders.
RADIO: Should a vessel receive radio advice at sea to proceed to Pal and the clearance is to another port, it is requested to send follow information to "Ferrominera" at earliest convenience. i.e. Master's f name and nationality, vessel's nationality, port and number of regis net and gross tonnage, type of vessel M/V or S/S, vessel's overall len and width, last port of call, original port of destination. This is necess in order to comply with the Venezuelan Custom Law.
BALLAST: To provide the best manoeuvring trim on docking, it will b at the discretion of the Master to properly ballast the vessel. But in or to lose no time on loading operations, as well as to prevent short load the ballast should be pumped out as soon as possible, using utmo caution not to pump oil or sludge overboard in the port area.

APPROACH AND DOCKING IN PALUA: After passing the village of San Felix, and before reaching the turn off from the main channel, 2 tugs and a Docking Pilot will meet the vessel and will assist in the docking manoeuvre. Although the Master will always be responsible for the vessel's movements either in the case of docking or undocking, the Docking Pilot will actually pilot the vessel to, and dock the ship at Palua.

At Mile 180.5 the ship should leave the main channel, turning to the left to follow the new dredged entrance channel of approach which is marked by 2 flashing buoys: white on the port and red on the starboard side. Diamond-shape range marks of 6 ft. side, painted white with black diagonal cross, indicate the centre line of the approach channel. The front range, fastened on the ore loading pier, shows flashing green light, and the rear range, set on a tower shows flashing green light, and the rear range, set on a tower approximately 2,000 ft. away, has fixed green light.

The docking shall be port side to in all events; and please stow all hatch boards, or pontoons, or steel battens, etc., on the starboard side of the hatch as this will keep the gear cleaner and lessen the work of the ore handling gang.

Vessel's accommodation ladder is used. Nothing should overhang the port side of the vessel on docking.

If the loading berth is not available the arriving vessel would be instructed to anchor at an anchorage just below the entrance to Palua approach channel at Mile 178.

LOADING DOCK: The ore loading port is located at Mile 181.5 of the Orinoco waterway, along the left bank going up-river. The steel dock here is aligned up and down stream in the general direction of the current. It is 907 ft. long between its pointed heads, with 791 ft. of boarding side along, the deck fixed at about 6 ft. over the maximum rise of the river in the flood season. It has a strong fender system of steel structure covered with timber overhanging the side, down to near the lower river stage; and is fitted with 14 bollards plus 2 more, one on each head, for proper docking and securing the vessel.

Once the vessel is moored alongside the new ore loading dock, there shall be no further shifting necessary to load, as the loading tower moves along the dock on rails to facilitate the loading through the various hatches.

LOADING: The ore handling and loading equipment for Palua has a max. capacity to load 3,000 metric tons of ore per hour (average 2,500 metric tonnes per hour), for the time being. With this capacity, the vessel's mooring lines should be tended during the operation.

The boom of the loading tower is so designed as to allow free movement in any direction, fore and aft. The gantry and boom travel along the dock for a distance of 518 ft., and can place the ore at a distance horizontally out from the dock fenderline of 23 ft. minimum and 62 ft. maximum at the highest water stage, and from minimum 29 ft. to maximum 67 ft. horizontally out at the lowest stage (Ship's Master reports outreach is 55 ft.).

Care must be taken during the course of loading to avoid piling the ore too high in the holds, as this necessitates hand trimming before the hatch covers can be properly secured, and incurs unnecessary trouble.

UNDOCKING: The Master, assisted by a Docking Pilot, if required, will handle the vessel on leaving the dock, going upstream from the dock not less than 0.75 miles distance to the turning basin in the same heading as when the ship moored alongside. Two tugs will go alongside the ship prior to undocking and will assist the vessel until it is headed downstream in the main Orinoco Channel. The amber lights at the heads of the dock form a range to mark the shoreside boundary of the local dredged channel. A red light high up on the loading gantry will come in the same range as the 2 amber lights. In the turning basin a tug-boat will assist the vessel swinging downstream.

When the ship is in the main channel, properly headed downstream, the Docking Pilot will leave on the tug, and the River Pilots (2 of them) will assume the navigational direction. Report to Radio Marina by voice radio and give ETA at Mile 27.

Report again to Radio Marina giving position every hour, and try to contact Barima Pilot Station sometime before arrival at Mile 31, where the Pilots will disembark.

If voice radio communication is not possible, comply by radio-telegraph by way of the YVM station.

GAS-FREE CERTIFICATE: Vessels reporting to Palua to load ore should have the holds and cargo compartments swept clean and ready to receive cargo. Also, any combination ore/tanker vessel tendering to load iron ore at Palua shall present, along with the Notice of Readiness, a Gas-free Certificate if said vessel has in the past been employed in the carriage of petroleum products. Such certificate shall be dated subsequent to the discharge of the vessel's last petroleum cargo. But they are advised that around Palua in Venezuela there is no chemist available for granting such a Gas-Free Certificate. It may be secured before arriving at Venezuela by calling at Trinidad, reporting to cable address: Harriman, Port of Spain.

In case of necessity, or for convenience, it could be arranged for the chemist to travel to Venezuela to meet the ship in Palua, advising Harriman (Port of Spain) at least 3 days before arrival at Palua.

If the vessel is equipped with a gas-indicating meter (explosimeter), CVG Ferrominera Orinoco C.A. will accept the Master's certification in writing that the vessel is gas-free. However, they reserve the right to check the vessel with their own equipment prior to acceptance.

MEDICAL: There is a medical dispensary at Palua, and a hospital of the Company at El Pao, where seamen may be admitted when requiring hospitalisation in emergency cases.

CONSULS: See "Puerto Ordaz".

REPAIRS: Minor emergency repairs of mechanical, electrical and electronic types may be carried out in the shops by the personnel of the Iron Mines Company of Venezuela. The American Bureau of Shipping has a surveyor at Puerto Ordaz, near Palua.

FLOOD SEASON: The port experiences a yearly flood season from the middle of June to the middle of November, to a max. of about 38 ft. at the last days of August, above the lowest stage (during the first days of April) in the dry season that occurs from the middle of November to the middle of June.

TIDE: The wind in the locality blows generally upstream, and on exceptional occasions during the dry or low-river season, when the current is weak, does overcome the current and cause the anchored ships to tend with stern upstream.

FRESH WATER: Drinking water is available at the dockside in limited quantity of about 100 tons every 24 hours. Small amounts of fresh provisions may be obtained in the locality.

FUEL: All grades of bunker fuel are available at Palua, delivered by barge.

DENSITY: 995.

REGULATIONS: The Venezuelan law is very strict on the subject of contraband. It cannot be stressed strongly enough that all *new* articles, clothing, cigarettes, liquor, etc., must be declared and sealed up on arrival.

Concerning passes, the regulation states that "members of the crew who are not officers of the vessel, in order to go ashore and return aboard, have to be supplied with an identification card to be issued by the Purser of the vessel or his substitute, which card will contain the name of the vessel, the name of the crew member and the date of issue. This card will have to be signed by the person issuing same and has to be authorised by the respective officer of the Port Captain's office for the district".

Section C

PUERTO ORDAZ: 08.21 N. 62.43 W.

OPERATORS: CVG Ferrominera Orinoco.

LOCATION: The operations of the CVG Ferrominera Orinoco are centred in the State of Bolivar in Eastern Venezuela and iron ore is loaded into ocean-going vessels at Puerto Ordaz (08° 21′ N., 62° 43′ W.), at the junction of the Caroni and Orinoco Rivers, approximately 184 nautical miles from the open sea.

GAS-FREE CERTIFICATE: Any combination ore-tanker vessel tendering to load iron ore at Puerto Ordaz shall present, along with the Notice of Readiness, a Gas-Free Certificate if said vessel has in the past been employed in the transportation of petroleum products. Such certificate shall be dated subsequent to the discharge of the vessel's last petroleum cargo. Gas-Free Certificates can be obtained through an approved surveyor in Puerto Ordaz.

APPROACHES: See "Punta Cuchillo".

MAX. SIZE: Max. d.w.t. 115,000 tons. Max. LOA 289.56 m. Max. beam 39.01 m.

HEALTH: Vessels could be boarded by the Public Health Doctor in the stream off Puerto Ordaz. He will not come up a Pilot ladder and will insist on an accommodation ladder which should be rigged and ready when he approaches. In order not to delay docking, this accommodation ladder should be rigged on the port side during low river stage, and starboard side during high river stage. If vessel moves directly to berth, Health Doctor will board vessel at dock.

RADIO: Should a vessel receive radio advice at sea to proceed to Puerto Ordaz, and the clearance is to another port, the Master must radio station YVM Puerto Ordaz, and advise the name of the vessel, flag, port of embarkation, original port of destination, Master's name and number of members in the ship's crew. This is necessary in order to comply with article 17 of the Venezuelan Customs Law.

TUGS: All vessels touching at Puerto Ordaz will be assisted by a tug in docking and undocking manoeuvres. Line-handlers are available on the dock to secure mooring lines on vessel's arrival, and to release them on vessel's departure.

BERTHING:

1. **The Harbour:** The Puerto Ordaz Harbour extends from Mile 183.5 to Mile 184.1 of the waterway. The harbour consists of a natural basin formed by the mouth of the Caroni as it flows into the Orinoco. The width of the turning area within the basin varies from a min. of about 1,600 ft. at low water to a max. of about 2,000 ft. at high water. The lighted buoys marking the navigable limits on either side of the harbour are moved to different positions according to river stages in order to achieve full utilisation of navigable waters. The bottom of the harbour is generally rock, with scattered layers of sand overburden deposited as sediment by the river. This sand is regularly removed by dredging in order to maintain depths which will accommodate the maximum draft authorised by the Port Captain. The bottom configuration across the harbour consists of a rocky shelf extending about 900 ft. from the face of the dock. Beyond this shelf the bottom slopes steeply into a deep gorge, then rises to form a sandy beach along the opposite shore. The velocity of river currents at this site varies according to stage levels. A slower current is generally experienced over the rocky shelf adjacent to the dock, with velocities averaging about 1.5 knots at flood stages and about 0.5 knots or less at reduced river stages. The velocity of the current over and along the deep gorge averages about 3.5 knots at flood stages and 1.5 knots or less at reduced river stages. During extreme low water, the basin is subject to tidal influence and the velocity of currents is minimal, although there is no reversal of flow. The direction of the current is aimed slightly toward the face of the dock at its S.E. end but deflects away from the pier about 500 ft. downstreamward. Access to the harbour is by way of a naturally deep and wide fairway which is the continuation of the gorge as it enters the Orinoco River.

2. **The Dock:** The Puerto Ordaz Dock is located along the right ascending side of the harbour and extends outward from shore on a S.E. by East alignment. The all-steel fixed-height dock is 1,885 ft. long; its elevation is 41 ft. above low water plane (0.0 ft. stage). This dock is fitted with a strong fender system and with a sufficient number of accessible bollards for proper docking and securing.

A loading rate of 2,467 t.p.h. was achieved using 2 × 10 in. hoses. Shore stop at end of loading.

On completion of cargo operations 3 hours should be allowed for paperwork. The cargo documentation is brought on board by the Agent, who signed for the Notes of Protest on behalf of the suppliers (Lagoven SA).

Officials: The vessel was boarded at San Felix anchorage by the Agent and 5 officials, and everything proceeded smoothly.

The following documents were required:
5 copies Crew List
3 copies Crew Personal Effects List
3 copies Bond List
Clearance from Last Port

The Ship's Certificates were inspected.

Departure: The Docking Pilot took the ship off the berth, using the same 2 tugs. Pilot departed once the ship was swung. We carried 3 river pilots, two were there for the journey only, although they all did a spell on the bridge. The vessel anchored at Buoy 44.3A for 5 hours, awaiting tide. The pilots left at Buoy 32.5. At 90 r.p.m. we made 8.5 knots until we were clear of the channel.

The maximum sailing draft allowed on this occasion was given as 38 ft. 6 in. (F.W.) which, to say the least, was optimistic.

AGENCY: Lagoven handles all papers and documentation connected with the ship's business. Lagoven will also help the ship's Master in providing required land transportation, limited provisions, or any other assistance that may be required for the operation of the ship's normal business. Alcoa will also assure that the ship's requirements are met in regard to Sanitary Inspection, Customs Inspection and Guardia Nacional.

Section E

VENALUM TERMINAL: 08.18 N. 62.50 W.

SHIPMASTER'S REPORT: February, 1981

LOCATION: Mile 194 on Orinoco River. See "Matanzas – San Felix" in "Plan Section".
ENTRY: See "General, etc." under Orinoco River.
TUGS: Are summoned by Pilot when required.
BERTHING: Modern quay built on piles parallel to the bank with access by two piers, one at either end of the general cargo quay, allowing a one way system to be operated.

Length of general cargo quay – 215 m.
Length of bulk cargo quay – 85 m.
Depth alongside at lowest state of river – 12 m.

Fenders: The Pier's fenders keep the vessel 5.0 m. away from Pier. Fenders move up and down as water level changes.
CARGO FACILITIES:
Cranes: Venalum has 2 cranes of 35 tons capacity each, for loading/discharging aluminium, general cargo, containers and bulk cargo.

Two electro-hydraulic clamshells with 12 cu.m. capacity each, for discharging bulk cargo through 4 hoppers of 20 cu.m. capacity each, are used for loading bulk into trucks at a rate of 110 tonnes/hr. (2 clamshells).

When the Orinoco River water level permits, ship's crane is used for loading/discharging operations.
Elevator: Forklift with max. capacity 6 tonnes.
The Electro-Magnets: The equipment is connected to crane, and the discharge rate is 20 t.p.h. each.
Pneumatic Cranes: This system used for alumina and petroleum coke only.
STEVEDORES: Working hours – 24 hours a day, 7 days a week.
AUTHORITY: CVG Industrias Venezolanas de Aliminio C.A., Zona Industrial Matanzas, Apartado 312, Ciudad Guayana, Edo Bolivar, Venezuela. *Tel:* 086-9400911, 705318, 705317. *Telex:* 086-86463. *FAX:* 086-940063. *Contact:* Captain Pedro Cabrera, Traffic Manager.

Industrias Venezolanas de Aluminio C.A., Av. La Estancia, Edificio Torre Las Mercedes, Piso 09, Urbanizacion Chuao (Apartado 51965), Caracas 1060, Venezuela. *Tel:* (02) 918022. *Telex:* 23444. *FAX:* (02) 918244. *Contact:* Luis Suarez, Terminal Operator.

END OF ORINOCO RIVER SECTION

PERTIGALETE: 10.15 N. 64.34 W. (See Plan)

LOCATION: Situated in a sheltered bay about 2 miles East of the port of Guanta, or about 4 miles from the pilotage zone situated in the North.
PILOTAGE: The pilotage zone in Pozuelos Bay is the same as for Guanta, i.e. an area situated between the islands of Borracha and Chimana, in the Bay of Pozuelos (formerly called Bergantin Bay).

From the pilotage zone for the port of Guanta/Puerto La Cruz, the private pier Pertigalete is to be approached by sailing between the Isla de Plata and the island of Cachicamo. Pilotage is compulsory in and out and is performed by well-trained government Pilots. The navigation is considered very safe.
MAX. SIZE: The depth of water for ocean-going vessels alongside the Pier is 20 ft. (shore side) to 40 ft. (sea side).
TUGS: Available from Inward Clearance port at Guanta/Puerto la Cruz.
BERTHING: The private pier in Pertigalete for berthing ocean-goi vessels is up to 150 m. (492 ft.) long. The apron is ample and allow easy manoeuvre of trucks with cement. On the same pier the ceme factory is regularly receiving raw material and machinery, but th berthing is along the West side of the pier for coastal trade, so does n interfere with operations for ocean-going vessels. There are chute conveyor belts from the nearby silos. No cranes available.
STEVEDORES: Loading operations are performed exclusively by th personnel of the cement factory. All costs, including overtime, are f account of the cement factory.

Under normal conditions on Saturday afternoon there is no work, bu almost without exception the cement factory works overtime o Saturdays if by doing so the vessel can be despatched that day. O holidays, if circumstances call for urgent operation, the cement facto has the option to work overtime.
TANKERS: Berth at private wharf at Pamatacualito, operated by Banc de Venezuela SA. Length of berth 113.60 m., depth alongside 10 m.
LOADING: The cement factory is able to deliver to the pier 600 tonne per hour (cement in bulk).
GARBAGE DISPOSAL: No collection service available.
WASTE OIL DISPOSAL: No collection service available.
SEAMAN'S CLUBS: No seaman's club at this port.
CURRENCY: Venezuelan Bolivar.
OPERATOR: Private pier of C.A. Vencemos Pertigalete is under th jurisdiction of Customs and Harbour Master of Guanta/Puerto La Cru Eastern Venezuela. All charter business and general administration i covered by Caracas Headquarters of Venezolana de Cemento S.A.C.A.

Local address: C.A. Vencemos Pertigalete, Apartado 4141, Puerto L Cruz. *Tel:* 95421, Al 30. *FAX:* 95420. *Telex:* 81154.
AUTHORITY: Capitania de Puerto La Cruz, Paseo Colon, Sector Lo Cocos, Puerto La Cruz, Venezuela. *Tel:* (5881) 677452, 67793 *Telex:* 81386. *Contact:* Captain Humberto Marcano, Harbour Master.

AGENT: Servicios Navieros Tisa (Sernatica), P.O.Box 4356, Puerto L Cruz, Venezuela. Tel: (5881) 683998, 683481, 683666, 68408 Telex: 81390. Fax: (5881) 683422.

PUERTO CABELLO (inc. Borburata): 10.29 N. 68.01 W (See Plan

DOCUMENTS:
Last Port Clearance.
6 Crew Lists.
6 Passenger Lists.
3 Stores Lists.
3 Narcotics Drugs Lists.
2 Lists of Personal Effects.
1 Vaccination List.
Derat Certificate.

PILOTAGE: Pilotage is compulsory, but vessels must first anchor i roads 1 mile North of Punta Brava to await entry formalities and berthing orders.
MAX. SIZE: Bulk Cargo Pier: Up to 32 ft. draft.
Inner Port: Up to 28 ft. draft.
Also see "Tankers".
TUGS: The use of tug-boats within the port is compulsory both fo entering and leaving port, as well as for manoeuvres in the port basi for foreign flag ships over 300 tons.
BERTHING: The port entrance is 100 m. wide in direction West to Eas Berth No. 1 and half of Berth No. 2 are along the same entrance channe where ships are berthed only as an exception or when the port is rathe congested. The total length of the North (main) Pier for the berthing o ocean-going vessels is 1,025 m., room enough for 6 to 8 vessels. Fo administrative reasons the pier is divided into 8 berths of about 128 m each. Between Berths No. 2 and 3, the pier turns Southwards. Alon the pier there are warehouses which under normal circumstance provide sufficient indoor space.

Along the East Pier, of 350 m. length, there are no warehouses. Thi pier gives berthing facilities to 3 or 4 middle-sized vessels.

Along the South Pier, of 500 m. length, there are 2 warehouses. Thi pier is exclusively used for coastwise shipping, fishery and small craf in general.

The dredged channel along the East Pier is only 80 m. wide. This i the only channel which connects the main basin of the port with th South basin of the port, the latter served through the South Pier.

Ro-Ro facilities available.
BULK HANDLING FACILITIES: 400 m. long new pier, designe exclusively for the handling of bulk cargoes.

This bulk cargo pier has an apron of about 25 m. and allows ship with a draft of 10 m. at any time.

Ships moored along this new pier are not able to take water there but have to be shifted to the general cargo piers in the port of Puert Cabello.

There is no telephone installation on the new pier.

Tug-boat service and assistance of Pilots is compulsory to negotia the distance to and from the bulk cargo pier.

General cargo is not allowed to be handled at this pier. There are n cargo handling facilities whatsoever and no kind of rolling equipmen either. All the vessels, unless they have up-to-date dischargin equipment of their own, have to provide derricks of minimum 5 tons capacity to support the SKT discharging equipment of receivers. The cargo is discharged in bulk cargo trucks, fully closed and with only rathe narrow manholes for the SKT arm.

The new grain terminal has been opened. The wharf is 400 m. long and allows 2 vessels to berth. Max. depth 30 ft. Average discharge rat 1,500 tons per day.

NKERS: *Borburata:* The Maraven Terminal lies about 2 miles East the port entrance.

Berth No.	Max. length	Max. beam	Max. draft
1	400 ft.	—	20 ft.
2	575 ft.	72 ft.	31 ft.

No. 1 Berth is used for bunkering only.

No. 2 Berth is used for the discharge of refined products and bulk hemicals. It is fitted with 4×8 in. Chicksans and a range of hoses from in. to 8 in.

A Pilot is compulsory, and boards at Puerto Cabello. If the vessel is eared outwards at Borburata, the Pilot may return to the pilot station y road.

Berthing and unberthing in daylight only.

Also see "Shipmaster's Reports" and "Report".

goven Terminal: The buoy mooring is used for the discharge of etroleum products. Max. length 198 m. Max. beam 28 m. Max. draft 4 ft., will be increased to 38 ft. Max. Tonnage 40,000 d.w.t. Vessels erth using 5 shackles on the port anchor, and 6 stern lines to 3 mooring buoys.

Terminal Marino Holanda: Consists of 3 buoys situated in a depth of 5 ft. near Guaguaza Lighthouse. Used for loading/discharge of Chemicals.

STEVEDORES: *Straight Time:* Monday to Friday: 0700 – 1100 hrs. and 300 – 1700 hrs.

Overtime: Monday to Friday: 1800 – 2300 hrs. Normally overtime beyond 2300 hours is not permitted.

Relief Gangs: Obtainable, if there are not too many ships working in the port at a time, from 1100 – 1300 hrs. and 1700 – 1800 hrs.

Work on Sunday: Not permitted except for passenger vessels, and considered as such are those carrying more than 60 passengers, and with a medical doctor on board.

Saturday Afternoon Work: Not permitted. But if a vessel can terminate operation and sail with a maximum of 3 additional hours' work, a special permit can be obtained from Customs and Port Authorities. In such case, the additional working hours are considered straight time work.

FRESH WATER: Available by tanker trucks only.

The drinking water in Puerto Cabello is tropical treated, well-filtered and wholesome.

Every vessel of over 600 nett tons calling at Puerto Cabello, and other ports in Venezuela, should arrange to take water only at Puerto Cabello in order to avoid double water dues.

REPAIRS: The adjacent Naval Yard, the entrance to which is within the main port, opposite the North Pier, is equipped for minor repairs both on engine and hull. For emergency purposes, the dry dock could be used. Its capacity is for ships up to 30,000 to 35,000 tons. All repairs on the hull are effected by a special crew transferred from the Naval Yard.

At the dry dock there is 1 crane of 15 tons capacity. Within the Naval Yard there are 2 slipways for ships of 125 ft. length and 210 ft. length max. respectively.

Venezuelan Navy ships always have priority.

WATCHMEN: A very careful watch must be maintained in and around the accommodation as ships' safes and cabins have been broken into.

OPENING/CLOSING HATCHES: Is not performed by the National Port Services, but instead either the ship's crew or hired assistance labour must be used. Recommended that ship's crew open and close hatches.

REGULATIONS: Port regulations referring to contamination of the port waters will be strictly applied and fines for contravention will be imposed.

No maintenance to bridgehouse, hull or deck should be carried out whilst in port unless special permit issued by the Port Captain has been obtained.

SHIPMASTER'S REPORT: November 1984 (See "Plans").

Vessel: LOA 170 m., beam 26 m.

Berth: Maraven Berth at Borburata.

Pilot: Pilot boards off Puerto Cabello during daylight hours only.

Max. Draft: 32 ft.

Tugs: When berthing, 2 tugs are made fast on the Main Deck fore and aft.

When unberthing 2 tugs are used, 1 tug tows aft and the other stands by forward.

Charts: B.A. 1523 and 1966.

SHIPMASTER'S REPORT: October 1985.

Depth within the port received from Agent:

Entrance to the Harbour	31 ft. 6 in.
Pier No. 1	31 ft. 6 in.

Docks at Area 7 (Floating Docks)	
Pier No. 37	27 ft. 0 in.
Pier Nos. 38 and 39	30 ft. 0 in.
Pier Nos. 40, 41 and 42	32 ft. 0 in.

SHIPMASTER'S REPORT: February 1989.

Documents:

1 copy Health Declaration.
2 copies Drugs List.
3 copies Stores List.
2 copies Crew Declaration.
5 copies Crew List.

The port officials are generally relaxed and easy going, ship's standard papers are accepted.

A Ministry of Transport and Communications Inspector will board, probably after clearance has been given, and will fill in a long questionnaire about the vessel and equipment and also inspect all the certificates. An Inspection Certificate is issued and is required by the Port Captain before the Clearance Outward can be issued, however, the Agent had never heard of this before.

Pilotage: The Pilot boards at the anchorage from a large launch. Pilots leave just in the entrance channel.

Approaches: Charts: B.A. Charts No. 1966 and 1523, USDA Chart No. 24450.

Buoys were found to be as charted with lights working.

In February 1989 dredging was being carried out in the entrance with cranes on a barge moored to the North shore of the channel and blocking about half the width. Two buoys (Fl. Red) are moored approximately mid-channel, marking the work, with vessels passing to the South. The channel is still adequate.

Communications: Contact with pilots and Port Captain's office can be made on VHF Channel 16.

Shortly after anchoring, a launch came alongside with an Arrival Information Form to be completed.

When calling on VHF, a number of stations will answer, most of them are ship chandlers but do not identify themselves as such.

We were advised that the vessel should anchor in Anchorage 'C' and when we asked who was calling they said that it was the Pilot station calling, it was in fact a ship chandler.

Agents can be contacted on VHF Channel 16 and usually use Channel 11 for working, during office hours only.

Tugs: The Pilot advised that tugs are compulsory, one tug used for vessels under 125 m. in length and 2 tugs for vessels over 125 m. LOA.

The tugs join the vessel just inside the harbour entrance and if making fast use their own lines.

Berths: Berths No. 13 to 21 have not yet been completed and work does not appear to be continuing at the present.

Berths No. 31 and 32 are served by a fixed grain elevator supplying a grain silo on on the dockside.

Berths No. 25 to 30 are used for discharge of grain by portable elevators and also for containers.

The area of the dock from Berths No. 25 to 32 is known as El Granel.

Dockside cranes are not provided at any of the berths but a quantity of mobile cranes of various capacities are available.

There are good fenders on all the completed berths.

Cargo Working: On the bulk berths working hours are:

Weekdays: 0700 – 1200, 1230 – 1800, 1830 – 2300.
Saturdays: 0700 – 1200.
Sundays and holidays: No work.

Overtime is possible on Saturday afternoons to finish, also at other times if all parties agree.

Grain is discharged with a two stage chain conveyor elevator, each stage requiring a crane for support, i.e. 2 cranes at each hatch working.

Two elevators were used throughout, requiring 3 ship's cranes and one shore crane.

Shore crane hire rates are variable, depending on the shift, but were quoted as approximately 4,000 Bolivars per 3 shift day, exchange rate is 37 Bolivars to U.S.$1.00.

Discharge rate is quoted as 1,500 tonnes per elevator but this is entirely dependent on the availability of trucks to take the cargo away.

The distance the trucks have to go is also important, as some of our cargo was reported to have a destination 10 hours away, with a result that each truck could only make one round trip in a day. Each truck carries approximately 40 tonnes.

It was unfortunate that the vessel arrived just before Carnival, as heavy transport is not allowed on the roads during this time and other holidays, in an effort to reduce accidents, due to the many drivers on the roads.

Delays during discharge were due to shortage of transport with some short delays for rain and breakdowns.

Elevator hours available	161.3 hours.
Elevator hours used	74.17 hours.
Gross rate for 8,000 tonnes	49.6 t.p.h.
Net rate for 8,000 tonnes	107.9 t.p.h.

The nett rate gives 1,618.5 tonnes per day for each elevator.

Of the 74.17 elevator hours used, 2 elevators were working simultaneously for 14.7 hours. If discharging had been carried out with only one elevator it would have required at least another day alongside to complete.

Priority for trucks is given to completing vessels.

First four days of discharge 11 shifts (48.45 elevator hours) were used, average of 4.4 hours per shift.

Last two days of discharge 5 shifts (25.72 hours) were used, average of 5.14 hours per shift.

Medical: The Agent must be pre-advised of any medical attention required. The office car will pick-up crew for the doctors at 0800 hrs. and 1330 hrs. at the gangway. A note is required from the vessel by the driver.

Fresh Water: Fresh water is delivered alongside by tank trucks, each carrying about 20 tonnes, order well in advance as delivery is slow. The trucks provide the necessary hoses.

Repairs: The Port Authority only allow chipping and scraping alongside on the bridge front, funnel and decks, provided that no chippings fall overside.

Hull painting is forbidden.

Permits are required for Plimsoll and draft mark painting, the permits are arranged through the Agent.

Engine repairs and check-ups require permits from the Port Authority prior to work starting, permits are often refused.

All repair work requires the advance permission of the Port Captain.

Repatriation: Prepaid tickets are a condition as airline agents cannot guarantee Seamen's Rebate and will give preference to full paid tickets.

Shore Leave: Shore passes are issued and stamped by Immigration and Port Captain, the blank passes are brought on board by the Agent with the visit and have to be completed before the Officials stamp and sign them.

Oil Spillage: The spillage of oil and garbage into the dock is prohibited, and this also covers overflowing of ballast tanks, washing dust from the docks and washing down.

Ship Chandlers: About ten ship chandlers will present themselves as soon as the clearance visit is completed, with widely varying prices.

We found Perdomo Shipchandlers to be professional, with reasonable prices and also provided a good service.

Captain's Car Service: The Agent will send the office car at 0900 hrs. and 1500 hrs. for transport to the office for communications with the Owners if required, or at any time if requested by VHF.

Flags: The Venezuelan flag must be hoisted every morning at 0600 hrs. and lowered at 1800 hrs. every evening whilst alongside.

Lifeboats: Vessels are not allowed to lower liferafts or boats for painting or maintenance work without a permit, whether alongside or at anchor.

Ratguards: Ratguards must be in position on all ropes in order to avoid fines.

REPORT: A tanker terminal has been established inside the port, at Berth No. 32. The terminal belongs to the "Instituto Nacional de Puertos", and is referred to as "Terminal Santana". The terminal handles vegetable oils through 3×6 in. connections and flexible hoses. There are 4 shore tanks about 80 m. away. Ships discharge into either shore tanks or lorries. Max. draft 9.50 m.

PUERTO DE HIERRO: 10.38 N. 62.05 W.

DOCUMENTS:
- Last Port Clearance.
- 6 Crew Lists.
- 6 Passenger Lists.
- 6 Stores Lists.
- 6 Narcotic Drugs Lists.
- 2 Health Declarations (forms provided and filled by doctor on arrival).
- Derat Certificate.

PILOTAGE: Pilot boards at Sea Buoy, Lat. 10° 37′ N., Long. 62° 06′ W. If no pilot boat meets vessel on arrival, ship must anchor to wait orders. Send 7 day, 48 and 24 hour ETAs to cable address "Transterm Guiria". Vessels should anchor in the vicinity of Sea Buoy. No radio-telephone available.

ANCHORAGE: Vicinity of Sea Buoy. Good holding ground.

RESTRICTIONS: Vessels may have to wait at anchorage until slack water for docking when tide/current is strong.

MAX. SIZE: Dock, East berth: 30 ft. at LW; 33 ft. at HW; 690 ft. length, 90 ft. beam.

Dock, West berth: 19 ft. at LW; 32 ft. at HW; 600 ft. length, 60 ft. beam. Also see "Berthing".

HEALTH: Doctor boards at berth and grants Pratique. Any suspected disease or fever to be reported at that time. Vessels arriving from a Venezuelan port do not require Pratique.

RADIO: La Guaira, Venezuela.

TUGS: None available.

BERTHING: Berthing at times limited to slack water period depending on strength of tides. Pilot will advise.

Bauxite Terminal: Max. draft 37 ft. Depth alongside 40 ft. Max. 40,000 d.w.t. Loading rate 3,000 t.p.h.

STEVEDORES: Bulk cargoes: Discharging rate 700 – 800 t.p.h., loading rate 800 – 1,000 t.p.h. No facilities available for handling general cargo.

MEDICAL: No notice required. Venezuelan Navy Hospital with limited medical assistance.

TANKERS: No oil carriers.

DENSITY: LW – 1020. HW – 1023.

FRESH WATER: Available in limited quantities at berth. Rate of delivery 30 t.p.h.

FUEL: In an emergency. Diesel fuel medium, specific gravity at 60°F 0.85, API gravity at 60°F 35, viscosity SSU at 100°F 37, viscosity engler at 20°C 1.40.

REPAIRS: None. Small company workshop.

CONSULS: None.

CUSTOMS ALLOWANCES: Two cartons of 200 cigarettes each or equivalent in tobacco. Two 0.75 litre bottles.

AIRPORT: Nearest airport (1 hour voyage on launch) is Guiria with 2 weekly flights to Caracas and the same number to Port of Spain, Trinidad. Next nearest (1 hour launch plus 2 hours car) is Carupano with 4 daily flights to Caracas.

TIME: GMT minus 4 hours all year round.

HOLIDAYS: Cargo worked 24 hours a day, 365 days a year.

IDENTIFICATION CARDS: Issued locally by Navy on arrival.

DEVELOPMENTS: Possibility of increasing draft to 42 ft. at loading berth, and to 30 ft. at discharging berth.

GENERAL: The whole of Puerto de Hierro is a Venezuelan Navy Supply Base. The dock and cargo installations are operated by Puerto de Hierro, S.A., a subsidiary of Caribbean Steamship Company, S.A. Only bulk cargoes transhipped by Caribbean Steamship are handled.

AUTHORITY: Puerto de Hierro, S.A.

PUERTO LA CRUZ, (Puerto La Cruz Terminal): 10.13 N. 64.38 W.

(See Pla

FLAG: Venezuelan flag must be displayed from the foremast wh entering Pozuelos Bay as well as in docking operations regardless the hour. At all other times the Venezuelan flag must be displa between sunrise and sunset.

LOCATION: Puerto La Cruz located on Pozuelos Bay on the N.E. coa of Venezuela. Its harbour is well protected by numerous islands aga sea currents. The hurricane path is several hundred miles to the Nor and has never affected the flow of navigation in the Puerto La Cruz ar

The lighthouse marking the entrance to Pozuelos Bay is located: La 10° 18′ 18″ N., Long. 64° 41′ 07″ W. Visibility is 20 miles.

DOCUMENTS: Arrival Clearance is effected on board vessel shor after docking by Government Officials and a representative of t Company.

The following documents are required and should be prepared pr to arrival:
- Ship's Register.
- Ballast Manifest (1 copy).
- Crew List (6 copies).
- Passenger and Baggage List, if any (5 copies).
- List of Passengers in Transit, if any (5 copies).
- List of Personal Effects (4 copies).
- Stores List* (5 copies).
- List of Slop Chests (4 copies).
- Sailing Permit issued by Marine Authority at last port of ca (Original).

*Stores List should indicate separately all deck, engine and cab stores.

PILOTAGE: The use of Government Pilots is compulsory for all vesse docking and undocking. The Company will arrange for this service at a times. If it becomes necessary for the Master of the vessel to disregar Pilot's orders in order to ensure safety of the ship a written report fro the Master shall be submitted promptly to the Government Port Capta in Spanish. Meneven will assist in translation, when necessary.

The zone for Pilot to board or to anchor awaiting Pilot is delineat by the following 3 lines: South by parallel 10° 15′ N., East by merida 64° 40′ W., and West by an imaginary line from Punta Puinare on Is Chimana del Oeste to the North point of Morro de Barcelona.

When ready to dock, a Pilot will be despatched by launch to ship.

RESTRICTIONS: No restrictions on arrival or sailing time.

MAX. SIZE: No limitation is placed on width of tankers. Ships up t 950 ft. in length can be turned around in the inner harbour are Max. safe draft alongside (Berth No. 5) is 55 ft. (Also see "Berthing"

HEALTH: In theory the Government Port Doctor is to board ea incoming vessel and board only outgoing vessels which car passengers. In practice, however, the doctor boards at his discretion

Ships cleared between the hours of 1700 – 0800. Mondays throu Fridays and all day Saturday, Sundays and holidays are charged b Immigration Service for the issuance of shore leave passes. There i no charge for this service from 0800 – 1700 hrs. Mondays throu Fridays. Transportation and immigration clearance fees on movemen of seamen are billed at cost.

RADIO: Masters are requested to advise Corpoven Puerto La Cruz b radio 72 hours in advance of estimated arrival giving vessel's nam date and hour of arrival, bunkers, name of Master, port of departur draft (arrival), Venezuelan gross tonnage, flag of ship. Vessels ma contact the terminal by radio-telephone on 2182 kHz and VHF Chann 16. There is standby attention 24 hours a day. The terminal also ha the frequencies 2080, 2120, 2638, 2738 and VHF Channel 13.

Ship-to-shore radios are installed on the oil dock and on both tug A 350-watt AM transmitter-receiver is monitored 24 hours a day.

TUGS: The use of 2 tugs is compulsory for all vessels over 145 m. LO The Company has available 3 tugs (2×3,000 h.p. and 1×1,600 h.p.

BERTHING: The loading facilities consist of 6 berths. Products availab and safe draft are as follows:

	Berth 1	2	3	4	5	6*
Crudes	×	×	×	×	×	×
Heavy fuel oil					×	
Refined products		×	×	×		×
LPG		×				
Bunker "C" fuel	×	×	×	×	×	
Diesel fuel	×	×	×	×	×	
Intermediate fuels	×	×	×	×	×	
Fresh water	×	×	×	×	×	×
Max. safe draft (ft.)	38	38	38	55	55	40
Max. d.w.t. (thous.)	50	50	45	120	120	58
Max. LOA (ft.)	750	750	700	950	950	800

*El Chaure Terminal – Now Pier No. 6. Also see "El Chaure".

Jose Terminal is Berth No. 8 – See "Jose Terminal".

Upon arrival at dock the following rules must be observed:

(a) Masters must ensure that mooring lines are properly tend during the discharge of ballast and loading of cargo, and th sufficient personnel are on board at all times to handle sam Discharging or loading will be temporarily suspended up infringement of this regulation.

(b) Masters are requested to remove the blank flanges from th vessel's loading manifold before docking, so as to expedite th connecting of the shore hoses by company personnel. Vesse using Berth No. 5 are also requested to have their derrick an gangway ready for use.

Note: Vessels normally dock with starboard side to dock, unle otherwise advised.

(c) While docked, discharge of sea water, hot water or steam o dockside of ship is prohibited. Hot water or steam may activ the automatic sprinkler system as well as damage piping loca under the dock surface.

(d) Rat-guards must be placed on all ropes connected with th shore.

(e) Heavy exhaust smoke from vessel's funnel is not permitted. Any infringement of this rule will result in Government fine and/or removal of ship from dock.

(f) Meals must be provided in officers' mess-room for Venezuelan National Guard personnel who may be assigned to the vessel during stay in port.

LOADING: After the vessel has been cleared, the Company Dock Supervisor on watch will give the Master of the vessel written instructions as to grade or grades of cargo, loading rates, information on size of hoses and lines, and other information pertinent to the loading of the vessel.

During loading operations, company employees are on watch to administer to the needs of each vessel.

Upon termination of loading cargo of crude or fuel oil, hoses are normally displaced with air at controlled rates prior to disconnecting. If the ship's officers request that the alternate procedure of draining hoses be effected, shore personnel will be happy to comply provided the following steps are observed by ship's officers:

1. Advice be received prior to termination of loading cargo.
2. Ship's receptacles be situated to receive oil drained on board. It should be noted that heavy fines are imposed for spills or overflows which contaminate the bay.

Shortly after completion of loading, company personnel together with ship's officer will take ship's ullages and, later, deliver cargo and sailing papers to an officer of the vessel.

Ships must vacate berth upon completion of loading and await papers at anchorage if the berth is needed for another vessel. The Dock Supervisor on duty will advise ship's officer on this matter.

BALLAST: Although climatic conditions in Puerto La Cruz are relatively mild, vessels should arrive with sufficient ballast to permit safe handling. Venezuelan regulations strictly prohibit the pumping overboard of dirty ballast in territorial waters. All ballast must be pumped ashore with the exception of vessels especially equipped with clean segregated systems which are reserved for ballast only. Vessels so equipped will be permitted to pump overboard after first being inspected and approved by shore personnel. Heavy fines are imposed for pollution of waters and industrial fishermen are quick to report any infringement. Max. discharge pressure to shore installations is 90 p.s.i. through the 16 in. line which dumps into ballast lakes approximately 300 m. South of dock.

No vessel will be allowed to discharge ballast if any of the following conditions exist:

(a) Last previous cargo was sour crude/product and/or could result in unpleasantness to area inhabitants.

(b) Ballast has lead gasoline, naphtha and/or other volatile residue which may cause an explosive atmosphere at the open ballast pit.

(c) Last previous cargo had to be heated and/or pour point was higher than 80°F. This will be verified by the laboratory.

MEDICAL: All requests for medical or dental treatment must be accompanied by a written request from the Master to the vessel's Agent.

FRESH WATER: Fresh chlorinated water is available at an average rate of approximately 2 t.p.h. Total volume of water that can be supplied during the normal period alongside averages about 150 tons. As water is not held in special reserve for vessels' requirements but supplied from terminal water system, availability may be limited dependent on time of year and other conditions.

FUEL: The terminal is not a general bunker station. Only ships loading petroleum or its products may take bunkers.

Bunker "C", heavy diesel fuel and complete range of intermediate fuels are available in reasonable quantities. Delivery rates to the ships are approximately as follows: Bunker "C", 200 t.p.h.; heavy diesel, 150 t.p.h.; intermediate fuels, 150 t.p.h.

Bunkers are delivered concurrent with the cargo and should be taken as soon as clearance is granted.

Meters are installed on all bunker systems and are calibrated in nett barrels; except diesel meters which indicate gross barrels.

The dock valves on the bunker lines will only be opened and closed upon advice from the ship's personnel.

Lubricants and gasoil are available through the vessel's Agent.

CONSULS: The following foreign countries have consular offices in the vicinity of Puerto La Cruz:

Belgium
Brazil
Colombia
Denmark
France
Great Britain
Italy
Netherlands
Norway
Sweden

Vessel's Agent should be appraised of vessel's consular requirements promptly upon docking.

REPAIRS: Request for repair work by local contractors must be accompanied by a written request from the Master of the vessel.

SURVEYORS: 1. Saybolt, Inspecciones and AIVEPET cargo inspectors available at the Terminal Office.

2. Lloyd's Register, American Bureau, Bureau Veritas, P & I available locally or from Caracas via the ship's agent.

CUSTOMS: Crew members should be warned against taking knives or other lethal weapons ashore, as this is strictly prohibited. All firearms and ammunition must be noted on Stores List. They cannot exceed 1 per officer and 18 cartridges per gun. No arms may be carried while ship is in Venezuelan waters or tied up at dock. Contraband of any description will be confiscated. Each man is allowed 1 package of cigarettes on his person and this package must be opened. No liquor is to be taken ashore. It is prohibited to carry liquor from shore to ship without authorisation from Master of vessel. It is further strictly prohibited to consume liquor in dock area.

It is normally forbidden to take photographic cameras ashore. However, upon written request to the National Guard contingent on the oil dock, special permission may be obtained. This is subject to 2 limitations: (1) that the camera is returned to the ship; (2) that no photographs are taken of the petroleum installations.

TELEPHONES: There is a telephone booth on each dock. The Supervisor on duty may be contacted by calling number 308 or 906.

REPATRIATION: Seamen discharged from hospital for transfer to another port, seamen arriving from another port or those being repatriated are handled by the vessel's Agent, who must comply with all Venezuelan Regulations.

In the case of seamen left ashore for any reason, Masters are requested to furnish a letter accepting responsibility for all expenses incurred, advances if any, and instructions for repatriation. Venezuelan regulations, at all times hold the vessel responsible for a seaman during his stay in the country. Close contact is maintained by radio with ship owners regarding disposition of their seamen.

TIME: GMT minus 4 hours all year round.

EMERGENCY CO-ORDINATION CENTRE: Seccion de Seguridad, Busqueda y Salvamento Maritimo. Telex: 31154. Tel: (02) 513395, 512156.

BANKS: Banco Royal Venezolano. Tel: (081) 691921.

Cash: The local currency is the Bolivar.

Foreign currency may be exchanged at local banks. Local banks are open Monday to Friday from 0830 – 1130 hrs. and from 1400 – 1630 hrs., except holidays.

STORING: See "Prelims".

1. Vessel can be stored by truck.
2. No need for barge storing while ship is alongside.
3. Trucks can proceed to the berth gate only. Distance from gate to ships berth 200 ft.
4. Fork lift trucks cannot be permitted inside the berth while the ship is either deballasting or loading.
   No fork lift trucks whatsoever permitted alongside LPG ships.
5. No Customs regulations in force regarding storing.
6. Local riggers can be employed to assist with storing through ship's local Agent.

IDENTITY CARDS: Passes for shore leave are issued by the officials of the "Capitania de Puerto", who board with the Customs authorities upon the vessel's arrival at dock. These passes are valid for the duration of the vessel's stay in port and must be returned before sailing to the guard assigned to the vessel.

In order to comply with Immigration Regulations, crews should be carefully checked before sailing, and any missing seamen reported to the vessel's Agent. Crew members left behind when the vessel sails will be held in custody until deported at the vessel's expense.

GARBAGE DISPOSAL: Garbage collection service available. Contact Marine Garbage Recolector C.A., Ave. Constitucion No. 92, Puerto La Cruz. Tel: (081) 664243. Garbage collection is by request only, $ 300.00 per service (including supply of waste bags and cleaning of garbage storage area). Daytime service only.

WASTE OIL DISPOSAL: Waste oil disposal service available at Jetties No. 1, 2, 3, 4 and 5. Discharge and disposal is limited to 15,000 tonnes per vessel. Arrangement for this service is by prior agreement. Contact agent 72 hours before arrival. There is no charge for this service.

SEAMAN'S CLUB: No seaman's club available. Taxis to be ordered by Agent. No telephone service on jetty.

CURRENCY: Bolivar. No currency restrictions. Also see "Banks".

REGULATIONS:

Excessive Smoke. It is absolutely prohibited to exhaust heavy smoke through a ship's funnel while tied up at the Company's docks. It is also prohibited to blow boiler tubes. Failure to comply with this regulation will result in any or all of the following actions:

1. Vessel's discharge of ballast or loading of crude or products will be immediately shut down.
2. Vessel will be subject to fine from authorities.
3. Vessel may be removed from dock.
4. Ship's Agent will be advised of infractions of this regulation.
5. Fines, time lost, and other related expenses will be charged against the vessel.

Pollution. Venezuelan laws are very strict on this subject and local authorities quickly enforce existing statutes. For this reason each Master is handed a circular that emphasises the necessity of complying with federal and local laws and customs.

The spilling or discharge of dirty ballast, crude oil or petroleum products into coastal waters is defined as pollution, as is also the throwing overboard of garbage, trash or other unwanted objects while the vessel is at anchor or dockside. Prior to the start of loading operations all discharge valves, bilges and scuppers must be closed and strict vigilance exercised during deballasting and loading operations.

When a spill does occur, the Master, Government officials and a company representative evaluate the quantity and submit a report to the Government Petroleum Inspector. This report becomes the basis for a federal fine that is practically incontestable. An additional expense occurs when local authorities require assistance in cleaning beaches and shorelines after a major spill and can pinpoint the responsible vessel or source.

TONNAGE CERTIFICATE: Due to reciprocal agreements between Venezuela and the following countries, ships flying the flag of any of the below-named countries are exempted from Arqueo compliance and payment of fees: Denmark, Great Britain, France, Germany, Netherlands, Norway, Portugal, Sweden, United States.

Ships bearing the flag of any other nation shall require a Venezuelan Arqueo Certificate. The cost of measuring is contingent on the size and tonnage of vessel. The certificate is usually issued after the ship sails from port. It is then sent to the marine department of the Owners of the vessel by airmail.

GENERAL:

No charts or sailing directions are available in the terminal. Same should be forwarded by airmail to the vessel's Agent for delivery to the ship.

All ship requirements such as chandlery supplies, mail, cash advances, medical, dental, consular requirements, repair work, laundry service, bonded stores, transportation etc. should be obtained through the vessel's Agent.

Local authorities strictly forbid the throwing overboard of garbage, trash or any objects while anchored or docked, and they also forbid the exchange of articles between crew members and the occupants of adjacent small craft.

Corpoven as operator of the Terminal charges a fixed fee for General Services such as supervising the docking and undocking manoeuvres, hose connections, loading and documents required by the cargo buyers or consignee. Handling of Telexes, documents and air postage will be charged at cost.

Offices of Corpoven loading and marine personnel are located on the first floor of the building between Berths No. 1 and 2. Any matter concerning loading, bunkering, is handled through this office, which is open 24 hours of every day. On the ground floor of this same building is the Documentation Section.

SHIPMASTER'S REPORT: February 1979.
Documents:
3 copies of List of Passengers or "nil" passengers.
3 copies of a letter by Master stating that vessel was diverted after sailing from previous port and explaining why clearance destination is wrong.
3 copies of cable ordering diversion.
Anchorages: Good holding ground in N.W. part of anchorage area, thick mud.
Restrictions: Maximum height of manifold about 18.95 m., so necessary for vessels of 140,000 d.w.t. to load some cargo before completion of ballast.
Max. Size: If draft less than 30 ft. on arrival vessel can approach berth direct from West, and use 2 tugs. If more than 30 ft. draft then vessel must use channel to the North of berth and use 3 or 4 tugs. This for vessels of 140,000 d.w.t.
VHF: Tankers call "Corpoven" on Channel 16, then change to Channel 12 or 13. Also call Agents on Channel 16.
Berthing: Back springs to bollards on jetty. Breasts and heads and stern lines to hooks on dolphins. These hooks are secured to bollards by wire of circumference 19 cm. or diameter 6 cm.
Consuls: No U.S. Consul available and Agents will give Master letter to this effect for U.S. Immigration.
General: Ballast, if clean, may be pumped overside. If dirty, advise Corpoven prior to arrival of quantities to be pumped ashore. They will also accept slops if not sour crude or smelling too badly.
Notice to Shipmasters:
We wish to advise the Masters of all vessels calling at this port that it is strictly prohibited to take photographs.
It is likewise contrary to regulations to carry ashore a camera. Same is liable to be confiscated by the Government Authorities.
Signed S. A. Corpoven.

SHIPMASTER'S REPORT: January 1989.
Berth: Berth No. 4, starboard side alongside.
Vessel: 89,000 d.w.t.
Gangways: Shore gangways at Berths No. 1 – 5.
Tugs: 2 tugs used, port bow and starboard main deck aft. Tugs lines used.
Mooring: 2 head/stern lines, 2 breast lines and 2 springs at each end. Head lines sent first, then breast lines and finally springs. From aft, springs first, then breast lines and finally stern lines.
The pilot boat takes all the forward lines. After springs sent away by heaving line if possible, otherwise all after moorings by pilot boat on completion of forward moorings.

AGENCY:
All incoming ships to lift cargoes at this Terminal must have a local Agent to render all services required for a prompt and efficient tanker turnaround and to cancel all ships disbursements during the port stay.
AUTHORITY: Capitania de Puerto, Guanta, Puerto La Cruz. *Tel:* 081-660534, 081-660367. *Telex:* Capipuerto 81386. *Contact:* Captain A. Hernandez, Port Captain.
Operator: Corpoven S.A. *Tel:* (081) 604709, 6022211. *FAX:* (081) 603483. *Contact:* Jesus Narvaez, Terminal Supervisor.

PUERTO SUCRE (Cumana): 10.28 N. 64.12 W.

(See Plan)

SHIPMASTER'S REPORT: August 1980.

DOCUMENTS: As for Guanta. Entry formalities, normally after berthing but if at anchor will board about 0900 hrs.
APPROACHES: Approaching Puerto Sucre at night, the lights of the city are visible for many miles, but the light indicated at the end of the pier is non-existent, also the water tower marked on the chart with red lights is non-existent.

Two vessels were alongside when this vessel approached so the pier was clearly visible with the lights of the ships, otherwise there are no lights on the pier.

The pier indicated on the chart just North of the main pier is no longer there although at low water parts of the supports are still visible. Further North there are 3 piers, approximately half cable long, used by fishing boats. They start approximately 1 cable North and 1 cable between each, also there are car ferry terminals before the mouth of the river South of Pta. Carenero. This river mouth is undergoing extensive work which is apparently to be a fishing harbour.

A tall white building is situated in approximate position Lat. 10° 27.8′ N., Long. 64° 11.1′ W., it has a fixed red light and an occulting red light at night. A silo is situated in approximate position Lat. 10° 26.7′ N., Long. 64° 11.25′ W., this has 3 red lights in a horizon line at night. There is an air light on the control tower at the airpor alternating white and green every 5 seconds, but this is only lit whe an aircraft is due.
PILOTAGE: Pilotage is compulsory for berthing and unberthing. Pilo will anchor vessel if required.
ANCHORAGE: Anchorage is limited in pilotage area "A". This vesse anchored 3 cables off the shore line and 3 cables off the pier i 30 fathoms of water, vessels also anchor 2.5 to 3 miles S.W. of pier i 25 fathoms, however Pilots prefer vessels to use nearer anchorage.
VHF: Pilots occasionally on Channel 16, but very little English spoken The ship's chandler has a VHF set and can be very helpful as he speak very good English.
TUGS: One tug is available to assist with berthing/unberthing.
BERTHING: Vessels use both sides of the pier and Ro/Ro vessels t up stern to the head of the pier. Soundings were taken around the pie (See "Plan").
CARGO HANDLING FACILITIES: There are numerous fork lift truck of all sizes, 4 mobile cranes and some small towing vehicles. This vesse had a cargo of bagged fertiliser which was discharged onto lorries an there was no shortage of these, even when working 2 ships wit 10 gangs no delays were caused due to lack of transport. Ship's gea is used at all times but the mobile cranes can be hired if required.
MEDICAL: Services available.
FRESH WATER: Available using ship's hoses.
FUEL: Diesel oil is available but difficult to obtain as it has to be brough from Puerto la Cruz by road tankers.
WATCHMEN: Not available, one member of National Guard on board requires a cabin if one available. This vessel had no spar accommodation but the guard must still be fed.
SHORE LEAVE: Permitted, but shore passes must be carried an passes returned when vessel leaves.
GENERAL: *Provisions and Laundry:* Available.
Garbage Disposal: No facilities.

PUNTA CARDON: 11.38 N. 70.14 W.

PORT LIMITS: The area enclosed by the parallels of Lat. 11° 38′ 00″ N and Lat. 11° 36′ 38″ N. and the meridian of Long. 70° 14′ 25″ W.
FLAG: It is compulsory to display the Venezuelan flag at the foremas starboard yardarm during daylight hours for ships anchored or berthe in Venezuelan waters. The ship's Services will provide a Venezuela flag at any time for ship's account.
LOCATION: The port of Punta Cardon is located on the Gulf o Venezuela, on S.W. coast of Paraguana Peninsula, Venezuela. Punt Cardon is an open sea port with practically no swell, due to the Easter winds prevailing almost all year from the shore side.
ESSENTIAL REQUIREMENTS:
1. Incoming vessels must send ETA at least 3 days before arrival a Punta Cardon.
2. If a ship, originally cleared for another port (including any othe Venezuelan port) is diverted at sea to Punta Cardon, certain informatio must be radioed prior to arrival in order to avoid heavy fine(s) and/o delays.
3. No dirty ballast may be pumped overside in port in Venezuela coastal waters. Ballast disposal facilities are available at Punta Cardo Terminal.
4. The use of Venezuelan Government Pilots is compulsory fo berthing and unberthing.
5. In addition to other clearance documents, 5 copies of an itemised list of articles in the ship's slop chest must be presented to the authoritie on arrival.
6. The emergency fire signal is 5 long blasts on the ship's whistle o siren. No other signal is to be given in cases of emergency.
7. Rat-guards must be placed on all mooring lines.

DOCUMENTS: Clearance (inward Pratique). Inward Clearance i effected on board by Government Port and Customs Officials and a representative of the Oil Movements Department immediately afte berthing. The following documents must be ready on arrival:
(1) In ballast:
- *(a)* Clearance from Last Port (1 copy).
- *(b)* Ballast Manifest from Last Port (1 copy).
- *(c)* Crew List (7 copies).
- *(d)* Steward's Stores List (all foodstuff, liquors, tobacco, etc.), to be declared on a separate and independent sheet (5 copies, see note (2)).
- *(e)* Deck and Engine Stores and Spare Parts List (paints, varnishes chains, ropes, etc.), to be declared on a separate and independent sheet (5 copies, see note (2)).
- *(f)* Medicine Chest Lists (including narcotics accurately itemised (5 copies).
- *(g)* Slop Chest Lists (5 copies).
- *(h)* Personal Effects Lists (4 copies).
- *(i)* Sailing Permit (issued by Maritime Authority at Last Port of cal (1 copy).
- *(j)* Passenger and Baggage Lists (if any) (2 copies).
- *(k)* List of Passengers in transit (if any) (4 copies).

(2) Both the Steward's Stores List, the Deck and Engine Stores an Spare Parts List may be prepared on board prior to the vessel's arriva The Steward's Stores List must be comprehensive and accura especially with regard to cigarettes and liquor. All new clothing, gif souvenirs, etc. are to be clearly marked. All personal effects of the cre are to be collected and placed in the Bonded Stores Locker, ready fo sealing by the Customs Authorities on arrival.

Although vessels proceed directly to Punta Cardon, clearance documents should be made out showing the port as "Las Piedras, Paraguana (Punta Cardon)". Failure to comply with this requirement may result in fines up to a max. of U.S. $600.00.

(3) Clearance documents out-bound: Outward Clearance and cargo documents are delivered on board by the Ship's Services Representative.

In the event that the berth is required by another vessel, a vessel having completed loading may be required to vacate the berth promptly and proceed to anchorage to await cargo documents and clearance.

APPROACHES: Restricted Fishing Area. Masters when approaching coast should keep a particularly sharp lookout for fishing boats, nets and small craft.

Mechanically propelled vessels drawing more than 5 ft. are prohibited from navigating in the restricted fishing area that extends off Paraguana Peninsular from Punta Macolla, Lat. 12° 05′ 32″ N., Long. 70° 12′ 55″ W. to Punta Estanques (Los Taques), Lat. 11° 48′ 45″ N., Long. 70° 16′ 45″ W., and a line connecting the position indicated below:

(a) Lat. 11° 37′ 12″ N., Long. 70° 14′ 25″ W.
(b) Lat. 11° 37′ 30″ N., Long. 70° 19′ 23″ W.
(c) Lat. 11° 37′ 36″ N., Long. 70° 21′ 50″ W.

Leading Lines:

	Position			*Height in Metres*
Jetty	*Latitude* N.	*Longitude* W.	*Colour*	*(LWS)*
I	11° 37′ 19.2″	70° 13′ 54.6″	Green	4.70
	11° 37′ 23.1″	70° 13′ 47.6″	Green	14.20
II	11° 37′ 32.0″	70° 14′ 02.0″	Red	4.83
	11° 37′ 35.9″	70° 13′ 55.1″	Red	14.30
III	11° 37′ 08.1″	70° 13′ 53.5″	White	3.06
	11° 37′ 09.1″	70° 13′ 50.6″	White	14.94
IV	11° 37′ 41.9″	70° 14′ 12.0″	Blue	5.10
	11° 37′ 42.4″	70° 14′ 09.4″	Blue	21.54

Navigation Aids:

A light is located on the outer radio tower.

Position: Lat. 11° 38′ 03″ N., Long. 70° 13′ 56.2″ W.

Characteristics: Fl. White and Red, ev. 10 sec. Height 205 ft. (62.5 m.) 21 miles (U).

Sectors: Red 340° – 009°, White 009° – 202°, Eclipsed 189° – 340°. (All bearings are true from seaward).

2 large chimneys are very conspicuous in the Refinery Area. The North chimney is situated Lat. 11° 37′ 54.6″ N., Long. 70° 13′ 10.8″ W. Height above MLWS 399.6 ft. (121.8 m). The South chimney is situated Lat. 11° 37′ 52.9″ N., Long. 70° 13′ 09.8″ W. Height above MLWS 396.3 ft. (120.8 m.). For daylight distinguishing marks, both are painted with broad red and white bands and at night both have a string of all round fixed red lights at the top and the same at the middle height.

PILOTAGE: Pilots are employees of Venezuelan Government and pilotage is compulsory for vessels entering or leaving harbour. The Ship's Services Office will arrange for this service at any time. If it becomes necessary for Master of the vessel to disregard Pilot's orders in order to ensure safety to the ship, the Master must promptly submit a written report to the Harbour Master on the matter, via the Ship's Services Representative, stating reason for this action.

Pilots sustaining injuries: It is compulsory to submit a full report in cases where a Pilot is injured while performing duties on board vessels.

Agent's Notice to Masters: Dated July 1986.

Subject: Pilot Service from/to Punta Cardon

Harbour Master's Office has issued new regulations. Here below are mentioned regulations:

1. Pilot service from Punta Cardon is only compulsory when Masters are crossing the channel of Lake Maracaibo for the first time. If this is not the case, the Pilot should be then embarked at San Carlos.
2. Upon your request this Pilot service can be arranged by the Agency.
3. On departure, Pilot service to Punta Cardon is not required.
4. If Official Pilot is unable to disembark at San Carlos due to difficulties on board or by *force majeure*, or if you decide to change the instructions given to the Agency with regard to Pilot disembarking San Carlos, a letter addressed to the Harbour Master stating your reasons should be handed to the Pilot before he disembarks in Cardon.

Master's Note: With regard to the above, on reflection the content of the letter from Agent may not be too clear to those not familiar with this area. At risk of stating the obvious, what this Notice is saying is that pilotage inwards from the "EM" Buoy, to the San Carlos Pilot Station is only necessary on the Master's first visit to a Lake Maracaibo Port. Thereafter he may navigate the Outer Channel without a Pilot. The Outer Channel Pilot is taken at Punta Cardon on the inward passage, and disembarked there on the outward passage, should a Pilot be so required.

Shipmaster's Report: January 1989.

Punta Cardon is no longer a pilot station. The new station is Guaranao Pilot Station. The embarkation/disembarkation zone is located between the following 4 points:

A.	Lat. 11° 40.0′ N.	Long. 70° 15.5′ W.
B.	Lat. 11° 41.5′ N.	Long. 70° 15.5′ W.
C.	Lat. 11° 41.5′ N.	Long. 70° 16.5′ W.
D.	Lat. 11° 41.0′ N.	Long. 70° 16.5′ W.

ANCHORAGE: The anchorage at Cardon roads within a radius of 2 miles from end of jetties has depths varying from 54 ft. to 100 ft. (LWS) and a bottom consisting of mud with some patches of small stones, sand and shells. There are no known obstructions from West to N.W. of the Piers and there is ample water for a clear approach when coming from West and N.W., but the anchorage is limited on the South by a sandspit projecting 1 mile S.W. off Punta Cardon Cape. A beacon is located on this Sandspit in position: Lat. 11° 36′ 03.4″ N., Long. 70° 14′ 15.6″ W. Fl.R. ev. 1 sec. 17 ft. 5 miles (U).

MAX. SIZE:

Jetty/Berth			*Depth LWS* (ft. in.)	*Draft* (ft. in.)	*Length* (ft.)	*Displac.* (tons)
No. 1	North Outer	(3)	42 00	39 06	710	25,000
	South Outer	(4)	42 06	40 00	710	25,000
	North Inner	(1)	31 06	30 00	575	25,000
	South Inner	(2)	32 06	31 00	575	25,000
No. 2	North Outer	(3)	43 00	40 06	710	25,000
	South Outer	(4)	41 06	39 00	710	25,000
	North Inner	(1)	21 00	19 06	424	25,000
	South Inner	(2)	23 00	21 06	424	25,000
No. 3	North Outer	(3)	47 00	44 06	900	62,000
	South Outer	(4)	48 00	45 06	900	62,000
No. 4	North Outer	(3)	47 06	45 00	900	54,000
	South Outer	(4)	47 06	45 00	900	54,000

RADIO/VHF: Arrival messages (ETA). Master of vessels bound for or diverted to Cardon are requested to radio the following information to "Maraven. Caracas" via La Guaira Radio, call sign YVG, 72 hours in advance of estimated arrival, or as soon as possible.

(a) Name of vessel
(b) Flag
(c) ETA
(d) Last Port.
(e) Master's name
(f) Number of crew and passengers
(g) Port for which the vessel is cleared
(h) Quantity of clean ballast on board
(i) All requirements

This information is of the utmost importance to the Harbour Authorities in facilitating the entry of vessels in general, and in case of diversion.

VHF Radio Telephony. The radio and communication centre is located in the Oil Movements Office Building situated at the foot of Pier No. 2 at a height of 50 ft. above sea level. The roof of the building is painted black and the word "Marine" painted across in large white letters.

There is an R/T set operating 24 hours a day on the following frequencies, and manned by English speaking operators:

156.6 MHz	FM	VHF	(Channel 12)	Range	limit	25	miles
156.8 MHz	FM	VHF	(Channel 16)	,,	,,	25	,,
2120 kHz	AM	HF		,,	,,	150	,,
2182 kHz	AM	HF	(Channel 1)	,,	,,	150	,,
7620 kHz	(SSB)	HF	(Channel 3)	,,	,,	300	,,

Call sign: "Marine Cardon".

Vessels not equipped with radio telephone may call the installation by signal lamp (Aldis lamp) whereupon the service launch will be sent out to vessel to pick up any message it may have.

Shipmaster's Report: 1993.

VHF Channels 16 and 12 used. It is important to call and listen on Channel 12.

TUGS: 2 tugs of 2,700 h.p. are available, and their assistance is compulsory for berthing. Number, disposition and manoeuvres of tugboats are directed by the Pilot. The following tug signals in practice in this port are listed below for Master's guidance:

Short blasts are used to give orders to the tug situated ahead.

Long blasts are used to give orders to the tug situated aft.

1 blast means *push* tug engine, ahead (if it is stopped); *stop* tug engine, stop (if it is moving).

2 blasts, *pull* tug engine, astern.

1 long, 1 short, 1 long and 1 short whistle, "Calling tugs".

2 long and 2 short whistles, "Tugs Dismissed".

BERTHING: Without exception ships always moor head-in on all berths. It is considered prudent to have the outboard anchor hove out prior to approaching piers to facilitate speedy release while docking if necessary. Vessels are to be moored to satisfaction of the Port Services Superintendent or his deputy; mooring lines must be tended regularly and kept hove taut to prevent surging and possible damage to ships, docks or hoses. When adjusting mooring lines, the assistance of harbour tugs should be requested before slackening off any mooring line.

BALLAST: It is suggested that vessels nominated to load at this installation arrive with the minimum of ballast on board, necessary for the safe handling of the vessel under normal conditions. In this connection experience has shown that, under normal weather conditions, vessels can be safely berthed and unberthed with a quantity of ballast of approximately 25% of their respective Summer deadweights. Clean ballast can be pumped into the sea, but Masters are reminded that pollution of the sea incurs heavy fines. Dirty ballast can be received ashore. Maximum discharge pressure to shore installation is 150 p.s.i. in the 20 in. ballast line of Jetty No. 2; Jetties No. 1 and 4 have a 24 in. ballast line, and Jetty No. 3 has a 16 in. line. Masters are requested to endeavour to arrive at this port with 20% SDW ballast.

MEDICAL: Facilities are available for medical and dental treatment, vaccination and hospitalisation in a private clinic.

Emergency cases will be attended to at all times.

Masters requiring medical or dental service or vaccination for their crew members should call Ship's Services by dialling 2105. Our representative will make the necessary arrangements with the clinic and arrange for transportation to pick up the crew members on the pier and to take them to the clinic and back. Any crew member who is sent ashore for medical or dental treatment, and who does not speak English or Spanish, must be accompanied by a crew member who speaks one of these languages.

Doctors do not attend patients on board. In serious cases where the patient is unable to walk an ambulance will be provided to take him to the hospital.

FRESH WATER: Fresh water is available at all berths. Loading rate is 30 t.p.h.

FUEL: Available if advance notice given. Funds at to be remitted to Chase Manhattan Bank, One Chase Manhattan Plaza, New York, 24 hours in advance to Maraven S.A. (Account No. 001-1-992773).

REPAIRS: Shore facilities are available for emergency repairs of a minor nature. The nearest dry docks are located at Puerto Cabello and Curacao, N.A. Request for repairs should be mentioned in the ship's ETA message.

CUSTOMS: Venezuelan National Guards are stationed at the piers to ensure that vessels in port comply with regulations.

1. *Smuggling.* Strict compliance with the Customs laws of the country is enforced by the Authorities and Masters are strongly advised to caution crew members against attempting to smuggle ashore cigarettes in carton lots, cigars, tobacco, souvenirs, gifts (particularly items of women's apparel) or other articles. A maximum of twenty cigarettes per person for personal use is allowed to be carried but a greater quantity will result in the imprisonment of the offender with possible heavy fines and delay to the vessel.

2. *Bar.* On Customs Authorities instructions vessels maintaining a "Bar Service" on board for the use of officers, crew, passengers and visitors, must keep the bar closed during the vessel's stay in port.

3. *Firearms.* Firearms on board any merchant vessel calling at Venezuelan ports must not exceed one per officer, nor can the ammunition exceed 18 cartridges per officer. All firearms and ammunition must be declared on Stores List. Officers must not carry firearms while ship is in Venezuelan waters. Said arms should be collected together with the ammunition and held in the Master's safe custody. Crew members should be warned against taking knives or other weapons ashore as these will be confiscated and the bearer fined.

CERTIFICATES: All ships arriving in Venezuelan ports for the first time must be measured by the Maritime Authorities for issuance of a Venezuelan Tonnage Certificate, known as "Certificado de Arqueo". This document gives the measurements and weight of the vessel in accordance with existing laws. The cost of measuring and issuing of the Certificate is contingent on size and tonnage of vessel.

It is usual practice to take ashore the ship's "General Arrangement" and "Capacity" plans, which are used as a basis for calculations. These plans and the Venezuelan Tonnage Certificate are later forwarded to ship's Owners.

Vessels registered in following countries are exempt from above regulations, due to existing reciprocal agreement with Venezuela: Denmark, France, Germany, Great Britain, Ireland, Netherlands, Norway, Portugal, Sweden, U.S.A.

The Venezuelan Tonnage Certificate is used in calculating Venezuelan Government Port charges, such as Port Captain Habilitation for entry and despatch of vessels and Pilotage Dues, for all vessels except those registered in the countries mentioned above, in which case the Lloyd's Registered Tonnage is used.

TIME: Local time is GMT minus 4 hours.

HOLIDAYS: By order of the local Port Authorities it is requested that all ships in port be fully dressed on the following national holidays: January 1st, April 19th, July 5th, July 24th, October 12th, December 25th.

TELEPHONES:

Communications Office (General and Port Information, 24 hours service), 2604. Ship's Service Office (All services to ships: mail, doctor, taxi, papers, etc., 24 hours service), 2105. Agents' Office (Weekdays) (0700 to 1200 – 1300 to 1600 hrs.), 2125. Loading Supervisor (Re cargo and bunkers), day, 0700 to 1600 hrs., 2821/2133; at night, after 1600 hrs., 2133.

SHORE LEAVE: Shore leave is permitted and Harbour Master's representative who boards vessel on arrival issues the required number of shore passes. These passes must be shown when proceeding ashore to the Government and Company Guards at the gangway and refinery gates. They are to be collected by Master prior to sailing and handed to Pilot unberthing the vessel. Masters are reminded that in accordance with the instructions of local police, crew members be properly dressed before leaving the vessel, i.e. long trousers and shirts.

Masters are requested to have shore leave expire at least 2 hours before expected departure. Men then found missing should be reported to the Ship's Services Office, Tel. 2105, who will endeavour to locate them. An officer must accompany shore personnel in order to identify the missing crew member.

Vessels are not permitted to sail until all crew members are on board, unless said crew members are hospitalised or previously signed off by the Master through the Ship's Services representative. If any crew member is missing at sailing time and cannot be found, his passport and other personal documents must be handed to the Ship's Service representative, as well as written instructions as to his repatriation, when found. All costs and expenses of a crew member so left behind will be for ship's account.

GENERAL:

1. *Animals:* The importation and transit of all birds belonging to the genus parrot or parakeet is prohibited. For other birds a valid health certificate is required. For so-called "small animals" e.g. dogs, cats, monkeys, rabbits, etc. a valid health certificate and a valid rabies vaccination certificate are required.

2. *Bonded Stores:* Stores in bond are not obtainable in Punta Cardon. The nearest port with bonded stores facilities is Curacao.

3. *Board of Trade Gangway:* A safe gangway must be provided by the vessel and should be rigged as soon as possible after mooring to allow the Port Authorities to board, and should not be taken in until Pilot has boarded to unmoor vessel. The use of rung ladders, pilot ladders, etc. is contrary to Port Regulations and Port Authorities will not board except by means of a safe gangway or accommodation ladder.

4. *Damage during Manoeuvres:* When a vessel or the pier sustains damage during manoeuvres with an official Pilot on board, it is the responsibility of the Master to submit to the Ship's Services representatives, immediately after the accident, a report in quintuplicate, for presentation to the Harbour Master. Such reports should give full details of the accident and of all engine movements as ordered by the Pilot, as well as a sketch in triplicate of the ship's manoeuvring position at the time. These will be translated by the Agents into Spanish and forwarded to the Harbour Master.

5. *Cash Advance to Masters:* Cash advances to Masters are made only in Venezuelan currency, which is the Bolivar. Cash requirements should be included in the vessel's ETA message. Foreign currencies are accepted in the United Seamen's Service Club.

6. *Rat-guards:* By order of the Port Authorities rat-guards must b fitted to all mooring lines. Non compliance entails a fine of 200 Bolivar for each unguarded line.

7. *Kerosene, Motor Gasoline, Gas-Oil, Solvents:* Supplies for ship purposes are available in drums. The return of empty drums ashore i prohibited by Customs regulations. Therefore the cost of each drum w be billed to the vessel in the Port Disbursement Account.

8. *Lubricants, Oils and Greases:* Supplies of products are availab Vessels arriving at Punta Cardon on Saturday or Sunday or on a holida should give ample notice of their requirements by cable in order th the necessary labour arrangements for delivery can be made. Th procedure also applies to the delivery of white oils mentioned unde 7 above, when required outside working days.

9. *Laundry Service:* Laundry service is available throughout eac working day. Such service should be requested in the vessel's ET message.

10. *Wireless Transmitters in Port:* It is strictly prohibited to use vessel wireless transmitters in the Port of Cardon. Non-compliance with th regulation may result in a fine being imposed on the vessel by th authorities.

11. *Mail:* On vessels' arrival, blank Mail List Forms will be handed t the Master to be completed in sextuplicate and duly signed by him, whe sending ship's and crew mail ashore for posting. Ship's mail receive after ship has sailed, or for vessels on which no advice has bee received, will be held for 15 days and then returned by airmail to th owners or operators or senders, at ship's expense unless speci instructions have been received beforehand.

12. *Marine Surveyors:* Both the Lloyd's Agents at Maracaibo an Norske Veritas at Caracas have a representative in Punta Cardon wh acts on their behalf when a surveyor is requested. However, in the cas of continuous or classification surveys, advance notice of 4 days shou be given in order to arrange for an appointed surveyor to come fro Caracas. There is also a representative of the American Bureau o Shipping in this area (Caracas).

13. *Miramar Club:* Masters, chief engineers and their wives can vis the Miramar Club. For this purpose entrance passes should b requested from the Ship's Services Office, tel. 2105.

14. *Manaure Bathing Beach:* The above mentioned bathing beac is open to all ship's staff and crew members.

15. *Navigation Charts:* Navigation charts are not available at this por

16. *Passengers:* Movement of passengers over Cardon Piers i subject to restriction under terms of agreement with the governmen Passengers will not be permitted to disembark unless in possession o the required Venezuelan visa and travel documents. If passengers ar carried, Master should so advise in his radio ETA so that arrangemen can be made for Immigration Authorities to visit vessel on arrival an thus facilitate clearance.

17. *Petroleum Inspection:* E.W. Saybolt, petroleum inspectors, ar available in this area. Contact can be made through the Loadin Supervisor (Tel: 2821).

18. *Personnel – Seamen Left Ashore:* In the case of seamen le ashore for hospitalisation, repatriation, desertion or other reasons, a documents and personal effects are to be handed to the Oil Movemen Department's representative before sailing. A letter is required from th Master advising the maximum advances, if any, to be made to th seamen, and instructions concerning his repatriation. All expense incurred by seamen left ashore, including cost of repatriation, are t ship's account. It is important that Masters bear in mind that th Venezuelan law will at all times hold the vessel, her Master, or Owne responsible for any seamen left behind in Venezuela.

19. *Photographing:* The taking of photographs within the bounda fence of the Cardon Refinery is prohibited. Taking cameras ashore i likewise prohibited.

20. *Provision and Stores:* Provisions and stores are availab Requisitions should be conducted through the Ship's Services Offic Telephone number 2105 or the Ship's Services representative when h calls on board with the authorities on arrival. Ships' chandlers are no permitted to visit ships, unless specifically instructed to do so by th Agents.

21. *Radar and Radio Repairs:* Repair and maintenance services fo radar, radio, gyro compass, radio direction finder, echo sounder, et are available. The repair man should be contacted through the Ship' Services Office, telephone number 2105.

22. *Safety of Personnel:* It will be appreciated that persons intoxicate by alcoholic drinks can create risks of accidents; therefore we ask th Master's co-operation to ensure that these persons do not enter th refinery gates and/or board their vessel unless accompanied by sobe members of their crew. In this connection we will advise the Master o one of his officers, so that measures can be taken to ensure the safe of the forementioned person(s) e.g. by sending one or more of the cre to the gate to accompany him (or them) to the ship.

23. *Visitors:* Visits to ships are prohibited except from those compa employees, petroleum inspectors, etc., whose duties require the presence on board.

24. *Staff and Crew Changes:* No staff and/or crew should be engage or discharged without consulting Ship's Services (telephone 2105). I case of discharge, identification documents must be handed to the Ship' Services representative or the Norwegian Consular Officer in the cas of Norwegian vessels.

25. *Tank Cleaning and Mopping:* Several contractors in the are provide labour for tank cleaning and mopping. Masters in need of th service should submit their requirements to the Ship's Services Offic (telephone 2105), who will contact and request a contractor to go o board to discuss details and estimate costs of work to be effected. I must be pointed out that the Master of the vessel is solely responsib for the proper fitness of the ship's tanks for loading his next cargo, an will therefore be held liable for any contamination of the cargo aft loading, due to inadequate tank cleaning. Therefore it is up to him t decide the degree of tank cleaning necessary. He may, of course, se

advice from the installation representative in this respect, whenever there is any doubt.

26. *Turnaround:* To promote the economical operation of their vessel, Masters are requested to co-operate with installation representatives in minimising their in-port time. Any delays which are considered unnecessary or extensive should be reported to the loading Supervisor (Tel. 2133) so that corrective measures can be taken.

REPORT: February 1991.

The following telex was sent to a Master by the Agent.

Quote:

Latest Instructions Received from Coast Guard and Port Captaincy with Reference to National Security Enforcement:

(AAA) Arrival and departure transit of vessel to the terminal of Punta Cardon.

(AA1) All vessels should arrive at following position:
Lat. 12° 10′ N.
Long. 70° 40′ W.

(AA2) Then, they have to proceed to the following position (course 180°):
Lat. 11° 46′ N.
Long. 70° 40′ W.

(AA3) In order to arrive at terminal of Punta Cardon it is compulsory to pass through Coast Guard control zone at the following area:
(A) 11° 40′ 15″ N. 70° 22′ 30″ W.
(B) 11° 40′ 15″ N. 70° 26′ 00″ W.
(C) 11° 37′ 00″ N. 70° 26′ 00″ W.
(D) 11° 37′ 00″ N. 70° 22′ 30″ W.

(AA4) After passing through Coast Guard control you may go ahead to the anchorage zone which is as follows:
Parallels 11° 40′ 00″ N. and 11° 38′ 00″ N.
Meridians 70° 17′ 00″ W. and 70° 15′ 30″ W.

(BBB) Arrival and departure information should be transmitted by radio on VHF Channel 16 to Coast Guard or Guaranao Pilot Station (Port Captaincy of Las Piedras):

(BB1) Once you arrive at the position referred to in (AA1) above you should start calling the Coast Guard (if you do not receive any answer then call Guaranao Pilot Station).

(BB2) Following information should be passed to them:
Agency name.
Vessel's name.
ETA/Port.
Last Port.
Call Sign.
Kind of vessel.

Please note that all this information should be provided by us (agent) to the port authorities 48 hours prior to the vessel's arrival. Once you arrive at Point (AA1) above same information must be reported to authorities, thence you may be authorised to transit from Point (AA3) to (AA4) above.

If there is something different in the information, your vessel may be requested to anchor in the zone mentioned in Point (AA3) above and wait until Coast Guard boards your vessel and checks all the information again.

Please note that even when all information is correct your vessel may be requested to anchor for routine check.

(BB3) Upon departure you should contact Coast Guard/Port Captaincy and inform them about your departure and transit through zone indicated in Point (AA3)/(AA2)/(AA1).

If all the above procedure is not followed by you, your vessel will be requested to anchor for about 48 hours in area referred to as Point (AA3).

We highly appreciate your co-operation in order to avoid any unnecessary delay for your vessel.

NOTES

Please also advise Shipping Guides Ltd.

Socialist Republic of Vietnam

GENERAL:

The following ports are open for international trade:

1. Ba Ngoi
2. Campha
3. Can Tho
4. Cua Lo
5. Danang
6. Haiphong
7. Hon Chong
8. Hongay
9. Le Mon
10. My Thoi
11. Nam Can
12. Nghe Tinh
13. Nha Trang
14. Quy Nhon
15. Saigon
16. Vungtau

The following small ports are also open to international trade, and information on these ports will be included in a latter edition of the Guide.

Thanh Hoa Port: Pilot Station at Lat. 19° 40.6′ N., Long. 105° 57.8′ E. Contact: Vosa Haiphong.

Dong Thap and Vinh Thai Ports, located on the rivershore at Tien Giang. Pilot Station at Lat. 09° 26′ 23″ N., Long. 106° 30′ 48″ E. Contact: Vosa Vung Tau or Vosa Saigon.

DOCUMENTS: (All ports).

Arrival Procedure:

(a) Arrival documents to be filled in or signed:

Clearance from Last Port.
2 copies Declaration of Arrival.
8 copies Crew Lists.
8 copies Passenger Lists.
2 copies Health Declaration.
Crew Personal Effects (individual declaration).
Passengers Personal Effects (individual declaration).
5 copies Dangerous Cargo Declaration.
5 copies Cargo Manifest.
5 copies Cargo Plan.
8 copies List of Articles Forbidden to be Used in Port.
Zoological Quarantine Declaration.
Ship's Stores Manifest.
Phyto Sanitary and Fumigation Certificates.
Veterinary Certificate.
Phyto Quarantine Certificate.
Application for Crew Members and Passengers Shore Passes (to be returned before Ship's Departure).

(b) Arrival documents to be submitted to Port Authority:

Ship Safety Construction Certificate.
Ship Nationality Certificate and Navigation Certificates.
International Load Line Certificate.
International Tonnage Certificate.
Safety Radio Telephony Certificate.
Safety Equipment Certificate.
International Certificate of Vaccination for Passengers and Crew.
Ship's Derat (or Exemption) Certificate.
Seamans Passports or Seaman's Books of Crew and Passports of Passengers.
Transit Cargo Manifest.
Zoological and Botanical Transit Cargo Manifest.
Certificates of Competency of Officers and Engineers (for all Officers onboard).
Certificates of Proficiency in Manoeuvring Lifeboats.
Foreign Currency Declaration and Invoices.
International Oil Pollution Prevention Certificate.

Departure Procedure:

2 copies Declaration of Departure.
3 copies Health Declaration.
6 copies Outward Cargo Manifest.
6 copies Crew Lists and Passenger Lists (if changes).
6 copies Personal Effects Declaration.

PILOTAGE: Pilotage is compulsory for all vessels entering or leaving Vietnamese Ports, as well as when mooring, unmooring and shifting berths in harbour.

Request for Pilots at every port by international signal code for sea pilots and on VHF Channel 16.

RADIO: All communications for ship movements through radiotelephones of Harbour Offices on VHF Channel 16.

Agents, receivers, etc. can be called through Coastal Radio Stations, this includes Vosa, who are located at every port.

Notice of Arrival: ETA message to be given 48 hours prior to ship's arrival, including particulars of vessel and cargo on board. 4 hours prior to arrival send correct time of arrival.

HEALTH: Usual international health regulations are to be observed. Any vessel, which is suspect, should inform Harbour Office and Medical Office.

Medical assistance, if required, is available, including vaccinations and inoculations, as well as dispensary and hospital treatment in all ports.

International code quarantine signals to be shown on arrival at port limits. No person, except Pilot and Port Authorities, may board or leave the ship until Free Pratique is given after port health inspection.

TIME: Local time in Vietnam is GMT plus 7 hours.

HOLIDAYS: New Year's Day (last day of December, 1st and 2nd January); Day of International Worker's Solidarity (1st May); National Day (2nd and 3rd September).

AGENCY: All foreign vessels upon arrival at Vietnamese ports are attended by the Vietnam Ocean Shipping Agency (Vosa).

There are Vosa branches at every port. Cable address of any branch is "Vosa":

Vosa Hongay, Vosa Campha, Vosa Haiphong,
Vosa Ben Thuy, Vosa Danang, Vosa Quynhon,
Vosa Nhatrang, Vosa Saigon, Vosa Vungtau, Vosa Can Tho.

All branches of Vosa work round the clock, including Sundays.

GENERAL: Commercial vessels may call at all ports officially declared open, if permission from Vietnam Maritime Department obtained at least 7 days in advance of arrival. The arrival should be re-confirmed at least 24 hours before entering territorial waters.

Emergency calls are allowed, but the Maritime Administration should be notified immediately.

Vessels only allowed to leave the Pilot Station when all formalities, such as Free Pratique, Customs, Clearance, etc., have been performed.

Crew members and officers are not allowed to have contact with other than Pilot and Port Authorities during arrival and sailing formalities.

SEARCH AND RESCUE: Maritime Search and Rescue Committee of Vietnam is located at 80 Tran Hung Dao Street, Hanoi (Ministry of Communication and Transport).

There are Search and Rescue Centres at every port (Harbour Office). The Head Office of the Rescue and Salvage Company is located at Ho Chi Minh City, and there are branch offices at Danang and Haiphong Ports.

AUTHORITY: Vietnam Maritime Department (VINAMARINE), 11 Vo Thi Sau, Haiphong, Vietnam.

The Section of Registration and Maritime Safety (VINAMARINE), 11 Vo Thi Sau, Haiphong, Vietnam. *Contact:* Tran Thanh Minh, Director.

BA NGOI: 11.48 N. 109.12 E.

AGENT'S REPORT: April 1994.

PILOTAGE: Compulsory.
Pilot Station Co-ordinates: Lat. 11° 48′ N., Long. 109° 12.5′ E.
Distance from Pilot Station to Port: 9 miles.
RESTRICTIONS: Draft 6.50 m.
TUGS: 1×400 h.p.
BERTHING: Quay length 81 m.
Mooring Buoys: 3.
Average Handling Rate: 1,800 tonnes/day.
CRANES: 2×5 tons and 1×15 tons mobile cranes.

CAN THO: 10.03 N. 105.42 E.

DOCUMENTS: See "General" before first port.

PILOTAGE: Pilotage is compulsory for all vessels that enter or leave the Port of Can Tho.

Pilot boards at correct time of arrival at "Zero Buoy" in position Lat. 09° 28′ 57″ N., Long. 106° 30′ 23″ E. During bad weather, Harbour Master will advise, by VHF, the position where Pilot may board in safety.

RESTRICTIONS: Pilot boards during daytime only.

ANCHORAGE: In "Zero Buoy" area with max. depth 12.00 m.

MAX. SIZE: LOA – No restriction. Draft 7.0 m.

HEALTH: See "General" before first port.

RADIO/VHF: Communications available on VHF Channel 16 and ICOM IC-M700 on 8,743.7 kHz. with Vietnam Ocean Shipping Agency, Can Tho Branch (VOSA CANTHO) and Port of Can Tho Authority, stand-by daily, including Sundays and holidays, 0700 hrs. – 1100 hrs. and 1300 hrs. – 1700 hrs.

TUGS: 1×135 h.p. and 1×1,400 h.p.

BERTHING: Two quays with total length 140 m., depth 9.0 m.

STEVEDORES: 4 shifts: 0700 hrs. – 1100 hrs., 1300 hrs. – 1700 hrs., 1900 hrs. – 2300 hrs. and 0100 hrs. – 0600 hrs.

CRANES: 3 shore cranes of 10 tons, 15 tons and 20 tons capacity.

FRESH WATER: Available at berth.

FIRE PRECAUTIONS: Port fire service and City fire service available.

REPAIRS: Deck and engine repairs of medium size possible at Navy factories.

POLICE/AMBULANCE/FIRE: Via Port Authority or Vosa Can Tho.

SERVICES: Shipchandler services available via Vosa Can Tho.

AGENT'S REPORT: April 1994.

Location:	Lat. 10° 03′ N., Long. 105° 42′ E.
Pilot Station Co-ordinates:	Lat. 09° 28′ 57″ N., Long. 106° 30′ 23″ E.
Distance from Pilot Station (Dinh An):	70 miles.
Pilotage:	Compulsory, daytime only.
Restrictions:	Draft 7.00 m.
Tugs:	1×1,400 h.p.
Cranes:	1×5 tons, 1×10 tons and 1×15 tons.
Berth:	Length 141 m. Depth 9.00 m.
Buoys:	1 pair.
Storage:	Warehouse: 3,240 sq.m. Open: 4,500 sq.m.
Container Handling Facilities:	1 crane (45 tons) truck for shifting container.
Barges (for lighterage):	3
Average Handling Rate:	Bagged cargo 500 – 800 tons/day.

AUTHORITY: Port of Can Tho Authority, 14/11 Le Hong Phong Street, Binh Thuy, Can Tho City, Can Tho Province, Vietnam. *Tel:* (84) 01-71-41254. *FAX:* (84) 01-71-41049. *Contact:* Le Minh Khang, Harbour Master.

CUA LO: 18.50 N. 105.45 E.

AGENT'S REPORT: April 1994.

PILOTAGE: Compulsory and daytime only.
Pilot Station Position: Lat. 18° 47′ N., Long. 105° 47′ E.
Distance from Pilot Station to Port: 6 miles.
RESTRICTIONS: LOA 100 m., draft 4.5 m.
TUGS: 1×300 h.p. and 1×500 h.p.
BERTHING:

Quay No.	*Length* (m.)	*Depth* (m.)	*Type of Cargo*
1	160	6.00	All types.
2	160	4.00	

Sheds/Warehouses: 2×5,970 sq.m.
Open Storage: 40,000 sq.m.
Barges (for lighterage): 5×70-700 tonnes.
CRANES: 5×5 ton mobile cranes.

DANANG: (Tourane): 16.04 N. 108.13 E. (See Plan)

DOCUMENTS: To be inspected:
Certificate of Registry or Nationality.
Load Line Certificate.
Tonnage Certificate.
Certificate of Pollution Prevention, and other Safety Certificates.
Permit for Ship's Radio Operation.
International Vaccination Certificates (for crew/passengers).
Transit Cargo Manifest.
Crew's Passports and Passengers' Passports.
Certificates of Competency for Master, Chief Engineer, Chief Radio Officer, Officers and Engineers.
Civil Responsibility Insurance Certificate (for ships carrying petroleum or dangerous cargo).
Foreign Currency Declaration or Crew Luggage Books.
Certificates of Proficiency in Manoeuvring Lifeboats.
Required for Entry:
1 copy Port Clearance from Last Port.
2 copies Declaration of Arrival (Form supplied).
2 copies Declaration of Health (Form supplied).
1 copy Individual Luggage Declaration (Form supplied).
5 copies Cargo Plan and Cargo Manifest (Form supplied).
5 copies Dangerous Cargo Manifest (Form supplied).
5 copies Declaration for all Equipment and Instruments/Tools used during Ship's stay in port (Form supplied).
5 copies Stores List – Deck, Engine and Provisions (Form supplied).
5 copies Crew List (Form supplied).
5 copies Passenger List (Form supplied).
1 copy Declaration of Provisions (Form supplied).
1 copy Zoological/Phyto Quarantine Certificate (Form supplied).
1 copy Application for Crew and Passengers Shore Passes (Form supplied).
Required for Departure:
2 copies Declaration of Departure (Form supplied).
3 copies Cargo Manifest (Form supplied).
1 copy Declaration of Health (Form supplied).
5 copies Crew List and Passenger List (Form supplied).
Also see "General" before first port.
PILOTAGE: Compulsory for all vessels that enter or leave port. Pilot Station at "Zero Buoy" (Lat. 16° 10′ N., Long. 108° 11′ E.), depths at Pilot Station 14.0 m. Pilot requires 8 hours notice.
Pilot boards from a tug during daytime only. Ships arriving at night should anchor in a position close to the Pilot Station.
ANCHORAGE: Pilot station and 45 anchorages in Danang Bay with depths from 10.0 m. – 16.0 m.
RESTRICTIONS: No restrictions in the Danang Bay and anchorage.
MAX. SIZE: Permissible LOA 190 m. Beam 26 m. and max. draft 11 m.
HEALTH: See "General" before first port.
RADIO: Danang Radio, call sign XVT, works 24 hours everyday.
Contact by VHF Channel 16. It is possible to contact anywhere through Danang Radio.
Name: Danang Radio Coast Station.
1. SW: 8 MHz. Call Sign: "XVT".
   Transmit Frequency: 8,570 kHz.
   Receiving Frequency: 8,368/8,369 kHz.
   Working Time: From 0700 hrs. – 2200 hrs. (local time).
   Call Time: The first half of every hour (Call "TRAFICLIST").
2. MW: Transmit and Receiving Frequency: 500 kHz.
   Call Time: From the 35th minute of every hour.
3. R/T – H/F: Listens and answers on frequency 12,290 kHz.
   Working Time: From 0700 hrs. – 2100 hrs. (local time).
4. VHF: Channel 16. 24 hours/day.
5. R/T – M/F: Frequency 2,182 kHz for emergency (24 hours/day).

TUGS: 3 tugs available. 1×1,140 h.p., 1×800 h.p. and 1×480 h.p.
BERTHING: There are 2 areas:
Tien Sa area: 2 quays with 4 berths (one with length 182 m.), depth 9.5 m.
X50 Berth (Navy): 250 m. long with depth 6.0 m.
Song Han area:
1 main berth 530 m. long with depths 4.0 m. – 6.0 m.
1 berth (Song Han 7) 134 m. long with depth 6.0 m.
1 berth (Song Han 8) 90 m. long with depth 6.0 m.
1 berth (Song Han 9) 60 m. long with depth 5.2 m.
1 berth (called 234) 220 m. long with depth 6.0 m.
VHF: Contact with Port Authority and VOSA Danang on VHF Channel 16. Port Authority listen 24 hours. VOSA Danang and Pilot listen during daytime only.
RADAR: Not available.
CRANES: There is one heavy lift floating crane of 100 tons capacity and mobile truck cranes up to 25 tons capacity.
BULK CARGO FACILITIES: No specialised facilities available. Cargoes handled include coal, maize and fertiliser in bulk.
SPECIALISED CARGO HANDLING FACILITIES: No specialised facilities for container handling. Storage space available for palletised cargoes. Ro-Ro ramp available.
STEVEDORES: Ordered by Agent, work continuous throughout 24 hours, except for meal breaks.
BRIDGES: None.
MEDICAL: 6 hours notice required for medical assistance. There are hospitals in town.
TANKERS: Two submarine hoses of 8 in., all kinds of white spirits discharged through both lines. Maximum back pressure 8 kg. Average discharging rate 200 tons per hour per line.
FRESH WATER: Available by barges, arrange with Agent.
FUEL: Fuel oil, diesel oil and lubricating oil available, arrange with Agent.
CONSULS: Russia and Laos.
REPAIRS: Can be undertaken on request to Agent.
DRY DOCKS: Two dry docks for vessels up to 7,000 d.w.t.
SURVEYORS: Cargo Surveyors: Vina Control, 105 Le Duan Street, Danang.
Ship Surveyors: Vires Danang, Branch No. 4, 4 Nguyen Thi Minh Khai Street, Danang.
HATCHES: Opening/closing is normally carried out by crew or stevedores.
REPATRIATION: Possible.
AIRPORT: There is an airport about 5 km. from the city with local flights only:

	Departure	Arrival	
Danang – Ho Chi Minh City:			
Everyday:	0900 hrs.	1000 hrs.	(except Wed.)
	1435 hrs.	1535 hrs.	
Tues., Thu., Sat.:	1635 hrs.	1735 hrs.	
Mon., Wed., Fri.:	1530 hrs.	1630 hrs.	
Sun.:	1200 hrs.	1300 hrs.	
Wed.:	0840 hrs.	0940 hrs.	
Danang – Hanoi:			
Everyday:	0930 hrs.	1030 hrs.	
	1440 hrs.	1540 hrs.	
	1200 hrs.	1300 hrs.	(except Sun., Mon.)

Danang – Pleiku:			
Mon., Wed., Sat.:	1335 hrs.	1415 hrs.	
Danang – Nha Trang:			
Tue., Fri.:	1330 hrs.	1435 hrs.	

TIME: GMT plus 7 hours.
HOLIDAYS: 1st January; Lunar New Year (3 days); International Labour Day (2 days – 30th April and 1st May); National Day (2nd and 3rd September).
POLICE/AMBULANCE/FIRE: Contact Danang Radio (VHF Channel 16) to request telephone No. 13 (Police), 15 (Ambulance) or 14 (Fire); or contact VOSA Danang or Port Authority (VHF Channel 16).
EMERGENCY CO-ORDINATION: S.A.R. Centre of Danang Port based at Harbour Office. Contact with S.A.R. Centre on VHF Channel 16.
SERVICES: Available. Contact VOSA Danang or Ship's Agent.
BANKS: Vietcom Bank, Danang Branch, 104 Le Loi Street, Danang City. Tel: 84.51.23503.
Vietnam Export-Import Bank, Danang Branch, 92D Hoang Dieu Street, Danang. Tel: 84.51.26673, 84.51.26675, 84.51.26676. Telex: 84.51.5730 DN-EIB VT. Fax: 84.51.26674.
Vietnam Maritime Commercial Stock Bank, Danang Branch, 14 Tran Phu Street, Danang City. Tel: 84.51.25804, 25822, 24049. Telex: 311260 MSB VT. Fax: 84.31.45125.
SHORE LEAVE: Permitted via ship's Agent.
IDENTIFICATION CARDS: Shore passes issued.
GARBAGE DISPOSAL: Service is compulsory every 5 days. Ship must provide drums or bags. Charges U.S.$ 20 per time (on berth), U.S.$ 45 per time (at buoys or anchorage). Can be arranged through ship's Agent or VOSA Danang.
WASTE OIL DISPOSAL: Available. Contact ship's Agent or VOSA Danang.
SEAMAN'S CLUBS: Two Seamen's Clubs in the port. Facilities include shops, restaurants, international telephone, church services, football, dances, mini-bus collection and postage service. Arrange through ship's agent VOSA.
CURRENCY: Vietnamese Dong (d). U.S.$ 1.00 = 10,950 d (May 1994).
REGULATIONS: It is strictly forbidden to throw any garbage, waste oil, etc., into the bay or the river. Garbage collected by barge.
DELAYS: In the months from February to August: Good weather with S.E./S.W. winds.
In the months from September to January: Bad weather usually with N.E. wind (Monsoon), and it is often impossible to berth for discharging or loading at Tien Sa Berths, or the tanker berth at My Khe.

GENERAL: Officials boarding on arrival with Pilots: Two armed policemen who remain aboard during ship's stay at anchorage and berth.
Officials boarding for clearing:
2 Port Authority Officers (Immigration Officers).
2 Security Officers.
2 Customs Officers.
2 Quarantine Officers.
Ship's Agent.

SHIPMASTER'S REPORT: 1976 (Updated 1994).
Documents: On arrival usually dealt with immediately by the Immigration Service, Police Service, Customs Service, Agency and Health Service. Ship's Documents: Certificate of Registry, Radio Certificate, Load Line Certificate, Safety Equipment Certificate, Port Clearance from last port. Cargo Documents: Bill of Lading (8 copies), Cargo Manifest (8 copies), Stowage Plan (5 copies), In Transit Cargo Manifest (if any). Immigration: Crew List (7 copies), Stores List (2 copies), Crew's Effect Declaration (2 copies), Passports of the crew.
Health: Vaccination List (2 copies), Provisions List (2 copies), International Vaccination Certificates.

All documents to be ready on arrival. Cameras and binoculars to be collected and placed in a locker, to be sealed. Bonded stores not sealed.
Pilotage: Pilot station at a position Lat. 16° 10′ N., Long. 108° 11′ E. Pilot boards from a tugboat and moves the ship to a position about 1 mile West of Phare de l'observatoire. Pilot boarding during daytime only. Ships arriving at night should anchor in a position close to the pilot station. Pilot will board the ship at 0600 hrs. ETA should be given 48 hours and 24 hours prior to arrival at the pilot station.
Restrictions: There are no restrictions for entering the bay.
Health: A 24 hours cable should be sent to the Agent, stating that all crew are fit and healthy. If any sickness on board cable 48 hours in advance.
Radio:

Call sign	Frequency	Working hours GMT
XVT	500 kHz	0001 – 1200 hrs.
XVT 2	417.5 kHz	0001 – 1200 hrs.
XVT 2	8,570 kHz	0130 – 0145 hrs.
		0830 – 0845 hrs.
		1200 – 1315 hrs.

Radar: There is no radar post.
Tugs: There are 3 tugboats available, 1×1,200 h.p., 2×800 h.p. each. Tug's lines are used if necessary.
Berthing: There is one finger pier of 250 m. and another under construction. The latter to be ready towards the end of 1976. A tanker berth is situated in position Lat. 16° 04′ N., Long. 108° 15′ E., called My Khe. Tankers proceed to this position, after clearance, with Pilot rounding by the peninsula. (See "Plan"). At the cargo pier all discharging is done by ship's gear.
Cranes: There is 1 heavy lift floating crane of 100 tons capacity.
Bulk Handling Facilities: Bulk cargoes are sometimes handled at the port (i.e. maize) but there are no special facilities.
Bridges: No bridges.
Stevedores: Ordered by the Agent. No ETA necessary. Working hours 0001 – 0400 hrs., 0800 – 2400 hrs. Approx. discharging rate general cargo 400 tons/gang.
Medical: Six hours' notice required for medical assistance. There is a hospital in town. Inoculations required for cholera and yellow fever.
Tankers: Two submarine hoses of 8 in., all kinds of white spirits discharged through both lines. Maximum back pressure 8 kg. at ship's manifold. Average discharging rate 200 t.p.h. per line.
Density: Cargo pier brackish depending on the season. At the tanker berth salt.
Fresh Water: Available by barge, rate of delivery 50 t.p.h.
Repairs: Repairs taking longer than 2 hours are not permitted unless permission is granted by the Port Master. Small repair facilities can be carried out ashore. There are no drydocks at this port.
Deck Watchmen: Cargo ships alongside the pier are provided with a gangway watch. Tankers discharging at My Khe will have two security guards on board during the stay in port.
Hatches: Old type hatches opened and closed by shore labour. Special patent hatches by crew.
Customs Allowances: The bonded stores are not sealed. There are no restrictions for quantity of spirits, cigarettes, beer, etc. It is strictly prohibited to supply any bonded stores to shore personnel.
Cargo Gear: There is 1 floating heavy lift crane of 100 tons.
Repatriation: Possible, but takes some time and can be very difficult. Haiphong is a better place for crew changes.
Airport: There is an airport about 7 km. from the town. Air services to Ho Chi Minh City and Haiphong, local flights only, twice a week.
Time: GMT plus 7 hours (no Summertime) is kept along the whole coast.
Holidays: There are no special holidays.
Police/Ambulance/Fire: Via local Agent, telephone number 21161.
Services: There are laundry facilities (2 days ashore) with a 24 hour service. Shipchandler available at all times. Good fresh vegetables and fruits, depending on the season. Also good sea food.
Shore Leave: Permitted via local Agent with 6 hours' notice. Persons with invalid Passport are not allowed to go ashore.
Regulations: It is strictly prohibited to throw any garbage into the bay, heavy fines. Garbage collected by barge.
Delays: Remittance has to be granted by Owners or Charterers before sailing. Without a sufficient remittance the vessel does not receive a clearance.

Alongside the pier berthing and unberthing only between sunrise and 1400 hrs. due to strong winds in the afternoon. At any other time when strong winds are experienced berthing and unberthing not allowed. The fore mentioned also for the tanker berth at My Khe, here berthing is normally carried out during the morning hours, when there are weak winds. During a strong monsoon it is sometimes necessary to stop discharging operations and unberth the ship.

General: Ships calling for the first time at Danang port should give their ETA and call sign, nationality, all other necessary particulars so that the ship can be identified by the Navy. Ships, chartered by the Vietnamese Government should state this also and whether time or voyage charter. Ships carrying general cargo should also give all particulars about the stowage of the cargo, whether any deck cargo, heavy lifts etc.
Agent: Vietnam Ocean Shipping Agency, 1a Quang Trung, Danang. Cable: OSA Danang, telephone 21161.

SHIPMASTERS' REPORT: September 1980 (Updated 1994).
Documents: See "General".
Pilotage: Compulsory. Pilot boards in position Lat. 16° 10′ N., Long. 108° 11′ E. Notice required 24 hours. Daylight only for berthing except in cases of emergency.
Anchorage: In the Bay of Tourane; depth up to 19.0 m.
Restrictions: No restrictions in the bay and anchorage, depth of water up to 19.0 m.
Radio: Danang Radio.
VHF: Pilot on Channel 16.
Tugs: Two tugs available; 1 of 1,200 h.p., the other being used for barge work only.
Berthing: Location Lat. 16° 07.1′ N., Long. 108° 12.6′ E. Two piers available. Distance from sea to berth 4 miles. Max. size permissible LOA 190 m., beam 26 m. and deepest draft 11 m. Least depth of water in channel from sea to berth 13.0 m. Mean tidal range at berth 0.5 m. Nature of bottom at berth – mud and sand. Average density 1016.

Cargo Handling Facilities: No bulk handling facilities or quay cranes available. There is a quarter ramp for Ro/Ro vessels and a 50 ton floating crane. Security is good as armed police are on duty throughout the vessel's stay. There is adequate storage space for break bulk and palletised cargoes. No container handling facilities. Stevedore gangs are available as required and work throughout 24 hours except for meal breaks.
Barges: There are steel barges of various sizes which are towed by tugs.
Services: The following are available: Fresh water; fresh provisions; minor repairs facilities; airport with internal flights only; laundry services; bunker fuel oil; diesel oil; lubricating oil; doctor and hospital; groceries and meats.
General:
Officials Boarding on Arrival with Pilots:

Two armed police who remain aboard during vessel's stay at anchor and berth.

Officials Boarding when Vessel Anchored:
Agent and assistant.
2 Customs Officers.
2 Port Authority Officers (Immigration).
2 Quarantine Officers.
2 Security Officers.
Documentation:
8 Crew Lists.
2 Stores Lists – Deck, Engine and Provisions.
2 Crew Customs Declaration Lists.
2 Currency Lists for foreign money in Crew's possession.
2 Bonded Stores Lists.
1 Health Declaration.
2 Crew Vaccination Lists.
All Vaccination Certificates.
4 copies of Bills of Lading.
7 copies of Cargo Manifest.
2 copies of Cargo Manifest – Cargo in Transit.
1 Form (Supplied) for Ship's Sextants, Binoculars, Cameras, etc.
1 Form (Supplied) for Arrival Details and Times.
All Discharge Books (Passports of Officers' wives collected for safe keeping ashore).
Restrictions:
Main and Emergency Transmitters sealed.
Stornos (Walkie Talkies) sealed.
Cameras sealed.
Bond sealed.
Inspection of all cabins on arrival.
General:

Vessel on 4 hours' notice at all times for sailing or shifting berth. Although bond sealed release of spirits available at any time from Customs.

Very strict on cigarettes with issue of only 200 per week per person. Shore passes issued to all personnel. Shore leave very restricted but bus service available to Seaman's Club nightly from 1800 – 2130 hrs. accompanied by a guard.

Maximum of 20 cigarettes per person for shore leave.

Seaman's Club takes Sterling (£5 notes and above only) and U.S. Dollars.

One sight seeing tour was to have been arranged this call but cancelled due to adverse weather conditions. (Limited number of cameras would have been available on this occasion).

Remittances from Owners take at least 1 month before any cash is made available.

One typoon warning received this call when vessel had to vacate berth and proceed to anchorage.

One emergency vacation of berth at 0300 hrs. this call when heavy swell built up alongside pier.

On departure full inspection of cabins and personnel, discharge books (passports of Officers' wives returned). Shore passes collected. No mail received this call due 1 month delivery time. No restriction on bond for coastal passage Danang to Haiphong.

AGENT'S REPORT: April 1994.
Location: Lat. 16° 07′ N., Long. 108° 13′ E.
Pilot Station Co-ordinates: Lat. 16° 10′ N., Long. 108° 11′ E.

Distance fro Pilot Station to	
Tien Sa:	6 miles.
Song Han (Quay 1,2,3):	9 miles.
Song Han (Quay 7,8)'	10 miles.
Nai Hien:	12 miles.
My Khe Buoy:	24 miles.
Lien Chieu Buoy:	6 miles.
Pilotage:	Compulsory, day and night at Tien Sa.
Restrictions:	Draft: 9.5 m. at Tien Sa. 4.9 m. in Canne. LOA: 200 m. and 230 m. (Ro-Ro).
Tugs:	1×1,140 h.p., 1×800 h.p. and 1×480 h.p.
Cranes:	3×25 ton and 8×5-16 ton mobile cranes. Floating cranes available with 100 tons lifting capacity.

Berths:

Quay	Length (m.)	Depth (m.)	Type of Cargo
Tien Sa:			
1	182	9.5	General cargo, Ro-Ro, passengers
2	182	9.5	General cargo, passengers
3	182	9.5	General cargo, passengers
4	182	9.5	General cargo, passengers
Song Han:			
1-2	195	6.0	General cargo
4-6	335	6.0	General cargo
7	140	3.0	General cargo
8	80	6.0	General cargo
Nai Hien:			
	15	5-5.5	For small tankers. LOA 80 m. only.

Mooring Buoys:	My Khe Area: 4 buoys, depth 13.0 m. Lien Chieu Area: 2 buoys, depth 7.0 m. (both for tankers). Song Han: 3 buoys, depth 6.0 m.
Sheds/Warehouses:	Tien Sa: 15,800 sq.m. Song Han: 11,000 sq.m.
Open Storage:	Tien Sa: 150,000 sq.m. Song Han: 10,000 sq.m.
Container Handling Facilities:	One berth and one terminal at Tien Sa.
Barges (for lighterage):	6, totalling 2,000 tonnes.

AUTHORITY: Danang Port Authority, 1 Bach Dang Street, Danang, Vietnam. *Tel:* 84.51.26203. *FAX:* 84.51.23172. *Contact:* Nguyen Van Thai, Port Director.

HAIPHONG: 20.52 N. 106.41 E. (See Plan)

PORT LIMITS: A line drawn from A0 Point to A1, A2, A3, A4 Points. In addition, there are 4 positions in Hongay Bay, and 5 positions in Halong Bay. In Hongay Bay: HG1, HG2, HG3 and HG4. They are bound by the following co-ordinates (D area):

	Latitude N.	Longitude E.
HG1	20° 55′ 54″	107° 03′ 42″
HG2	20° 56′ 24″	107° 03′ 37″
HG3	20° 56′ 36″	107° 03′ 54″
HG4	20° 56′ 48″	107° 03′ 48″

In Halong Bay: HL3, HL4, HL5, HL9 and HL10. They are bound by the following co-ordinates (D area):

	Latitude N.	Longitude E.
HL3	20° 51′ 34″	107° 07′ 45″
HL4	20° 51′ 45″	107° 06′ 38″
HL5	20° 51′ 50″	107° 06′ 13″
HL9	20° 49′ 10″	107° 05′ 17″
HL10	20° 49′ 17″	107° 06′ 12″

Seaward boundaries of Haiphong port limits within 3 Points F0 (Zero Bucy), F1 and F2. They are bound by the following co-ordinates (A area):

	Latitude N.	Longitude E.
F0	20° 42′ 13″	106° 56′ 42″
F1	20° 40′ 00″	106° 58′ 30″
F2	20° 40′ 00″	106° 54′ 00″

DOCUMENTS: See "General" before first port.
PILOTAGE: Pilotage is compulsory for all vessels that enter and leave ports. Pilot boat arrives at the areas which are bound by the Points F0, F1 and F2 (See "Port Limits") at the correct arrival time, or as instructed by the Port Authority of Haiphong. Pilot boats are painted buff with a red stripe and a yellow star. Contact pilot station on VHF Channels 9 and 16.
ANCHORAGE: To Pilot's advice and permission of Haiphong Port Authority.

There are 4 anchorage areas:

Ninhtiep Anchorage Area with max. draft 7.00 m. There are 4 positions (NT1, NT2, NT3 and NT4).

Bachdang Anchorage Area with max. draft 6.0 m. There are 9 positions (BD5, BD6, BD7, BD8, BD9, BD10, BD11, BD12 and BD13).

Halong Bay Anchorage Area with max.draft over 10.0 m. There are 5 positions (HL3, HL4, HL5, HL9 and HL10).

Hongay Bay Area with max. draft less than 9.4 m. There are 4 positions (HG1, HG2, HG3 and HG4).

RESTRICTIONS: Max. draft to enter the berths of Haiphong Port and Ninhtiep and Bachdang Anchorage areas is 25 ft. Ships with draft over 25 ft. have to operate lighterage at anchorage areas.
MAX. SIZE: At berths, LOA 200 m. Breadth 26 m. Draft 7.0 m.
Berth for Oil Tankers: LOA 70 m., breadth 10 m. and draft 5.0 m.
HEALTH: See "General" before first port.
RADIO: Haiphong Radio handles vessel traffic. Call sign XVG, frequency 500 kHz and 8364 kHz.
VHF: Port Authority on Channel 16, working Channel 10.
TUGS: Tugs available of 500 h.p., 600 h.p. and 3,200 h.p. Tugs are used for escort, rescue, salvage and towage.
BERTHING: Port central area has 12 berths available.

Berth No. 1: Containers.
Berth No. 2: Grain, ore, coal.
Berths No. 3, 4, 5, 6, 8, 9, 10: General cargo.
Berths No. 7: Containers.
Berth No. 11: General cargo and refrigerated cargo.
Berths No. 4, 5: Passenger ships.
Doanxa Area: 2 berths for Ro/Ro or container ships.
Chua Ve Area: 2 berths for general cargo ships.
Thuongly Area: 1 berth for tankers.
Cuacam Area: 3 berths for general cargo ships.
Thuysan Area: 2 berths for fishing vessels and general cargo ships.
Vatcach Area: 3 berths for general cargo ships of less than 1,200 d.w.t.

CRANES: Port Central Area, Doanxa Area and Vatcach Area have shore cranes with capacities of 5 tons, 6 tons, 7 tons, 10 tons and 25 tons.
The Port Central Area, Doanxa Area and Chuave Area have floating cranes of 60 tons up to 200 tons available.
BRIDGES: None.
STEVEDORES: Ordered by Agent (Vosa Haiphong) or other ships' Agents in Haiphong.
Stevedores work 24 hours continuously in 4 shifts.
Loading or discharging rates are those stipulated by charter party or by the agreement between cargo owners and the stevedoring companies.
Particular advice: See "General" – "Radio" – "Notice of Arrival".
MEDICAL: Doctors and hospital facilities available in Haiphong through Agents.
TANKERS: One tanker berth, max. draft 19 ft., depending on the tide. Two tanker anchorage positions in Halong Anchorage Area with max. draft over 30 ft.
DENSITY: Low tide 1000, at berths.
FRESH WATER: Available at berths and at anchorage.
FUEL: Diesel oil and fuel oil can be supplied through Vosa Haiphong.
FIRE PRECAUTIONS: Safety Regulations for tankers and other ships with dangerous cargo.
REPAIRS: Any deck and engines repairs can be performed on request.
DRY DOCKS: Pha Rung Ship Repair Yard nearby. Dry dock available for ships with max. length 150 m. and 10,000 d.w.t. There are other small shipyards in the port area.
SURVEYORS: Cargo surveyors: Vinacontrol, branch in Haiphong City. Ship surveyors: Vietnam Register of Shipping (VIRES), Branch No. 10 at Haiphong City.
GANGWAY/DECK WATCHMAN: Compulsory for the ship's security and safety.
OPENING/CLOSING HATCHES: By the ship's crew, or by stevedores if requested.
CUSTOMS ALLOWANCES: No restrictions for spirits, cigarettes and beer for crews use, but strictly prohibited for commercial purposes.
CARGO GEAR: Cargo handled by ship's cranes or by shore cranes. If shore cranes are used, there must be a request in advance.
REPATRIATION: To Agent's advice.
AIRPORT: Catbi Airport for local services only. Noi Bai International Airport situated about 130 km. from Haiphong Port.
TIME: GMT plus 7 hours.
HOLIDAYS: National Day (2nd and 3rd September); International Labour Day (1st May); New Year (1st January); Tet Holidays (last day of December and 1st and 2nd January of Lunar Calendar).
POLICE/AMBULANCE/FIRE: Contact Port Authority or Vosa on VHF Channel 16.
EMERGENCY CO-ORDINATION: S.A.R. Centre of Haiphong based at Harbour Office, contact can be made on VHF Channel 16 or Tel: 42637, 42682.
TELEPHONES: No connections on board vessels. All operational ports are linked by telephone network.
SERVICES: Tank cleaning equipment, facilities for discharge of tank washings and all kinds of oil residues, oily rags, food wastes, garbage and hazardous substances are available at the port. Compass adjusting, radio and radar repairs, extensions of Ship's Certificates are available at port.
BANKS: State Bank of Vietnam in Haiphong Maritime Bank, 25 Dien Bien Phu Street, Haiphong.
SHORE LEAVE: Crew members are allowed ashore.
DEVELOPMENTS: *1st Phase:* Construction of graving dock (150 m.×25 m.×6.3 m.) and 200 m. length berth with depth 6.5 m.
2nd Phase: Construction of dry dock (180 m.×30 m.×7 m.) and small piers length 100 m. and 150 m.

SHIPMASTER'S REPORT: October 1980.
Documents: See "Shipmaster's Report" for Danang dated September, 1980.
Pilotage: Compulsory. Pilot boards in position Lat. 20° 41′ N., Long. 106° 58′ E. 24 hours' notice required.
Anchorage: The inner anchorage is between the outer bar and the channel cut, depth at LW 8 m.
Restrictions: It is not advisable to enter or leave during hours of darkness as there are only a limited number of lights and buoys.

Max. Size: Max. LOA 200 m., beam 26 m., draft 7.5 m. Lightening facilities are available at Baie d'Halong for vessels with draft of up to 10 m.

Health: Quarantine Authority require 24 hours' notice of arrival.

Radio: Haiphong Radio handles vessel's traffic.

Tugs: Available. 1×600 h.p., 1×500 h.p.

VHF: The Agency (Vietnam Ocean Shipping Agency – VOSA) on Channels 6 and 16. They will forward messages to the Pilot.

Berthing: Berth situated in position Lat. 20° 52′ N., Long. 106° 43′ E. The berth was built in 1976 and is down river from the town berths. In all there are 12 berths available. Our berth was 18 miles from the entrance. Max. size acceptable at the berth, LOA 200 m., beam 26 m. and deepest draft 7.4 m.

Cargo Facilities: No bulk handling facilities; no cranes at this berth but some were sighted at the town berths; no Ro-Ro facilities visible. There is a floating crane with a capacity of 60 tons (approx.). Security is good as armed guards stay aboard the vessel throughout. No container facilities of any kind sighted. Labour works around the clock in 3 shifts.

Barges: Wood and steel barges available, some have engines.

Consuls: None, nearest are in Hanoi.

Services: The following are available: Fresh water; fresh provisions (depending on time of year); minor repair facilities; airport; laundry service; diesel oil; lubricating oil; doctor and hospital; small amounts of groceries and meats.

General: Any vessel intending to remain at the port for a long period of time should have onboard sufficient stores and fresh water prior to arrival, as if vessel at anchor, stores and fresh water can take up to one week to arrive.

SHIPMASTER'S REPORT: November 1981.

Pilot Station: The Pilot boards the vessel at the anchorage which is about 2 to 3 miles S.S.E. from Zero Buoy. Pilot boat is a metal boat about 20 m. length. The funnel is painted buff with a red stripe and a yellow star.

Restrictions: There are 2 mud banks up river. One after the buoyed channel and one after the ship-canal about 1.5 miles before the berths. River draft depends on the tide which varies from 6.4 m. to 7.2 m. at HW. Haiphong port draft about 6.9 m.

Pilotage: The channel from Zero Buoy to Haiphong has buoys but no lights visible and the buoys are often out of position. The channel is very narrow having only a few centimetres' bottom clearance. Pilots are good.

Anchorage: For deeper draft than 6.9 m., ships are lightened at Halong Anchorage. Pilots, Security Officers and Customs Officer board at Zero Buoy and the vessel proceeds to the anchorage via Passe Henriette. Depths are 18 m. to 21 m. and good holding ground. The place is sheltered from all winds except North.

Documents: 1 more copy of Crew List and Money Declaration necessary than stated in "Shipmaster's Report", September 1980 for Danang.

Also see "General".

Security Police: At Halong Anchorage 2 security policemen remain on board, requesting accommodation and food.

Agency: During the vessel's lightening, Agent's clerk remains continuously on board requesting accommodation and food. Any communication with the Agency at Haiphong is done by telegram. Ship's transmitter is unsealed by Security Officer, message sent, and then resealed. Whilst alongside, Agent visits every day and they are quite efficient.

Stevedores: At Halong Anchorage, a barge with quarters for the stevedores comes alongside the vessel. Chief Stevedore is always available speaking efficient English. Discharging performed by vessel's derricks with shore grabs. Rate about 1,500 metric tons per day. At Haiphong berth discharging performed by shore cranes with a rate of about 1,800 – 2,000 metric tons per day. Haiphong Port has a berth accommodating ten large ships. There are about 25 shore cranes from 10 to 15 tons capacity and we have seen 1 floating crane of about 200 tons.

Ship Chandler: Fresh provisions are poor quality and only small quantities available. Low prices. Also ship chandler takes care of sick crew members for hospital and doctors.

Shore Leave: From Halong Anchorage crew are not allowed to go ashore. At Haiphong berth shore leave allowed from 0700 – 2300 hrs. All foreign currency, rings, watches, must be declared at the gate.

Repatriation: Agent assures Master that repatriation is very easy, however the need of formalities and permissions will take a long time.

Health: Quarantine doctor will revaccinate any crew member with expired certificate.

Communications: VOSA Agency has VHF Channel 16 and it is possible to contact them from Zero Buoy. Communication with Owners is very slow and the cable needs 2 to 3 days to reach the destination. Crew mail requires more than 40 days to reach the vessel.

Density: Halong anchorage 1020. Haiphong port 1000.

General: A lot of people visit the vessel claiming that they are Harbour Officers, Chief Stevedores, Receivers, Surveyors, Stevedores, Customs Officers, Security Officers.

IMPORTANT: Stevedore's barge which is alongside the vessel at Halong Anchorage is full of rats, which come on board via ladders and other ropes, with result that the vessel becomes infested with rats.

Ships must have on board, from their previous port of call, sufficient quantity of rat poison to kill them after sailing from Vietnam.

AGENT'S REPORT: April 1994.

Location:	Lat. 20° 52′ N., Long. 106° 41′ E.
Pilot Station Co-ordinates:	Lat. 20° 42′ 01″ N., Long. 106° 57′ 08″ E.
Distance from Pilot Station:	20 miles.
Pilotage:	Compulsory, day and night.
Restrictions:	Draft: 7.5 m. (channel) LOA: 170 m.
Tugs:	From 600 h.p. – 3,200 h.p.
Cranes:	5-15 tons shore cranes. 10-50 tons (max. 80 tons) floating crane.

Berths:

Quay	Length (m.)	Depth (m.)	Type of Cargo
1,2,3	390	8.0	Bulk cargo
4,5,6	490	8.0	General cargo
7	165	8.0	Containers, general cargo
8,9,10	489	8.0	General cargo, grain
11	156	8.0	Frozen cargo
Chua Ve	200	6.0	General cargo
Doan Xa	300	8.0	Containers, timber
Vat Cach	250	4.0	General cargo, lighter
Lighterage	6 vessels	12.0	Bulk, bagged cargo, passengers

Shed/Warehouses:	74,300 sq.m.
Open Storage:	53,000 sq.m.
Container Handling Facilities:	Available.
Barges (for lighterage):	Available.

Cargo Handling Rates: (10,000 g.r.t. vessel)

At Berth:	Bulk cargo:	1,500 ton/day min.	3,500 ton/day max
	Bagged cargo:	800 ton/day min.	2,000 ton/day max
	General cargo:	450 ton/day min.	600 ton/day max
	Equipment:	500 ton/day min.	700 ton/day max
	Container 20:	100 TEU	200 TEU
	Frozen cargo:	250 ton/day min.	350 ton/day max
	Timber:	600 ton/day min.	800 ton/day max
At Anchorage:	Bagged cargo:	1,000 ton/day min.	1,500 ton/day max
	Bulk cargo:	1,500 ton/day min.	3,000 ton/day max

AUTHORITY: Port Authority of Haiphong, No. 1 Minhkhai Street. *VHF:* Channel 16. *Tel:* 42637, 42682.

HO CHI MINH CITY (Saigon Port): 10.50 N. 106.45 E. (See Plan)

LOCATION: 46 nautical miles from Vung Tau

DOCUMENTS:

7 copies Crew Declaration.
7 copies Passenger Declaration.
1 copy Stores Declaration.
2 copies Arms & Ammunition Declaration.
1 copy Tobacco/spirits/personal effects.
8 copies Inward Cargo Declaration.
3 copies Health Documents.

Vessel status and safety equipment will be checked.

These documents are to be completed and presented with copies of manifest and ship's documents at the time of report.

PILOTAGE: Compulsory.

Request pilot by telephone: Saigon Pilot Tel: 290152; Vung Tau Pilot Tel: 2235. Notice of ETA required at least 24 hours in advance. Pilot on VHF Channel 16.

Exact Pilot Boat location: Lat. 10° 20′ N., Long. 107° 03′ E.

The anchorage position for vessels awaiting pilot: Lat. 10° 18′ N., Long. 107° 03′ E. to Lat. 10° 21′ N., Long. 107° 02′ E.

Pilotage service is available from sunrise to sunset. Ladders required for pilot boarding.

ANCHORAGE: From Lat. 10° 20.4′ N., Long. 107° 03.2′ E. to Lat. 10° 21.9′ N., Long. 107° 02.25′ E. off Vung Tau, Can Gio estuary. Depth 12.0 m. Good holding ground. Nature of bottom mud and sand. Good shelter in N.E. monsoon.

RESTRICTIONS: Daytime entry only (0600 hrs. – 1500 hrs.). Overhead power lines cross river with 36 m. clearance. East Bend limits vessel length to 230 m.

MAX. SIZE: Length 230 m.; Beam 36 m.; Draft 9.5 m. at high water (semi-diurnal tidal regime: MHHWL +3.6 m., MWL +2.30 m.). Some vessels of 30,000 d.w.t. and 11.0 m. draft have been accepted.

HEALTH: Usual International Health Regulations have to be observed.

RADIO: Saigon Radio (XVS) 500 kHz and VHF Channel 16.

TUGS: Towage undertaken by Saigon Port Marine Enterprise. 13 tugs from 600 h.p. – 2,400 h.p.

BERTHING:

Quay	*Length* (m.)	*Depth* (m.)	*Type of Cargo*
MM1	138	8.3	Passenger, General cargo
MM2	125	6.0	General and bagged cargo
MM3	163	6.0	General and bagged cargo
MM4	66	7.0	General and bagged cargo
K0	85	7.0	General and bagged cargo
K1	120	8.0	General and bagged cargo
K2	145	7.0	General and bagged cargo
K3	95	6.0	General and bagged cargo
K4	94	6.5	General and bagged cargo
K5	110	5.5	General and bagged cargo
K6	116	7.0	General and bagged cargo
K7	128	8.0	General and containers
K8	117	8.7	General and containers
K9	100	9.0	Dry bulk cargo
K10	139	10.3	General and containers
K12	156	10.8	Ro-Ro and containers
K12 A	132	9.0	Ro-Ro and containers
K12 B	55	10.5	Dry bulk cargo

There are also 11 pairs of mooring buoys along the opposite side of the river which can handle deeper draft vessels by barge or lighter.

Lighters/barges: 30, from 150 tons – 1,200 tons available.

Sheds/Warehouses: 34 (78,620 sq.m.).

Open Storage: 56,300 sq.m.

CRANES: Floating: 35 tons and 100 tons. Mobile: 5-10 tons and 150-200 tons.

BULK HANDLING FACILITIES: Dry bulk (cement, fertilizer and wheat) handled by cranes, grabs, bulldozers and trimmers.

CONTAINER HANDLING FACILITIES: Feeder vessels only handled at Berth K12.

2 shore cranes available.

Forklift trucks in container yard from 2 tons to 30 tons capacity.

Tractors and trailers available.

Container Yard: About 5 Ha. Max. stacking height: 3, using forklift trucks.

BRIDGES: Inland road transport to/from the port: Tan Thuan Bridge 12 tons and Khanh Hoi Bridge 25 tons nominal allowable truck load.

STEVEDORES: Provided by the port, 24 hour service (3 × 8 hour shifts). Ship's gear operators, watchmen, opening/closing hatches operators available.

MEDICAL: Hospital, dentist, doctor and chemist available.

TANKERS:

Nha Be Petroleum Terminal: 3 berths with 7.0 m., 12.0 m. and 18.0 m. depth alongside respectively.

Load/discharge rate: 300 t.p.h. – 1,000 t.p.h.; Lines of 6 in., 8 in. and 10 in. diameter for handling Fuel oil, Mogas, Diesel oil, Kerosene and Lub oil.

Vegetable Oil Terminal also available.

Also see "Shipmaster's Report" dated September 1993.

DENSITY: 1005.

FRESH WATER: Supply from hydrants on quays or by barges.

FUEL: Diesel oil and fuel oil by barge or truck.

REPAIRS: Facilities only available for barges (slipway) and vehicles (workshops) at locations within the port area.

SURVEYORS: Cargo surveyors: Vinacontrol.

Ship's surveyors: Vires, Branch No. 6, 22 Nguyen Hue Sreet, Ho Chi Minh City.

CUSTOMS: Port of Entry: Vung Tau-Saigon; branch office situated in Saigon Port.

HOLIDAYS: New Year's Days (Lunar: 3 days, Solar: 1 day), May Day (1.5 days), National Day (2 days: September 2nd and 3rd).

POLICE/AMBULANCE/FIRE: Telephone 13, 15 and 14 respectively for service required from Ho Chi Minh City or call 294971, 725526 and 225762 respectively for Saigon Port service.

AIRPORT: Tan Son Nhut International Airport 10 km. from the port.

TIME: GMT plus 7 hours.

EMERGENCY CO-ORDINATION: S.A.R. Centre of Saigon Port is based at Harbour Office. Contact with S.A.R. Centre can be made on VHF Channels 16 or 6.

GARBAGE DISPOSAL: Service available. Drums provided alongside, and collected every three days. Charges U.S.$ 20/collection at wharf, U.S.$ 40/collection at buoy. Contact Saigon Port General Service Enterprise. Tel: 721744, 224161. Telex: 812772 SGPORT VT. Fax: 84-8-224168.

WASTE OIL DISPOSAL: Service available by barge or tanker truck. Truck capacity 10 cu.m., barge capacity 100 cu.m. Charges: Trucks U.S.$ 50/truck, barges up to 50 cu.m. U.S.$ 300, over 50 cu.m. U.S.$ 6/cu.m. Contact Saigon Port General Service Enterprise. Tel: 721744, 224161. Telex: 812772 SGPORT VT. Fax: 84-8-224168.

SEAMAN'S CLUBS: Seamans Club 1 & 2, mini-shop and Duty Free Shop. 24 hour service.

CURRENCY: Vietnamese Dong (d).

SERVICES: Telex, telephone, transport and souvenir shop.

Hotels and tourist services to International standards available within short distance of about 1 km.

CLIMATE: Dry season November to April, rainy season May to October (average rainfall: 160 mm. – highest in July: 330 mm.), temperature: 28° C, humidity: 81%, Wind: N.E. monsoon from October to April and S.W. monsoon from May to September.

STATISTICS:

	1987	1988	1989	1990	1991
Vessel Calls:	907	961	1,049	982	985
Throughput (kTons):	2,497	3,075	4,048	4,347	4,160

(Throughput of Saigon Port in 1989 amounts to about 85% of total throughput of all ports in Ho Chi Minh City area).

Average handling rates (tons/10,000 d.w.t. vessel per day).

Commodities:	
General cargo	551
Steel, machinery and equipment	951
Rice and agricultural products	1,640
Bulk cement and fertilizer	1,260
Cement and fertilizer in bags	1,475
Containers (TEU/8 hour shift)	70

DEVELOPMENTS: Channel dredging to 9.5 m. and alongside dredging (1992); New container berths and new container handling facilities (1992-1994); Navigational aids and lighting for night navigation; Rehabilitation of existing facilities (1992-1993), and other improvements.

SHIPMASTER'S REPORT: January 1989 (Updated 1990).

Approaching from South, Mui Vung Tau (ex-Cap St. Jacques) observed on radar from about 15 miles with all details.

Anchorage extends from Lat. 10° 19′ N., Northward to Buoy No. 2. If anchoring South of Lat. 10° 19′ N., vessel will be requested to come closer in order to be boarded and cleared by Authorities.

Anchorage well protected during N.E. monsoon, no swell.

Pilot boarding ground at position Lat. 10° 20.4′ N., Long. 107° 03.2′ E. However, vessels are requested to enter and anchor at Vung Tau without the pilot. Pilot Station can be contacted on VHF Channels 16 and 6.

Watch on VHF Channel 16 should be maintained from 1000 hrs. – 1200 hrs. and 1400 hrs. – 1600 hrs. (local time), usually notice is given when vessel is to leave Vung Tau for proceeding up the river.

Buoy No. 1 is in position Lat. 10° 18.7′ N., Long. 107° 03.8′ E.

Buoy No. 2 is in position Lat. 10° 22.4′ N., Long. 107° 02.7′ E.

Buoy No. 3 is in position Lat. 10° 19.5′ N., Long. 107° 04.1′ E., but is liable to drift.

Buoy No. 7 is in position Lat. 10° 20.25′ N., Long. 107° 03.8′ E.

Buoy No. 8, formerly in position Lat. 10° 21.55′ N., Long. 107° 02.05′ E., no longer exists.

No other buoys observed in this area.

All existing buoys are unlit.

Buoy No. 2 is the Northern limit of the area where pilot not required.

Lighthouses on shore reliable and working.

Distances and bearings, taken by radar, reliable.

There are numerous fishing traps, extending from, or in the vicinity of the shore, but not obstructing navigation.

Previous information concerning the maximum size and draft is still valid.

From Vung Tau Anchorage to Saigon Port, most of the river is without any marks. Inbound or outbound ships transit the river during the day time only.

Authorities from Vung Tau board the vessel on anchoring, but only North of Lat. 10° 19′ N.

There are about 5 – 6 officials, representing Immigration, Customs, Port Authorities and Port Health. In addition ship's agent and 2 port police officers board (and stay onboard for security reasons). Vessels bound for Saigon (Ho Chi Minh City), if waiting at anchorage, are also cleared by Authorities and one set of documents remains on board to be handed to Authorities in Saigon by ship's agent.

Whilst at anchor and alongside in port, crew must keep sharp lookout and keep watch duties as Port Rules require.

In addition to the numerous forms given on arrival by Authorities to be filled in, following documents are required:

Clearance from Last Port.

7 copies Crew List.

1 copy Crew Personal Effects Declaration.

1 copy Ship's Stores Declaration.

1 copy Arms and Ammunition Declaration.

1 copy Medical Narcotics Declaration.

1 copy Crew Vaccination List (if expired, crew will be revaccinated).

1 copy Foreign Currency Declaration (crew and vessel's).

6 copies Cargo Manifest.

6 copies Cargo Plan.

All ship's certificates checked by Port Authorities.

Crew Passports/Seaman's Books usually taken ashore to obtain shore passes in Saigon.

Radio room sealed, if necessary to operate, permission must be obtained from Police Officer on board.

Fresh water available by barge (250 tons) at Vung Tau on advance notice of 24 hours, and by barge (250 tons), or by pier hose connection at Saigon Port.

Fresh fruit, vegetables and any kind of food can be obtained, prices low and negotiable, medium quality.

The cargo fumigation can be performed at Saigon Port.

The ship's derating can be performed at Saigon Port.

SHIPMASTER'S REPORT: June 1993.

Vessel: 17,500 g.r.t. LOA 176 m. Arrival draft 5.40 m. Departure draft 9.60 m. Cargo: 23,750 tonnes of bagged rice.

Charts: B.A. Charts No. 1261 and 1016.

Vessel approached in ballast from South and picked-up Mui Vang Tau at 18 miles.

Anchorage extends from Lat. 10° 19′ N. Northwards to Buoy No. 2. For the Port Authority to come on board, vessel is requested to come closer and North of 10° 19′ N.

S.W. Monsoon had just begun, but there was no swell, although there was a fresh S.W. wind.

Pilot boarding ground at position Lat. 10° 20′ N., Long. 107° 03′ E. (approx.). However, vessels usually anchor well North for Port Authorities and Pilot to board. Police station keeps watch on Channels 16 and 6.

Watch is to be maintained on VHF Channel 16 all the time for the Port or the Agent to contact vessel.

Information to proceed up the river is usually given by Port and/or Agent in advance.

Buoy No. 1 is in position Lat. 10° 18.7′ N., Long. 107° 03.8′ E.

Buoy No. 2 is in position Lat. 10° 22.4′ N., Long. 107° 02.7′ E.

Buoy No. 3 is in position Lat. 10° 19.5′ N., Long. 107° 04.1′ E.

Buoy No. 7 is in position Lat. 10° 20.25′ N., Long. 107° 03.8′ E.

Buoy No. 8 was not in position.

No other buoys observed in this area.

All existing buoys were lit.

Lighthouses on the shore are reliable and working.

Distances and bearings by radar are reliable.

Visual bearings reliable.

There are numerous fishing traps extending from and in the vicinity of the shore, but do not obstruct navigation.

From Vung Tau Anchorage to Ho Chi Minh Port, most of the river is without any marks. Inbound and outbound ships transit the river during the daytime only.

Maximum outward draft permitted is 9.6 m. fresh water.

Authorities from Vung Tau board the vessel on anchorage only, North of 10° 19′ N.

There are about 6 – 8 Officials representing Immigration, Customs, Port Authorities and Port Health. In addition, ship's Agent and 2 Port Police Officers board (Police stay onboard for security reasons). Vessels bound for Ho Chi Minh City are cleared by Authorities and one set of documents remains onboard to be handed over to Authorities in Saigon by ship's Agent.

While at anchor and alongside in port, crew must keep a sharp vigil and watch as Port Rules require. Anything loose (sounding rods, sounding pipe caps, heaving lines, etc.) is stolen.

In addition to numerous forms given by Authorities to be filled in, the following documents are required:

Last Port Clearance.
7 copies Crew List.
1 copy Crew Personal Effects Declaration.
1 copy Ship's Stores Declaration.
1 copy Arms and Ammunition Declaration.
1 copy Medical Narcotics Declaration.
6 copies Cargo Manifest.
6 copies Cargo Plans.

All ship's Certificates are checked by Port Authorities.

Crew Passports/Seaman's Books are taken ashore to obtain shore passes.

Shore leave is permitted from 0700 hrs. – 2300 hrs. If a crew member is late back, a heavy fine is imposed.

Radio room is sealed. If it is necessary to operate radio, permission must be obtained from the Police Officers onboard.

Fresh water is available by barge (250 tons) at Vung Tau on advance notice of 24 hours or by pier hose connection at berth.

Fresh fruit, vegetables and any kind of food is available. Prices negotiable, but of medium quality.

Diesel oil and lub oils available.

Repairs of any kind available.

Due to cheap labour, chipping and painting can be done in a very short time at a very cheap cost.

Stevedores are very efficient, fast and very cooperative. Usually load to entire satisfaction.

Cargo fumigation is performed at the port.

Derating can be performed.

SHIPMASTER'S REPORT: September 1993.

Nha Be: *Chart:* B.A. Chart No. 1016 and 1261.

General: The name "Saigon" is still widely used. Indeed, the pilot boat at Vung Tau has "Saigon Pilot" prominently displayed. It seems the individual areas are known by their present names – Nha Be / Ho Chi Minh City, whilst the general maritime district is known as Saigon.

Authorities give little trouble, and restrictions on cameras or bridge electronic equipment were not found.

Reasonable English is widely spoken, but not by pilots.

Approaches: Vung Tau (old Cape St.Jacques) is prominent and can be seen from Nha Be, some 27 miles over the flat land.

The statue of "Christ" at the Southern end of the Cape and the new racon of the lighthouse are both conspicuous.

Numerous fishing boats are encountered, and as the vessel neared Mui Vung Tau, the craft became a major hazard. We arrived near dusk with the mass of boats putting to sea. Fortunately, they tended to alter around the ship. The deep water was followed to 1 mile South of Mui Vung Tau, and then course was altered to pass South of Buoy No. 1.

Communications: VHF Channel 16 used by pilots at Vung Tau, Channel 9 used by VOSA Agent at Vung Tau, and Channel 14 used by pilots during river transit.

As we neared Vung Tau, the Agent called vessel on Channel 9 for arrival information, English was passable.

The telex numbers of VOSA (State Agent) in Ho Chi Minh City are 811257/811258.

Anchorage: The numbers on B.A. Chart No. 1016 at Vung Tau are no longer used or relevant.

The Authorities like vessels to anchor as near as possible to the new Buoy No. 3. We anchored in position Lat. 10° 20′ N., Long. 107° 03.48′ E., which seemed suitable to all concerned (in the middle of fishing pots). We anchored with 5 shackles and holding seemed good. A heavy swell from the West was found, vessel mainly lying North/South.

Authorities: Boarding Agent together with 8 Customs/Immigration/Police Officers boarded vessel by white launch soon after arrival at Vung Tau Anchorage, and cleared vessel.

No particular problems (See "Documents"). We had all forms already prepared in line with "Guide to Port Entry". Two Police Officers remain onboard until departure of outward pilot, so accommodation is required.

Shore passes are made out for shore leave, and are to be handed in on departure to Police Guard. There is a curfew ashore between 2300 hrs. and 0500 hrs. Boats moored and came from Harbour in Baie Des Cocotiers (10° 20.4′ N., 107° 04.5′ E.), all have white hull and superstructures. Authorities at Vung Tau require pilot ladder, not gangway.

Pilots: Operate in river Song Saigon between 0500 hrs. and 1900 hrs. (daylight). Passage inwards or outwards must be completed within this period, which means last transit North/South must commence no later than 1530 hrs., depending on vessel's speed. Ships of deep draft leave Vung Tau about 2 hours after low water at Vung Tau.

Transit to and from Nha Be takes 3 hours. We managed a speed of 13 knots on 7.5 m. draft, the engine being unable to take more load.

Pilots report 13 knots is about the average speed of transit. Pilots board off Baie Des Cocotiers from launch with white hulled superstructure with "Saigon Pilot" displayed.

Generally 2 pilots (Senior/Junior), but little English spoken apart from basic commands. The pilots seem very competent.

Pilot boat at Nha Be is a small fast launch.

River/Transit: Song Saigon is the only channel used to Saigon.

Normally maximum draft is 7.0 m. plus tide, which means about 10.0 m. maximum draft.

Maximum length of vessels is about 200 m., with 50 m. breadth. Normally about 30,000 d.w.t. is the largest vessel to Nha Be and Ho Chi Minh City.

The river has a 200 m. navigable width at its minimum. There is a right angled bend at Pointe de L'Est.

Few navigational marks are displayed, although what there are seem to be in good condition.

Ships pass throughout the river length. Shoreline is mainly mangrove swamp with "paddy fields" at the Northern end. Vessels awaiting berthing or daylight South transit are anchored off Pointe Pham (10° 40.8′ N., 106° 46.4′ E.), holding ground found to be good, we used 5 shackles.

Maximum air draft of 45.0 m. is enforced for Ho Chi Minh City due to power cables. This restriction does not apply at Nha Be.

The Cua Soirap Channel is no longer used for commercial traffic.

The depths as charted on B.A. Chart No. 1016 for Song Saigon were found to be mainly accurate with perhaps 0.5 m. to 1.0 m. greater depth. No uncharted shoals were seen on the echo sounder.

Berthing: The main petroleum berth at Nha Be is the old Shell Terminal, now called Jetty No. 4 in position Lat. 10° 41.55′ N., Long. 106° 45.34′ E. (corrected WGS 84). It is a typical tanker "T" jetty of concrete construction, and is in reasonable condition with good fendering. Depth alongside at C.D. was found to be 10.0 m.

Tankers up to 30,000 d.w.t. use the terminal.

Vessels are swung off the berth to head South on berthing (starboard side alongside).

Tugs: We observed 3 tugs of low power. Two tugs were used for berthing, mainly pushing. On departure, the largest tug took ship's bow line and pulled vessel off berth.

Mooring: 2 line boats used. Basically 1,2,2, each end (See "Plan"). Mooring very competently undertaken by river pilot with tugs pushing.

Berth/Discharge: An effective mooring length of 80 m. is provided by 2 mooring dolphins connected to the central jetty section by catwalks.

Pipelines come from the nearby tank farms, down the two pipe jetties to a central hose area.

All hose lifting by ship's gear with assistance of a large gang of terminal labour, 8 in. hoses used.

Two grades of product handled at same time. We discharged 3 grades of lubricating oil at an average rate of 350 t.p.h.

Grades of products handled are petrol, diesel, lubs, furnace oil and pressure LPG.

About 4 hours should be allowed for survey and sampling.

International companies are used with local partners, in particular S.G.S. and B.P. have local partnerships.

Ship's brow gangway used.

Agent: State organisation VOSA. A few telex queries before arrival were answered by satellite through Perth.

Fresh Water: Fresh water is not piped to berth, but can be obtained by barge from Ho Chi Minh City, if plenty of advance notice is given.

Chandler: State Chandler boards on arrival at berth. Fresh produce is very inexpensive, and there is a plentiful supply of good quality. We received a range of vegetables, fruit and fish, and all were good. Delivery is by launch. U.S. dollars are accepted.

Shore Leave: Granted between 0500 hrs. to 2300 hrs. with shore pass. Chandler will arrange transport to and from Ho Chi Minh City.

Gratuities: We handed out 28 cartons of cigarettes and 12 bottles of wine (no spirits on board) to Agent, Pilots, Police, Customs and Immigration at Vung Tau and Nha Be.

Documents: On arrival at Vung Tau:

Ship's papers and Crew's Seamen's Books sighted.
8 copies Crew List.
2 copies Maritime Declaration.
3 copies Vaccination List.
1 copy List of Ports of Call.
2 copies Personal Currency List.
2 copies Ship's Currency in Master's Safe.
2 copies Personal Declaration.
3 copies Stores/Bond/Canteen List.
1 copy Dangerous Cargo List.
1 copy Arms and Ammunition List (or "Negative").
1 copy Passenger List (or "Negative").
2 copies Medical Drugs (in Master's Safe).
8 copies Cargo Manifest.
1 copy Cargo Plan.

At Nha Be:

Shore passes are issued to each crew member and must be returned to Police Guard on departure.

Ship's Papers and Crew's Seamen's Books sighted.
2 copies Crew List.

Visitors/Boarders: No females or persons unconnected with the ship's business allowed on board and none seen.

Boarding Agent at Vung Tau warned me against boarders and thieves at the anchorage. We took all usual precautions (double watches, locks on all outside doors) and were not bothered.

At Nha Be a few bum boats with local tourist gifts and fruit tried to sell goods, but no attempt was made to board the vessel.

AGENT'S REPORT: April 1994.

Saigon:

Location:	Lat. 10° 50′ N., Long. 106° 45′ E.
Pilot Station Co-ordinates:	Lat. 10° 20′ N., Long. 107° 02′ 30″ E.
Distance from Pilot Station:	48 miles.
Pilotage:	Compulsory, daytime only.
Restrictions:	Draft: 9.5 m. LOA: 230 m. Beam: 36 m.
Tugs:	12 (600 h.p. – 2,400 h.p.).
Cranes:	3×10 ton and 15-20 ton shore cranes. 8×5 ton mobile cranes. 1×35 ton and 1×100 ton floating cranes.

Berths:

Quay	Length (m.)	Depth (m.)	Type of Cargo
MM1	138	8.5	General cargo, passengers
MM2	125	8.0	General cargo, reefer cargo
MM3	163	8.5	General and bagged cargo

Quay	Length (m.)	Depth (m.)	Type of Cargo
M3KO	65	6.5	General and bagged cargo
K0	85	8.0	General and bagged cargo

K6	116	8.5	General and bagged cargo
K7	128	8.5	General and bagged cargo
K8	117	8.5	General and bagged cargo
K9	100	8.5	Dry bulk cargo
K10	139	9.5	Dry bulk cargo
K12	154	13.5	Ro-Ro, containers
K12B	55	13.7	Dry bulk cargo

Mooring Buoys: 13 pairs.
Sheds/Warehouses: 32 (75,167 sq.m.).
Open Storage: 91,700 sq.m.
Container Handling Facilities: At K12 for feeder vessels only.
Ship's Gear on Wharf side, Rate: 234 TEU/vessel/day.
Forklifts: In container yard from 2 – 30 ton capacity.
Tractors/Trailers: Available in container yard.
Barges (for lighterage): 30 (150 – 1,200 tons).
Average Handling Rate:

General Cargo	550 ton/day.
Machinery and Equipment	950 ton/day.
Steel, Iron	1,043 ton/day.
Rice in bags	1,640 ton/day.
Fertiliser in bags	1,475 ton/day.
Cement in bags	1,118 ton/day.
Bulk Fertiliser	1,260 ton/day.
Containers	234 TEU/day.

Ben Nghe:
Distance from Pilot Station: 48 miles.
Berths:

Quay	Length (m.)	Depth (m.)	Type of Cargo
K14	96	9.5	General Cargo
K15	265	9.5	General cargo, containers
K15B	175	11.0	Containers (under construction)

Mooring Buoys: 7 pairs.
Cranes: 1×110 ton, 1×45 ton, 1×30 ton, 1×25 ton, 2×20 ton and 3×15 ton shore cranes.
Forklift: 35 tons.
Warehouses: 6×1,500 sq.m. 3×700 sq.m.
Container Yard: 51,000 sq.m.
Container Handling Facilities: 12 TEU/gang/hour.
Forklifts: 2×42 ton, 1×11 ton, 5×5 ton, 3×2.5 ton and 2×2 ton.
Average Handling Rates:

General Cargo	128 ton/gang/day.
Cargo in bags	400 Ton/gang/day.
Containers	12 TEU/gang/day.

Distance from Pilot Station to Port: 25 miles.
RESTRICTIONS: Draft 5.0 m.
TUGS: None.
BERTHING:
Quay Length: 65 m. Depth 13.0 m.
Storage: 1 warehouse for 500 tons of frozen cargo and 1,000 tons of dry cargo.
Average Handling Rate: 300 tons/day (bagged cargo).
CRANES: 1×25 tons.

NGHE TINH (Ben Thuy): 18.39 N. 105.42 E.

PORT LIMITS: The seaward boundaries of Nghe Tinh Port are the Lat. 18° 50′ N. in the North, the Lat. 18° 45′ N. in the South and the Long. 105° 49′ E. in the East.

The seaward boundaries of Nghe Tinh Port (including Ben Thuy) Gua Lo, Xuan Hai areas, in the North, East and South limited by sections from the positions 18° 50′ 01″ N., 105° 42′ 09″ E.; 18° 50′ 01″ N., 105° 47′ 00″ E.; 18° 48′ 00″ N., 105° 48′ 00″ E.; 18° 45′ 04″ N., 105° 46′ 08″ E.

DOCUMENTS: See "General" before first port.
PILOTAGE: Compulsory for entering and leaving. Pilot Station at "Zero Buoy" (Lat. 18° 48′ N., Long. 105° 48′ E.) for Nghe Tinh and Xuan Hai areas, depth 14.0 m., and for Gua Lo area (Lat. 18° 48′ 30″ N., Long. 105° 45′ 12″ E.), depth 10.0 m.
ANCHORAGE: Anchorage Area: "Zero Buoy", and discharge area at position Lat. 18° 49′ N., Long. 108° 45′ E. (N.W. of Hon Ngu Island), depth 11.0 m.
RESTRICTIONS: Maximum draft to enter 5.0 m. Vessels exceeding 5.0 m. draft discharge cargo into self-propelled barges at discharge area (See "Anchorage"). Pilot boat may only arrive at "Zero Buoy" in conditions of weather with wind not exceeding Force 5. Pilot boards during daylight only.
MAX. SIZE: At berth, LOA 100 m., max. draft 5.0 m.
HEALTH: See "General" before first port.
RADIO: There is no radio contact with Nghe Tinh Port. Notice of Arrival messages sent via Haiphong Radio XVG or Danang Radio XVT.
VHF: Nghe Tinh Harbour Master on Channel 16 from 0800 – 1400 hrs. and 1600 – 2000 hrs. local time.
TUGS: 2 tugs, 305 h.p. each available.
BERTHING: 3 small berths in Nghe Tinh area for ships with draft 4.0 m.
Two berths in Gua Lo area for ships with draft 5.0 m. One berth in Xuan Hai area for ships with draft 5.0 m.
CRANES: There are 5 mobile truck cranes, capacity 3 – 6 tons each.
BRIDGES: None.
STEVEDORES: Stevedores work 2 shifts. 0800 hrs. – 1800 hrs. and 1800 hrs. – 0600 hrs. with one meal interval between 1130 hrs. – 1230 hrs.
One gang average for day (24 hours).
Grain and Bulk Cargo: 300 tons.
General Cargo: 150 – 200 tons.
DENSITY: 1,000 at low tide.
MEDICAL: Doctors and hospital facilities available through Agent – Vosa at Nghe Tinh Port.
FRESH WATER/FUEL: Fresh water and fuel oils are available at Nghe Tinh.
AIRPORT: International Airport at Noi Bai, about 340 km. from the port.
REPAIRS: Can be performed on request.
SURVEYORS: Cargo Surveyors: Vina Control have branch office in Nghe Tinh.
Ship Surveyors: Vires have branch office in Nghe Tinh.
EMERGENCY CO-ORDINATION: S.A.R. Centre of Nghe Tinh Port based at Harbour Office, call on VHF Channel 16.

SHIPMASTER'S REPORT: July 1982.

Location: 10 miles upstream from the entrance of the Song Ca River. Vessels exceeding 4.5 m. draft discharge cargo at anchor off the entrance to the river into self-propelled barges which transport the cargo to Nghe Tinh.

Pilot/Anchorage: Vessels anchor in position: Lat. 18° 47′ N., Long. 105° 47′ E. 1.5 miles S.E. of Hon Niem Island in 14 m., soft grey mud and sand. Pilot and officials board at this position. After Clearance granted, vessel shifts to discharge anchorage in position Lat. 18° 49′ N., Long. 105° 45′ E., 1 mile N.W. of Hon Niem Island in 10 m. This anchorage was approached by rounding Hon Niem Island to the Eastward, not less than 0.5 miles off, there is a dangerous rock awash at LW in position Lat. 18° 50.7′ N., Long. 105° 46′ E. It is prudent to approach the port in daylight due to the large amount of unlit fishing craft in the vicinity.

Documents/Officials:

Officials boarding with Pilot on arrival:
- 3 Security Officers.
- 2 Customs Officers.
- 2 Immigration Officers.
- 2 Quarantine Inspectors.
- 1 Agricultural Inspector.
- 1 Agent.
- 1 Harbour Master.

To be accommodated and victualled during stay of vessel in port:
- 3 Security Officers.
- 2 Customs Officers.
- 1 Agent.

Agent is the only person who speaks/understands a limited amount of English.

Documents required:
- 6 Crew Lists.
- 2 Stores Lists (deck, engine and cabin).
- 2 Stores Lists (provisions).
- 1 Health Declaration.
- 2 Crew Customs Declaration Lists.
- 2 Currency Lists (foreign monies in crew's possession).
- 2 Bonded Stores Lists.
- 4 copies Cargo Manifests.
- 4 copies of Bills of Lading.
- 2 Cargo Stowage Plans.
- 3 Forms (supplied) for Sextants, Binoculars, Cameras, etc.
- 3 Forms (supplied) for Arrival details and times.
- 1 Form (supplied) Report concerning where water taken during the voyage, drinking and ballast in tons and tank being used at present for drinking water.

Certificates of Registry, Radio, Load Line, Safety Equipment and Derat sighted, also Clearance from last port.

All Passports/Seamen's Identity Cards collected and taken ashore, require to see each crew member and compare with Passport photo. Discharge Books were not required. All Vaccination Certificates sighted and returned. Inspection of all crew cabins and each crew member's foreign money counted at the same time.

Restrictions: Main switch for Radio Transmitter/Receiver sealed.

All Cameras sealed. Bond and beer lockers sealed. (Release of bonded stores available at any time from Customs Officers on board).

General: There is no Radio or VHF contact with Nghe Tinh. ETA/Health messages, etc, via Haiphong Radio XVG to VOSA Haiphong.

No fresh water or oil fuels are available at the anchorages off Nghe Tinh.

Limited quantities of fruit and vegetables are available when in season.

There are no facilities for sending or receiving mail.

Draft survey is carried out at commencement and completion of cargo, 3 surveyors attend from Hanoi, a journey of approximately 10 hours by road.

Bulk cargoes are discharged by ship's gear using shore grabs (which are in poor condition) each grab capacity approximately 1.5 tons (bulk wheat) also burlap savealls, sewn on to cargo nets are used.

Cargo loaded into self propelled barges, each carrying 40/50 tons bulk grain, approximately 20 barges are available when none are under repair, which is quite frequent, journey to discharge wharf takes 3 hours, 6 hours to discharge and 3 hours to return to the ship.

Stevedores work two shifts 0600 – 1800 hrs. and 1800 – 0600 hrs. with one meal interval between 1130 – 1230 hrs.

1 gang's average discharge per day (24 hours) 250/350 tons.

AGENT'S REPORT: April 1994.

Location (Ben Thuy):	Lat. 18° 39′ N., Long. 105° 42′ E. (105° 45′ E.).
Pilot Station Co-ordinates:	Lat. 18° 47′ N., Long. 105° 47′ E.
Distance from Pilot Station:	12 miles.
Pilotage:	Compulsory and daytime only.
Restrictions:	Draft: 4.5 m. LOA: 100 m.
Tugs:	1×300 h.p. and 1×600 h.p.

Berths:

Quay No.	Length (m.)	Depth (m.)	Type of Cargo
1	50	7.0	All types of cargo
2	30	7.0	

Open Storage:	Available.
Barges (for lighterage):	5 (70 – 700 tons).
Cranes:	5×6 tons mobile cranes.

AUTHORITY: Nghe Tinh Port Director and Harbour Master, Nghe Tinh Harbour Office.

NHA TRANG: 12.12 N. 109.13 E.

DOCUMENTS: See "General" before first port.

PILOTAGE: Compulsory for all vessels entering and leaving port.

Pilot boards at one of 2 stations.

Southern Pilot Station: Lat. 12° 10′ 10″ N., Long. 109° 15′ 30″ E.

Northern Pilot Station: Lat. 12° 14′ 50″ N., Long. 109° 14′ 50″ E. t correct arrival time.

ANCHORAGE: To Pilot's advice.

Anchorage area for ships carrying dangerous cargo in North, West o Hon Mot Island, max. depth 20 m. Other cargo ships anchor with 0.5 miles of port pier, max. depth 15 m.

RESTRICTIONS: Pilots board during daylight only.

HEALTH: See "General" before first port.

RADIO: Nha Trang Radio, call sign XVN.

VHF: Harbour Master on VHF Channel 16.

TUGS: 3 tugs available, 600 h.p., 400 h.p. and 300 h.p. Use ship's lines

BERTHING: 1 quay with length 100 m. available, also new constructio of 172 m. length. Max. size ship at berth LOA 150 m., depth of wate 7.2 m.

CRANES: 5 shore cranes available. One crane with max. capaci 15 tons. There are no floating cranes.

BRIDGES: None.

STEVEDORES: Stevedores work 3 shifts: 0000 hrs. – 0800 hrs. 0800 hrs. – 1600 hrs. and 1600 hrs. – 0000 hrs.

Load and discharge rates:

At berth: General cargo: 500 tons per day.
Bulk cargo: 600 tons per day.
Lightering: General cargo: 240 tons per day.
Bulk cargo: 500 tons per day.

TANKERS: Submarine pipeline with max. pumping pressure o 100 p.s.i. (5 kg.) (300 m. distance from shore).

DENSITY: 1020.

FRESH WATER: Available at berths or by barge.

FUEL: Supplied by ship chandler, available from self-propelled barg with max. capacity 50 tons.

FIRE PRECAUTIONS: Safety Regulations for tankers and other dangerous cargoes apply.

REPAIRS: Contact Vosa Nha Trang.

SURVEYORS: Cargo surveyors: Vinacontrol, branch at Nha Trang City

Ship Surveyors: Vires, Branch No. 5, Nha Trang Port.

AIRPORT: Nha Trang Airport serves Ho Chi Minh City and Hanoi.

International Services available at Tan Son Nhat Airport (Ho Chi Min City) or at Noi Bai Airport (Hanoi City).

TIME: GMT plus 7 hours.

HOLIDAYS: There are no special holidays.

POLICE/AMBULANCE/FIRE: Police post is in inner port. Fire servic Tel: 18 or 22135. Ambulance service Tel: 17. Vessels can also contac emergency services through Harbour Office or Vosa on VHF Channel 16.

EMERGENCY CO-ORDINATION: S.A.R. Centre of Nha Trang Por based at Harbour Office. Contact with S.A.R. Centre can be made o VHF Channel 16.

SERVICES: Contact Agent.

SHORE LEAVE: No restrictions.

(A) CAMPHA PORT

DOCUMENTS: See "General" before first port.

PILOTAGE: Compulsory for all vessels.

Pilot Station: Lat. 20° 44′ 12″ N., Long. 107° 10′ 30″ E. No dra restriction from Pilot Station.

Pilot Station for bad weather: Lat. 20° 49′ 00″ N., Long 107° 08′ 02″ E., follow Harbour Master.

Waiting berth place: Lat. 20° 57′ 54″ N., Long. 107° 20′ 07″ E.

CHANNEL: The main channel to reach Campha is marked by 10 uni buoys and 3 leading lights in line, and is dredged up to 7.0 m. at L.W. with width 110 m. Distance from pilot station to inner harbour is 26 mile

MAX. SIZE: 50,000 d.w.t.
HEALTH: See "General" before first port.
RADIO: Contact Haiphong Radio.
VHF: Harbour Master (Pilot) of Campha Port or Hon Gay Port and Vosa Campha (Agent) or Vosa Hon Gay on Channel 16.
TUGS: 1×3,200 h.p., 2×305 h.p. and 2 small tugs.
BERTHING: Coal loading only. One quay available at Campha with length 500 m. and depth 9.0 m.
CRANES: Shore cranes: 3×5 tons.
Conveyors: 2×1,600 t.p.h.
FRESH WATER: Fresh water supplied from small barge through Vosa Campha.
AIRPORT: International Airport Noi Bai situated about 180 km. from the port.
EMERGENCY CO-ORDINATION: S.A.R. Centre based at Harbour Office. Call on VHF Channel 16.

AGENT'S REPORT: April 1994.

Location:	Lat. 21° 01′ N., Long. 107° 22′ E.
Pilot Station Co-ordinates:	Lat. 20° 43′04″ N., Long. 107° 10′ 03″ E. (L'Orange Island).
Distance from Pilot Station to Port:	26 miles.
Pilotage:	Compulsory, day and night.
Restrictions:	Draft: 6.5 m. (channel). 8.5 m. (berth). LOA: 185 m.
Tugs:	1×305 h.p., 1×600 h.p. and 1×3,200 h.p.
Cranes:	4×5 ton shore cranes. 2 conveyor loaders.
Berth:	Quay No. 1: Length 300 m. Depth 9.0 m. Cargo: Bulk, coal.
Mooring Buoys:	None.
Sheds/Warehouses:	None.
Open Storage:	64,800 sq.m.
Container Handling Facilities:	None.
Barges:	50×200 tons (for lighterage).
Cargo Handling Rates:	1,200-1,500 tonnes /day for lump coal. 3,000-4,500 tonnes/day for dust coal.

AUTHORITY: Campha Harbour Office of Quang Ninh Port Authority.

(B) HON GAY PORT

DOCUMENT: See "General" before first port.
PILOTAGE: Compulsory for all vessels.
Pilot Station: Lat. 20° 44′ 12″ N., Long. 107° 10′ 30″ E.
ANCHORAGE: In Halong Bay, depths 18 m. to 21 m. (low tide) and good holding ground. The anchorages are sheltered from all winds.
Anchor places: For LASH vessels: Lat. 20° 49′ 50″ N., Long. 107° 08′ 02″ E.
For tankers: Lat. 20° 50′ 25″ N., Long. 107° 07′ 48″ E. or Lat. 20° 50′ 50″ N., Long. 107° 07′ 35″ E.
For dangerous cargo: Lat. 20° 52′ 15″ N., Long. 107° 05′ 00″ E. or Lat. 20° 52′ 15″ N., Long. 107° 04′ 30″ E.
For discharging/loading cargo: Lat. 20° 56′ 55″ N., Long. 107° 03′ 34″ E. or as instructed by Harbour Master.
RESTRICTIONS: The main channel to reach Hongay is marked by 10 unlit buoys and dredged to 6.7 m. at low tide. Width 80 m. Distance from pilot station to inner harbour is 18 miles. Also see "Bridges".
MAX. SIZE: Coal Berth: Length 130 m., draft 8.5 m.
Tanker Berth: Length 185 m., draft 10.5 m. (located at Lat. 20° 58′ N., Long. 107° 03′ 42″ E.). Also see "Bridges".
Cailan Berth: Length 160 m., draft to Pilot's advice.
HEALTH: See "General" before first port.
RADIO: Contact Haiphong Radio.
VHF: Harbour Office (Pilot) of Hon Gay Port and Vosa Hon Gay (Agent) on Channel 16.
TUGS: 1×1,200 h.p., 1×305 h.p. and two small tugs.
BERTHING: Coal Berth: One pier of length 150 m.
Tanker Buoys: For tankers of 20,000 d.w.t., depth 15 m.
General Berth: One pier with length 166 m. and depth 9 m.
CRANES: Shore cranes available.
MEDICAL: Doctors and hospital facilities available through Vosa at Hon Gay.
FRESH WATER: Fresh water supplied from small barge through Vosa at Hon Gay.
FUEL: Diesel oil and fuel oil can be supplied by barge through Vosa at Hon Gay.
AIRPORT: International Airport Noi Bai, situated about 140 km. from the port.
REPAIRS: Can be performed on request.
DRY DOCKS: Available at Pharung Shipyard for 10,000 d.w.t., and Halong Shipyard for 5,000 d.w.t.
SURVEYORS: Cargo Surveyors: Vinacontrol branch.
Ship's Surveyors: Vires, Hon Gay branch.
BRIDGES: None, but tankers going into and out of mooring berth must contact Harbour Master, to get permission to pass under high voltage electric line at Hon Hay (Baichay). Clearance under cable with maximum high water of 5.0 m. is 32 m.
EMERGENCY CO-ORDINATION: S.A.R. Centre of Hon Gay Port based at Harbour Office. Tel: 25394 or call on VHF Channel 16.

SHIP'S OFFICERS REPORT: July 1986.
Pilotage: Compulsory. Pilot will board at pilot station between 0600 hrs. and 1800 hrs. (daylight hours). Pilot will bring vessel to either Quarantine Anchorage or Inner Harbour, via Vung Ha Long Buoyed Channel, for Customs and Immigration clearance.
Pilot Station: Lat. 20° 44.2′ N., Long. 107° 10.5′ E.
Anchorages:
Quarantine Anchorage: Lat. 20° 52.2′ N., Long. 107° 06.2′ E.
Inner Harbour Anchorage: 0.8 miles S.S.W. off Hon Gay.
Restrictions: 1. Transit from Pilot Station to Quarantine Anchorage in daylight hours only.
2. Vung Ha Long Buoyed Channel dredged to 7.0 m. Draft restriction according to tides. Approximate max. draft 10.0 m.
3. Height restriction through Cua Lu to tanker berth 39.0 m. (air draft) at Chart Datum.
Radio/VHF: Hon Gay Pilot and Vosa Hon Gay (Agent) on VHF Channel 16.
Tankers: Tanker berth in position Lat. 20° 58.0′ N., Long. 107° 03.7′ E. Vessel tied up to buoys and discharged via flexible hose of 6 in. Vessel can expect delays. Average discharge rate 180 t.p.h.
Density: Between 1009 and 1017, according to tidal stream.
Agent: Vosa is sole government Agent. Agent acts as interpreter.

SHIPMASTER'S REPORT: September 1988.
Hon Gay: Radio contact direct through Haiphong (XVG) is possible for sending cables, but working hours are unreliable.

Not a single cable was acknowledged by Vosa Agent at Hon Gay. However queries were received from Vosa Haiphong via Haiphong Radio.

VHF contact after arrival was also difficult, due to frequent electricity shutdown in Hon Gay.

No draft restriction from Pilot Station (Lat. 20° 44.12′ N., Long. 107° 10.3′ E.) to Lightering Anchorage (Lat. 20°50.3′ N., Long. 107° 07.7′ E.).

The main channel to reach Hon Gay is marked by 10 unlit buoys and dredged up to 6.3 m. at low water. When crossing the channel with 9.0 m. draft and 3.3 m. of high tide, the echo sounder indicated a clearance of 2.0 m.

All movements in the channel during daytime.

The Sea Berth is just after passing the electricity high tension overhead cables. Air draft required to pass under the high tension cables with high tide of 3.3 m. was 33 m.

Mooring and unmooring during daylight hours and during slack water. One tug available for mooring and unmooring.

Sea Berth consists of 5 buoys (3 forward and 2 aft). The hoses are rigged on the port side, we were given 2×6 in. hoses for discharging Gas Oil. The rate of discharging was 200 tonnes per line per hour. Shore capacity is around 15,000 tonnes.

Shore start/stop of cargo operations is by flag signals during daytime and by light signals during night time. During rain and blackout at night time, the signal arrangement is inadequate and unreliable.

During the stay at Sea Berth, lightering is allowed.

At all times, 3 policemen reside onboard. Accommodation and meals are to be supplied.

Fresh water is available.

Shipchandler service is minimal. Most essentials out of stock or out of season.

SHIPMASTER'S REPORT: February 1993.
Hon Gay: Vessel: 26,200 d.w.t. Draft 9.5 m. fore and aft. LOA 170 m. Airdraft 33 m. Vessel discharged a cargo of gas oil.

Vessel made contact by VHF Channel 16 one hour prior to arrival.

Two pilots boarded in position Lat. 20° 44.2′ N., Long. 107° 10.2′ E. The pilots spoke good English and very experienced.

The main channel to Hon Gay is marked by 5 pairs of numbered light buoys (System "A"). The channel depth was 6.6 m. at low water and 9.9 m. at high water. There is a strong current running across the channel. The channel bottom is mud (no rocks). The vessel's speed in the channel was 5-6 knots.

As the high tension cables were situated before the discharge berth, we anchored in the inner roads to await low water. Clearance at low water is 36 m. and at high water 32 m.

On berthing, we dropped port anchor to 1.5 shackles in water. Six ropes were sent to three mooring buoys forward and four ropes were sent to two mooring buoys aft, by mooring boat.

The cargo of gas oil was discharged to the account of "Petrolimex".

Maximum rate of discharge was 350 cu.m./hr. During discharge, two representatives of the consignees stayed on board and they were in VHF contact with the terminal.

Fresh water is available by barge.

Two small tugs assist with unmooring by swinging the ship to starboard towards the entrance.

AGENT'S REPORT: April 1994.

Location:	Lat. 20° 57′ N., Long. 107° 10′ E.
Pilot Station Co-ordinates:	Lat. 20° 43′ 04″ N., Long. 107° 10′ 03″ E. (L'Orange Island)
Distance from Pilot Station:	18 miles.
Pilotage:	Compulsory, day and night.
Restrictions:	Draft: 6.6 m. (channel) 8.2 m. (berth) LOA: 170 m. Air draft: 33 m.
Tugs:	1×350 h.p., 1×600 h.p. and 1×1,000 h.p.
Berth:	Quay No. 1: Length 120 m. Depth 8.2 m. Cargo: Bulk, coal.
Mooring Buoys:	5 (for tankers) with depth 9.5 m.
Open Storage:	42,000 sq.m.
Barges (for lighterage):	50×200 tons.
Cranes:	2×5 ton shore cranes.

AUTHORITY: Hon Gay Harbour Office. *Tel:* 25394, 25604.

QUY NHON: 13.46 N. 109.14 E.

DOCUMENTS: See "General" before first port. Additional copies of documents may be required.
PILOTAGE: Compulsory. Pilot boards on correct arrival time at "Zero Buoy" (Lat. 13° 44′ 19″ N., Long. 109° 15′ 16″ E.). During bad weather Harbour Master will advise by VHF the anchorage position where Pilot may board in safety.
RESTRICTIONS: Pilot boards during daylight only.
ANCHORAGE: In "Zero Buoy" area with max. depth 10.00 m. If draft exceeds 9.00 m. vessels anchor in the Southern port limits.
MAX. SIZE: LOA 180 m. Draft 7.5 m.
HEALTH: See "General" before first port.
RADIO: Contact Quy Nhon Radio, call sign XVH.

VUNG TAU (Cat Lo): 10.21 N. 107.04 E.

DOCUMENTS: See "General" before first port.
PILOTAGE: Pilotage is compulsory for all vessels that enter or leave the Port of Vung Tau.

General Pilot Station for Saigon/Vung Tau Ports and Mekong River is at "Zero Buoy" in position Lat. 10° 20′ 40″ N., Long. 107° 03′ 00″ E.
ANCHORAGE: In Vung Tau Bay, with anchorage well protected during N.E. monsoon, no swell at waiting area.

(1) All vessels waiting to enter Saigon Port must fly signal flag No. 1 at top of foremast.
(2) All vessels waiting to transit Mekong River must fly signal flag No. 2 at top of foremast.
(3) All vessels waiting to enter Saigon Port may be inspected by Vung Tau Harbour Master (if requested by Master).

HEALTH: See "General" before first port.
RADIO: Contact Saigon Radio, call sign XUS.
VHF: Contact with Pilot Station, Harbour Master and Vosa Vung Tau on Channel 16.
TUGS: Available from 1,000 h.p. – 7,000 h.p.
BERTHING: Vung Tau Port consists of three ports:

1. No wharf. Port for export of the crude oil. Pilot Station at position Lat. 9° 11′ N., Long. 107° 35′ E., for tankers with LOA 250 m., breadth 40 m., draft 15.0 m. and 80,000 d.w.t.
2. Petroleum and gas service port in position Lat. 10° 23′ 36″ N., Long. 107° 05′ 58″ E. There are 9 quays. Quay No. 6 for ships with LOA 160 m., breadth 28 m., max. draft 9.0 m. and 12,000 d.w.t. Other berths for ships less than LOA 120 m., draft 6.0 m. and 6,000 d.w.t.
3. Cat Lo Port in position Lat. 10° 24′ 48″ N., Long. 107° 08′ 00″ E. Length of quay 250 m. For ships with LOA 135 m., breadth 20 m. and 6,000 d.w.t.

CRANES: There are 3 shore cranes of 10 tons, 3 floating cranes of 300 tons and 400 tons and mobile truck cranes.
MEDICAL: Doctors and hospital facilities available through Vosa Vung Tau or Vosa Saigon.
TANKERS: See "Berthing" and "Shipmaster's Report".
FRESH WATER: Can be supplied by pier hose connection for berthed ships (Cat Lo Port) and by barge, generally subject to advance notice of 24 hours.
FUEL: Diesel oil and fuel oil can be supplied at Vung Tau Port.
REPAIRS: Any small deck and engine repairs can be performed on request.
SURVEYORS: Cargo Surveyors: Vinacontrol, branch at Vung Tau City.
Ship's Surveyors: Vires, branch at Vung Tau Port.
AIRPORT: International service via Tan Son Nhat Airport at Ho Chi Minh City.
SERVICES: Shipchandler available at all times.
POLICE/AMBULANCE/FIRE: Contact through Harbour Office and Vosa Vung Tau on VHF Channel 16.
EMERGENCY CO-ORDINATION: S.A.R. Centre of Vung Tau Port based at Harbour Office. Contact S.A.R. Centre on VHF Channels 16&

SHIPMASTER'S REPORT: June 1992.
Berth: Offshore storage tanker "Chi Linh".
Position: 09° 49.9′ N., 107° 59.9′ E.
Documents: See "General" before first port.

A boarding party of Pilot, Customs, Immigration, cargo supplier and cargo surveyor, 9 persons in total, come on board before berthing. Five of them stay onboard during the loading operation and require accommodation.

Pilotage: Pilotage is compulsory. Communications before arrival with the Pilot, who is also the Master of the "Chi Linh", is via VHF Channel 16 and working Channel 6. The Pilot boards the vessel from a supply boat/tug.

Approaches: B.A. Charts No. 3986 and 3987.

Coming from the North East on course 246°, the Iles of Catwick were passed to the South. 10 miles South of Poulo Sepata, course was altered to 270°, keeping the patch of 7 fathoms and the "Submarine Vulcanoes" area well clear.

Poulo Sepata was radar conspicuous at approximately 22 miles distance.

In a position bearing Poulo Sepata 059° and distance 20 miles, course was altered to 315°.

Petit Catwick and Grande Catwick are also both radar conspicuous.

In a position bearing Grande Catwick 082° and distance 23 miles, course was altered to 270°. Grande Catwick was still visible on the radar.

The first flares of Vung Tau Oil Field were visible at a distance of approximately 20 miles during daylight. Soon thereafter the first rigs could be seen on the radar.

At a distance of approximately 15 miles, the storage tanker "Chi Linh" could be distinguished clearly.

In position 10° 00′ N., 108° 17′ E., course was altered to 242° to an anchor position 3 miles West of the storage tanker.

Anchorage: 3 miles West of the storage tanker. There are numerous oil rigs in the vicinity and construction is still underway.
Restrictions: No night berthing. Vessels unmoor day and night, weather permitting.
Max. Size: 110,000 d.w.t.
Health: See "General" before first port.
Agency: Vosa Vung Tau. Telex: 641054 VOSAVU VT.
VHF: See "Pilotage".
Tugs: A supply boat/tug makes fast to the stern of the tanker during the approach to the berth. For this, 2 soft ropes are required, led through the same centre lead. The eyes of the ropes should be tied together with a messenger line onto which a heaving line should be fastened. The tug's towing rope is then shackled to the eyes of the ship's ropes, which are fastened on the bollards when sufficient slack (about 75 m.) has been paid out.

During the stay on the berth, the tug maintains a light pull on the vessel to keep her off the stern of the "Chi Linh".

Berth: The storage tanker "Chi Linh" is permanently moored to an SPM by means of a special construction between ship's bow and SPM turntable.

Berthing: Berthing is done in a manner similar to mooring to an SPM. The mooring arrangement is as per OCIMF Standards.

The Pilot remains on the bridge until the tanker is at a distance of approximately 0.5 miles from the berth. During the final approach, he is on the foc'sle, directing the vessel by ship's walkie-talkie.

On the foc'sle, one messenger line has to be prepared for picking up the mooring arrangement. The rope is put on a winch drum, led through a bow stopper and a centre lead.

When the distance between the approaching vessel and the stem of the "Chi Linh" is approximately 60 m., the latter shoots a heaving line over the foc'sle of the tanker, by means of a pneumatic gun. Attached to this is a messenger line which, once on board, can then be fastened to the messenger line on the tanker.

The mooring arrangement can now be pulled in and the chafe chain secured on the bow stopper (vessels not equipped with a bow stopper can be moored by means of a wire/shackle arrangement, secured on the bitts, as per OCIMF).

Only 1 nylon grommet rope is used for this tandem berthing.

Loading: A 16 in. floating hose string, with a total length of 262 m., runs from the port side of the stern of the "Chi Linh" to the tanker's port manifold. The tanker rail hose has a 12 in. reducer fitted.

Cargo particulars (approximate):
Name: Bach Ho Crude.
API: 39.9 (density 15°C: 0.8252).
Pour point: 32°C.
Loading temperature: 39°C.
Heating requirements: Between 38°C and 43°C.
Max. loading rate: 2,600 cu.m./hr.

Due to the high pour point of the crude, the "Chi Linh" has to carry out a line flush on completion of each loading. As a consequence of this, a water plug of approximately 75 cu.m. is received at the start of loading. This should preferably be loaded into one cargo tank.

At the end of loading, the line contents will be displaced by means of a water plug. Preferably the same tank as above should be used for this, as well as for dropping the lines. Loading lines should be thoroughly stripped/drained in view of the high pour point.

During stay in the berth, the starboard side accommodation ladder should be ready.

AGENT'S REPORT: April 1994.

Cat Lo:

Location:	Lat. 10° 20′ N., Long. 107° 03′ E.

NOTES

Please also advise Shipping Guides Ltd.

Virgin Islands

FREDERIKSTED, St. Croix: 17.43 N. 64.53 W.

DOCUMENTS: All forms are standard U.S. Government Forms:
Passenger List (I-418) – 3 copies.
Crew List (I-418) – 3 copies.
Clearance from Last Port.
Inward Customs Manifest (1302) – 4 copies.
Ship's Stores Declaration – Customs Form 1303 – 2 copies.
Crew Effects Declaration – Customs Form 1304 – 1 copy.
(Also see separate headings – "Health" – "Customs" – "Immigration").

PILOTAGE: Services available day or night. Payment for Pilot services is mandatory whether Master uses Pilot or not. (Vessels commissioned by the U.S. or foreign government, yachts and vessels under 100 gross tons are exempt from pilotage fees, except when the services of a Pilot are requested).

ANCHORAGE: Open roadstead on the lee (West) side of St. Croix, providing a good anchorage with no significant tide.

HEALTH: See "Health Regulations" before first U.S.A. Port (Albany).

Garbage should be disposed of beyond the 3-mile limit. On passing the 3-mile limit all garbage disposal units which open to the sea should be closed. All garbage should then be placed in covered cans and retained on board until the ship is again beyond the 3-mile limit.

RADIO: (a) Vessels may communicate with Island via:

Mackay Radio, Amagansett, New York	Call Letters WSL
Chatham Radio, Massachusetts	Call Letters WCC
Lantana Radio, Florida	Call Letters WOE
Barbados Radio, Barbados	Call Letters VPO
Destrellan Radio, Guadeloupe	Call Letters FFO
Fort de France Radio, Martinique	Call Letters FFP

All stations maintaining 24-hour service. These radio stations then relay the messages by cablegram to Frederiksted via either ITT World Communications Inc., Cable and Wireless or Western Union International.

(b) Master of every vessel arriving Frederiksted is required to give at least 24 hours advance notice of arrival to Captain of the Port, U.S. Coast Guard – San Juan, Puerto Rico, by wireless on 500 kHz or by radio telephone 2182 kHz. Call Letters for U.S. Coast Guard, San Juan, Puerto Rico – NMR.

(c) Masters are requested to advise Agent their expected time of arrival as far in advance as is possible, vessels arriving from ports other than U.S. or Caribbean Islands should give at least 7 days' notice, and vessels arriving from U.S. ports should give at least 4 days' notice. In addition, a message should be sent verifying arrival at least 48 hours in advance, with delays reported as necessary. Arrival messages should include information regarding repairs, stores, number of crew and passengers on board. If cash is required, a minimum of 7 days' (prior to date of arrival) notice is mandatory.

(d) While vessels are in Frederiksted the Authorities do not permit the use of the ship's radio transmitters.

(e) Vessels equipped with VHF equipment should commence radio watch on Channel 16 when vessel is 100 miles from St. Croix. Contact with Agents and shore facilities can be made direct or via Virgin Islands Marine Operator – Station WAH – Call Letters WAH.

(f) Masters of vessels arriving at Frederiksted Pier are required to contact V.I. Port Authority through their Agent or by Fax No. (809) 778 1033, 24 hours in advance of arrival.

VHF: Port Authority on Channel 16.

TUGS: None readily available – tugs can be arranged with 48 hours advance notice.

BERTHING: A government-owned pier with a 1,400 ft. long approachway, bridging Maritime Zone to a pier-head 240 ft. long by 60 ft. wide. Vessels 600 ft. and over with a max. forward draft of 25 ft. have been accommodated.

FRESH WATER: Available at dock, arranged by Agent.

SHORE GANGWAYS: Available.

LAUNCHES/TENDERS: Not available.

CUSTOMS: Customs Officers will board at anchorage or wharf berths, and will require an accommodation ladder.

Vessels required to enter and clear through Customs House:
Vessels loading or unloading cargo;
Vessels embarking or disembarking passengers;
Vessels remaining in port over 24 hours;
Vessels requesting permission for their passengers to go ashore during the stay of the vessel in port.

Vessels in above categories must present following documents:
Clearance from Last Port;
3 copies of Crew List (Form I-418) or substantially similar form – see note*
3 copies Passenger List (Form I-418) or substantially similar form – see note*
4 copies Inward Foreign Manifest covering all cargo for discharge at St. Croix, V.I., showing weights or measurements (of basis of how cargo is freighted) on all items (Customs Form 1302).
2 copies Stores List (Engine-Deck-Commissary-Narcotics).
1 copy Crew Effects Declaration (Custom's Form 1304).

* List of passengers and crew shall be on Customs and Immigration Form I-418 or on a substantially similar form, except that where no steerage passengers are aboard upon arrival, the listing of the passengers may be in the form of a vessel "Souvenir List" or similar list, in which the names of the passengers are listed alphabetically by class.

Sealing of Stores: Upon arrival of a vessel from a foreign port, or a vessel engaged in foreign trade from a domestic port, sea stores and ship's stores not required for immediate use of consumption on board while vessel is in port and articles acquired abroad by officers and members of crew, for which no permit to land has been issued, shall be placed under seal, unless Customs Officer is of the opinion that circumstances do not require such action. Customs Inspectors in cha of vessel, from time to time, may issue stores from under seal consumption on board by passengers and crew.

Passengers disembarking must present personal baggage declara if from foreign.

IMMIGRATION: Recommended that Masters who are unfamiliar w U.S. Immigration Procedure should seek clarification from Agents as in advance as is possible.

If a vessel arrives direct from a United States mainland port or fro Puerto Rico no Immigration inspection will be performed. If a vess arrives direct from a foreign port the vessel shall undergo Immigra inspection.

Vessels arriving without a visaed Crew List, may be able to obtai waiver from Officer in Charge of U.S. Immigration & Naturalisatio Service, by making application on Form I-193. A fee of $10.00 is requ to obtain a waiver.

In order to expedite the clearing of the vessel, it is suggested th prior to arrival all passengers subject to inspection should be assemb where the inspection is to be performed.

Stowaways must be reported in ETA Message and listed on Passenger Manifest (Form I-418) and on Form I-94, and must b reported to the U.S. Immigration Officer as soon as he boards.

All non-resident alien crew members, whether shore leave is requ or not, are required to have in their possession valid Passpo Seamen's Book or Identification Card (with photo) and Form I- (Crewman's Landing Permit) or Form I-184 (Alien Crewman's Per and Identification Card) on arrival. All resident alien crew members a required to have in their possession Alien Registration Receipt Ca (Form I-151) on arrival.

AIRPORT: Distant 8.5 miles.

TIME: GMT minus 4 hours. Atlantic Standard Time.

HOLIDAYS: The following are legal holidays: Sundays; January (New Year's Day); The third Monday in February (President's Da March 31st (Transfer Day); Holy Thursday; Good Friday; Eas Monday; Whit Monday; Last Monday in May (Memorial Day); June 22 (Organic Act Day); July 4th (Independence Day); July 3rd (Emancipat Day); Last Monday in July (Supplication Day); The first Monday i September (Labour Day); The second Monday in October (Columbu Day); The fourth Monday in October (Veterans' Day); The fou Thursday in November (Thanksgiving Day); December 25th (Christma Day); December 26th (Christmas Second Day), and such other days a the President or the Government may by proclamation declare a holidays. The port remains open on holidays.

REGULATIONS: The U.S. Coast Guard strictly enforces the Harbo Pollution Act of 1924, prohibiting discharge of refuse and oil in navigab waters of the U.S. Virgin Islands. Local Port Regulations are similar t those applying in U.S. Mainland Ports.

AUTHORITY: Virgin Islands Port Authority, Marine Division, P.O.Bo 1134, Christiansted, St. Croix, Virgin Islands, U.S.A. 00820. *Tel:* (80 778-3131 (St. Croix). *FAX:* (809) 778-1033. *Contact:* Larry Finch, Mari Manager.

LIMETREE BAY, St. Croix: 17.41 N. 64.44 W.

(See Plan

LOCATION: The facilities of Hess Oil Virgin Islands Corp. (HOVIC) a located in Limetree Bay on the South coast of the island of St. Croi U.S. Virgin Islands. St. Croix is 32 miles South of St. Thomas a St. John Islands and 50 miles S.E. of the island of Puerto Rico. It is th largest of the U.S. Virgin Islands being 19 miles long and avera 3.5 miles in width.

The Limetree Bay sea buoy is located approximately 9.3 miles Ea of Sandy Point and Southwest Cape, St. Croix, on the South coast o the island. The harbour is located between Krause Lagoon a Canegarden Bay.

On approaching the Pilot Station, Mariners are advised to stay to th South of the 100 fathom curve to avoid fish traps and shoal areas whi have not been completely surveyed.

A vessel is considered to be "Arrived" when it is on the Pilot Statio that is South of the Channel Entrance (See "Pilotage").

Charts: Virgin Islands (including Saint Croix) – U.S.C. & G.S. Cha No. 905, U.S. Naval Oceanographic Office Chart No. 25246. St. Croi British Admiralty Chart No. 485. Frederiksted Roads – U.S.C. & G.S Chart No. 937 and U.S. Naval Oceanographic Chart No. 25251.

DOCUMENTS: All ships arriving from a foreign port will be boarded b Customs, Immigration and U.S. Public Health Service Officers. Ship *personnel are not allowed ashore until permission is granted from the officers.*

The following documents are required for entry and clearance and ar to be presented to the respective officers on boarding:

Customs:
2 copies Crew List (Form I-418).
2 copies Passenger List (Form I-418).
1 copy Ship's Stores Declaration (Form 1303).
1 copy Crew Effects Declaration (Form 1304).
Inward Foreign Manifest (if discharging).
Original and 3 copies Form 7527-B.
Ship's Register.
Clearance from last port.
Derat Certificate.

For vessels not using the HOVIC Marine Agency, the follow additional documents are required:
1 copy for entry and 1 copy for clearance Master's Oath on Entry Vessel in Foreign Trade (Form 1300).
1 copy for entry and 2 copies for clearance General Declaration (For 1301).
All other forms should be provided by the vessel's Agent.

Immigration:
Original Crew List (Form I-418) (Certified if available).
1 copy Passenger List (Form I-418).
Each crewman must have either valid D-1 (Form I-95) or new Form I-95 for presentation with Passport/Seaman's Book to Inspection Officer.
United States Immigration laws apply in the U.S. Virgin Islands. Passports and Visas are required for non-U.S. citizens.
Normally Customs entry must be complete before cargo operations can begin.
Customs clearance is accomplished by the vessel's Agent.
Cargo documents are placed onboard by the Refinery Terminal Department.
Note: The Customs Service of the U.S. Virgin Islands is under the jurisdiction of the United States Treasury Department. However, Virgin Islands Customs laws differ considerably from those of the Continental United States.
Limetree Bay is in the Christiansted Customs District.

APPROACHES: Channel Entrance Buoys No. 1 and No. 2 are located in 80 ft. of water on the Easterly and Westerly sides of the Limetree Bay channel entrance.
Entrance Buoy No. 1 is positioned at:
Lat. 17° 40′ 37.4″ N., Long. 64° 44′ 18.2″ W.
Buoy No. 1 is painted green and equipped with a quick flashing green light and a visibility of 5 miles.
Buoy No. 2 is painted red and equipped with a quick flashing red light and a visibility of 3 miles.
All aids to navigation in the approach channel and harbour are privately maintained by HOVIC.
Channel/Berths: The channel is 500 ft. in width and 60 ft. in depth at Mean Low Water (MLW). This depth extends into the VLCC Berths No.3 and No. 4. Docks No. 5 and No. 6 have 50 ft. at their face. Docks No. 1, No. 2, No. 7, No. 8 and No. 9 have 45 ft. at the face of MLW. Dry Cargo Berth has a draft restriction of 34 ft. without fenders and 38 ft. 06 in. with fenders. The turning basin opens up Eastward from the channel line and is approximately 1,200 ft. long and 1,000 ft. wide. The West Turning Basin is 1,500 ft. × 1,200 ft. A breakwater extends out from the head of the East Basin to the coral reef which forms the Southern harbour limit.
Anchors: Vessels shall have their anchor windlasses manned and their anchors ready to let go upon entering the channel into Limetree Bay.

PILOTAGE: Service is available 24 hours a day. All vessels entering Limetree Bay must comply with the Navigation Safety Regulations per 33 CFR, Part 164 and an entry denoting this should be made in the vessel's logbook. A HOVIC Pilot is mandatory for all vessels entering, shifting, or leaving the facilities at Limetree Bay. Pilots will assist the Master in the docking and undocking of the vessel; however, the Master of each vessel retains *full* responsibility for the vessel at all times.
Vessels must remain at the Pilot Station 2.5 miles South of the Channel Entrance until boarded by a HOVIC Pilot. The Pilot will be placed aboard by a company tug.
The HOVIC marine and terminal office is equipped with a VHF radiotelephone having the following channels:
Initial Contact – Channel 11
Working – Channels 9, 10 and 11
Ships must call the HOVIC marine office on VHF at least 3 hours before arrival at the Pilot Station and advise of any change in their ETA.
Pilot Ladders: The following regulations apply to Pilot Ladders:
If these regulations are not complied with, HOVIC Pilots may refuse to embark or disembark thus delaying the vessel.
The Officer responsible for the embarkation and disembarkation of the Pilot is to be a Deck Officer.
The pilot ladder is to be properly secured and adequately lit at night.
The Pilot should be able to pass safely and conveniently from the head of the ladder onto the ship's deck. Where portable stanchions and bulwark ladders are used for this purpose, the portable stanchions must be rigidly secured to the ship's structure to prevent being unshipped and supported at not less than two points to prevent lateral movement. The bulwark ladder should also be independently attached and firmly secured. The stanchions should be of reasonable height and adequately capped to allow a firm grip.
The ladder is to be in good condition and its treads are to remain horizontal. The treads are to have a rough upper surface.
The length of the ladder should not exceed 30 ft. Whenever the distance from sea level to a point of access on the ship is more than 30 ft., access from the pilot ladder to the ship must be by means of an accommodation ladder or other equally safe and convenient means.
The ladder is to be rigged so that each step rests firmly against the ship's side. Spreaders are to be provided not more than 10 ft. apart to prevent the ladder twisting.
A manrope or a safety line is to be secured at the vessel's rail and lowered over the side adjacent to and for the full length of the pilot ladder. A lifebuoy with self-igniting light is to be readily available.
The ladder is to be rigged well clear of any overboard discharges and at a place where the best lee can be provided to the boat carrying the Pilot.

Whenever a mechanical pilot hoist is used, a standard pilot ladder shall be at hand, ready for immediate lowering in the event of a hoist malfunction.

ANCHORAGE: There is no safe anchorage off the entrance to Limetree Bay. Vessels having to wait due to berth availability or weather should proceed to sea towards the South and West of the Island and heave to 15 or 20 miles offshore, maintaining VHF contact with HOVIC Marine by guarding Channel 11 for berthing instructions.
In bad weather it is possible to proceed to Fredericksted on the West end of the island and anchor in 30 ft. to 60 ft. of water. Vessels shall have their anchors ready to let go upon entering the channel into Limetree Bay.

RESTRICTIONS: Navigation is permitted 24 hours a day, except for vessels over 100,000 d.w.t. Vessels over 100,000 d.w.t. are handled on a daylight basis inbound only. The Port Captain will check and report on each vessel's draft before a Pilot is dispatched.
Ballast Drafts: Ballast draft restrictions are as follows:

Vessel d.w.t.	*Forward* (ft.)	*Aft* (ft.)
Under 30,000	10	16
30,000 – 50,000	12	18
50,000 – 70,000	15	21
70,000 – 100,000	18	24
San Clemente Class	21	27
100,000 – 150,000	28	32
150,000 – 200,000	32	36
Over 200,000	40	40

These guidelines will be adjusted as weather and vessel handling characteristics dictate. Advice concerning any variance will be provided to the vessel by the Pilot in ample time to prevent any unnecessary delays to the vessel's ballasting.

MAX. SIZE: The docking facilities listed are subject to change, depending on weather conditions, depth of water and length of vessels at the adjoining berths. All vessels are normally turned prior to docking.

Roll-On/Roll-Off Dock – East Basin:

Length:	318 ft.
Draft:	17 ft.

Dry Cargo Dock – East Basin – Tankers:

Length:	650 ft. – Depending on size of vessel at Dock No.1 and distance from bow to centre manifold.
Draft:	38 ft. 06 in. with fenders. 34 ft. 00 in. without fenders.
D.w.t.:	45,000 tons.

Dry Cargo Dock – East Basin – Sulphur Ships:

Length:	585 ft. LOA
Beam:	65 ft. with Yokohama Fenders.
Draft:	38 ft. 06 in. with Yokohama Fenders.
Beam:	75 ft. without Yokohama Fenders.
Draft:	34 ft. 00 in. without Yokohama Fenders.
D.w.t.:	45,000 tons Max. – Must be adhered to.
Freeboard:	40 ft. Max. – Must be adhered to.

NOTE: If the restriction on the beam is not adhered to, hand trimming will be required. This is an extra cost.
Vessels over 585 ft. LOA, up to 685 ft. LOA may use this berth. The above restriction on beam and draft to be adhered to.
It will be necessary to undock, and turn a vessel of over 585 ft. up to 685 ft. at least once during the loading. This will involve extra port charges (one pilot and 2 tugs will be required).
All other restrictions pertaining to beam, draft, deadweight and freeboard must be strictly adhered to.

Dock No. 1 – East Basin:

D.w.t.:	80,000 tons maximum.
LOA:	900 ft. maximum.
Beam:	Unlimited.
Draft:	42.5 ft. maximum.
Bow-Centre Manifold:	450 ft.

Dock No. 2 – East Basin:

D.w.t.:	80,000 tons maximum.
LOA:	900 ft. maximum.
Beam:	Unlimited.
Draft:	42.5 ft. maximum.
Bow-Centre Manifold:	450 ft.

Dock No. 3 – East Basin:

D.w.t.:	300,000 tons maximum.
LOA:	1,200 ft. maximum.
Beam:	200 ft. maximum.
Draft:	55 ft. maximum.
Bow-Centre Manifold:	600 ft. maximum.

Dock No. 4 – West Basin:

D.w.t.:	300,000 tons maximum.
LOA:	1,200 ft. maximum.
Beam:	Unlimited.
Draft:	55 ft. maximum.
Bow-Centre Manifold:	600 ft.

Dock No. 5 – West Basin:

D.w.t.:	100,000 tons maximum.
LOA:	900 ft. maximum.
Beam:	Unlimited.
Draft:	47.5 ft. maximum.
Bow-Centre Manifold:	450 ft.

Dock No. 6 – West Basin:

D.w.t.:	100,000 tons maximum.
LOA:	900 ft. maximum.
Beam:	Unlimited.
Draft:	47.5 ft. maximum.
Bow-Centre Manifold:	450 ft.

Dock No. 7 – West Basin:

D.w.t.:	25,000 tons maximum.
LOA:	500 ft.
Beam:	Unlimited.
Draft:	35 ft. maximum.
Bow-Centre Manifold:	Length of vessels using this berth shall be guided by the length of the vessel at Berth No.6, also on the distance from bow to centre of the manifold.

Dock No. 8 – West Basin:
D.w.t.: 100,000 tons maximum.
LOA: 900 ft. maximum.
Beam: Unlimited.
Draft: 42.5 ft. maximum.
Bow-Centre Manifold: 450 ft.

Dock No. 9 – West Basin:
D.w.t.: 100,000 tons maximum.
LOA: 900 ft. maximum.
Beam: Unlimited.
Draft: 42.5 ft. maximum.
Bow-Centre Manifold: 450 ft.

HEALTH: United States quarantine laws are enforced by the U.S. Public Health Service.

Pratique is required only if vessel is coming from a plague infected area or if there is illness of a suspicious nature or there is a death (from any cause) onboard. The Master is obligated to report to the HOVIC marine office any of the above circumstances well in advance of the vessel's arrival at the Pilot Station in order that the Public Health Officials may be notified – failing this the vessel may be delayed.

All trash and refuse kept in drums on deck must be in closed plastic trash bags and the drums must have securely attached lids. No plastic bags laid upon the deck nor open containers on and/or below decks will be acceptable. No garbage collection or disposal service is allowed or available. No trash or refuse will be allowed to be deposited in the harbour. Failure to comply with any of the aforementioned items results in immediate and large fines.

RADIO/VHF: Masters must advise HOVMAR St. Croix and their agents by radio or telex 72 hours, 48 hours and 24 hours in advance of their ETA, giving the vessel's name, date and hour of arrival (Local time) and the name of their last port of call, otherwise delays may result in berthing the vessel. A vessel will be considered as "Arrived" when it reaches the Pilot Station 2.5 miles South of the Sea Buoy.

A vessel's "Notice of Readiness" will not be accepted until the vessel has initially reached this point and notified HOVIC by VHF.

VHF Radio Frequencies:
1. Calling only – 11
2. Harbour Operations – 9-10-11
3. Pilotage – 11
4. Agency – 10 or 11
5. Standby-call – 2182 kHz.

Harbour tugs and the HOVIC Marine Dispatchers monitor the VHF frequencies 24 hours a day.

S.S.B. Channel Frequencies:
SSB communication available with prior scheduling.

RADAR: No Port Radar Service or Vessel Traffic Management System exists in the port.

TUGS: Tug assistance in the channel, docking and undocking is mandatory and is provided by 3×3,000 S.H.P. twin screw diesel tugs and 2×7,200 S.H.P. twin screw diesel tugs which are stationed in the port to provide this service. Additional tugs are available when required for handling VLCC's. All HOVIC tugs are equipped with firepumps, monitors and foam towers to assist in firefighting.

Line Handling: A line handling vessel and personnel are provided for mooring.

MOORING: A HOVIC Pilot will direct the mooring of the vessel to ensure that it is properly secured before cargo handling operations start. This does not relieve the Master of his responsibility to ensure that the vessel is safely moored and that the lines are kept properly tended at all times.

Ship's Moorings and Mooring Winches: Ships shall at all times remain adequately secured alongside the berth by the use of ropes or wires which are in good condition and properly sized for the service they are in.

Mooring lines of the same size and type should always be used for all leads in the same service.

The use of constant tension mooring winches in the automatic mode is not permitted. Vessels with constant tension mooring winches must have their brakes set manually.

BERTHING:

Port Alucroix: Situated to the West of the HOVIC Terminal. The port is entered via the Krause Lagoon Channel with a controlling depth of 35 ft. at Mean Low Water and a width of 300 ft. At the head of the Lagoon is the Martin Marietta Alumina Terminal which is currently idle. Pilot boards approximately 2.5 miles South of the Krause Lagoon Channel Entrance Buoys.

Container Port: Situated close to the West of the HOVIC Terminal. The port is entered via the Krause Lagoon Channel (300 ft. wide and 35 ft. depth) and the Container Port Cross Channel (400 ft. wide and 35 ft. depth). Length of the pier is 1,200 ft. with 35 ft. depth. 1 × 30 ton Paceco container crane is available with a telescopic spreader to handle 20 ft., 35 ft. and 40 ft. containers.

A berth at the head of the pier can handle Ro/Ro cargoes.

TANKERS: *HOVIC Terminal (Hess):* A shore gangway is provided. For berth limitations due to size see "Maximum Size". All berths are for the handling of petroleum products with the exception of Dry Cargo Berth which has in addition the capability of loading sulphur pellets in bulk. There are no other facilities for handling any other cargoes beside petroleum at the HOVIC Terminal. No shore steam/power is available. Lightering: *VLCC Lightering is no longer conducted off Frederiksted, St. Croix. Lightering is done at the island of St. Lucia. If arrangement is made to lighter at St. Croix, the procedures listed below are to be adhered to:*

BALLAST: United States laws prohibit the pumping overboard of dirty ballast while a vessel is within U.S. coastal waters. All ballast must be pumped to facilities available ashore. However, if a vessel is especially equipped with clean segregated systems which are reserved for ballast use only, it is permissible to pump the segregated ballast overboard at the dock after the ballast tanks have been inspected and approved by a Marine Department representative.

In pumping dirty ballast ashore, the ballast is received through a 36 shore line at a maximum discharge pressure to the shore installatio 100 p.s.i. Ballast is pumped into a ballast facility about 1 mile Nort the dock.

Due to the limited facilities and the possibility of more than one ves deballasting at a time, it is requested that vessel arrive with a minim amount of ballast, consistent with Pilot's ballast draft restrictions, a include the amount to be discharged on their ETA advices to th Agents.

The U.S. Oil Pollution Act of 1924 applies to the Pollution of Coas Waters. Violators are subject to fines and possible imprisonment.

INERT GAS SYSTEM: Ships equipped with a properly working In Gas System are to keep all cargo tanks inerted when alongside w exception of those tanks that are gas-free.

Vessels equipped with an Inert Gas System may be required to pressurise the cargo tanks to allow for ullage measurements to be mad HOVIC Terminal and U.S. Coast Guard Rules and Regulatio concerning Inert Gas Systems must be complied with at all times.

NOTICE OF READINESS: Notice of Readiness to load or discharge a warranty that the vessel is in all respects ready to load or dischar and that all of the ship's equipment, including, but not limited to, tan pumps, valves and pipelines, are ready and fit to load or discha petroleum or petrochemical products.

HOVIC reserves the right to refuse acceptance of such Notice Readiness unless the vessel is in all respects ready to load or dischar

A vessel will not be deemed ready to load or discharge and pump will not commence until the Senior Deck Officer shall have execu and delivered to HOVIC a "Declaration of Inspection Prior to Bulk Car Transfer" as required by U.S. Coast Guard Regulations.

HOSES: *Connecting and Disconnecting Hoses:* A crew will be provid by the terminal to connect and disconnect cargo hoses, bunker hos and Chicksan arms on the ship.

Vessels should have blank flanges removed from the cargo line reducers installed and drip pans or other fixed containment in place arrival at the dock. The HOVIC Dispatcher will advise the vessel arrival the size and number of hoses to be connected. Manifolds not use must be blanked off.

1. Oil transfer hoses and loading arms must be long enough to al the vessel to move to the limits of its moorings without placing strain on the hose/loading arm or oil transfer piping system.
2. Each hose must be supported to prevent kinking or other dama to the hose and strain on its coupling.
3. The oil transfer system must be properly aligned.
4. Each part of the oil transfer system not necessary for the trans operation must be securely blanked off.
5. The end of each hose and loading arm that is not connected the transfer of oil must be blanked off using closure devices.

LOADING: The Petroleum docks are serviced by the following sho lines: 1×42 in. crude line, 1×36 in. crude line, 1×36 in. No. 6 oil li 1×36 in. ballast line, 1×30 in. VGO (Catfeed) line, 1×24 in. No. 6 line, 1×24 in. VGO (Catfeed) line, 2×20 in. gasoline lines, 1×20 in. Je Kerosene line, 1×16 in. gasoline line, 1×12 in. line for each of th following: Paraxylene, Xylenes, Benzene and Toluene, 1×8 in. Caus Soda line and bunker lines of 1×18 in., 1×12 in. and 1×8 in. All hos connections are 10 in. diameter, there are 4×16 in. loading/dischar arms at Berths No. 3 and No. 4 for crude oil, 2×16 in. arms for No. oil/crude at Berth No. 6, and 2×16 in. arms for VGO (Catfeed)/Cru at Berths No. 8 and No. 9. Chemical grades are handled via 1×10 hose with Caustic Soda handled by 1×6 in. and balance grades 2×10 in. hoses. Facilities are available to handle dirty slops/ta washings.

BRIDGES: There are no bridges that affect harbour movements.

MEDICAL: Emergency medical attention is available from the Pub Hospital at any hour of the day or night. The ship's agency representat should be contacted by the Master with any requests for crew medi attention. For each man needing medical or dental attention, a for should be completed in duplicate and signed by the Master, or in h absence, by the Chief Officer. The form should provide the date, patien name, rating and the name of the vessel.

For routine medical treatment, a doctor will board vessel on a da basis. Dental treatment is available ashore on weekdays.

All crew members requiring medical attention should be available t treatment upon ship's arrival.

Inoculations and vaccinations are available.

DENSITY: 1025.

FIRE PRECAUTIONS: Standard fire precautions for tanker safety app including but not limited to: Smoking is prohibited on the weather dec of tank vessels, on docks, and in the general dock vicinity. All doors a portholes from the quarters facing outside must be kept closed wh transferring cargo at the dock. No portable cables connected to electrical source shall be used while transferring cargo or ballast. Wh illumination is needed, approved explosion-proof lights are to be us Boiler cleaning, tank cleaning, gas freeing, welding, burning or hot wo is not allowed at the dock. Tank mopping is permitted on an individu basis. Vessel's main engines should not be out of service while th vessel is in port. It is not permitted to shut down both main boilers a steam vessel or pull the cylinder heads from the main engine of motor vessel. In the event a stack or engine exhaust emits live spar the transfer of cargo must be stopped. The main radio transmitter is n to be used while transferring cargo or ballast. The transfer of cargo a ballast must be stopped during electrical storms, or when lighten appears in close vicinity. A fire towing wire should be led out forw and aft on the offshore side of the vessel and lowered to the wa edge, made fast to the deck and tended to maintain them at the wa edge. In the event of fire on the vessel, dock or waterfront area, th transfer of cargo will be suspended and the vessel made ready immediate departure if the danger is imminent. Furthermore, should emergency or accident occur, vessel and terminal personnel must ta immediate action in order to protect life and property. Contact the HO

Port Captain on VHF Channel 11 and the terminal dockwatch to inform them of the nature of the emergency.

FRESH WATER: The Island of St. Croix is dependent almost entirely on rainfall for its supply of fresh water. There are wells but most of them are rather saline in nature. As a result, fresh water is scarce and expensive. In conjunction with its refinery operation, HOVIC operates desalination plants and limited quantities of fresh water are available providing at least 72 hours' notice of these requirements is given prior to the ship's arrival. All fresh water is metered aboard ship.

FUEL: Bunkers are available by prior arrangement. Advice concerning the quantities and type required should be given in the vessel's arrival message (ETA) sent in 72 hours prior to arrival.

CONSULS: Denmark and Netherlands.

REPAIRS: In general no repair work is authorised, except for emergencies while the vessel is at the dock. Nearest major repair facilities are at San Juan, Puerto Rico.

DRY DOCKS: No dry docks are available in the port.

SURVEYORS: Cargo Inspectors are available at Limetree Bay as follows: SGS Inspectorate, Chas. Martin and Caleb Brett. E. W. Saybolt available on premises.

Representatives of the American Bureau of Shipping, Lloyd's Register and other maritime classification societies are available from San Juan, Puerto Rico on 24 hours' notice. The ship's Agent will assist Masters in soliciting their services.

GANGWAY/DECK WATCHMEN: Vessel to provide personnel at manifold and gangway.

Gangway: Vessels must be prepared to provide their own gangways. Some of the docks have gangways that may be used at the discretion of the dock foreman. Where HOVIC provides the gangway, a safety net will be rigged. When the vessel's gangway is used, we strongly urge the use of a vessel supplied safety net under the gangway.

CUSTOMS ALLOWANCES: Crew members are permitted to hold out of bond 1,500 cigarettes and 1 litre of alcohol per crew member.

REPATRIATION: Facilities exist for effecting crew changes and arranging repatriation by air.

AIRPORT: HOVIC Terminal at Limetree Bay is located 15 minutes via highway from the airport. Daily flights direct to Miami, Fla., New York, N.Y., Newark, N.J. and numerous flights to San Juan, Puerto Rico with worldwide connections are available.

TIME: The U.S. Virgin Islands use Atlantic Standard Time (A.S.T.) which is Greenwich Mean Time minus 4 hours all year round.

HOLIDAYS: The refinery and terminal operates 24 hours per day all year round.

POLICE/AMBULANCE/FIRE: The refinery and terminal have their own ambulance and fire department. Contact the HOVIC Port Captain on VHF Channel 11. Local police may be contacted via the Agent.

TELEPHONES: No arrangements are available for placing telephones aboard ship.

SERVICES: Following services are available: Radio/Radar repair, Ship Chandler, Liferaft Service/repacking, ship classification societies surveyors (from San Juan, P.R.), and charts, publications or Notice to Mariners in very limited supply.

BANKS:

The Bank of Nova Scotia, Christiansted (809-773-1013).
Banco Popular, Christiansted (809-773-0077).
Chase Manhattan Bank, Christiansted (809-773-1200).
First Pennsylvania Bank NA, Christiansted (809-773-0440).

STORING: Vessels can only be stored by truck delivery to the pier. Trucks may approach the vessel no closer than 150 ft., where goods are pushed/pulled alongside using vendor's wheeled carts. A shore crane is capable of lifting light weights to the vessel from the apron. Forklifts are not allowed on the dock. Local riggers are available for assistance provided a minimum of 24 hours' notice is given to the Agent.

SHORE LEAVE: Under normal circumstances, no restrictions are imposed by the Immigration authorities on shore liberty. Masters are requested to have all crew members on board at least one (1) hour prior to departure time to avoid delay "awaiting crew members".

If crew members of foreign vessels are to be given shore leave, Form I-95 must be prepared for each member of the crew. These forms are available from the ship's agent.

Transportation: Crew members desiring shore leave are not permitted to walk through the refinery. Taxi cabs are available when required for transportation through the refinery and to Christiansted and Frederiksted at the crew member's expense.

IDENTIFICATION CARDS: Agency representative will supply Master with Refinery Gate Passes.

GARBAGE DISPOSAL: Service available. Contact any of the following for details:

Dept. of Planning and Natural Resources. Tel: 772-0565.
Brown and Ferris Industries. Tel: 809-788-7171.
Safety Clean Enviro Systems. Tel: 854-1090.

Hess Oil Virgin Islands Corp. Facility: Facilities available for handling of plastics and garbage/refuse provided material is non-hazardous. Medical waste and hazardous waste are not acceptable. U.S.A. Regulations 33 CFR 158.115, 40 CFR 261.3 & 261 Sub-part D apply. All ship waste is subject to inspection and control of the U.S. Dept. of Agriculture & U.S. Coast Guard. Vessels should apply for service through their agent 36 hours prior to arrival, indicating type and amount of material for disposal ashore. Charge is U.S.$ 21.00 per 4 cu.ft. bag. Special bags are supplied through the agent.

WASTE OIL DISPOSAL: Service available. Contact any of the following for details:

Dept. of Planning and Natural Resources. Tel: 772-0565.
Brown and Ferris Industries. Tel: 809-788-7171.
Safety Clean Enviro Systems. Tel: 854-1090.

Hess Oil Virgin Islands Corp. Facility: Dirty ballast/slops are discharged to shore through a 36 in. shore line at a maximum discharge pressure to the shore installation of 120 p.s.i.

SEAMAN'S CLUBS: None. Usual local facilities.

Hess Oil Virgin Islands Corp. Facility: Hess Oil Virgin Islands Corp. jetty is within 10 minutes of large shopping centre which can be reached by taxi or walking from the refinery main gate.

CURRENCY: U.S.Dollar.

TIDES AND CURRENTS: The tides are small and diurnal, the mean range being about 0.5 ft. and the diurnal range less than 1 ft. Normally there is a drift of 0.5 knot to 1 knot moving along the South shore of the island in a Westerly direction.

H.O. Sailing Directions and U.S. Coast Pilots No. 5 can provide additional details.

REGULATIONS: Vessel will be held responsible for the cost of labour and material required to clean up any oil spill caused by the vessel in Limetree Bay. Slick booms are available to isolate spills and contingency plans are in force for oil spills. The U.S. Coast Guard will be notified of any oil spills, no matter how minor, also vessel's cargo transfer operations will be suspended pending U.S. Coast Guard investigation.

AIR POLLUTION: Blowing or cleaning of boiler tubes while a vessel is alongside the dock or within the harbour limits is strictly prohibited.

It is unlawful to permit the emission of smoke darker than No.2 on the Ringelmann scale. Violation of this law in Limetree Bay may result in fines to the vessel. Terminal personnel record violations and report the same to Air Pollution Authorities. Masters are advised that continued violation can result in the vessel being placed offhire. The vessel will be sailed and not re-docked until the problem is fully resolved.

In the event a stack or engine exhaust emits live sparks, the transfer of cargo must be stopped. If the condition is not corrected immediately, the vessel will be removed from the harbour.

SWIMMING: Swimming in the Harbour is not permitted.

COMMUNICATIONS:

Communication with U.S. Navy at Fredericksted: Arriving at or departing from Limetree Bay, all vessels passing the Western end of St. Croix are to monitor VHF Channel 16 for radio traffic from the U.S. Navy Weapons Tracking Station at Fredericksted. Vessels may be requested to alter course to avoid interrupting naval activities that are being conducted with aircraft, ships and submarines.

GENERAL:

Photography: Cameras are not allowed within the confines of the Refinery. Picture taking is strictly prohibited.

Emergency Towing Wires: Immediately on docking, emergency towing wires of sufficient length to reach the water's edge, with 8 ft. eyes on the outboard ends, must be paid out from the offshore bow and quarter. The inboard end of the wire must be made fast to the vessel's bitts. Wire shall be in good condition, of adequate strength and adjusted as necessary throughout loading/discharge operations to keep the eyes at or above the waterline at all times.

Liquors: The transportation of alcoholic beverages inside HOVIC's property is strictly prohibited; consequently, no liquor or beer may be removed from vessels. The only exception to the foregoing is the delivery of bonded stores ordered by the Master for the vessel.

Visitors: No visitors are permitted in the dock area. Only persons on official ship's business are permitted on the piers.

Laundry: Facilities are available to handle ship's laundry.

Mail: Official and personal mail will be delivered on board by the ship's Agent upon vessel's entry.

Mail received for vessels while in port will be delivered on board prior to sailing. Outgoing mail is accepted from Master, provided it is accompanied by a mail transmittal slip to support disbursements.

Supplies and Repairs: Limited supplies of provisions and marine hardware are available on the island. There are no facilities for major repairs closer than San Juan, Puerto Rico. Machine shops in Christiansted and Fredericksted can assist in making minor repairs.

Overloading: Masters are advised that International Laws pertaining to overloading are strictly enforced and they should be guided accordingly.

Vessels shall not arrive or sail overloaded. All expenses incurred in discharging or lightering overloaded cargo will be for the vessel's account. Vessels departing to zones requiring lighter draft may sail with the draft permitted in that zone plus an allowance for fuel and water consumption to the zone limit.

Weather Conditions: The loading and discharging of all crude and petroleum products will be stopped during severe electrical storms.

Loading of gasoline or other similar low flash products will be stopped during periods of calm when the heavy vapours cannot be dispersed quickly enough to prevent hazards from accumulated gas pockets. Ship's Officers are cautioned to be on their guard during such conditions.

In the event of abnormal weather conditions in the area, such as a hurricane, vessels will be notified that additional moorings are required. If the situation so demands, Masters may be told to suspend all operations and proceed to sea until normal weather conditions again return.

Demurrage: Vessels are required to vacate the berth promptly upon completion of cargo handling operations (loading or discharging operations, as the case may be). Permission to lay alongside at any time the vessel is not engaged in cargo handling operations must be granted in writing by the HOVIC Marine Manager.

If any vessel fails to vacate its berth upon completion of cargo handling operations and expiration of free laytime for dock usage as outlined below, the vessel will be held responsible for penalties and demurrage as follows:

(1) To pay dock demurrage at the rate of U.S.$1,000 per hour or a pro-rata share thereof for a fraction of an hour.
(2) To hold HOVIC harmless for any demurrage and consequential damages incurred as a result of any other vessels suffering berthing delays or for any other events resulting from its failure to properly vacate the berth.

The following rules shall govern the determination of demurrage:

(1) 1 hour of free laytime will be allowed after completion of cargo loading operations. This free time will start at the time cargo hoses are disconnected from the ship's manifold on completion of loading or discharging of cargo.

Vessels awaiting cargo papers and/or Customs Clearance must vacate the berth within 1 hour of such completion and move outside to await their papers.

(2) 4 hours free Laytime will be allowed for ballasting after discharge operations are completed.

(3) Ballasting times for VLCC's will be handled on an individual basis for each ship.

(4) Delays caused by the terminal are excepted.

DEVELOPMENTS: Currently there are no planned revisions to the harbour.

AGENCY: Vessels calling at HOVIC's terminal should address all business messages to their Agent. Ship owners and operators may wish to have their vessels represented by HOVIC Marine Agency. The Agency offers a complete and efficient service.

Arrival: The ship's agent is to be advised as to the vessels ETA 72 hours, 48 hours and 24 hours prior to the vessel's arrival. They are to keep the terminal advised at all times.

AUTHORITY: Hess Oil Virgin Islands Corporation (HOVIC), P.O.Box 127, Kingshill, St. Croix, U.S. Virgin Islands 00850. *Tel:* 809-778-4000, 778-4494. *Telex:* 3473013. *Contact:* Steven Williams, Port Captain. John H. Frederick, Marine Manager.

Virgin Islands Port Authority, P.O.Box 1707, St. Thomas, Virgin Islands, U.S.A. 00801. *Tel:* (809) 774-2250 (St. Thomas), (809) 778-1180 (St. Croix).

ROAD HARBOUR & PORT PURCELL, Tortola, British Virgin Islands: 18.25 N. 64.37 W.

PORT LIMITS: All the area of water North of an imaginary line drawn from Burt Point to Hog Point (see B.A. Chart 2020).

DOCUMENTS:

Clearance from last port.
1 Declaration of Health Certificate.
4 Crew Lists.
2 Crew Store Lists.
2 Ship's Stores Lists.
2 Passenger Lists.

PILOTAGE: Only compulsory for vessels of 200 g.r.t. and over, unless a vessel is in possession of a valid Exemption Certificate issued by the Ports Manager. Pilot boards at Port limits after receiving advice from Agents preferably 12 hours prior to arrival. Link calls made through Tortola Radio, Channel 27 in daytime and Channel 16 at night.

Vessels arriving ahead of ETA sound "G" on whistle if unable to advise Agent.

No inward pilotage at night, unless emergency, night Pilotage outwards by special arrangement.

ANCHORAGES: Between Buck Island and Beef Island or immediately South of Port limits, approximately 12 fathoms.

RESTRICTIONS: Anchorage within Port limits prohibited unless authorised by Ports Manager. Max. draft alongside Port Purcell 21 ft.

HEALTH: Customs issue Pratique for vessels with clear bill of health, otherwise request doctor to board on arrival alongside or at anchor.

RADIO: Call sign "Port Purcell" – can be reached by VHF Channel 16. Cable and Wireless maintain a Public Coast Station on Tortola, call sign "Tortola Radio", with an approximate range of 50 miles and provides linked telephone calls between ships and any shore based telephone subscriber. From 0700 hrs. – 1900 hrs. watch is kept on Channel 16, at night for emergencies only.

For distances in excess of 50 miles any other convenient shore station, (eg. Barbados, St. Thomas) that will accept messages for onward cabling or telephoning to Tortola.

TUGS: None available.

BERTHING: Port Purcell quay is 800 ft. long, max. draft 21 ft. at any state of tide, salt water. Ships discharge with own gear.

CRANES: Port Purcell has 1 mobile shore crane, max. lift 8 tons. Prior advice required for use.

MEDICAL: Hospital facilities available, no routine inoculations, etc., required unless specially notified.

DENSITY: Entirely salt water within port limits.

FRESH WATER: Available in limited quantities at Port Purcell, approx. delivery 20 t.p.h. and costs U.S.$14.00 per 1,000 gallons.

FUEL: Diesel only for small vessels delivered by road tanker to Port Purcell, 2 hours' notice.

REPAIRS: Minor repairs only.

SURVEYORS: Available.

HATCHES: Opened and closed by crew.

CUSTOMS ALLOWANCES: No sealing of tobacco, wine or spirits.

AIRPORT: Beef Island, 7 miles, regular local flights to St. Thomas, Puerto Rico, Antigua which connect with several main lines to Europe and the Americas.

TIME: GMT minus 4 hours.

HOLIDAYS: Port Purcell closed Christmas Day, Good Friday and 1st Monday in August.

POLICE/AMBULANCE/FIRE: Dial 999 (emergency). Police station 43422.

TELEPHONES: Telephones available for use on board ship.

SHORE LEAVE: No restrictions for crews.

IDENTIFICATION CARDS: None required.

DELAYS: None should be expected. Cargo working is geared to ship's arrival, irrespective of time and 24 hours continuous working if required.

AUTHORITY: Ports Manager and Harbour Master, Road Town, Tortola, Virgin Islands.

ST. THOMAS: 18.20 N. 64.56 W. (See Pla

St. Thomas is situated on South side of Island of St. Thomas. I 1,434 miles from port of New York. Northern side of Island borders Atlantic Ocean, and Southern side on Caribbean Sea. The Harbour one of the best in the West Indies, being almost landlocked.

DOCUMENTS:

Quarantine, Customs and Immigration – See "Frederiksted".

Agent:

1 copy Crew List (Form I-418).
1 copy Passenger List (Form I-418).

PILOTAGE: Compulsory and available day and night. Pilot Boat h letter "P" on deck house and flies International Code flag "P". Pilots w meet vessels 1 to 3 miles outside harbour, boarding via Jacob's ladd

ANCHORAGE: Outer Harbour Anchorage located beginning at Scorp Rock Lighted Buoy No. 1 (Lat. 18° 19′ 25.6″ N., Long. 64° 55′ 08″ W thence 180° 1,580 yards; thence 263°, 2,490 yards; thence due Nor 1,255 yards; thence due East to the Southerly tip of Sprat Point, Wa Island; thence to Cowell Point, Hassel Island, and thence to point beginning. This anchorage is considered good and is about 8 fathom with sand bottom.

RADIO: (a) The St. Thomas Marine Operator will guard the follow throughout 24 hours: Channel 26, 16 VHF, 2009 – 2506 and 2182 k AM, and the upper side band (2010.4 – 2507.4 kHz) of the sam frequency. The Harbour Master's Office maintain a 24 hour watch o VHF Channel 16 (working on Channel 12).

(b) Master of every vessel arriving at St. Thomas is required to g at least 24 hours advance notice of arrival to Captain of the Port U.S. Coast Guard – San Juan, Puerto Rico by wireless on 500 kHz or b radio telephone 2182 kHz.

(c) Masters are requested to advise Agents their ETA, at lea 36 hours in advance. Arrival messages should include ca requirements (local currency U.S. Dollar) and advice regarding repai stores, etc. This information is particularly necessary in the cases o vessel arriving on weekends or holidays. For cruise vessels the arriv messages should also include the number of passengers and crew o board.

(d) While vessels are in St. Thomas Harbour, the Authorities do n permit the use of the ship's radio transmitters.

(e) U.S. Coast Guards: This organisation maintains a small Mari Safety Detachment in St. Thomas to observe, service and effect repai to navigation aids in vicinity of St. Thomas. An 82 ft. Coast Guard Pat Boat "Point Whitehorn" (82364) is attached to the station for prima purpose of search and rescue work. Maintains watch on VHF Channel 1 Radio telephone marine information broadcasts, including Notices t Mariners, will be made on 2670 kHz, after first making a prelimina announcement on 2182 kHz. Radio telephone urgent and safety broa casts or Marine Information will continue to be made on 2182 kHz.

TUGS: Normally not considered necessary for docking, however tug are available for docking and undocking ships.

BERTHING: Wharf of the West Indian Company Limited, located o Eastern shore of harbour basin. Wharf is bulkhead type, 2,234 ft. lo with 600 ft. extension, running N.E./S.W., and is well protected t seaward. Mooring bitts are spaced at intervals of 50 ft. There is a "cu out" in the wharf 950 ft. from N.E. corner, which is 22 ft. wide a approximately 3.5 ft. above low water. This ramp is slanting from 8.3 f to 3.5 ft. over a distance of 20 ft. Safe depth alongside from 27 ft. ne N.E. end to 30 ft. on S.W. end. Bulwark is 8.3 ft. above mean tid Average difference between high and low tide is 11 in.

Dockage dues are payable to the West Indian Company Limited a per tariff.

In the Crown Bay area (access via East or West Gregerie Channe the V.I. Port Authority maintains facilities which include a pier extendi 800 ft. from shore with 500 ft. of berthing space on South side and 200 f on North side, where ships up to 25,000 g.r.t. can moor. Controlli depth presently 38 ft. This pier is used for berthing tourist and tank vessels only. A curved bulkhead at top of Crown Bay, approxima 900 ft. long, is used for Ro/Ro, container and break bulk carg Controlling depth 15 ft. 24-hour arrival notice is required.

Phase II-A of the development at Crown Bay will include a 650 f berth for cargo vessels.

CARGO HANDLING: Containers are handled at the West Indi Company and the Crown Bay area (V.I. Port Authority), but no speci gantry cranes are available. Ro/Ro cargo handled at these facilities a well. No liquid chemicals facilities exist here but there is a small private owned LPG plant limited to 20 ft. draft and 250 ft. length. Shell uses th facility for gasoline and light diesel. The "T"-pier in Crown Bay is use for the V.I. Water and Power Authority for movement of fuel and wat and Texaco has its own pipeline on the same pier for their products

STEVEDORES: Discharging and/or loading arranged by the West Indi Company Limited for account and risk of vessels.

Rates of discharging and/or loading dependent on vessel's equipme and stowage. However, following may be considered average:

General Cargo 6 weight tons per gang hour.
Bagged Goods 8/10 weight tons per gang hour.
Lumber 10/12 weight tons per gang hour.

Each stevedore gang normally consists of 12 stevedores (10 on boa and 2 ashore), 2 winchmen, 1 signalman, 1 foreman.

MEDICAL: Local hospital is the Knud-Hansen Memorial Hospital, whi is equipped with facilities for operations, etc.

FUEL: Bunkers are not available except for small craft.

FRESH WATER: Mostly rain water which when available is suppli the West Indian Company Limited. This supply is limited and is on a emergency basis only. Water may also be requested from th Government of the Virgin Islands in cases of emergency only. Deli effected by pipe alongside wharf. Water can be delivered by barge

HEALTH, CUSTOMS, IMMIGRATION: Refer to Frederiksted.

CONSULS: Following countries have consular representatives in St. Thomas:

Belgium
Denmark
Dominican Republic
El Salvador
France
Haiti
Netherlands
Norway
Panama
Sweden
United Kingdom

AIRPORT: Distance 2 miles. Connections with International flights from Puerto Rico and direct flights from New York, Dallas/Fort Worth and Miami.

TIME: Official St. Thomas time is Atlantic Standard Time, which is 4 hours behind GMT.

HOLIDAYS: The following are legal holidays in St. Thomas: Sundays; January 1st (New Year's Day); January 15th (Martin Luther King); January 30th (Roosevelt's Birthday); February 12th (Lincoln's Birthday); The third Monday in February (Washington's Birthday); March 31st (Transfer Day); Holy Thursday; Good Friday; Easter Monday; Whit Monday; The last Monday in May (Memorial Day); June 22nd (Organic Act Day); July 4th (Independence Day); July 25th (Supplication Day); The first Monday in September (Labour Day); The second Monday in October (Columbus Day); The fourth Monday in October (Veterans' Day); November 1st (Liberty Day); The fourth Thursday in November (Thanksgiving Day); December 25th (Christmas Day); December 26th (Christmas Second Day), and such other days as the President of the Government may by proclamation declare as holidays.

Whenever any holiday falls upon Sunday, the Monday following is a legal holiday.

POLICE/AMBULANCE/FIRE: Police 915; Ambulance 774-1212; Fire 921. Port Authority 774-2250, 774-2333.

REGULATIONS: The U.S. Coast Guard strictly enforces the Harbour Pollution Act of 1924, prohibiting discharge of refuse and oil in navigable waters of the U.S. Virgin Islands.

Local Port Regulations are similar to those applying in U.S. Mainland Ports.

WEATHER: The weather is usually mild with little wind. Squalls when they occur, usually come from the N.E.

GENERAL: *Gangway:* One aluminium gangway available which is 34 ft. long and 2 ft. 6 in. wide – made with skidding prevention strips only and therefore not recommended for use as a passenger gangway. There is a similar gangway that is owned and used on V.I. Port Authority facilities. Since these are the only gangways; they are made available to vessels on first-come-first-served basis.

Stores: St. Thomas should not be depended upon for large quantities of provisions or deck and engine stores, as practically all commodities are imported making prices higher than United States mainland ports and Puerto Rico. No regular Ship's Chandlers established in St. Thomas, V.I.

Storage Facilities: The West Indian Company Limited undertakes ordinary storage for a limited period of time in 8 transit warehouses, all 14 ft. high with a total floor area of 80,000 sq. ft., plus an additional 9,600 sq. ft. roof covered area. There is also a large uncovered area available for outside storage. Only limited cold storage facilities are available on The West Indian Company's Dock.

Ice: Small quantities may be obtained.

Laundry: Modern laundry service is available.

AUTHORITY: Virgin Islands Port Authority, Office of the Marine Manager, P.O.Box 2216, St. Thomas, Virgin Islands, U.S.A. 00803. *Tel:* (809) 774-2250, 774-2333. *FAX:* (809) 774-0025. *Contact:* Marine Manager.

NOTES

Please also advise Shipping Guides Ltd.

Western Samoa

APIA: 13.50 S. 171.45 W. (See Plan)

PORT LIMITS: The Customs Act defines the port of Apia as follows: The limits of the said port of Apia shall be a circle of 2 miles radius from the Custom House now existing in Apia and the said port shall include all land, river, and sea included within that circle. The Shipping Act defines the limits of the port in similar terms using the Export Wharf as the centre of the 2 mile radius circle. Both of these features are shown on Chart 2211.

DOCUMENTS:
1 Clearance from previous port of call.
3 Crew Lists.
3 Passenger Lists.
2 Health Documents.
1 Manifest.
Bills of Lading.
Ship's Papers (stores and poisons).
List of Dangerous Goods.

PILOTAGE: 72 hours ETA is required, confirm 24 hours before arrival. Pilotage is compulsory for merchant vessels. Pilot boards 1.5 miles outside harbour on line of leading beacons. Pilot boards from harbour tug.

By night, in addition to usual navigation lights, Pilot boat carries standard identification, i.e. a red light on foremast with all-round visibility. Exemption from pilotage may be granted to Masters of vessels trading regularly to Apia, but pilotage dues are still payable.

ANCHORAGES: In 20 fathoms outside a line drawn between the 2 reefs and preferably on line of leading beacons. Bottom is coral.

RESTRICTIONS: No night-time or tide restrictions. Turning basin dredged to 36 ft. in 1972, extending to 1,200 ft. from each end of the wharf. Arrivals preferred during daylight hours.

MAX. SIZE: Shore bollards to take stern and bow lines for vessels up to 800 ft. in length. Max. draft 35 ft.

Buoy mooring for tankers up to 32,000 d.w.t. consists of 3 buoys with black and red vertical stripes, 1 ahead and 2 astern. Vessel also uses starboard anchor.

HEALTH: Doctor boards vessel on arrival alongside.

RADIO: ETAs should be sent 72 hours before arrival, and confirmed 24 hours before. Signals to incoming ships by radio or radio-telephone from Apia Radio Station 5WA. For radio, ships should call on 500 kHz and operate on 483 kHz. For radio-telephone, ships should call on 2182 and operate on 2162 or other available frequency as may be arranged once contact has been established. Call sign "Apia Radio" repeated.

Apia Radio maintains continuous service, and the Harbour Master can be called on Channel 16 during normal working hours. The tug and pilot launch also operate on Channel 16 .

TUGS: 2 tugs available, *Pualale,* 425 b.h.p. (7 ton pull) and *Tavola,* 2×800 s.h.p. (20.95 tons pull).

BERTHING: Export Wharf – reinforced concrete wharf 604 ft. in length on the East side of inner harbour. Max. depth alongside 36 ft. All loading and discharging is carried out with ship's gear. No wharf cranes available. This wharf and all surrounding areas enclosed by fence is Customs area and all vessels trading to or from places outside Western Samoa must depart from or arrive at this wharf.

New wharf 604 ft. long, vessels up to 800 ft. may be berthed.

There is 250 ft. of berthing alongside the inner face of the Southern arm of the wharf for small ships in deep water.

There are no special Ro/Ro facilities.

Shore equipment: One 15 ton mobile crane. 2×20 ton forklifts. About 10×3 to 5 ton forklifts.

STEVEDORES: Arranged by ship's Agents.

MEDICAL: Advance notice to Agents preferable. Doctors and good general hospital where seamen may be admitted.

There is a private medical clinic and a private dental clinic. Both high standard.

TANKERS: Shell, Mobil, and B.P. operating in Samoa, and have own discharging facilities. Tanker terminal situated on West Reef. Discharge line is 6 in. diameter. Launch service may be provided between ship and shore at a small charge.

DENSITY: 1025 – but may alter considerably during rainy season.

TIDES: Mean high water intervals 6 hours 27 minutes, Spring range 3.8 ft., mean range 2.6 ft. Tidal stream normally slight, but after heavy rain outflow from rivers and streams can cause it to become quite strong.

The current across the harbour entrance about 600 m. off the reef can be variable, but is predominantly Westerly and velocities up to 4 knots have been reported but this is not normal.

FRESH WATER: Available at wharf from shore installation.

FUEL: Only light diesel fuel available.

FIRE PRECAUTIONS: Fire services available on wharf, station is 0.5 miles distant.

CONSULS: The New Zealand High Commissioner represents all British subjects; French Consul, Australian High Commissioner, Embassy of the Chinese People's Republic, South Korean Consul, German Consul, United States of America Consul.

REPAIRS: Minor repairs only.

SURVEYORS: None.

GANGWAY/DECK WATCHMEN: Recommended and available.

OPENING/CLOSING HATCHES: Opened and closed by stevedores.

CUSTOMS ALLOWANCES: No enforcements.

AIRPORT: 25 miles from Apia on Western side of Island. Regular and frequent mail and passenger services. Direct to Auckland or U.S.A. via American Samoa.

TIME: GMT minus 11 hours. No alteration to clocks.

HOLIDAYS: No cargo on Sundays from midnight Saturday until 2100 hrs. Sunday. The recognised holidays are Christmas, New Year, Boxing Day, Good Friday, Easter Monday, Whit Monday, Anzac Day and Independence holidays from 1st June to 3rd June.

TELEPHONES: Police and public telephones near wharf and provis are available for telephone connection to tourist vessels berthed at wharf.

POLICE/AMBULANCE/FIRE: Hospital 21.212; Police 22.222; Fire emergency or 20.404.

EMERGENCY CO-ORDINATION CENTRE: U.S Coast Guard, Pa Pago, American Samoa, 80 miles East of Western Samoa.

BANKS: Bank of Western Samoa, P.O.Box 189, Apia, Western Samo Tel: 22 422. Telex: 258.

Pacific Commercial Bank (Affiliate Bank of New South Wales a Hawaii), P.O.Box 192, Apia, Western Samoa. Tel: 22 781. Telex: P 231.

STORING: See "Prelims".
1. Truck only.
2. N/A.
3. Yes.
4. Yes.
5. No regulations.
6. Yes.

SHIP SUPPLY SERVICE: The Marine & Shipping Division of the Minis of Transport provides tug-boat services which are available for ship- shore transport of personnel and/or essential ship stores, sick cr members, etc., on application to the Secretary, Ministry of Transpor

SHORE LEAVE: No restrictions.

IDENTIFICATION CARDS: Not needed.

GARBAGE DISPOSAL: No regular service currently available. Conta Department of Agriculture Quarantine Service (Tel: Apia 2092 Garbage disposal is only permitted from ships from Australia, Fiji a New Zealand.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

CURRENCY: Western Samoa Tala (WS$). Local currency can not exported.

GENERAL: *Supplies:* Provisions available. Deck and engine ro supplies can be obtained in limited quantities.

Divers: No divers other than scuba divers are available, and skin div may be recruited for up to 50 ft. diving.

Oil Pollution: The pumping of bilges, etc., within harbour limits is permitted and *heavy penalties will be imposed for any breach.*

Garbage Disposal: The dumping of refuse of any kind within harbo limits is strictly prohibited. Properly covered receptacles will be ma available and rubbish disposal vans will clear them as necessa A small charge will be made for this service.

Republic of Yemen

GENERAL:

CIRCULAR: Extract from the Circular dated 21st June, 1975 from the Hodeidah Port General Corporation.

Information and General Condition:

1. Payment of Tolls and Dues:

All charges imposed herein are payable in cash, in advance except in the circumstances in which the General Manager of the Hodeidah Port General Corporation exceptionally agrees otherwise.

2. Definition to Certain Terms:

(a) "Vessels" shall deem to refer in the Regulations to every floating craft made to sail on water by its or without its own means, whether or not fit for navigation.

(b) "Working Day": Commences at 0600 hrs. and ends at 1800 hrs. Night: Commences 1800 hrs. ends 0600 hrs. following day. Weekend: Commences Thursday 1200 hrs. and ends Saturday 0600 hrs.

3. Public Holidays:

The following occasions are observed as Public Holidays, which commence from 1200 hrs. on the preceding day and end at 0600 hrs. following the holiday:–

1. Weekly Holiday: Friday.
2. Al-Hijra (Moslem New Year): *1st Muharram.
3. Maulid-El-Nabi (Prophet's Birthday): *12th Rabia Awal.
4. Al-Meiraj (Prophet's Ascension Night): *27th Rajab.
5. Al-Shaabania: *15th Shaaban.
6. Idd-El-Fitr (4 days): *1st to 4th Shawal.
7. Idd-El-Adha (5 days): *9th to 13th Dulhijja.
8. Revolution Anniversary: 26th September.
9. 13th June (National Holiday).
10. Labour Day (1st May).
11. Revolution Day (14th October).

*N.B.: For Hijra Calendar dates, the corresponding Georgian Calendar dates will be those proclaimed by the Government of the Yemen.

CIRCULAR: To Owners/Masters.

We quote below text of a Circular dated 21st January, 1979, issued by the General Corporation for Ports and Marine Affairs, Hodeidah, for your information and necessary compliance:

"No vessel, having no workable derricks or winches of her own, shall be received or accepted.

Agents shall be responsible for said obligations and without any liability to the Port General Corporation, in all Yemen Ports.

Due to non-availability of discharging means of floating cranes at anchorage and non-guarantee of available shore cranes, advisable you ensure that all ships calling under your Agency should be fully equipped as required."

PILOTAGE: Pilotage is compulsory on all vessels irrespective of their size, on entry and departure.

NOTICE: The following notice was handed to a Master on arrival at Hodeidah.

Re: *Formalities, Restriction, Breaches & Penalties at Yemeni Ports:*

We are very pleased to welcome you and the vessel under your command at Hodeidah/Raskateeb/Saleef/Mokha, and request you to note and comply with the following formalities/restrictions to avoid payment of penalty.

1. Call Pilot only when you are fully ready in all respects. If Pilot is called to take the vessel out, and the vessel fails to depart after boarding of the Pilot, the vessel will bear all the consequential expenses of (a) Pilot waiting time, (b) Launches assistance charges, (c) unmooring charges, including any other expenses.
2. Fine of Y.Rials 500 to 2,000 is imposed, if Yemen flag is not hoisted on the highest mast.
3. Fine of Y.Rials 500 is imposed, for arrival at Port without prior notice, notifying actual time of arrival of the vessel.
4. Fine of Y.Rials 10,000 to 20,000 is imposed for attempting entry to berthing quay, without prior permission from the Management and without Pilot on board. Same penalty imposed for attempting departure without permission and Pilot, from the quays or inner basins.
5. Fine of Y.Rials 500 to 1,000 is imposed for draining water onto the quays. Vessel also to bear responsibility for losses caused therefrom.
6. Fine of Y.Rials 1,000 is imposed for throwing garbage, cargo remains, food remains, oil, etc. into inner harbour or onto quay.
7. Fine equivalent to 100% of the loss in income to the Corporation is imposed, in the event the vessel submits inaccurate statements on ships particulars and drafts.
8. Fine of Y.Rials 5,000 is imposed, if the vessel leaves anchorage after registration without clearance from the Corporation.
9. Fine of Y.Rials 500 is imposed, if Rat Guards are not provided to avoid rats escaping to the quays.
10. Fine of Y.Rials 2,000 is imposed, if vessel uses her own boats within Port limits without prior permission.
11. Fine of Y.Rials 2 is imposed per hour per metre of LOA of the vessel, for delay in completion of discharging during the duration set out by the Corporation.
12. Fine of Y.Rials 1,000 is imposed on whoever obstructs Corporation's staff/employees in carrying out their duties or insults them.
13. A shore crane will be compulsorily deployed at 100% surcharge to a vessel over 100 m. LOA.
14. Corporation reserves the right of removing any vessel from the quays for any reason in the general public interest.
15. Photography of the Port area is prohibited.

(Notes from Tariff – 1/82 published by Ports & Marine Affairs General Corporation).

Please note that the Port Limits (for Hodeidah) are 14° 55′ 34″ N., 53° 37′ E.

"Pilotage Point" for entrance and departure is Buoy No. 2.

We trust that you will find the above information very helpful to promote cordial relations with all officials and relevant authorities, and at the same time contribute towards reducing expenses of our mutual Principals.

PLEASE NOTE: All the foregoing information was in effect prior to the unification of the country and may have been superceded in recent times.

ADEN, (including Little Aden): 12.48 N. 44.54 E.

DOCUMENTS:
5 Crew Lists for Ship's Agent, Police and Immigration.
5 Passenger Lists for Ship's Agent, Police and Immigration.
2 Lists of Bonded Stores.
1 Health Form to be shown to Pilot on boarding and handed to Ship's Agent.
Manifests, Bills of Lading if landing cargo only.
Ship's Register to be sighted by Pilot.
Arrival Declaration to be filled in by Ship's Agent after arrival.
Dangerous Material Declaration to be handed to Pilot on boarding.

PILOTAGE: Compulsory for all vessels proceeding to and from Inner Harbour and Oil Harbour at Little Aden which exceed 200 g.r.t. To call Pilot fly International Code Flag "G" or red/white/red lights at night. Call "Harbour Control" on VHF Channel 16, or R/T 2182 kHz. 48 hours' notice of ETA with draft to Harbour Office.

Pilot boat will meet ship at the Fairway Buoy in all weathers. Pilot boat is 50 ft. launch painted red, flying Pilot flag by day or white/red lights at night. Pilot will board on lee side of ship by pilot ladder only. Vessels waiting Pilot can anchor anywhere in Outer Harbour except in a Prohibited Area of 2,000 ft. around the Fairway Buoy. All Pilots are Yemenies with foreign-going Master's certificates.

ANCHORAGES: Ample anchorage area available with in Outer Harbour depths from 18 ft. to 54 ft.

(a) Anywhere North of Fairway Buoy clear of Main and Little Aden Channels and clear of Prohibited Area mentioned above.

(b) Deep water anchorage anywhere to S.W. of Fairway Buoy clear of Little Aden Channel and Prohibited Area mentioned above.

MAX. SIZE:

Aden:

(a) Max. length 900 ft., breadth no restriction, depth 38 ft. at datum for vessels taking bunkers from A.B.C. (Aden Bunkering Co.).

(b) Vessels taking bunkers from Y.K.T.C. (Yemen-Kuwait Terminal Co.), max. length restricted to tankers of 750 ft., breadth no restriction, depth 39 ft. at datum.

(c) Larger vessels can be considered on application to the Port Officer. Longest vessel to enter 940 ft.

Little Aden Refinery:

Max. length 760 ft., breadth no restriction, depth 40 ft. at datum and max. deadweight 65,000 tons.

A new jetty 45 m. in length has been constructed on the North side of the oil harbour by Agip Oil Company for use by oil rig supply tugs. Vessels up to 90 m. LOA and 6.1 m. draft can berth on the jetty.

Note: In both harbours vessels manoeuvring require 2 ft. water under keel, and vessels of draft 37 ft. and above require 4 ft. water under keel.

Ballast Draft for Tankers: All tankers when manoeuvring within the port shall be ballasted properly to a mean ballast draft which shall not be less than half the Summer draft and the trim by the stern not exceeding 6 ft. These figures are the minimum for normal conditions and may be increased when conditions necessitate at the discretion of the Pilot.

HEALTH: Vessels requiring Pratique fly International Code Signals or 3 red lights at night. This signal to be exhibited until Pratique has been granted by the Pilot or Port Health Officer.

Control of quarantinable and infectious diseases is direct responsibility of Port Health Officer. All passengers from infected local areas except children under age of one year are required to have valid international certificate of vaccination or revaccination against yellow fever and cholera.

RADIO: All ships landing passengers are boarded by Assistant Port Health Officer unless Radio Pratique has been given. Pratique may be obtained by radio to Port Health Authorities no earlier than 12 hours and no later than 4 hours before arrival, in accordance with international procedure. All landing passengers medically inspected and vaccination certificates checked on board before Free Pratique granted. Ships having infectious diseases on board are also boarded; after examining the case and taking any necessary precautions the Assistant Port Health Officer grants Restricted Pratique. Ships also inspected for issuing Derat Exemption Certificates. Deratting carried out when necessary and Derat Certificate issued.

Yemen Telecommunications Company: Mercury House, Ras Boradi (Tel. 22223/5).

6 In		Dolphin & breast buoys (oil)	800	38
7 In	T	Dolphin & breast buoys (oil)	750	39

The capital letters in column two denote alternative designation of mooring buoys/dolphins.

New Quay: New quay with length 750 m. and depth 11.0 m. for vessels up to 36,000 d.w.t. Two berths for container vessels and 2 berths for general cargo vessels. The quay will be equipped with 1×40 ton container crane and 6×6 ton semi-portal cranes.

Ro-Ro Terminal: Length 150 m., depth 7.6 m.

Home Trade Quay (H.T.Q.): 800 ft. long with depth of 6.7 m. Max. size of ships that can berth there are restricted to 122 m. LOA and max. draft 5.5 m.

Free zone. Initial Stage 525,420 sq.ft. open space and 162,000 sq.ft. covered space. Import and export industrial facilities. No restrictions, no taxes. Transhipment storage free for unlimited period.

STEVEDORES: ETA advice to Agent at least 48 hours before arrival.

MEDICAL: Advance notice for medical attention not normally required except for serious cases requiring doctor's attendance on board, or ambulance cases. Vaccination certificate required for landing. Hospital facilities available.

TANKERS: Tankers carrying dangerous petroleum (flash point below 73° F) and those not gas free or carrying more than 3 tons of category one cargo (explosives) cannot enter Aden Harbour during hours of darkness. They can enter Little Aden day or night. Slop (residue) discharge facilities available at Little Aden. 4 tanker berths for discharge/loading at Little Aden with max. datum depth of 40 ft.

Berthing at Oil Harbour: Functions of Oil Harbour Little Aden to receive crude oil in bulk for oil refinery and to export refined petroleum products. Vessels carrying cargo for refinery, other than oil, discharge at Inner Harbour.

Oil harbour has finger jetty and 2 T-head jetties which provide berths for 4 tankers. Tankers of up to 65,000 tons Summer deadweight with 55,000 tons of cargo can be accommodated.

Berth	Type	Normal maximum length of ship (ft.)	Datum depth (ft.)
1	Dolphin & mooring dolphins	750	40
2	Dolphin & mooring dolphins	750	40
3	Dolphin & mooring dolphins	750	40
4	Dolphin & mooring dolphins	See "below"	

Berth No. 4: Max. size 110,000 d.w.t. Max. LOA 264 m. Width of channel 220 m., depth 14.75 m. Depth alongside 15.85 m. Daylight berthing on flood tide. Daylight unberthing on suitable tides.

BALLAST: Notice: Port Authority require vessels arriving or sailing in ballast to have mean draft 50% of Summer draft and maximum trim of 6 ft. by stern. However, should the vessel have segregated ballast tanks then ballast condition must comply with regulation 13 of International Convention for Prevention of Pollution 1973, Protocol 1978. Total deballasting time allowed being 6 hours only. Vessels should have maximum possible ballast clean and capable of being pumped overboard. Dirty ballast and slops can be received ashore at maximum rate of 500 t.p.h.

Signed: Marine Superintendent.
Aden Refinery Company.

DENSITY: Salt water at all times.

FUEL:

(a) A.B.C. (4 berths).
Marine fuel 2500 sec., 1000 sec., 600 sec., 200 sec.
Diesel oil and gas oil.

(b) Yemen-Kuwait Terminal Co.
Marine fuel – all grades below 3,500 sec.
Diesel oil and gas oil.
All supplies done on a Nomination basis through the Compan Head Offices, with the vessel giving at least 48 hours' notice Aden.

FRESH WATER: Ample available, delivered by barge in Aden at abo 50 t.p.h. Ordinary water in Little Aden supplied by pipeline at abo 40 t.p.h. and condensate at about 2 t.p.h.

FIRE PRECAUTIONS: As per the Refinery regulations (Internatio Standard). Tug wires to be rigged and check list to be furnished.

CONSULS:

Algeria	Iran	Portugal
Belgium	Iraq	Russia

REPAIRS: Workshops are equipped to carry out: Boiler repairs; Plati and sheet metal work; Galvanising work/moulding work; Welding a blacksmith's work; Main and auxiliary machinery repairs; Carpentry a joinery work; Electrical and plumbing work; Refrigeration repai painting, cleaning and chipping. Repairs afloat to vessels up to 80,0 tons are undertaken; repairs to the largest vessels carried out mostly Outer Harbour.

Radio engineering section with fully qualified personnel giving roun the-clock service of repairs and maintenance to radar and rad equipment.

During repairs, maintenance and painting – no rubbish to be thro overboard, precautions to prevent pollution to be taken. No painti overside to be carried out without written permission from Port Authori Chipping and/or scrapping overside strictly not permitted.

DRY DOCK: 1 sideways slipway taking 1,500 tons and floating doc lifting capacity 4,500 tons. Length 137 m., breadth 31 m. Max. dra 6.0 m.

GANGWAY/DECK WATCHMEN: It is recommended watchmen a employed; they can be supplied by Ship's Agent. Safety net to be rigge

OPENING/CLOSING HATCHES: Normally carried out by stevedore derrick-topping by ship's crew. Vessels not to move in harbour wi beams off.

CUSTOMS ALLOWANCES: Tobacco/Wine, Spirit allowance. N restriction at the moment. Bonded stores not allowed to be supplie more than 1 hour before ship sails.

REPATRIATION: Arranged through Ship's Agent and Immigration.

AIRPORT: About 5 miles from port. Flights to U.K. via Beirut (Midd East Airlines), Air France, Kuwait Airways, Air India, Ethiopian Airline Saudi Air and Alyemda also call.

TIME: GMT plus 3 hours. No alteration of clocks.

HOLIDAYS: Most holidays are religious which have movable date National holidays are 14th October and 30th November. Cargo wo usually carried out during all holidays. Friday is a public weeken holiday.

POLICE/AMBULANCE/FIRE: Ambulance at Crater 53232; Harbou Police 22851; Port Health 22626/7; Fire 22222.

TELEPHONES: No connection to ships but link calls can be made o VHF through Yemen Communications using Channel 16 to call a working on Channel 26. Some Agents have private VHF Channels.

SHIP SUPPLY SERVICE: There are no firms specialised in this field i Yemen. However, the Yemen Ports Authority has a large fleet of tu and launches at Aden, and will, in 1985, have 2 Voith Schneid propelled tugs, 1 fast pilot launch and 2 mooring launches at the new constructed port of Mukalla-Khalf. These craft are available at all time for rendering assistance to sick persons on board ships in the vicini of the ports and are also available for crew changes, mail and spa parts delivery.

As to helicopter services, the Yemen Army and Air Force make th helicopters available for rescue at sea whenever possible.

SHORE LEAVE: *Regulations:* In accordance with Art. 8 of th Immigration Rule No. 28 of the year 1969, all crew members comi ashore will be excused from obtaining visa provided they surrender th Passports to the Immigration Officer-in-Charge. These Passports will b given back to the holders before they return to their particular vesse Any crew member unable to comply with these instructions will not b permitted to visit the town.

Ships' crew are not allowed to stay ashore after 0000 hrs.

IDENTIFICATION CARDS: Shore pass to be carried at all times wh ashore.

REGULATIONS: Vessels must fly the National flag of Yemen a foremast. No movement of "dangerous petroleum" at night. Vesse must vacate oil berths on completion of bunkering. Main engines mu not be immobilised in an oil berth. Sufficient crew must remain abo vessel at all times to move her.

Ships carrying dangerous cargoes calling at Yemen Ports must info the Port Authority concerned not less than 48 hours prior arrival. IM Class 1 dangerous cargo to discharge at Outer Harbour Anchorage IMO Class 1 in transit vessel will manoeuvre during day time only.

Immobilisation of main engines should not be executed at any ber before obtaining written permission from Port Authority, through shi Agent. Same procedure applies for overside hull painting. Applicatio to be through ship's Agent in duplicate. Main engine immobilisation oil berths and Home Trade Quay not allowed.

GENERAL: Outer harbour contains ample anchorage area for vessels requiring datum depths up to 54 ft. Inner harbour approached by 2.7 mile dog-leg channel, dredged to 38 ft., from Fairway Buoy in Outer Harbour where Pilots board. Inner harbour protected by breakwater at Steamer Point and by rubble mound. It provides 24 buoy or anchor-and-buoy berths, including 13 with oil bunkering facilities. Majority of these berths have a datum depth of 30 ft. or 38 ft., with max. length of ship ranging from 275 ft. to 750 ft. In addition 3 dolphin berths, with bunkering facilities, of 39 ft. datum depth and normally accommodating ships of 750 ft. – 800 ft. max. length; vessels of greater length can be accommodated with the approval of the Port Officer. Quays and wharves cater for shallower-draft vessels and lighters.

Oil harbour, serving refinery at Little Aden, reached by 38 ft. channel from Fairway Buoy, provides facilities for tankers of up to 750 ft. All berths and anchorages are under the jurisdiction of the Port Officer.

In order to facilitate berthing arrangements for ships calling at Aden, Masters are requested to furnish the Port Authority with the necessary information, such as, LOA, max. draft, g.r.t., type of ship, object of call, dangerous cargoes on board and IMO Classes, ETA and any other information Master thinks may be useful.

DEVELOPMENTS: Newly constructed alongside berths of 900 m. (excluding HTQ) are ready for berthing modern vessels:

2 Container berths (11 m. depth).
2 General cargo berths (11 m. depth).
1 Ro/Ro berth (7.6 m. depth).
1 Home trade quay (800 ft. long with 6.7 m. depth).

Procurement of new cargo – handling equipment:

1 Container gantry crane of 40 tons under spreader and 50 tons with hook.
2 Container handling forklifts of 45 tons each (operating August 1992).
4 Forklifts of 2.5 tons (diesel and electric).
6 Tractor units and 20 roll trailers and communications equipment.

Actual operations will start in August 1993.

The following will operate in the 2nd half of 1993:

3 Container forklift trucks of 35 tons under spreader.
12 Container forklift trucks of 12.5 tons.
5 Forklift trucks of 2.5 tons.
6 Terminal tractors.
12 Terminal chassis (semi-trailers).
Other terminal equipment plus workshop equipment and tools.

SHIPMASTER'S REPORT: 1976

Documents:

Pilot: Sights Ship's Register to check tonnages.
Customs: 2 Crew Lists; 1 Bond List.
Immigration: 2 Crew Lists.
Doctor: 1 Health Form; 1 Vaccination List.

Note: Crew List should have consecutive numbers as well as Agreement numbers.

Agents: 2 Crew Lists; Arrival information sheet; Statement of Owners full address also Cable address; 2 Arrival Declaration for Yemen Ports Authority; 2 Aden Port Log; 1 Charges sheet for Mail; 1 Sailing information sheet; 1 Currency refund sheet.

Agent brings these Forms on board and will assist with filling in the information.

Communications: It was found impossible to make Radio Contact with Aden prior to 5 days before arrival. Best time seems to be after Aden sends its Traffic List. VHF contact was made at 12 miles as the hills around Aden appear to blanket signals when further away. Channels 16, 13, 8 or 6.

Approach: This is straightforward. The B.A. Charts appear to be well up-to-date. The Fairway Buoy is easily seen at 8 miles. Pilot boards here. Pilot ladder required. Authorities will not allow the accommodation ladder to be used.

Mooring: There was a trainee Pilot with both the inward and outward Pilot.

Ship was swung using starboard anchor and 1 tug aft. Berthed at No. 4 Berth. Forward: 3 ropes to buoy on inside plus starboard anchor 5 shackles. Aft: 1 rope from port quarter and 1 from starboard quarter taken to outside buoy, then 2 ropes, 1 from each quarter taken to inside buoy. Ship then hove to be centred between the 2 after mooring buoys. When ship in position oil pipeline, on floats is towed alongside.

Visit: Agent boarded with Doctor. At first Doctor was insisting all had to have Cholera vaccinations but is not really necessary. Immigration and Customs boarded. All pleasant and helpful. Bond was sealed.

Port Facilities: 2 fairly powerful tugs. Numerous mooring boats, 1 floating crane seen but as to lift capacity this was not ascertained. Port is run by The Yemen Ports Corporation. Like the Agency it is State owned.

Watchmen: Agents automatically provide 2 watchmen. Seemed to be alert.

Regulations: Masters are requested to assist the Port Authority by not allowing Bumboatmen or fishermen to board without written permission. The Port Authority advises Masters to be most careful if they do issue written permission. There were no bumboats about and no one seeked permission to come aboard to do business.

One half hour prior to sailing the Pilot signal red-white-red in a vertical line or "G" to be hoisted also call Port Control on VHF 16.

Use of ship's whistles or sirens is very controlled.

Bunkering: Ship's crane used to hoist pipeline aboard. The bunkering operation went smoothly and the Oil people seemed co-operative.

Walport Film Exchange: Agents were cabled but it is necessary for an Officer to go with the Agent to make the exchange.

Mail: Mail posted in London on 22nd March or 23rd March was stamped as having arrived Aden 28th or 29th March.

General: It would seem that the Port Authority, State, etc., are very keen to build up a thriving Port. It would also seem that they endeavour to give a good efficient service. I gather there is a special duty free shop ashore for the purchase of souvenirs, goods, etc.

SHIPMASTER'S REPORT: March 1985.

Documents: See "Fuel".

Pilotage: Harbour Control was called on VHF Channel 16 two hours before arrival and again 4 miles off the Fairway Buoy. Information given from the Harbour Control regarding Pilot and berthing gave the impression of a well organised port. Night signal for a ship requiring Pilot is following: vertical lights, red-white-red.

Radio: From one week before arrival, radio messages were sent via Aden Radio (7OA) to Aden and Ethiopia. Radio Officer told me that Aden Radio proved to be easy and efficient to work with.

Fuel: Bunkering commenced immediately on arrival even before ship cleared by the Authorities. Authorities came on board just before departure to collect Crew Lists and Stores Lists. Crew's cabins were not searched and stores not sealed.

2 men from the Agents were on board to handle ship's matters.

Repatriation: 7 crew members were repatriated to Denmark, and 7 new crew members joined. Tickets for those to be repatriated were brought from Denmark with the joining crew. Crew change went smoothly.

Notices: Yemen Ports Authority – Port of Aden:

Masters are requested to assist the Port Authorities in controlling bumboat traffic as follows:

Bumboatmen and fishermen selling fish *may not* board ships without the written permission of the Master. Disregard of this rule renders the men liable to police action *after* the ship has left when evidence cannot be obtained from the ship. Masters can greatly assist the Authorities if they will ensure that they give written approval to bumboatmen and fishermen whom they have allowed to board the ship.

Port Officer, Aden.

To: All Masters of Vessels in Aden Port – From National Shipping Agency.

The undermentioned information is for your kind attention and guidance:

Immobilisation of Ship's Engines:

Please note that it is an offence to immobilise ship's engines WITHOUT written permission being obtained from the Yemen Ports Authority. To avoid heavy penalty, Masters are advised to forward their requests to us in duplicate, as ship's Agents, and should NOT immobilise ship's engines unless they are in possession of the written permission of the Yemen Ports Authority for the period approved.

Garbage Collections:

Appended below are extracts from Circular No. G/3/128 dated 25th January, 1984, of the Port Officer and Director of Marine Affairs, Yemen Ports Authority, Aden:

(a) Collection and removal of garbage from vessels is entrusted to persons authorised and licensed by the Yemen Ports Authority, Aden, and who work on a rota system.

(b) It is compulsory for a vessel staying in the harbour for a period exceeding 24 hours to avail itself of this service and fees will be collected per day **whether garbage has been collected or NOT.**

(c) Similarly it is compulsory for garbage collectors to call on vessels allocated to them daily unless other arrangements have been agreed with the Master of a ship. Any garbage collector who does not call on vessel allocated to him daily without prior agreement of the Master will not receive his fee that day if reported.

Note: Masters requiring special service for collection of extra garbage, i.e., refuse/wastes, etc., emanating from the cargo holds/engine room, etc., must put their written request in duplicate to us, as Agents, to arrange for the garbage collector to call on their vessel. The Master should also notify us in writing the charges agreed upon for the extra garbage with the Collector. This does not apply to Russian vessels who are required to comply with the procedures below.

For Masters of Russian Ships: Before applying for the collection of extra garbage, please first submit your written request in *4 copies* through the Agent for *approval* of the Resident Representative for Russian ships. Please *do NOT* employ collection of the extra garbage before receiving this approval.

Scraping, Chipping and Painting in the Port:

Please note that as per instructions from Yemen Ports Authority, scraping, chipping and/or painting are *NOT ALLOWED* during vessel's stay in the port, unless prior permission is obtained from the Port Officer through us, as Agents. Any requests for the above must be forwarded to us in duplicate.

Shore Leave – Immigration Regulations:

All shore leave expires at 2300 hrs. and, therefore, all Masters, Ship's Officers, crew and passengers should be on board by this time. Overnight stay ashore is *not permitted.* Infringement of the above will be subjected to penalty and also delay to the ship.

Cash Advance to Master in Yemeni Dinars:

Cash advances required by Masters for payment to their crew in order to enable the crew to avail themselves of purchases from *Tax Free Shop,* require the following procedures to be complied with:

(a) Masters are required to render their requisitions in duplicate to the Agents during working hours together with 2 copies of Crew List.

(b) Either the Master or Chief Officer or Purser in person should have the requisition attested, stamped and signed by the Customs Officer before handing them to National Shipping Co. (the Agents).

(c) Together with the cash to Master the Agents will issue Purchase Certificates on Tax Free Shop.

(d) After completion of the purchases and 24 hours before vessel is due to sail, the Master should obtain *Purchase Clearance Certificate* from Tax Free Shop and hand it over to the Agents. This is most essential as against these Certificates only and after reconciling with the actual cash advanced, the Agents can accept the balance cash refund from Master.

Under the Exchange Control Regulations, it is an offence *not* to return the *UNUSED* Yemeni Dinars prior to sailing. Masters of vessels who received Cash Advance in Yemeni Dinars are advised to return *ALL* Yemeni Dinars remaining in their possession, to our representative who boards to clear the vessel, and ensure to obtain from him *on the spot* an official receipt of the National Shipping Company for the amount refunded, prior to departure of the vessel.

Victualling Allowance:

Free meals to Stevedores' Personnel/Watchmen.

Free meals are normally given by vessels by mutual arrangements between Masters and the Stevedores, to save time of the following persons who otherwise would have to go ashore for their meals:

One Tally Clerk per hatch working.
One Foreman.
One Cargo Supervisor.

It is left entirely to your discretion to supply free meals to the above mentioned personnel and the watchman or not. Kindly, therefore, note that we do *NOT* countersign or vouch expenditures.

Contacts on VHF: Masters of vessels can contact Agents on VHF (Channel 16) at any time during the *DAY* or *NIGHT* for any inquiries or services required. The Harbour Control also can be contacted on the same Channel.

Authorities: All in all the Port Organisation, Pilots, tugs and the Authorities gave us a good impression of the port.

AUTHORITY: Yemen Ports Authority, P.O. Box 1316, Tawahi, Aden, Yemen. *Tel:* 22666. *Telex:* 2278 Mawany Ad. *Cables:* Mawany. *Contact:* Mohamed Ahmed Ali, Director General.

ASH SHIHR TERMINAL: 14.41 N. 49.31 E. (See Plan)

LOCATION: The Ash Shihr Petroleum Export Terminal, operated by Canadian Occidental Petroleum Limited, is located on the Southern coastline of the Republic of Yemen, approximately 230 nautical miles East of Aden.

The Terminal area is delineated by a circle 3 miles in radius from the SPM.

ACCEPTANCE: *Terminal Terms of Acceptance:* The Mooring Master will give the Master of the vessel a Terminal Rules and Regulations booklet and duplicate copies of documents entitled "Ash Shihr Petroleum Export Terminal Conditions of Use", "Ship/Shore Safety Check List" and "Inert Gas Check List". These documents specify the Terminal conditions of use and safety requirements which must be satisfied.

The Master must personally sign the "Conditions of Use" document before the Terminal Operator will accept the vessel.

NAVIGATION: The location of certain navigational and mooring facilities is given by the following coordinates:

(i) SPM Position: Lat. 14° 40′ 35″ N., Long. 49° 31′ 16″ E.
Navigation Light – white "U", visible 5 miles.

(ii) Navigation Buoys: Permanent navigation lights are exhibited on the 3 navigation buoys marking the 27.4 m. (90 ft.) water depth seabed contour.

Position of the buoys are given hereunder:

East Buoy:	Lat. 14° 41′ 15″ N., Long. 49° 31′ 10″ E.
Middle Buoy:	Lat. 14° 41′ 05″ N., Long. 49° 30′ 53″ E.
West Buoy:	Lat. 14° 40′ 55″ N., Long. 49° 30′ 31″ E.

(iii) Service Tug Mooring Buoy:
Mooring Buoy: Lat. 14° 41′ 08″ N., Long. 49° 29′ 28″ E.

Masters of vessels are advised that no Anchorage Area is warranted as being suitable by the Terminal Operator.

Seabed soil characteristics within the Terminal area are Dolomite Limestone, and is not suitable for anchoring large vessels with conventional anchors.

Masters of vessels must not attempt to anchor within the Terminal area.

All attempts to anchor their vessel is at their own risk, and must be well clear and seaward of the Terminal and its facilities.

The Terminal Operator will have no liability whatsoever for any claims, charges, damages or losses of any nature or kind incurred by or in any way relating to anchoring of vessels.

Navigational Chart: The location of the Terminal is indicated on the following navigational chart:

British Admiralty Chart No. 3784, titled – Ra's Al Kalb to Ra's Marbat.

Approach to Terminal: Approach to the Terminal is direct from the Indian Ocean.

DOCUMENTS: Upon arrival at the Terminal, the following documents will be required by the Republic of Yemen Government Authorities:

5 copies Crew List.
5 copies Customs Declaration.
5 copies Bonded Stores List.
1 copy for perusal Last Port Clearance.
1 copy Maritime Declaration of Health.
5 copies Ship's Manifest.
1 copy Derat Certificate (current).

Documentation required by the Terminal Operator is as follows:

Signed "Conditions of Use" letter (By Master).
Signed Ship/Shore Safety Check List.
Signed IGS Check List.
Signed Notice of Readiness Notification.
Signed Receipt for Terminal Information Book.
Signed Master's Acceptance of Early Departure Procedure.
Photocopy of Vessel Pollution Insurance Certificate.

EDP: A full Early Departure Procedure is operated. The Master receive no cargo documents when sailing and must authorise his lo Agent to sign all cargo documentation on his behalf. The Master receive a message with confirmation of the cargo details approxima 2 days after departure.

Protest Notices: No amendment of any Bill of Lading is allowed.

Any Letters of Protest must be signed and dated, with the ship's sta appended. Terminal Mooring Masters have authority to accept all lette after endorsement with "acknowledge receipt without prejudice".

PILOTAGE: *Compulsory Pilotage:* A Mooring Master and his assista provided by the Terminal Operator will board an arriving vess approximately 2 miles seawards of the SPM, or at another advis position compatible with prevailing weather.

Use of the Mooring Master is compulsory.

A combination accommodation ladder/pilot ladder should be rigg on the starboard leeward side, 1.0 m. above sea level.

Mooring Master: The assigned Mooring Master (or his relief) will rema on board the vessel to coordinate the loading operation throughout th vessel's stay.

Shipmasters must provide the Mooring Master and his assistant wi messing and accommodation equivalent to that enjoyed by the vesse officers. A cargo inspector will also remain on board during loading

Should adverse weather prevent the safe disembarkation of th Mooring Master and his assistant and the cargo inspector, the Termi requests the cooperation of the vessel's Master in allowing them t remain on board until the next most convenient point of disembarkatio

ANCHORAGE: No suitable anchorage (See "Navigation").

RESTRICTIONS: See "Berthing" – "Terminal Operations".

MAX. SIZE: 70,000 – 300,000 S.d.w.t. fully laden; 350,000 S.d.w.t. par laden (280,000 tonnes of cargo); 400,000 S.d.w.t. partly lad (265,000 tonnes of cargo).

RADIO: *Standard Message to Crude Vessels (Initial Visit):* "Maste are advised that there is no provision for vessels to discharge ballast t the shore facility. No oil contaminated ballast from cargo or permane ballast tanks is permitted to be discharged into the sea. Vessels arriv with ballast in crude oil washed tanks will be required to retain at lea the last meter on board.

The Terminal Operator must be provided with answers to the followi questionnaire, 3 days prior to the vessel's arrival at the Terminal:

AAA	ETA, Arrival and Sailing drafts.
BBB	Cargo requirements in barrels and metric tons.
CCC	Grade and A.P.I. of previous cargo; quantity and location of slo on board.
DDD	Quantity and location of ballast in cargo tanks.
EEE	Last port and destination.
FFF	Whether Inert Gas System is operative and percentage oxyg level in tanks.
GGG	Name of Pollution Insurers.
HHH	Gross, Net and Summer deadweight tonnages.
JJJ	Maximum and requested loading rate.
KKK	Deballasting time.
LLL	Number and size of cargo manifolds.
MMM	Availability of reducers to adapt manifolds to suit 16 in. 150 AN flanges. Two are required.
NNN	Can vessel load and deballast simultaneously while maintaini a minimum of a two valve separation?
OOO	Is vessel equipped with a patent A.K.D. stopper or simi capable of accepting a 76 mm. end link?
PPP	SWL of derricks.
QQQ	Nationality of officers and crew.
RRR	Other.

Your attention is drawn to the serious view taken by the Termi Operator of pollution. Fines may be imposed by Government Authorit to which will be added the cost of any clean-up operations. You a responsible to ensure that crew members cause no pollution during th vessel's stay at the Terminal.

Principal pollution causes include leaking sea and overboa discharge valves and cargo or bunker overflows.

Prior to arrival, sea discharge valves must be flushed and dec scuppers must be plugged."

VHF: Vessels shall monitor VHF Channels 9 and 16 for advice from th Terminal Control Centre (TCC), call sign "Ash Shihr Control", a thereafter maintain contact to the extent possible.

TUGS: A tug will be available at the Terminal. The tug will remain i attendance at all times and will be connected to the stern of the tank with a soft ship's rope from the tanker during loading. The soft rope i to be available on the tanker's stern prior to berthing.

BERTHING: Terminal's Facilities:

SPM Buoy: The 12 m. diameter Single Point Mooring buoy is moor in approximately 45 m. water depth. A small boat harbour is provid for the use of Terminal Service Vessels.

Loading Hoses: Each loading hose string tapers to a 16 in. diame tanker over-rail hose, to which is secured a shut-off valve, Camlo quick-connector, hand-off chain and flotation buoy.

Lifting Equipment: Vessel's hose lifting equipment shall be Safe Worki Load certified and rigged to handle 15 tonnes.

Mooring Systems: The tanker mooring system consists of 2×17 i circumference nylon hawsers with 2×76 mm. diameter mooring cha

Mooring: *Provision of Mooring Equipment:* Vessels must be equip with mooring equipment in accordance with the "Standards f Equipment employed in the Mooring of Ships at Single Point Moorings recommended by the Oil Companies International Marine Foru O.C.I.M.F., 2nd Edition, 1988, or latest revision.

Fair Lead and Panama Lead Sizes: Fair leads, Panama leads and cho stoppers must accept 76 mm. diameter chains.

Mooring Line Messenger: The vessel must supply a good mooring li or mooring line of at least 50 m. length at the bow, which will serve a a messenger line for the mooring at the buoy.

Terminal Operations: *Hours of Operating:* The Terminal opera 24 hours a day all year round, prevailing weather conditions permitti

Berthing at night will be at the discretion of the Terminal, and dependant upon the location of the vessel's ballast.

Berthing on Arrival: Government officials may board the vessel with the Mooring Master and his assistant. The vessel's Agent will usually board with the Mooring Master.

Notice of Readiness: Shipmasters may tender Notice of Readiness on arrival by contacting Ash Shihr Control, if the vessel is ready in all respects to load.

Acceptance of the Notice of Readiness: Notice of Readiness will be accepted by the Terminal Operator, subject to the following conditions:

(a) The Terminal is open.
(b) That the estimated Time of Arrival (ETA) has been advised to the Terminal, 10 days, 72 hours, 48 hours and 24 hours prior to arrival, and Masters have advised the Terminal of any change of ETA in excess of 3 hours.
(c) That the vessel complies with the Terminal Rules and Regulations.

LOADING: *Safe Loading:* Safe operations, and continuing compliance with the Terminal Rules and Regulations on board the vessel throughout the vessel's stay at the Terminal, is the Master's responsibility.

Segregated Ballast: Discharge of segregated ballast and loading of cargo may take place simultaneously, provided the draft and trim condition allows emergency berth evacuation. The Terminal Operator accepts no responsibility for the mixing of water and crude oil.

Suspension and Stopping Loading: Master may suspend loading at any time. Notice of 15 minutes is required prior to change of loading rate or suspension of loading, emergency stops excepted.

The Mooring Master and the Master of the vessel must liaise as to the amount of cargo that will be received on board the vessel after the shore loading pumps have stopped.

The Terminal Operator will not be responsible for any overloading of crude oil that might occur. There is no capability to pump excess crude oil back to shore storage tanks.

Ship and shore figures will be verified at regular intervals during loading operations.

Non-Closure of Vessel's Valves: The vessel's loading system valves must never be closed against the Terminal loading pumps.

After completion of loading, the Terminal will notify the vessel through the Mooring Master when it is safe to close the ship's cargo manifold valve(s) connected to the loading hose(s).

Minimum/Maximum Loading Rates:

The minimum loading rate is 15,000 b.p.h.

The maximum loading rate is 60,000 b.p.h.

Loading at the SPM: *Loading Manifold Size:* 2×16 in. 150 ANSI rated manifolds must be available for loading. The cargo hoses are fitted with standard sized 16 in. Camlock couplings.

Manifold Reduction Spools: The vessel shall provide any reduction spools which may be required.

Special Requirements for Vessels at the Terminal: The vessel's firemain must be pressurised at all times with 2 hoses with foam delivery nozzles connected to foam hydrants available for emergency use. Records must be at hand to show that the foam system is in good working order and functions correctly.

Two hand-held dry chemical extinguishers must be available close alongside the loading manifolds.

EARLY DEPARTURE PROCEDURE: NOTICE: This notice is to advise you of the Early Departure Procedure (EDP) practised at Ash Shihr Petroleum Export Terminal.

On completion of loading, you must provide a copy of the following documents for the Terminal:

1. OBQ Report (Onboard Quantity).
2. Ullage Report.
3. TCV = Total Volume Loaded, including water received, excluding OBQ.
4. VEF to be used always (if applicable), reason if not used.

At completion of loading, the Terminal will issue a TCV figure.

This quantity will be compared with your TCV as follows:

$$\frac{\text{Vessels figures corrected by VEF}}{\text{TCV}} \times 100 = \%\ \text{diff. Terminal TCV.}$$

If the percentage difference is 1.2% or less, the ship will be released to sail.

If the percentage difference is greater than 1.2%, the figures must be re-checked.

If the percentage difference of the Terminal and ship figures are the same after re-checking, the vessel may sail after submitting a Letter of Protest.

You must ensure receipt of Letter(s) of Protest filed by cable are acknowledged by the Terminal and/or your Agent.

BALLAST: *Discharge of Ballast:* Discharge of dirty or contaminated ballast water is strictly forbidden. The Operator will have no liability whatsoever for any deadfreight incurred due to retention of ballast or other residues.

Clean Ballast: No ballast reception facilities are provided at the Terminal. Clean ballast in segregated ballast tanks may be discharged to the sea. Ballast in previously cleaned cargo tanks may be discharged to the sea, provided it is not contaminated more than 15 parts per million, as defined by the International Agreement for the Prevention of Pollution of 1973, its Protocol of 1978 (MARPOL 73/78) and the modifications of 1984.

Bilges of the Vessels: Any bilge, or other contaminated residues accumulated during the vessel's stay at the Terminal, must be retained on board. Fines may be imposed by Government Authorities on vessels which discharge oil, other contaminated fluids or any other substance during the vessel's stay at the Terminal.

Deballasting Procedure for Vessels: Vessels should arrive with segregated ballast and/or clean ballast in the crude storage tanks, in compliance with MARPOL standards. Terminal representatives will inspect the vessel for International Oil Prevention of Pollution (I.O.P.P.) format Certificate.

Discharge of ballast from crude oil tanks will only be allowed during daylight hours. The last 3 ft. of liquid in each tank must be retained on board. These residues must be consolidated in a single tank before commencement of loading, unless the "Load-on-top" (L.O.T.) procedure is used. During such ballast discharge, the vessel's Master is required to appoint and place lookouts.

MEDICAL: Medical and dental services are not available at the Terminal.

FRESH WATER: Not available.

FUEL: Not available.

CONSULS: The nearest consuls are in Aden.

REPAIRS: No facilities available.

AIRPORT: The nearest airport is at Riyan, approximately 10 km. West of the Terminal.

GENERAL: *Lifeboats:* Except for an emergency abandonment of the vessel, no vessel shall lower its lifeboats to the sea.

Waste and Garbage: Disposal of waste, sewage waters or garbage in the sea is forbidden. No facilities exist to receive waste material, garbage or sewage waters at the Terminal.

Vessels alongside the Loading Vessel: Only vessels authorised by the Terminal Operator are allowed alongside, while deballasting and loading operations are in progress.

Standards of Operations: Loading operations are conducted in accordance with the latest editions of the following standards:

(a) Oil Companies International Marine Forum, International Chamber of Shipping, International Safety Guide for Oil Tankers and Terminals (OCIMF/ICS, ISGOTT).
(b) Standards for Tanker Manifolds and associated equipment OCIMF.
(c) Ash Shihr Petroleum Export Terminal Rules and Regulations.
(d) International Agreement for the Prevention of Pollution of 1973 and its Protocol of 1978 (MARPOL 73/78) and the modifications of 1984.
(e) Tanker Owners Voluntary Agreement Concerning Liability for Oil Pollution (TOVALOP).
(f) Contract Regarding a Supplement to Tanker Liability for Oil Pollution (CRISTAL).

Draft upon Arrival: Vessels must arrive at the Terminal with sufficient ballast on board, to ensure safe manoeuvring of the vessel and be trimmed no more than 3.0 m. by the stern and with propellers submerged. Vessels will not be berthed with excessive trim or insufficient ballast.

Handling of the Equipment Supplied by the Terminal: Equipment supplied by the Terminal will be taken on board from a line handling boat, using the vessel's lifting equipment. The vessel's crew must be available to receive equipment and handle crude oil delivery hoses.

State of Readiness: The vessel's main engines and essential machinery must be ready at all times in order to allow immediate vacation of the loading berth.

Mooring Master Authority: The Mooring Master can request any vessel to leave a berth.

Vessel Officer and Crew: A ship's officer with an adequate command of English and sufficient qualified crew must always be available for operational requirements and emergencies.

Deployment of Fire Wires: All vessels must deploy secured tug fire wires on the starboard side of the vessel from the forward and after end of the vessel.

Ship's Agents: Ship's Agents must be registered with the appropriate Government Authority.

Disembarkment: The embarkation and/or disembarkation of crew members and passengers as well as foodstuffs, provisions, fuels and different types of commodities using the Terminal facilities is strictly forbidden.

Any of the aforementioned services will be supplied by the Ship's Agent with his own resources and through his own means, either before or after loading operations.

Only in cases of approved emergency, or for humanitarian reasons, or for special circumstances as approved by the Terminal Operator and on whatever terms and conditions the Terminal Operator may impose, can the vessel personnel embark or disembark at the Terminal. In these cases, the Terminal Operator can provide transportation for the said embarkation or disembarkation.

Mail and Correspondence: Official communications and crew mail will be handled by the Ship's Agent.

SHIPMASTER'S REPORT: December 1993.

Location of SBM: Lat. 14° 40.6′ N., Long. 49° 31.3′ E.

Pilot: Pilot boarded 2 miles South of SBM.

Anchorage: None. Vessels must drift when awaiting berth.

VHF: Terminal works on Channel 9.

ETA: Sent by FAX/Inmarsat to 871-1473113 or 871-1473150, 10 days, 72 hours, 48 hours, 24 hours and 12 hours prior to arrival.

Arrival Information: The Terminal requires the following information 3 days prior to arrival:

(A) ETA, arrival and sailing drafts.
(B) Cargo requirement in bbls./tonnes.
(C) Slops, location, grade, API, previous cargo.
(D) Quantity and location of ballast in cargo tanks.
(E) Last port and destination.
(F) Whether IGS is operative and percentage of oxygen level in tanks.
(G) Name of pollution insurers.
(H) Gross, Net and Summer d.w.t.
(J) Max. loading rate.
(K) Deballasting time.
(L) Number and size of cargo manifold.
(M) Availability of reducers to adapt manifold to 16 in. 150 ANSI flanges (two are required).
(N) Can vessel load and deballast simultaneously while maintaining a minimum two valve separation.
(O) Is vessel equipped with a patent AKD stopper or similar, capable of accepting a 76 mm. end link.
(P) SWL of derricks.
(Q) Nationality of Officers and crew.

Documents:
5 copies Crew List.
1 copy Vaccination List.
1 copy Customs Declaration.
2 copies Bond Stores List.
1 copy Last Port Clearance.
3 copies Arrival Information (Form).
3 copies Sailing Information (Form).
1 copy Master's Authorisation Letter for EDP.

Agent: Natship Aden (Telex 2216/2217).
Cargo: Masila Crude Oil. API 31.0 – 31.9. Temperature 98°F.
Loading: Max. rate 60,000 bbls./hr.
Hoses: 2×16 in. on port side.
Officials: Customs and Immigration do not visit.

Local Agent boards with Clearance and EDP forms.

Duty Pilot and an assistant, together with a surveyor, stay onboard all the time.

Moorings: 2×18 in. nylon robes, bow stoppers required.

SHIPMASTER'S REPORT: April 1994.

B.A. Chart No. 3784 is barely sufficient to approach the port, but insufficient to approach the SPM.

B.A. Chart No. 10 shows only a plan of the port of Ash Shihr, a small port 6 nautical miles N.E. of the SPM.

VHF communication was established at a distance of 35 nautical miles to the S.E. of the Terminal, at greater distances, atmospheric disturbances made contacts impossible. Channel 9 is the working channel for loading operations and is manned 24 hours a day.

Ash Shihr Petroleum Export Terminal owns a telephone (967) 2-241175 and Fax: (871) 147-3113, which was out of order on this occasion. They do not have a telex.

National Shipping Agency, Aden, was reached via their telex numbers (806) 2216 YD and (806) 2217 YD, but at no time were answers obtained in spite of repeated requests to give details about the Terminal and berthing prospects, and confirmation of telex receptions. The only time communications with the agency were established was when the Radio Officer listened to Aden Radio traffic list, where a message asked for calling the agency's telex machine, only a standard message was received giving the same questionnaire and information contained in the "Guide".

The Mukalla branch of Natship, in charge of Ash Shihr Terminal, was as ill-informed by the head office as the vessel itself, and was of no help to the vessel. The Agent boarded together with the Pilots, filled out some papers for the authorities who are said to never board a vessel, and left with an authorisation to sign cargo papers on Master's behalf. He actually requires all the papers mentioned in the "Guide".

There are 3 European Pilots, contracted to Ash Shihr Terminal, of whom two bring the vessel to the SPM. After commencement of loading, one of the Pilots leaves while the other stays onboard as Loadmaster.

While Pilots were very competent, though cautious, on approaching and mooring, the local crews seemed to need a lot more training and experience.

Current on this occasion was setting N.E. at 1 knot, while drifting over night at a distance of more than 7 nautical miles from the coast, whereas when approaching the SPM and while alongside, the current was 2 knots, keeping the vessel's heading at a constant 245°.

Wind was varying and never more than Force 3.

Although berthing/unberthing will take place day and night, in view of the handling crews' lack of experience, Terminal seems to prefer daylight berthing during strong currents and when there is no time pressure. An average of 6 ships a month are handled at the Terminal, which opened in July 1993.

Masila Crude of API = 31.00 and temperature = 102°F (39°C) is loaded on port side through 2×16 in. floating hoses, at maximum rate of 60,000 bbls./hr., the maximum rate normally reached being only 57,000 bbls./hr.

Hose connecting/disconnecting very fast with the assistance of an experienced local Mooring Master.

Saybolt's cargo inspector was very professional.

Cargo figures were calculated by Terminal very quickly.

EDP described in the Terminal Information Book was not followed by the Terminal, viz. documents were not placed on board. Instead they were to be faxed to vessel, which never happened.

AUTHORITY: *Operator:* Canadian Occidental Petroleum Limited, P.O.Box 6065, Khormaksar, Aden, Republic of Yemen. *Tel:* (967-2) 233-881, 232-469, 231-691. *Telex:* 8062332. *FAX:* (1-403) 2321600. *Contact:* Richard Owens, Terminal Manager.

Ash Shihr Petroleum Export Terminal: *Tel:* (967-79) 21509 or 21525 or (967-2) 241175. *Telex:* (871) 1473150 (Inmarsat – East Atlantic). *FAX:* (871) 1473150 or 1473113.

HODEIDAH: 14.48 N. 42.55 E. (See Plan)

Also see "General" before first port.

FLAG: It is essential that from the time they enter Yemen territorial waters all vessels fly the Yemen flag and this should be flown continuously until they leave these waters on sailing. Failure to observe this courtesy may result in a heavy penalty. The design of the flag is red, white and black horizontal stripes of equal size with green star in centre of white stripe.

DOCUMENTS: On arrival 16 copies of Manifests of cargo for discharge are required and each must be endorsed with the word *Correct by the Customs Authorities* at the Port of Loading. It is imperative that at least 2 of the 16 copies of Manifests on board the ship should be freight copies, otherwise 2 additional copies, showing freight details should be airmailed to Hodeidah separately to arrive in advance of the vessel. The Master should also be in possession of 1 copy of each Bill of Lading and certificate to show vessel is not blacklisted.

PILOTAGE: Pilotage is compulsory and as the entrance of the Channel giving access to the Port cannot be observed from the port area that it is essential that accurate ETAs be given to the Agent in order to avoid delays waiting for a Pilot.

Vessels will be piloted down a dredged channel of about 8 miles in length. The channel, which is buoyed with black starboard and red port buoys, is 7.5 m. deep and 100 m. wide.

Pilot boarding position: Lat. 14° 56′ N., Long. 42° 54′ E.

ANCHORAGE: Masters are also recommended to ensure that on arrival they anchor off the entrance to the new port to await the Pilot and do not anchor off the old port opposite the town some 5 miles to the South and which is still shown as being the Port of Hodeidah on some charts. Vessels anchoring in the wrong area may suffer some delay before they can be contacted and asked to proceed to the correct area. Masters should be advised to anchor at the outer anchorage in the following position: Lat. 14° 55′ N., Long. 42° 54′ E. Also see "Shipmaster's Report – May 1982".

RESTRICTIONS: The approach channel is dredged to 9.5 m.

MAX. SIZE: Max. draft 31 ft. (September 1990). Also see "Shipmaster's Report", dated May 1982.

Shipmaster's Report: January 1985.

Entrance channel is buoyed differently to that shown on B.A. Chart (See "Plan"). Pilot suggests that max. draft at LW is approximately 8.0 m., especially if there is a swell at the entrance.

Report: We quote below text of a circular telex received from Ports and Marine Affairs Corporation, Hodeidah:

"The General Corporation of Yemen Ports hereby advise all Masters, Owners, Charterers and Agents that as of September 14th, 1990 all vessels with a draft of more than 31 ft. (9.45 m.) should not attempt to enter the dredged channel to the port of Hodeidah.

Vessels arriving during darkness should anchor to the West of the Fairway Buoy and await instructions.

Vessels arriving during daylight may have to anchor for a short period of time, but it is the intention of G.C.Y.P. to put a pilot onboard each ship at the first daylight high water and bring such vessels to the inner anchorage.

Under no circumstances should vessels attempt to enter the port without a pilot, except with the express permission of the Harbour Master".

HEALTH: All members of the crew must be vaccinated against yellow fever and cholera, otherwise permission will not be given to disembark.

RADIO: Masters should also ensure that a radio watch is kept to receive calls from the Port Authorities. The Hodeidah Radio Station is operative between 0600 and 1800 hrs. daily, the call sign is: 4WD or 4WD3 (short

TUGS: 6 tugs, 375 h.p. – 1,800 h.p. Pilot launch 250 h.p. also available to assist.

BERTHING: The quay is 540 m. in length with 4 berths, the first 70 m. long, depth 6 m., the second, third and fourth are of 150 m. length and 8.5 m. depth. *Officially, ships berthing are restricted in length to 180 m.*

The quay is of concrete construction and is well founded, vessels being secured to bollards in the normal manner. Use of rat-guards is recommended. The quay is equipped with 7 electric cranes having a max. capacity of 5 tons and one crane having a max. capacity of 10 tons. Floating crane of 75 tons capacity available.

There is also a dolphin berth for discharging of petroleum products which is connected by submarine pipes to storage tanks near the port area. The depth alongside is 6 m.

Also see "Report" and "Developments".

STEVEDORES: All labour is provided by Agent's representative including winchmen and tally clerks, but winchmen are provided entirely at ship's risk.

Rates of discharge vary but are quite satisfactory and with bagged cargo the average obtained is 30 tons per hatch per hour. Night work is possible.

Vessels are expected to supply food on board to cargo supervisor, foreman, and tally clerks. It may be left to Master's discretion whether this is supplied, but if not the Agency will have to supply same and the cost will be debited to the vessels.

Working Hours: Normally from 0600 hrs. to 1100 hrs. and again from 1300 hrs. to midnight. Additional work outside these hours, including after midnight can usually be arranged if necessary, although this cannot be guaranteed. Any work after midnight is overtime.

MEDICAL: Hospitals at Hodeidah and Sanaa-Taiz.

FRESH WATER: Available; pumping rate 10 t.p.h.– 15 t.p.h.

FUEL: Small quantities of diesel oil available from Yemen Petroleum

CONSULS: (and Embassies):

Algeria	France	Lebanon	Syria
China	Italy	Libya	United Kingdom
Egypt	Iraq	Russia	U.S.A.
Germany	Korea	Saudi Arabia	Yugoslavia
Ethiopia	Kuwait		

REPAIRS: Light repairs can be carried out.

SURVEYORS: Lloyd's Agency available.

AIRPORT: Flights to Sanaa. Also flights from the new Hodeidah International Airport.

TIME: GMT plus 3 hours.

HOLIDAYS: Friday is the weekly day of rest, Sunday being a normal working day. There are also a number of Moslem holidays. Work is usually possible on such days but cannot be guaranteed. Holidays for special occasions are also liable to be declared at short notice. Fridays if worked 50% and public holidays 100% surcharge. During the Moslem ast period of Ramadhan lasting about twenty nine days, which again varies from year to year, work is slower.

Also see "General" before first port.

SHORE LEAVE: Allowed. The Master should prepare a list of persons wishing to go ashore as Agent has to issue I.D. cards.

REGULATIONS: It is strictly forbidden for crew and passengers on board to take photographs while a vessel is in the harbour approaches or secured to the jetty in harbour.

Any vessel which permits oil and/or water to be discharged into the harbour will be liable to a minimum penalty of U.S. $500.

DEVELOPMENTS: A second container berth with length 300 m. and depth 11.0 m. and 1×40 ton container gantry crane has been completed.

Vacuators to be installed for grain handling, giving average daily discharge rate of 5,000 tonnes – 6,000 tonnes.

Also see "Report" below.

REPORT: August 1979 (Updated 1986).

Hodeidah Port is situated 5 km. away from the old town, built in 1961, the population of which is about 200,000. It was built on the Red Sea Coast, S.E. of Khour Ras Alkatheeb, 4 km. away from the town of Hodeidah.

Hodeidah port is built at a location safe from storms and strong winds. The port is under the administration of the Ministry of Public Works, managed by the Hodeidah Port General Corporation. It has a direct connection with the capital city of Yemen, Sana'a, by a modern highway and another connecting Taiz.

The official characteristics of the port are given as an external pool, 10 m. in depth, where ships can anchor. A channel, minimum 45 m. wide, about one km. long and 7.9 m. to 8.3 m. deep, enters into the inner pool. Maximum draft allowed is 25 ft. at HW. Buoy markings and signals for safe entry and departure are available The dimension of the inner pool is irregular, about 500 m.×400 m. Overall depth is 7.6 m. at LLW, except for 100 m. wide strip along the 300 m. berth where the depth is 8.5 m.

The port consists of a quay for loading and discharging and one special jetty for tankers. The total length of the quay is 570 m. forming 4 berths of 120 m., 150 m., 150 m. and 150 m. respectively. The quay can receive vessels up to 180 m. in length with a draft of 25 ft. at HW. The quay is equipped with 4 electric shore cranes of 5 tons maximum lifting capacity each and two mobile cranes each of 30 tons capacity.

Discharging speed for bagged cargo is between 250 tons and 300 tons per hatch per day. For general cargo the discharging speed is about 150 tons per hatch per day.

At present, there are 21,660 sq.m. of cargo storage floor space:

Shed No. 1	45 m.×60 m.	2,700 sq.m.
2	96 m.×60 m.	5,760 sq.m.
3	50 m.×60 m.	3,000 sq.m.
4	50 m.×60 m.	3,000 sq.m.
5	25 m.×60 m.	1,500 sq.m.
6	45 m.×60 m.	2,700 sq.m.
7	50 m.×60 m.	3,000 sq.m.

and several open storage yards for heavy machinery and equipment. There are fuel tanks with a storage capacity of 16,000 cu.m. connected to the oil jetty by means of a pipeline system. A wireless station for communications, from ship to shore and vice versa, is also available.

Future Development: The development of Hodeidah Port includes:

1. Dredging:
   a. Deepening of the approach channel to 9.0 m. below MLW (Mean Low Water) with the provisions of a passing bay and deepening of the port basin to 9.0 m. below MLW. (Completed 1980).
   b. Deepening to a depth of 9.5 m. MLW alongside Berth No. 2 and No. 6 (completed).
   c. An area to the West of Berth No. 1 to a depth of 4.0 m. MLW.

Hodeidah Port has the following:

Berth No. 1, length 110 m., dredged to 8.0 m.
Berth No. 2, length 150 m., dredged to 9.5 m.
Berth No. 3, length 150 m., dredged to 9.5 m.
Berth No. 4, length 166 m., dredged to 10.0 m.
Berth No. 5, length 195 m., dredged to 10.0 m.
Berth No. 6, length 195 m., dredged to 10.0 m.
Oil berth for 15,000 d.w.t tankers dredged to 10 m.

2. Berth No. 6: 195 m. long berth with a 40 m. wide apron. (Completed 1982). Berth No. 6 is designed for container ships of: 22,500 d.w.t., length 204.0 m., breadth 31.0 m., draft 9.2 m., container capacity 1522 units.

One container crane of 30.5 tons capacity is installed on Berth No. 6 and is able to load and unload between 30/40 containers per hour.

3. Slipway (completed 1981): 500 ton slipway next to the mechanical workshop. Slipway able to handle vessels 32 m. in length, 10 m. wide and 3.2 m. draft.

4. Paved Storage Areas (completed/available 1981): The concrete paving of open storage areas behind the 40 m. wide apron has approximately 80,000 sq. m.

5. Buildings and other services (completed/available 1981): Construction of service buildings include offices of the Port Corporation, Customs, Labour, First-aid with canteens, wash places and toilets.

6. Oil Terminal (completed/available 1981): 2 new breasting dolphins and 2 mooring buoys for handling tankers up to 15,000 d.w.t.

7. Floating Craft (completed/available 1981): A new 75 ton self-propelled floating crane has been provided.

8. Cargo Handling Equipment (completed/available 1981): 4 high level boom cranes, 1 port type mobile crane, 10 forklifts, 10 tonne trailers with tractors, 3 Ro/Ro tractors with goosenecks and Ro/Ro trailers.

9. Grain Silo Complex: The project under construction in Hodeidah port consists of a 20,000 ton Silo and a 14 stall bagging plant which has a bagging capacity of 200 per hour. The whole installation has a through put of 160,000 tons per year.

10. Water Mains (completed 1982): Extended to Berth No. 6 and fire mains will be from sea water and maintained with a 70 m. head by hydraulic accumulator.

Special Uses:

Berth No. 4 – grain unloading (40% berth occupancy).
Berth No. 6 – containers (with 30.5 ton container crane).

Container capacity will exceed 300,000 tons per year but will depend on the capability to empty containers and create an equivalent to that of the shipping.

Cargo must be carried by ships with a draft less than 9.2 m.

Arrival at Hodeidah/Ras Alkatheeb Ports:

Vessels arriving at Hodeidah Roads should anchor in the following positions inside Buoy No. 2.

Lat. 14° 55′ 58″ N., Long. 42° 53′ 53″ E.

Masters should radio or cable Agent the following information at least 24 hours in advance:

(i) Exact ETA.
(ii) Draft – fore and aft.
(iii) Quantity of cargo on board and distribution.
(iv) GRT, NRT and LOA (When vessel is calling for the first time).

Through Hodeidah Radio Station, Calling Sign: 4WD 500 kHz. (Frequency from 0500 hrs. up to 1700 hrs. GMT). 72 and 48 hours prior notice of arrival can also be given through Aden Radio.

Pilotage on entry and departure is compulsory. Normally, no pilotage is allowed after 1630 hrs., or before 0600 hrs. Hence vessels arriving in Hodeidah Roads after 1630 hrs. may not be piloted in until 0700 hrs. the following morning. Likewise, vessels which do not sail before 1630 hrs. may not be piloted out until 0600 hrs. the following day.

Supply of fresh water and shipchandlering is available.

Documents:

4 copies of Cargo Manifest.
2 copies of Freight Manifest.
1 copy of Bill of Lading.

(These should be airmailed to Agent after departure of vessel from port of loading.)

11 copies of Cargo Manifest.
1 copy of Freight Manifest.

(To be handed over to Agent by Master on arrival of vessel.)

Port Formalities:

1. Doctor.
2. Immigration.
3. Customs.

FOLLOWING TO BE STRONGLY OBSERVED BY ALL MASTER/CREWS OF VESSELS CALLING AT HODEIDAH:

1. Sale of wines and spirits prohibited.
2. Discharging water onto quay and dismantling ships' engines at berth not allowed.

In addition to above, Masters/Crews should be advised to take serious note of all prohibitions stipulated in the Port Tariff, see "General" before first port – "Fines".

SHIPMASTER'S REPORT: May 1982.

I came in and berthed at No. 6 Berth at 8.5 m. draft and discharged via vacuvators direct into lorries and managing a rate of 3,000 t.p.d. Pilot reckoned 29 ft. maximum can be taken in.

Other points in "Guide" seem accurate, but with the Chart B.A. 3050 being too small I cannot see many Masters bringing a large ship into the recommended anchorage position. I anchored 3 cables N.N.E. of the No. 2 Buoy in better water.

PURSER'S REPORT: August 1982.

Requirements:

1 Maritime Declaration of Health. (Any country's (preferably Arab) is accepted suitably amended).
1 Vaccination List (ship's form).
10 Crew Lists (ship's form).
2 Bonded Stores Lists (ship's form).
1 Crew Effects List (ship's form).

Sundry Customs and Agent's forms were brought aboard on arrival. These required the usual information regarding draft, fuel, water, and tonnages, etc.

Customs and Port Authorities were very particular that cargo tonnages were accurate as per Manifest when completing forms.

Customs sealed both bond and beer rooms, but placed no restriction on quantities in bars and cabins with the proviso that alcohol was not sold or given to locals. An additional quantity of bonded items was allowed to be removed before sailing.

Courtesy Ensign: Supplied in the U.S.A. and not marked to show which was top. It should be flown with the red stripe uppermost.

Mail: The Agent advised that mail both in and out of the country was slow and unreliable.

Laundry and Chandlery: Both services available but not used.

Navigation: The Master advises that navigational marks could well change due to berth extensions and port improvements. A container crane is at present under construction.

SHIPMASTER'S REPORT: April 1984.

Pilotage: Ships can enter or sail out of harbour at anytime, if Agent makes strong request. All the buoys in the channel as well as the approaches including the Sea Buoy are lit.

Berthing: Observed a ship entering with 30 ft. draft and Pilot confirmed that vessels can enter up to 30 ft. draft.

Stevedores: Bagged cargo discharging rate increased to up to 30 t.p.h. provided that receivers are able to supply sufficient trucks in time.

The stevedores no longer request drinking water from the ship, as they drink bottled water supplied from shore.

SHIPMASTER'S REPORT: April 1990.

1. There is no Fairway Buoy (Fairway Buoy is indicated on B.A. Chart No. 1990).
2. There is no Buoy No. 2 (Port Authorities instructed vessel to anchor inside Buoy No. 2 in Lat. 14° 55′ 44″ N., Long. 42° 53′ 42″ E. for registration).

3. Authorities/Agent instructed vessel to anchor by Buoy No. 2, but this was unsafe as the depth is 7.7 m.
4. Due to shallow water in anchorage position (inside Buoy No. 2), 2 vessels collided when one of them was trying to anchor.
5. A vessel anchored in the position indicated and ran aground.
6. Our vessel, which berthed port side to at Berth No. 4, grounded forward with a draft of 32 ft. 5 in.
7. The maximum depth in the anchorage position, which was checked, was 9.8 m., 3 hours after high water.
8. No ship's certificates were requested by the Port Authorities or the Agent on arrival.
9. No written permission given by Port Authorities for painting ship or load line or for boat drill.
10. Two crew members required cholera vaccinations, but these were not done.
11. A vessel was given verbal permission to paint ship's marks, and after painting was fined U.S.$ 3,000.00.
12. The Master of a vessel was jailed for refusing to instruct his crew, to discharge bulk cement from the hold, which were the remains of bags torn by the stevedores.
13. The cook on a vessel was shot by the gangway watchman, for refusing to prepare him food at 2300 hrs.
14. The Port Authority/Agent debited the vessel for one or two shore cranes daily, even though the shore cranes were not working.
15. The evacuator for discharging bulk wheat was damaged by the stevedores, due to bad handling, and the vessel was delayed 32 hours, until a bank guarantee of U.S.$ 200,000.00 was given (actual cost of damage was about U.S.$ 5,000.00).
16. Attention of all Masters and Owners is drawn to the permissable arrival draft which is 32 ft. (salt water). For every inch over 32 ft. the vessel is fined U.S.$ 3,000.00.
17. This vessel was penalised for 5 inches, and had to pay a fine of U.S.$ 18,000.00 without official receipt from the Port Authorities.
18. For further fines and restrictions, please see "General" before first port – "Notice".

CHIEF OFFICER'S REPORT: June 1994.

Approaches: Approaches to Fairway are generally clear without much traffic density and/or fishing crafts. Outer Anchorage for deep draft vessels is not declared by port, but vessels drawing more than 8.0 m. draft normally anchor between 1 mile to 3 miles N.W. of the Fairway. Some vessels are found anchored very far from Fairway as per Master's wish. There is no restriction regarding that by the port. Within 3 miles from Fairway, depths of between 14 m. to 21 m. are available. Strong S.W. winds are experienced in March/April, but the anchor holding ground is good.

VHF: Port Control keeps 24 hour watch on Channel 16, but generally calling vessels do not get reply on VHF during the hours of darkness. The reply on VHF is heard only when Port Control wants to contact the vessel for something. The enquiries regarding berthing instructions are not answered by Port Control, and they advise vessel to contact Agents by telex. All information regarding berthing, etc., is obtainable only through the Agents.

Pilotage: Pilot boards the vessel near Buoy No. 11. Vessels generally do not get much advance notice to proceed to pilot station. The requests by vessels to have advance notice to get engines ready are not taken care of. Also it has been frequently noticed that orders to proceed to pilot station are very often postponed, many times in some cases. If at short notice the vessel is not able to reach pilot station at given time, fine is imposed and/or berthing is cancelled. Masters are warned that Pilots are inexperienced and care must be exercised during their pilotage to avoid problems.

Fresh Water: Fresh water is available in port at U.S.$15.00 per tonne. Ships are advised to avoid receiving fresh water from the port as it is saline and unconsumable by crew. Also, the fresh water is not fit for use in engines. Water rationing should be commenced on arrival anchorage, if long stay is expected.

Fines:

1. Arrival Notice: Notice of Arrival must be given 24 hours prior to vessel's ETA.
   Fine of U.S.$120.00 for non-receipt of cable/notice by Master via Hodeidah Radio Station for vessel's arrival.
2. Flag: Fine of U.S.$200.00 for non-hoisting Yemen National Flag.
3. Permissible Draft: Maximum allowed arrival draft for Channel Entrance and alongside is 32 ft.
   Any over-draft on arrival, a fine of U.S.$3,000.00 per extra inch. International misdeclaration of draft by Master will be fined double.
4. Dumping Rubbish within Quays and Port Areas: Fine of U.S.$250.00 will be imposed. Master/crew of vessel or Agents are compelled to remove rubbish.
5. Spilling dirty liquids or fuels within port limits, vessel and Agents will be responsible in accordance with environment pollution regulations.
6. If Pilot boarded vessel for sailing under request of Master/Agents, and found vessel not ready, fine of U.S.$50.00 per hour will be imposed.
   In case tugs have been ordered by Pilot to attend for assistance, transport charges will be applied.
7. If Pilot proceeded to anchorage for berthing and found not ready, thus cancelling operation, full pilotage will be charged.
8. Vessel not allowed to change positions either at anchorage or alongside without prior permission, which will result in imposing fine according to vessel's size.
9. Any misdeclaration of particulars of vessel or cargo onboard by Master, fine of 100% of port dues/tolls.
10. If vessel sails from anchorage after having registered without clearance, fine of U.S.$1,000.00 will be imposed.
11. Fine of U.S.$120.00 for non-fixing of rat guards.
12. Fine at U.S.$0.50 per meter of LOA per hour to vessel, if it exce time allowed for discharge. Port Authorities reserve the righ remove such vessel to anchorage after 48 hours of exceed allowed time.
13. Distribution of cargo in vessel's holds is essential where minimu 30% of total cargo for discharge in each hold. Any excess of 30 in stowage, fine of U.S.$1.00 per ton will be imposed.
14. Port Authorities reserve the right to apply any fine deeme necessary after approval of Board of Directors, and to increase decrease the fine shown in this by-law accordingly to the exten offence.
15. If any crew members' Shore Leave Pass is lost, a fine U.S.$200.00 per lost Shore Leave Pass will be imposed.
16. If the gangway is opened after 0200 hrs., the Port Customs impose a fine of U.S.$1,400.00.

Draft Restrictions: The port is very strict about overdraft. Maximum dr allowed alongside is 32 ft. (9.75 m.). There is a fine of U.S.$3,000 per inch of extra draft. Vessels drawing exactly 32 ft. draft or a little le are warned that they must insist that the Boarding Pilot checks the dr and get a letter regarding draft signed by him. In the port, it is ve common practice to declare vessel's overdraft even if they are not.

This vessel, which is a bulk carrier, carried 28,500 tonnes of whe from U.S.A. U.S. silo figures showed 28,500 tonnes of cargo. As p ship's calculation, we had 28,560 tonnes of cargo on board. Arr Hodeidah, draft was 31 ft. 11 in. forward and 32 ft. 00 in. aft with no li The drafts and densities were frequently checked during long stay a anchorage to avoid problems in port. The only mistake done was th we did not insist on Berthing Pilot checking the draft. The reason w that we had decided to call Lloyd's Register Surveyor alongside t declare our draft and cargo figures. Alongside Berth No. 3/4, things we the way that we could not imagine. After berthing, when we check the draft, we found vessel tilted to starboard showing much lesser dr on port and about 6 in. more, i.e. 32 ft. 06 in. draft on starboard. Th was not at all expected. We checked the sounding by hand lead a came to the conclusion that vessel was touching bottom on port si and was afloat on starboard side, due to which she was tilted t starboard. This was high water time. Later, Port Authorities board 3 hours after high water and found 3 in. overdraft on starboard side t which they wanted the vessel to sign. It was refused, and they refus to start the cargo work. Later, at high water, Lloyd's Register Survey was called, who also concluded that vessel was touching bottom on p side due to which draft was unreliable. Port was asked to cast off th vessel and check draft a few meters away from the berth, but they nev agreed to it and insisted that vessel had to pay U.S.$9,000.00 for 3 i overdraft. They did not even agree to Lloyd's Register Surveyor's repo After discharge, silo computer figures showed 293 tonnes short load cargo which was not possible. Finally, P&I Club came into picture, ga them bank guarantee to get port clearance.

Therefore, all ships are again advised to:

(a) Insist that the Pilot checks draft before boarding and signs document regarding confirmation of not being overdraft.
(b) Get a draft survey done before commencement of discharge t avoid any disputes about short landing, which is very common.

Customs: Customs are quite strict in Hodeidah. There is no restrictio on keeping any amount of alcoholic drinks in your cabins or in ship bars. The only instruction given is that it should not be sold or offere to locals. In any case, offering drinks to locals cannot be avoided in m opinion, because the cargo work, as well as ship's stay alongside, w not be smooth, if drinks, cigarettes, etc., are not offered to those direc involved in ship's cargo work or other things. Also, there is no restrictio on books, publications and movies in other languages and countries a long as they are kept in cabins and not in common places.

Shore Leave: Shore leave is allowed with Shore Passes. Crew intendi to go ashore must get out of the port's main gate before 1800 hrs. Af 1800 hrs. you are not allowed to go out. There is no restriction t entering the gate at anytime, but generally taxis are not allowed t proceed beyond the gate and up to the vessel after 2200 hrs.

Shipchandlers: Stores and provisions are available, but their price i is about three times the market rate. Self-shopping for large quanti of provisions/stores, etc., is not allowed.

Facilities in the Town:

1. There are a good number of international telephone booths in th telephone exchange, where cards are available throughout the d and night, except between 1800 hrs. and 1900 hrs. The booths a available for calls throughout 24 hours.
2. There are two good hotels and restaurants, (a) Ambassador a (b) Bristol, where a wide variety of food, as well as alcoholic drin are available. Alcoholic drinks are not available and not allow anywhere else in the town.
3. A large attractive park is open to public and is a good place f children to play. There is also a long beach area which is good f picnics, etc., but has no lighting arrangement along the beach.

Public in general are honest, reliable and well mannered. Th population includes Yemeni and a few Indians and Pakistanis.

Other facilities, like video parlours for movies in English, Arabic, Indi and few other languages, are available. Currency is Yemeni Riyal, an official exchange rate is approximately 12 Riyals to U.S.$1.00.

AUTHORITY: Ports and Marine Affairs Corporation, P.O.Box 31 Hodeidah, Yemen. *Telex:* 5565 Mawani Ye. *Contact:* Captain A H. Elhabory, Chairman, Captain Ali H. Sharaf, Director-General, Capt Abdullah A. Rajab, Harbour Master.

AGENT: The Hodeidah Shipping & Transport Co. Ltd., P.O.Box 33 Hodeidah, Yemen. Tel: 2403/4/5. Cables: "Hodship". Telex: 5 (Hodeidah) and 2218 (Sana'a). Answerback: "Hodship". Branches Mocha, Saleef, Taiz and Sana'a.

MOCKA: 13.17 N. 43.10 E.

Also see "General" before first port.

Mocka New Port opened in June 1979, with equipment for loading and unloading.
TUGS: 2 available.
BERTHING: 350 m. of quay for vessels of up to 26 ft. draft (Depth 27 ft). Vessels may berth simultaneously. Cargo is discharged direct onto trucks or onto open area. New sheds are under construction.
CRANES: 1×18 ton mobile crane.
FUEL: Not available.
TIME: GMT plus 3 hrs.

REPORT: August 1979 (Updated 1986).
The project of constructing Mocka Port has been in execution since April 1978. The construction was completed during April 1979 and the port was officially opened to International traffic in June 1979.
Location: Mocka is connected to Hodeidah by a road of 240 km. out of which 45 km. is asphalt surfaced. Mocka is also connected to Taiz, by a road of 110 km.
Jetty: The port consists of a jetty of 150 m. in length and 35 m. wide with a draft of 8.5 m. during low tide. This jetty can accommodate 2 vessels at a time, each of 150 m. length, on both sides and a Ro/Ro vessel at the head. A protecting jetty for breakwaters is also constructed for controlling the force of strong waves. It is 750 m. in length and 15 m. wide with various depths from 5 m. to 3.5 m. This jetty is constructed for the purpose of protecting the main jetty and can receive coasters and lighters of aforesaid drafts.
Anchorage: The dimension of the manoeuvring area, for vessels securing at berth and departing from the main jetty, is 420 m. The length of the channel leading to the manoeuvring area is 2,000 m. with a draft of 28 ft. 5 in. during low tide, whereas the draft during high tide is about 30 ft. Vessels calling at Mocka should anchor at the following position: Lat. 13° 20′ 01″ N., Long. 43° 13′ 02″ E.
Storage of Cargo: The reclaimed area for storage of discharged goods consists of 300,000 sq.m. 4 storage sheds (60 m.×50 m.).
Future Developments: There are plans for building other jetties together with protecting jetties in the near future.
Bunkers: Bunkers, at present, are not available at this port. Any vessel calling at this port is required to supply fresh water for drinking purposes to all labourers during stevedoring operations.
Radio: Vessels calling at Mocka are advised to contact Agent through Hodeidah Radio Station, call sign, 4WD, 500 kHz (frequency from 0500 hrs. up to 1700 hrs. GMT), as, at present, this port is not equipped with a wireless station. It is proposed to establish one during 1979.

SHIPMASTER'S REPORT: August 1980.
Vessel: 6,000 d.w.t., 104 m. LOA. Discharged 2,000 tons of RBD palm oil.
Port Limits: None defined, however vessel is in port limits and 'arrived' once anchored within the anchorage marked on B.A. Chart 1955.
Documents: 1 copy Personal Effects Declaration, 1 copy Stores List, 1 copy Inoculations and Vaccinations and at least 10 copies of Cargo Manifests, 3 copies of Crew List.
Anchorages: Vessel anchored safely in a position with the North Fort Barge 103° True −1.74 miles. Vessel's max. draft was 20 ft. and there was 30 ft. of water below the keel at 1 hour before low water. It is inadvisable to proceed further South, especially at night due to the placing of unlit channel marking buoys by the port.
Pilotage: There are presently two berths, one on either side of a finger wharf. The Pilot boards at the anchorage and brings the ship alongside one of these berths. There are 3 Pilots in Hodeidah and 1 in Mocka.
Max. Size and Restrictions: Max. permissible draft is 26 ft. salt water and max. LOA permissible is 500 ft.
Radio: None. The port operates VHF on Channels 16 and 14. There are no fixed hours and the port radio is in operation only when the port wishes to communicate with the vessels.
Radar: None.
Tugs: 2 tugs assist vessels for berthing and unberthing. We were assisted by the 'Markaron' (2,000 h.p.).
Cranes: None. There are mobile cranes available with the prior arrangements of the ship's Agents. Otherwise ship's gear is mainly used.
Stevedores: None in the strictest sense. Labour is recruited by the Agents and made available on board.
Tankers: There is no facility for discharging petroleum cargo.
Density: 1025.
Fresh Water: Not available.
Fuel: Not available.
Fire Precautions: None.
Consuls: None.
Repairs: Not available.
Dry Docks: None.
Surveyors: None.
Watchmen: None.
Customs Allowances: Bonded stores are not sealed. Master is verbally informed not to make any issue from the bonded stores without the Customs permission. All officers and crew who declared their quota were allowed to keep same.
Repatriation: Possible, but local Agent has no knowledge of how to effect it.
Airport: None.
Time: GMT plus 3 hours.
Shore Leave: Allowed. The town is situated about 4 km. from the jetty. There is no entertainment that seamen can find in this town and it is not advisable to be ashore after dusk.
ID Cards: None are issued but ship's personnel going ashore have to carry their Seaman's Book or Passport.

AUTHORITY: Ports and Marine Affairs Corporation, Hodeidah, Yemen.
Contact: Abdelkader Abyadh, Manager of Mocka Port.
AGENT: See "Hodeidah".

MUKALLA (Khalf): 14.31 N. 49.09 E. **(See Plan)**

SHIPMASTER'S REPORT: August 1984 (Updated 1989).

PORT LIMITS: See "Gulf of Aden Pilot" (No. 64).
DOCUMENTS: See "Aden".
APPROACHES: The lighthouse is visible at 18 miles.
PILOTAGE: Compulsory for all vessels proceeding to and from the Port of Khalf. Call Pilot on VHF Channel 16. Vessels to display international signals day and night.
ANCHORAGES: Pilot Book as mentioned above gives sufficient information. A good practice during July each year (when S.W. monsoon is at its strongest) is to drop a second anchor in the morning and to heave it home again at about 1900 hrs. To keep second anchor out during the whole time of port stay is inadvisable as direction of turning on wind/tide is unpredictable and thus might end up with chains fouled.
RESTRICTIONS: Entering/leaving:
Anchorage: None.
New Port: Daytime only. During S.W. monsoon only between 0600 hrs. and 1100 hrs. and max. LOA 75 m.
MAX. SIZE: Ship's normally accommodated at Khalf Port up to 145 m., drawing max. draft of 8.5 m. Larger ships could be accepted if permission granted in advance by the Port Authority.
HEALTH: As ship arrived from Aden, no formalities whatsoever.
RADIO: All communication before arrival/after departure Aden and Mukalla via Aden Radio (70A). This radio station is working satisfactorily.
Once in port (either at anchorage or alongside) it is forbidden to use ship's radio and/or telex.
Sending cables/telexes via the Agency is time-consuming.
TUGS: At least 1 tug, and probably 2 when port is open for shipping.
BERTHING: 2 alongside berths for up to 10,000 Summer d.w.t. 3 alongside berths for coasters, depth up to 5.0 m.
CRANES: 14 mobile cranes, 3 – 10 tons capacity.
STEVEDORES: Work throughout 24 hours.
MEDICAL: Local hospital available but only a few facilities.
DENSITY: 1026.
FRESH WATER: Will be available in 1989.
FUEL: Will be available in 1989.
REPAIRS: Not available.
CONSULS: None.
SURVEYORS: Available.
FRESH PROVISIONS: Not available.
GANGWAY/DECK WATCHMEN: Not required, no reports of pilferage of cargo and/or ship's stores.
HATCHES: Once open, not necessary to close again except for sailing.
Climate: Warm/humid but no rainfall.
CUSTOMS ALLOWANCES: Bonded stores were sealed on arrival, no specific rules, no search parties of Customs.
On departure: No check of seals.
REPATRIATION: *Crew Change:*
Out-going: Via Mukalla Airport to Aden (6 times a week except Fridays) then either via Jeddah or Dubai/Kuwait to ultimate destination.
In-coming: Very difficult as visa required and not easy to obtain.
Note: Flights Mukalla-Aden and vice-versa may differ from printed timetables.
AIRPORT: Located at Rayan, 29 km. East of Mukalla.
BANKS: National Bank of Yemen. Local currency: Dinar.
On presentation of passport-receipt, U.S.$ (and only this currency) can be exchanged for Dinars (approximately U.S.$3 for 1 Dinar).
It is very difficult to obtain U.S. dollars in exchange for Dinars.
STORES: Not available.
SHIP SUPPLY SERVICE: See "Aden".
SHORE LEAVE: In Mukalla (as well as in Aden) when passing Customs Gate, Passport is exchanged for receipt by the Immigration Officer on duty. When returning from shore leave this receipt is again exchanged for Passport.
Note: It is difficult to make Officials understand that crew members and/or visitors from abroad are not in possession of a receipt, which makes a crew change extra time consuming (Charterer had to wait 3 hours before he was allowed to proceed to the ship).
DELAYS: At present congestion may occur during the S.W. Monsoon period.
In future congestion may occur as infrastructure of the new port leaves much to be desired (Roads to/in/from the port, direct delivery etc.).
GENERAL: *Transit Time Airmail Post:*
Mukalla-Europe: Minimum 2 weeks, maximum 3 weeks.
Europe-Mukalla: Minimum 2 weeks, maximum 3 weeks.
Agency: National Shipping Co., P.O.Box 8039, Mukalla, Yemen. Cables: "Natship Mukalla" (via Aden Radio).
Importer: National Company for Home Trade, 5th Government Branch, Mukalla.

SHIPMASTER'S REPORT: April 1985.

PORT LIMITS: The port limits extend in a 270° direction from Ras Marbat for 2.5 miles, thence 000° along Long. 49° 07′ E. to the coast.
APPROACHES: Charts B.A. 3784 and 10.
Prominent terrain affords reasonable radar positions. Careful consideration should be given to night-time arrival if without radar due to the total absence of navigational aids at both the port and adjacent coastlines. The white house at Point Ras Marbat and the 4 tower ruins above the town are charted and conspicuous from seaward.
ANCHORAGE: For vessels over 10,000 d.w.t. all cargo is handled at the anchorage which may be closed from May to October due to its exposure to the S.W. Monsoon. Holding ground is reported to be variable. Reasonable anchorage obtained in 27 fathoms in position Lat. 14° 30.8′ N., Long. 49° 08.3′ E. approximately 5 cables due South of rocky projection on which part of town is built. Requests will be made to anchor closer to the shore to reduce barge transit time.

PILOTAGE: Pilot boards from launch, off the breakwater.
RESTRICTIONS: Berthing during daylight hours only.
MAX. SIZE: Max. size 10,000 d.w.t. Max. draft 8.5 m.
VHF: Channel 16 for Port Authority, call sign "Mukalla Harbour Master".

Agent can be contacted by calling Mukalla Harbour Office on Channel 16.

TUGS: One Voith Schneider tug of 2,000 h.p. Reportedly to be replaced by 2×1,000 b.h.p. tugs shortly.

BERTHING:

Berth	*Length* (m.)	*Depth* (m.)
No. 1	177.25	9.15
No. 2	184.00	9.15
Fisheries	160.00	4.50

Turning Basin: Width 250 m. Depth 10 m.
Harbour Entrance: Approx. width 200 m. Depth 11 m.
Lighters: 4×200 tonnes, 4×60 tonnes and 2×400 tonnes, all plus or minus 10% subject to swell conditions. Lighters are discharged either at Khalf Harbour or at town quay located on West side of town, rocky projection in position Lat. 14° 31.5′ N., Long. 49° 08.2′ E. Town quay is restricted in size and served by mobile cranes.
Stevedores: Labour is available 6 days a week, Saturday to Thursday inclusive.

Morning shift: 0700 – 1230 hrs. Afternoon Shift: 1300 until lighters are full.

The afternoon shift is unpredictable and subject to lighters being available.

Medical: Local hospital affords basic medical requirements.
Fresh Water: Not available.
Fuel: Not available.
Shore Leave: Restricted by curfew to between 0800 – 1200 hrs. and 1600 – 1900 hrs. All persons going ashore are required to exchange Passport for local pass at Immigration.

GENERAL:
Harbour: Khalf Harbour, recently completed and as yet uncharted (See "Plan") provides 2 commercial jetties and a fisheries jetty.
Swell: Reportedly maximum 20 cm. in S.W. Monsoon.
Provisions: None available with the exception of individual purchases of fruit or poor quality vegetables available from market stalls ashore. Fishing good from ship's rail and crayfish, etc. obtainable from local fishing boats.
Launch: By prior arrangement with Agent only. Special dispensation can be obtained from Harbour Master to utilise ship's lifeboat. Barges can be used if other arrangements do not materialise.
Communications: By cable only. Telephone system is reported to be unreliable.
Port Officials: Immigration and Customs Officials board on arrival. Passports or Seaman's Cards are sighted. Bond Locker and Beer Room sealed but sufficient released for shipboard consumption.

Usual port papers required.

Agency: The National Shipping Co., Mukalla, Yemen. Cables: "Natship, Mukalla". Telex: None, but reported to be planned.

DEVELOPMENTS: The second stage development of Khalf Harbour will include:

Ancillary buildings, administration offices, workshop, transit sheds, surfacing and drainage, water and bunkering facilities will be made available.

AUTHORITY: Yemen Ports Authority. *Contact:* Ahmed M. Basaleem, Port Manager. Captain Salem Awad Saleh, Assistant Harbour Master.

NISHTUN: 15.50 N. 52.12 E. (See Plan)

DOCUMENTS: See "Aden".
PILOTAGE: Compulsory. Manoeuvring during day time only. There is a lighthouse, range 28 miles, flashing 10 sec. in position Lat. 15° 49.0′ N., Long. 52° 12′ E. Also the breakwater tower has a flashing green light.
ANCHORAGES: Ships waiting for berthing normally anchor 4 – 5 cables S.E. of the breakwater tower and clear of the harbour entrance.
MAX. SIZE: Maximum size of ship that can be accommodated is up to 3,000 d.w.t., 90 m. LOA and 5.0 m. draft. For ships over such size special permission should be obtained from Port Officer and Director of Marine Affairs.
VHF: Vessels approaching Port of Nishtun can communicate with Port Authority by using Channel 16 for calling during official working hours 0700 – 1400 hrs. (local time) .
BERTHING: Length of quay 220 m.
CRANES: 2×3 tons – 17.5 tons mobile cranes.
MEDICAL: Limited facilities available.
FRESH WATER: Available in small quantities.
FUEL: Not available.
AIRPORT: Located at Al-Gaidah, 40 km. to the East of Nishtun.
WEATHER: *Monsoon:* During S.W. Monsoon waves may break over breakwater. Swell is created in basin so extra precautions by ships' Masters regarding mooring and securing the ship against the quay are required and extra ropes or wires are necessary.
AUTHORITY: Yemen Ports Authority (See "Aden").

RAS ALKATHEEB: 14.55 N. 42.53 E.

Also see "General" before first port.

The Port of Ras Alkatheeb is situated 14 km. from the main city Hodeidah and connected by a gravel road which is in the process being resurfaced and broadened with two traffic lanes on the sam alignment, thus providing a first class road transport link betwe Hodeidah and Ras Alkatheeb. Also see "Hodeidah".

BERTHING: The port has a berth 270 m. in length and 27 m. wid pontoon type, with ships berthing on either side. This port can receiv vessels with a max. draft of 26 ft. at high tide. Vessels can be secure to barges and coasters with a draft of 14 ft. which can be connected t the shore, thus enabling ships to discharge directly onto waiting truck Said pontoon is mainly used for bagged cargo on direct delivery basi

Presently, this port does not have shore crane facilities and a unloading is done with ship's own gear.

Storage and Delivery: Due to lack of storage facilities at this port, delive at present, is given directly under the hook.

GENERAL: The port is not a commercial port.

SHIPMASTER'S REPORT: November 1980.

1. Port does not accept Vessel's Registration until vessel is anchore between Buoy No. 1 and No. 2. This as per the Port Radio VHF statio
2. Buoy No. 2 is placed about 6 cables N.N.W. of charted position.
3. Do not attempt entry at night since buoys are unlit and there a many uncharted stranded wrecks visible only during daytime.
4. Tugs available: 4×700 b.h.p. and 3×1,800 b.h.p. Pilotage on during daytime.
5. Vessel berthed at Ras Khatib pontoon. Max. draft 8.0 m., tota effective length of pontoon 270 m.
6. Port issues a directive to Agents giving estimated time to discharg If not completed, port charges at the rate of 4 Rials/per metre/per hou of stay extended.
7. Distance from Ras Khatib berth to town 15 km. Only 10 to 15 sho leave passes given to vessel, regardless of number of crew.
8. No chipping and scraping permitted but painting is allowed.
9. Fresh water inside port is $4/– per ton, at Ras Khatib $20/– per to by barge.
10. Provisions available but expensive.
11. Repatriation possible but very difficult due to having to obtai permission from Saana.
12. Cargo work is fast, 260 tonnes of cement per gang per day. Norma shift 0730 – 1200 hrs. and 1500 – 2330 hrs.
13. As per "Pilot", there will be dredging carried out soon and als lighted buoys will be placed.
14. Ras Khatib light Fl. 3 sec. of very low power.
15. Yellow fever inoculation not compulsory unless coming fro infected area.

RAS ISA MARINE TERMINAL: 15.08 N. 42.36 E. (See Pla

LOCATION: The geographical location of the Ras Isa Marine Termina "FSO Safer", is Lat. 15° 07′ N., Long. 42° 36′ E.

Ras Isa Terminal is an Offshore Loading Terminal, located in th Yemen at the Southern end of the Red Sea, East of the Zubair Islands and a little North of the port of Hodeidah. The Terminal consists of th purpose-converted Floating Storage and Offloading (FSO) Vesse "Safer". This vessel is 409,000 metric d.w.t., and continuously receive crude oil production from a pipeline on the seabed via an anchore fixed-turret mooring. The sub-sea pipeline to shore runs 4.8 miles to th N.E. at Ras Isa Peninsula. The Terminal is operated by Yemen Hu Oil Company (YHOC).

DOCUMENTS: At present only 2 Crew Lists are required.
PILOTAGE: The pilot boarding area for the Ras Isa Marine Termina 2 miles Southward of the storage tanker, or boarding will be anchorage as appropriate.

The Pilot will remain on board throughout the export tanker vesse stay on the berth; therefore, suitable and adequate accommodation sh be provided for him on board the export vessel.

Arrival at Pilot Station/Anchorage: Means of access to the vessel by th Mooring Master shall be provided in accordance with the requiremen of SOLAS, and early advice will be given by Ras Isa Marine Termi that access should be provided. At night, the access area shall adequately illuminated to provide for the approach and boarding of th Mooring Master, Agent, Cargo Surveyor and YHOC Representativ The condition of entry into and use of Ras Isa Marine Terminal, a agreement for the hiring of tugs will be presented to the Master of th export tanker, and shall be signed by him on behalf of himself, the vess and its Owners prior to departure from the pilot station/anchorage a commencement of berthing operations.

Usually the tugs and Berthing Master are automatically arrang through the export tanker's port Agent and YHOC, when export ta is scheduled to berth.

Notice of Readiness is only signed for receipt by YHO Representative. In no event shall a Notice of Readiness be vali binding on the Terminal, unless and until such time as the export vess her tanks and equipment are, in fact, in every respect whatsoever the proper condition and operation to receive the cargo. Export tan provided with a suitable landing area can be boarded by helicopte

ANCHORAGES: Should it be necessary to anchor, then the vessel should proceed to the recommended tanker anchorage area defined by the following coordinates:

Lat. 15° 05′ N.,	Long. 42° 32′ E.
Lat. 15° 03′ N.,	Long. 42° 32′ E.
Lat. 15° 05′ N.,	Long. 42° 36′ E.
Lat. 15° 03′ N.,	Long. 42° 36′ E.

RESTRICTIONS: No restrictions for berthing day or night when port is open.

Strong Winds: When mean speeds exceed 30 knots on the Marine Terminal anemometer, ships will, depending on the wind direction and general weather synopsis, be alerted that cargo/deballasting operations may have to be suspended and hoses disconnected. The Terminal has the responsibility of determining when wind conditions are reaching the limit of the design criteria for continued operations.

MAX. SIZE: Maximum size of 307,000 d.w.t. tonnes is permitted at the "FSO Safer". Partially loaded tankers acceptable. Average water depth is 38.0 m.

HEALTH: At present no Declaration required.

RADIO: *Communications:* On receipt of instructions to proceed to Ras Isa Marine Terminal, then 72 hours, 48 hours and 24 hours prior, advise ETA and other details as listed in the Ras Isa Marine Terminal Regulations and in a standard telex sent by the Terminal to the vessel. If vessel is scheduled to berth on arrival, be sure to advise the Terminal of any change in ETA to avoid excessive stand-by charges for the tugs.

Hodeidah Port Authority must be advised as mentioned above at Hodeidah Telex: 5565 Mawani, and via Hodeidah Radio (4WD) in addition to any telex contact, as they advise the Yemen Military Authorities, who maintain a radar watch on all vessels entering and leaving Yemen waters.

YHOC Marine, Hodeidah:
Telephone: 967-3-217994.
Telex: 5685 YHOCMA YE.
Fax: 967-3-226153.

YHOC, Sana'a:
Telephone: 967-1-216080, Ext. 2643 or 2218 (via operator).
Telex: 4013 YHOC YE.
Fax: 967-1-216079.

FSO Safer – Ras Isa Marine Terminal:
Telephone: 967-1-216080, Ext. 2380/2290 (via operator).
Telex: Inmarsat Atlantic 1473102 SAFA X.
Fax: 967-1-216080, Ext. 2264 (via operator).
VHF: Terminal Channel 74.
Tugs Channel 74.

VHF: *Export Tanker/Terminal Communication:* When the export tanker is at anchorage, communications between the storage tanker and the export tanker will be established on Channel 74.

Anchorage/Mooring Master Boarding Area: When within VHF communication range, Masters of export tankers should ascertain berthing prospects from the Terminal.

TUGS: Two suitable tugs are ready for each lifting, and are for export tanker account.

BERTHING: *Alongside Mooring/Unmooring Arrangements:* Should the export tanker be moored alongside, mooring will be on the starboard side of the "FSO Safer", according to following standard mooring plan: 4 headlines, 2 forward breast lines, 2 forward springs, 2 aft springs, 2 aft breast lines, 4 sternlines. Fendering between the two vessels consists of 5 large fenders.

For mooring/unmooring operations, the service of two tugs will be necessary. Export vessels should provide either synthetic mooring lines or mooring wires with synthetic tails. Synthetic ropes should be stored on drums or wrapping drums. Masters of export tankers are to be advised that the actual requirement of the mooring system may be subject to variation from time to time, depending on the environmental condition.

Tandem Mooring/Unmooring Arrangements: "FSO Safer" is also equipped with a Tandem Mooring System, which will be used if the weather conditions do not allow an alongside mooring, particularly in Winter time. The export tanker has to be equipped with a chain stopper on the bow, and shall be in overall conformity with the OCIMF "Standards for Equipment Employed in the Mooring of Ship's at Single Point Mooring", latest edition. The Terminal mooring hawser and chain arrangement does not allow for mooring with snotters nor with Smit Bracket, only an export tanker equipped with chain stoppers (OCIMF B 3 in. U3 chafing chain). The Terminal is permanently equipped with a floating 20 in. hose with 2×16 in. tails. Before any tandem mooring attempt, there should be a meeting between export tanker and Terminal personnel to establish procedures, responsibilities and supervisory roles. Refer to Ras Isa Marine Terminal Regulations for further information.

LOADING: *Transfer Operations:* The "FSO Safer" is equipped with 4×16 in. transfer hoses with a maximum loading rate of 100,000 bbls./hr. for alongside loading and 55,000 bbls./hr. for Tandem loading, and 1×20 in. transfer hose with 2×16 in. tails for tandem loading. At all times during the transfer operation, a responsible deck officer shall be in charge of operations, either on deck or in the control room. On vessels with a central control room from which all operations are controlled, a deck watch in contact with the control room is required to continuously patrol the cargo deck, and monitor the manifold area of the export vessel. At any time during the transfer operation, the rate can be reduced as requested by the Master or responsible officer of the export tanker. Early Departure Procedures are normally practised at the "FSO Safer".

The official quantity and quality of the crude oil delivered to the export tanker shall be determined by the Terminal, and shall be final and binding on the export tanker and her Owners and Charterers.

Hose Handling: Hose connection/disconnection will be carried out by the export tanker's crew, who at all times will be under the control of responsible deck officers. The export tanker will be required to have ready a derrick with a minimum SWL of 15 tons at the port manifold area for the handling of the Terminal hoses. For further information refer to Ras Isa Terminal Regulations.

Cargo Information: Oil loaded at Ras Isa Terminal is Marib Light Crude with an average API gravity of about 47°. The loading temperature will vary from 85°F in the Winter to 100°F in the Summer months.

Deballasting Operations: "FSO Safer" has no ballast reception nor slop disposal facilities, and therefore, export vessels are required to arrive with clean ballast suitable for pumping directly to the sea. Export vessels arriving with ballast unsuitable for pumping to the sea may be rejected for loading, or will be required to keep that portion of their ballast unsuitable for discharge to the sea segregated on board. YHOC will not accept any claims from vessels unable to meet such requirements.

It is strictly against the law to pollute the waters of Yemen. Any Master, and his vessel's Owners, may be subject to prosecution by Yemen, if such pollution does occur.

Simultaneous Deballasting and Loading of Cargo Tanks: This practice is essential. Vessel has to be ready at all times to manoeuver, and the only alternative is to load partial cargo first. Such operation is done at the sole risk of the export vessel, its Master and Owners, and the most stringent care and attention shall be taken by the export tanker. Export tanker will hold the Terminal, its parent companies, subsidiaries and affiliates, harmless from any and all claims, demands, damages, liabilities, costs, fines, and expenses, of every kind whatsoever, arising out of, on account of, or in any way connected with the simultaneous deballasting and loading of the export tanker.

Inert Gas Systems: All export tankers loading crude oil at the Marine Terminal must have an effectively working Inert Gas System in compliance with SOLAS Convention, and the Master shall confirm before berthing that the Inert Gas System is working correctly, i.e. maintaining positive pressure on all tanks with the oxygen content of the inert gas less than 8% by volume. On arrival alongside, export tankers will be asked to depressurise tanks sufficiently to allow up to 3 ullage ports to be open at any one time for the purpose of gauging sampling, waterfinding, temperature taking, tank inspection, etc., but ullage ports must be re-secured before cargo or ballast handling is commenced. Export tankers equipped with Vapour Lock tank dipping/sounding devices are not required to depressurise the tanks when gauging, temperature taking and water finding. During deballasting, the IGS must be capable of producing sufficient inert gas at 8% or less oxygen quality to prevent air from entering the tanks. If the IGS is not operable, deballasting from cargo oil tanks will not be allowed to commence. If during deballasting, the IGS fails, the deballasting must be stopped until the plant is again operational. If this repair is likely to take more than 24 hours, the ships' Owners and/or Charterers must be contacted and a safe deballasting/loading plan should be agreed by both parties, before operations are resumed. When loading an inerted tank, the inert gas displaced must be vented through the ship's vent system and not ullage ports.

Maximum Allowable Pressure: The export tanker must never exceed the maximum allowable pressure on its cargo piping system, and make sure the loading rate is fully agreed.

MEDICAL: No doctor, dentist or clinic, however, in emergencies, Terminal will attempt to assist.

DENSITY: 1027.

FRESH WATER: Not available.

FUEL: Not available.

CONSULS: At Sana'a.

REPAIRS: No facilities available.

REPATRIATION: No facilities available.

AIRPORT: Hodeidah and Sana'a.

SHORE LEAVE: Not permitted.

GARBAGE DISPOSAL: Not available.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

GENERAL: *Flags:* The national flag of Yemen shall be permanently displayed by vessels at the Ras Isa Marine Terminal.

Alcohol: Masters are advised that sale of alcoholic beverages to National Citizens is strictly forbidden, and are warned of the serious consequences of offering such drinks to Terminal staff who may board the vessel.

Agency: The Terminal does not perform any vessel agency functions. Vessels calling at Ras Isa Marine Terminal are required to arrange their own agency representation from an agency operating in Hodeidah.

WEATHER: The winds in the area are usually light and generally blow from Western/Northern quadrants in the Summer, while in the Winter, from October to April, the prevailing winds blow from Southerly quadrants, building up strong swells, which force the Terminal to use the Tandem Mooring System. The existing currents are very weak.

SAFETY: The Ras Isa Marine Terminal Safety Check List is based on the recommendations of the "International Safety Guide for Oil Tankers and Terminal" (ISGOTT).

HELICOPTER: *Helicopter Operations/Precautions:* Helicopter service for embarking/disembarking a Pilot, or any other personnel from the export tanker and any other vessel, is available, but subject to availability of a helicopter. Transfer of personnel by helicopter from ships located within the Terminal area may be carried out only in emergency (i.e. evacuation of injured crew member), and subject to availability of a helicopter. The helicopter service will be for account of the export tanker. Voice contact with helicopter is possible, because all are provided with VHF radio equipment. Ensure the selected landing area on board the vessel is clear. Ensure all operational requirements on deck are as per guidelines issued by the International Chamber of Shipping in their "Guide to Helicopter/Ship Operations".

SECURITY: *General:* The Terminal will take prudent and reasonable security measures, consistent with security threats and risk inherent in each particular situation.

Security Area: The security area covered is indicated by the encircled area on the chart. Throughout the vessel's stay alongside, a gangway watch shall be maintained. The gangway security watchmen should ensure (a), unauthorised persons are excluded from the vessel, (b), authorised persons are logged on and off the vessel, and (c), if necessary, conduct checks of baggage and packages being brought on to or taken off the vessel.

It is important that the Terminal advise the Master as soon as possible of any special circumstances which might necessitate special security precautions. Conversely, the Master of the vessel should also inform the Terminal of the security status procedures on board in accordance with the Vessel Security Guidelines. Export tankers, requiring urgent services (Owners' items), should establish contact with local port Agents, at the port of Hodeidah, for delivery offshore or at the Holding Anchorage, which, if the latter is utilised, should be reported to "Ras Isa Terminal – Safer", via telex or fax for clearance to use this anchorage. Any authorised representative of the Terminal shall have the right to board any vessel within the Terminal area at any time, for the purpose of ensuring that regulations are being observed. As a condition of entry into the Terminal area, the export tanker and any other ship, must agree to vacate the berth promptly on being requested to do so by the Terminal.

SHIPMASTER'S REPORT: May 1988 (Updated 1994).
NOTE: This report was received prior to receiving new operating procedures above.

Ras Isa Terminal is an offshore loading port located in the Yemen at the Southern end of the Red Sea, East of the Zubair Islands and a little North of Hodeidah (See B.A. Chart No. 143).

The Terminal consists of a purpose-converted Floating Storage and Offloading (FSO) vessel, FSO 'Safer'. This vessel is 400,000 tonnes d.w.t. (ex-'Esso Japan'), and permanently moored in position Lat. 15° 07′ N., Long. 42° 36′ E. The 'Safer' is under the Yemen flag, and permanently connected by pipeline to the production field via a turret-mooring (6 anchors), and submarine line to shore at Ras Isa, 4.4 miles to the N.E. Production Field is some 420 km. inland, in the Marrib area of Yemen, and production is understood to be some 150,000 barrels per day. 'Safer' takes production on a continuous basis and supplies export vessels as required.

Product is Yemen Marib Light Crude; typical API, 39.0 to 41.0, typical temperature at loading, 30°C to 38°C, dependent on local sea temperature. The 'Safer' is on a swivel mooring system and will normally lie head to wind, with some influence from tide. Terminal is operated by a Yemeni/American combine, the Yemen Hunt Oil Corp. (YHOC), and vessel is operated (at time of writing) with Italian, Yemeni and British officers and crew, together with American supervisors and Yemen Government representatives. Product suppliers are Yemen Oil and Mineral Resources Corporation. (YOMINCO).

Communications/ETA: (See Appendix "A").

On receipt of instructions to proceed to Ras Isa, then 72 hours, 48 hours and 24 hours prior, advise ETA and other details as listed. Hodeidah Ports and Marine Affairs Corporation)(Hodeidah Port Authority) *must* be advised via Hodeidah Radio (4WD), in addition to any telex contact, as they advise the Yemen military authorities, who maintain a radar watch on all vessels entering or leaving Yemen waters. Likewise on departure, vessel must advise Hodeidah Port Authority (per format supplied by Pilot) to be marked-up on military radar screen – otherwise vessel may be intercepted; also via 4WD on 500 kHz.

'Safer' Sat. Telex 1473102 Safa-X (IOR); after initial and 72 hour messages, only requires updated ETA. On approach use VHF Channel 74.

On receipt of ship's message, 'Safer' will respond with nomination and request ship's details (See Appendix "B").

YHOC Marine: Telex 4013 or via 4WD to YHOC Marine Sanaa.

Port Authority: Telex 5565 and via 4WD.

YHOC Marine, Port Authority and Agents require message per Appendix "A" to be repeated in each ETA notice.

Approaches and Anchorage: See B.A. Charts No. 143, 548, 542 and Appendix "C" and "Plan".

Approach to Ras Isa Terminal is straightforward and clear of dangers. However, due to lack of soundings and age of survey, it would be prudent to approach from seawards rather than coasting.

From North: Follow usual courses down Red Sea, to position 15° 30′ N., 41° 45′ E., 4.5 miles S.W. of Jabal at Tair. Thence course 120° T., distance 52 miles gives a clear run to the Holding Anchorage, passing 7 miles N.E. of Quoin and Haycock Islands in the Zubair group. Once into soundings, least depths are 40 m. – 49 m. Clematis Shoal will lie approximately 11 miles to the North of track when some 17 miles N.W. of Terminal.

Rashshah Island, 4 miles North of Terminal, is low and sandy and has a light (3M) Fl. 10s. 8 miles; both island and light are very poor, both visually and as a radar echo and will not be sighted until within 6 miles of terminal, if at all. Terminal ('Safer'), is well lit and a good radar target, and was located at 14 miles. There is a disused SPM to the East of 'Safer', which may have a tug lying close-by, these echoes tend to confuse the actual terminal position.

From South: Leaving Abu Ail Channel, course should be made to position 14° 25′ N., 42° 30′ E. (avoiding Avocet Rock), before turning North towards Holding Anchorage. Least depths on this approach appear to be 31 m., but survey soundings are old. On approach good fixed positions are necessary, due to Penguin Shoal to West, and S.E. Patches to East, the latter being actually in vicinity of anchorage.

Holding anchorage is established approximately 3.2 miles to S.W. of 'Safer'; vessels may enter and leave from/to sea without pilot, but the total area from shore, out to anchorage is restricted, and vessel must be under pilotage within this area. Depths in anchorage average 38 m. to 44 m., mud/sand bottom, holding-ground good.

Berthing and Operations: See "Plan".

Pilots (2) are British. There are 2 hired tugs (1×40 ton and 1×60 ton bollard-pull), and tugs lines are used. Tugs are not ideal as they are primarily salvage tugs. Berthing daylight only, unberthing any time, dependent on weather conditions; if wind speed above 20 knots terminal is usually closed for berthing. Any size of vessel up to 400,000 tonnes d.w.t. can be accommodated. Depth at terminal is 33 m.

Berthing is vessel's port side to 'Safer' starboard side. Terminal pr all wire moorings, but accept rope headlines and sternlines. Tails mu be removed from wires. Moorings are 4 headlines/wires, 2 breast wir 2 spring wires, 4 sternlines/wires, 2 aft breast wires, 2 aft spring wir – usual firewires required. Usually springs first, followed by brea followed by head/stern lines. 'Safer' then supplies 2 'shore' wires fo'cstle, and one 'shore' wire to poop. Messengers are required. Tu make fast in 'push-pull' position on starboard forward main deck and main deck for berthing, and on long lines starboard bow and starboa quarter on sailing. Tugs lines are very heavy.

While alongside, vessel must maintain starboard accommodati ladder in lowered position. Current international safety rules, Che Lists, Regulations and procedures are in use, and practised. IGS mu be positive and always less than 8%. Vessel must arrive with cle ballast, and ballast samples are laboratory tested before deballasti allowed. Portable radio is supplied by Terminal for inter-sh communications.

'Safer' will normally supply 2×16 in. hoses, using combination ship's lifting gear and her own crane. Her max. rate is 70,000 barre per hour. 'Safer' provides inter-ship gangway and connects/disconnec hoses.

'Safer' has cargo metering equipment, but this is still at proving sta and vessel will 'ship-stop'.

Documentation usually takes 3 to 4 hours after completion. Pilot a any surveyors will stay aboard vessel loading. Tugs stand-by wh operations are in progress.

Ras Isa commenced operations in December 1987 and 'Safer' cam on stream in March 1988. There are currently an average of 6 expo liftings per month from the terminal. As at present time, there are n port or customs or health formalities; ship's Agent requires 2 copie Crew List, and pilot asks of state of health. It is understood that th usual formalities will be instated in the near future, in which case th usual rules for entry into Muslim Arab countries are expected to app

The Yemen flag must be flown. It consists of red-white-black horizonta stripes, flown with red stripe uppermost.

There are no facilities or services available. No bunkers or water o repairs. It is apparently possible in urgent cases to obtain services v ship's Agent from Hodeidah, to the holding anchorage, with termi permission. This would be very expensive as Hodeidah is some 30 k away down the coast. Transport to/from 'Safer' is by launch or helicopte Agent boards vessel on arrival. Pilot issues Port Clearance and take off any timesheets and arrival/sailing figures for Agent if requeste Terminal will do their best to assist if urgent medical attention require but in general vessel must be totally self-sufficient in this port.

'Safer' has 5 large Yokohama fenders and sundry smaller fende and protection is good. Vessel's berthing (ballasted) trim must n exceed 3.0 m., with propeller immersed.

A comprehensive port-information book is issued to each arrivi vessel. On boarding, Pilot will require Master to sign an indemni absolving Pilot/Terminal from almost everything, and also pilota timesheets, port log and tugs time of hire.

APPENDIX A: See "Note" at beginning of Shipmaster's Report.

Export tankers shall advise their ETA upon departure from its last lo or discharge or other port or if at sea as soon as orders received t proceed to Ras Isa and repeat at 72, 48 and 24 hours in advance t arrival via Hodeidah Radio Station to the cable address "YHOC Mari Sanaa Telex No. 4013". Vessels equipped with Inmarsat satelli communications may address their telex(s) to "YHOC Marine" Inmarsa Telex No. 1473102 (IOR) and shall call the terminal on VHF Chann 16 when within range (then VHF Channel 74 for working).

For your information Ports and Marine Affairs Corporation, Hodeida requires the following information from vessels stemed for Ras Is Terminal to be sent to them either by telex (5565 Mawani YE) or v Hodeidah Radio (4WD) 72/48/24 hours prior to vessel's arrival:-

AA ETA Ras Isa Terminal.
BB Nationality of ship.
CC Summer deadweight.
DD Length overall.
EE Number of crew and state of health.
FF Cargo required.
GG Arrival draft – fore and aft.
HH Name of Agents.

Master tanker to adhere to these requirements, under copy to Age to avoid imposition of fines.

APPENDIX B: See "Note" at beginning of Shipmaster's Report.

We hold your nomination for approximate ..... bbls at 60° F. Yem Alif Crude approximate API 40.5.

Following information needed:

AAA Cargo quantity you able to load.
BBB Last cargo carried and if crude, source of origin.
CCC Quantity and grade of any transit cargo on board.
DDD Quantity of ballast and estimated deballast time.
EEE Quantity and type of slop onboard to lot of segregate on boa
FFF Maximum acceptable loading rate.
GGG Arrival draft (trim not to exceed 10 ft. or 3 m. by stern).
HHH Deepest sailing draft.
III Advised ability to simultaneously load and deballast with dou valve segregation throughout.
JJJ Confirm latest edition of I.S.G.T.T. Safety Guide and OCIM Ship-to-Ship Transfer Guide are onboard.

Repeat your ETA 72, 48 and 24 hours in advance of arrival to:

YHOC Terminal (via Inmarsat Indian Ocean Telex No. 14731 Safa X).

Port Authority (Telex 5565 Mawani YE).

When within range contact YHOC Marine on VHF Channel 16 work Channel will be 74.

On arrival have your pilot ladder ready on starboard side for Berth Master boarding and your port boom (SWL rating of minimum 10 ton rigged for 16 in. hoses handling purposes.

Confirm your inert gas system is in good working condition. Maintaining oxygen content less than 8% by volume in cargo tanks.

Operational/Safety Check List as per OCIMF Ship-to-Ship Transfer Guide will be followed when VHF contact will be established. Please report also full name of Master.

Signed. . . . . /Cargo Custody Transfer Coordinator
Ras Isa Marine Terminal

APPENDIX C: See "Note" at beginning of Shipmaster's Report.

On arrival vessel has to anchor at the holding anchorage. The area designated as the holding anchorage for vessels waiting for loading at Ras Isa Marine Terminal is located to the Southwest of the terminal in following position: (N.B. Vessels may only enter this area from sea, or sail to sea, without Pilot. Any other movement must be under pilotage.)

15° 05′ N. 42° 32′ E.	15° 03′ N. 42° 32′ E.
15° 05′ N. 42° 36′ E.	15° 03′ N. 42° 36′ E.

The permanent floating storage and offloading terminal (FSO) "Safer" 400,000 d.w.t.) is located approximately 4.8 nautical miles offshore Ras Isa in position:

Latitude 15° 07′ North   Longitude 42° 36′ East
in the Red Sea territorial waters of the Yemen.

SHIPMASTER'S REPORT: June 1989.

NOTE: This report was received prior to receiving new operating procedures above.

General: Ras Isa Marine Terminal is similar to ship-to-ship oil transfer, so no documents (i.e. Stores List, Bonded Store List, etc.) were requested. However 4 copies of the Crew List are required. Repairs, fresh water, crew repatriation and shore leave are not possible.

When vessel arrives at the Pilot boarding station (Anchorage area), the Pilot, Loading Master and Agent come on board by helicopter by launch. The Pilot and Agent remain aboard until ship's departure. Two British Pilots employed and one on duty. Two tugs assisted with berthing and unberthing operations.

Information required prior to arrival: ETA upon departure from last port and repeat 72/48/24 hours in advance of arrival via Hodeidah Radio Station to the cable address "YHOC MARINE SANA TLX4013". Vessels equipped with Inmarsat communications may address their telex "YHOC MARINE Inmarsat No. 873-1104125" and shall call the terminal "SAFER" on VHF Channels 16/74.

The Agent requests the following information to pass to the terminal, this may be sent 3 days in advance.

1. Cargo quantity able to load (we loaded Marib Light crude oil, API 41.1, temperature 96°F.).
2. Origin of last cargo.
3. Quantity of dirty ballast, and deballasting time (if any need to pump to shore, estimate time via 1 × 16 in. hose, maximum 70 p.s.i. discharge pressure, shore tank capacity 50,000 tons).
4. Quality and quantity of slops.
5. Maximum acceptable loading rate (storage tanker able to transfer 20,000 tons per hour).
6. Arrival draft (trim not to exceed 10 ft. or 3 m. by stern).
7. Maximum sailing draft.
8. Advise ability to simultaneously load and deballast with double segregation throughout.
9. Confirm latest editions of ISGOTT (International Safety Guide for Oil Tankers & Terminals) and OCIMF Ship-to-Ship Transfer Guide are onboard.

and additional items as follows:

Distance bow to manifold.

Helicopter landing area (helicopter has two engines and is large, takes about 20 persons).

Rig pilot ladder on starboard and 16 in. hose pick-up derrick on port side (SWL 10 tonnes).

I.G.S. works properly and all tanks including ballast tanks oxygen less than 8 percent by volume.

Mooring wires: Take off rope tail, this is extra ordinary request due to bad weather, the terminal had experienced rope tails breaking.

The Agent is requested to pass the following to the Port Authority:

1. ETA Ras Isa.
2. Vessel nationality.
3. Summer deadweight.
4. LOA.
5. Number of crew and confirm all healthy.
6. Quantity of cargo request for loading.
7. Arrival draft.
8. Name of Agent.

SALEEF (Salif): 15.18 N. 42.41 E.

Also see "General" before first port.

Saleef Port is a natural port on the Red Sea, approximately 80 km. North of Hodeidah Port. Two routes, one round the North end of Kamaran Island and the other around the South end provide suitable access to the harbour.

As prevailing winds are generally Southerly or Northerly, vessels are able to approach the berth from downwind. This is important as vessels will probably have to berth without tug asistance. Initially, mooring facilities are designed for 50,000 d.w.t. vessels and consists of a wharf head 20 m. wide, 93 m. long with two dolphins. A 10 m. wide trestle connects the wharf head to the shore. Facilities are designed to absorb the berthing impact of a ship approaching with a velocity component of 15 cm. per second perpendicular to the berth face and for a 50 tons mooring line pull.

Future developments: A French consulting firm has been awarded the contract to submit a report on future developments of this port.

SHIPMASTER'S REPORT: December 1979.

Acknowledgements: Most of the information has been gleaned from local Agency representatives and Capt. A. Saeed, Harbour Master.

Reference has been made to Red Sea Pilot and various BA Charts. Local written information is unavailable for the area concerned.

General: Salif lies some 60 km. North of Hodeidah, it is a natural deepwater harbour sheltered by Kamaran Island.

Since 1976 the port has enjoyed moderate expansion and can now boast a modern jetty capable of berthing ocean going vessels; other pontoon type berths are available, these being linked to the shore by small stone jetties. At present the port can accommodate two vessels of up to 200 m. length with a draft of 12 m.

Salif is geared for the export of bulk salt and the import of grain and some general cargo. In the near future a further pontoon type berth is due to come into operation to be used solely for the import of bulk cement. A bagging plant and silo have been constructed to handle the additional cargo.

This report is mainly directed to the facilities associated with the import of grain, however where possible relevant information has been included which could prove useful to other vessels trading in the area.

Documents:

6 Crew Lists with Passport numbers.
2 Bonded Stores Lists.
2 Personal Manifests.
2 Vaccination Lists.
3 copies Cargo Manifest.
Local inward forms made out on arrival.

Approaches: (BA Charts: 543 and 548). Recommend approaching around the North end of Kamaran Island, as mentioned in Red Sea and Gulf of Aden Pilot, page 390.

The lighthouses stand out well, but at night they are not lit (December 1979). The only difficulty in making Salif, in daylight, is passing to the South of N.W. shoal light, the channel at this point being about one mile wide. At night the lighthouses prove quite good radar targets, and the various islands etc. show up quite well. Once around the top of Kamaran Island course can be set down Kamaran Passage to the anchorage area off Ras el Salif. Charterers frequently advise that passage is possible South of Kamaran Island, however this is not advisable; the leads mentioned on the chart are very difficult to see and there is no room for error.

Anchorage: No specific area designated but anywhere in the vicinity of Salif Jetty. For vessels waiting for the wheat berth it is best to anchor about 0.75 miles West of Ras el Salif. Good holding ground in about 14 fathoms of water. For vessels with poor radar it would be best to anchor outside Kamaran Island until daylight, when passage can be made in safety.

Weather: See "Red Sea Pilot" for information. At Salif the wind usually picks up during the day and this can delay berthing if the strength is above Force 4.

Pilotage: Pilot boards in anchorage area from medium sized launch. Yemenese Pilot with limited English.

Daylight pilotage only.

Berthing: Vessels berth, at the bagging plant pontoon, head to wind. The pontoon consists of a flat topped barge made fast to a small stone jetty; it is well fendered with car tyres. The offshore anchor is used whilst coming alongside and a launch runs various ropes ashore to posts set on the land. Five ropes are required either end and it is necessary to join the first few together as considerable lengths are initially run. The bagging pontoon can only accommodate one vessel at a time. See "Shipmaster's Report – May 1982".

The general cargo and salt exporting jetty lies some distance to the South of the bagging plant. This pier can take one vessel of up to 200 m. in length. Facilities at this berth are an improvement over the pontoon, however for the import of grain type cargoes, it is not so efficient, it being necessary to bag the cargo by hand. Both berths can take vessels with up to 39 ft. draft.

Buoys are at present being laid to the North of the bagging pontoon and these could prove an obstacle for vessels berthing. The moorings are being laid to assist vessels making fast to the new cement pontoon (See "Projects").

Quarantine/Health Regulations: Doctor boards on arrival, either at anchorage or alongside. No health forms as such. Certificates not required unless vessel from infected area when Yellow Fever and Cholera certificates are needed. No derat facilities.

Customs: Usual Islamic laws in force. Bond not sealed and apparently no objection for crew to consume spirits/beer on board. On no account must alcohol be given/sold to local Yemenese.

Immigration: Passports are inspected on arrival. (Harbour Master acts as translator for Immigration Authorities.) Shore leave granted with passes for Salif area only. Special permission has to be given to proceed outside local area, i.e. Hodeidah.

For crew repatriation, passports are taken to Sanaa by Agent for necessary visas to be arranged.

Medical Facilities: One doctor resides in Salif, Yemenese and speaks English. He will attend the ship rather than the patient visiting him. The nearest hospital is in Hodeidah.

Port Operations (Bagging Plant): Foremen and workers are hard working. The foremen reside in caravans close to the bagging plant whilst most of the stevedores come from Salif.

The method of discharge is to load a number of diesel driven evacuators on deck and by various pipelines, these are connected to a storage hopper situated on the pontoon/barge. The hopper is connected to a small bagging plant and by means of conveyors the sacks are loaded onto road transport.

Discharge rates per 24 hours worked between 1,600 tonnes and 1,850 tonnes. Charter Party rate indicated about 750 tonnes per day. The takeaway rate from the hopper appears to be adequate with plenty of road trucks available. The grain is shipped immediately to different parts of the Yemen.

It is usual to carry sufficient bags to enable the complete discharge of the grain to go unhindered. The bags are baled and discharged onto the pontoon at regular intervals.

Ship's gear is required at each hold to sling the pipes that lead from the evacuators into the hatch. It is also required for discharging the gunnies and for loading the evacuators (1.5 tonnes). The evacuators appear reliable but spillage of diesel results during re-filling etc.

Fresh Water: Available but expensive. Supplied by road tanker at 15 tonnes a time, it is necessary to use ship's pump for pumping the water aboard. Agents require ample notice prior to supplying water.

Fuel: Heavy oil and diesel oil not available unless barged from Hodeidah.

Stores: Not readily available; fresh stores difficult to obtain.

Agency: The main Agency lies some 60 km. away by track, and the ship is attended by a runner who commutes between Hodeidah and Salif. Considerable delays result before ship's business can be completed and it is necessary for everything to be in writing; repatriation, in particular, is difficult for the organiser as well as the traveller.

Communications between Salif and Hodeidah are non-existent, a telephone line exists, but this is out of order. It is however possible to communicate directly through Portishead Radio and sometimes the only way to get messages out.

Local currency and American Dollars are obtainable from the Agents. It is difficult to obtain the money from the Agents and generally it is best to arrive with sufficient cash on board to cover any expenditure.

To arrange repatriation it is necessary to allow at least 6 days. Visas have to be obtained from Sanaa and tickets arranged. If pre-paid tickets have been sent from U.K., then they must arrive in ample time. The airport at Hodeidah has regular connections with Sanaa which in turn is linked into most air routes via Paris. Transportation from the ship to Hodeidah is by Land Rover or similar four wheel drive vehicle.

Port Regulations: Nothing in writing. The Harbour Master is the person to approach if anything required. Apparently Salif is designated a military zone and this is the reason no written information is available.

Gangway: The vessel only lies alongside for a distance of about 80 ft. amidships and consequently a pilot ladder is used instead of a gangway or brow. If this causes any difficulty, ship's lifeboat can be used as a ferry between gangway and shore.

Watchmen: Supplied by local Police/Army. They remain aboard during vessel's stay and keep pilferage to a minimum. They also keep close watch on any alcohol that may be obtained by local Yemenese.

Shore Leave: See "Immigration".

Garbage: No facilities for taking garbage away from the ship; best to dump waste food etc., whilst retaining cardboard boxes, and plastic containers.

Repairs: Possible to immobilise main engines, as once on the berth it is unlikely to shift. No repair facilities ashore.

Time: GMT plus 3 hours (no change).

Flag: Yemen Flag must be flown at all times. Red, white, black horizontal stripes with a black star in the white section.

Consuls: Situated in Hodeidah or Sanaa. Harbour Master available for Noting Protest, etc.

Tugs: None available for berthing though frequently tugs operate in the area towing barges, pontoons, etc.

VHF: Situated in port office but hours of working very flexible. The Harbour Master normally calls any vessel up shortly after anchoring.

Fire/Ambulance: None available.

Projects: A new pontoon berth, similar to the grain berth, is being constructed about 0.25 miles to the North. Silos have been erected close to the shore and are capable of storing 9,000 tonnes of finished cement. A bagging plant has also been constructed next to the silos. It is intended that cement be shipped, in bulk, and with evacuators discharged into the silos.

SHIPMASTER'S REPORT: May 1982.

We were in Saleef recently with 39,127 tonnes wheat – ship 182.08 m. long. The following are changes to information in the Guide.

The barge – pontoon berth with bagging plant no longer exists and apart from cement boats all ships now berth at jetty by Salt terminal.

Minimum water we found there in 18 days' stay was 18.5 m.

Ship's gear must be used and grain is dumped on wharf and bagged in situ, being taken away by lorries. Rate erratic, between 900 t.p.d. and 2,000 t.p.d.

Vessel has to vacate berth for car carriers and salt loaders.

No shore leave permitted.

Bond is now sealed. No restrictions on what is kept out.

NOTES

Please also advise Shipping Guides Ltd.

Yugoslavia

BAR: 42.05 N. 19.03 E. (See Plan)

PORT LIMITS: Seaward limits of the port defines a line drawn between "Voluica" Light and Ratac Point.

DOCUMENTS:

On Arrival:

5 copies Cargo Manifest (for discharge).
Certificates for Hazardous Cargo Transport.
Originals of Vessel's Certificates.
2 copies Health Declaration.
1 copy General Declaration.
5 copies Crew List.
5 copies Passenger List.
5 copies Crew Personal Effects.
3 copies Stores Lists.
1 copy Animal Pets Aboard.
1 copy Certificate of Financial Insurance on Civil Liability for Oil Pollution – only foreign ships carrying more than 2,000 tons of oil.
3 copies List of Hazardous Cargoes loaded on board and Cargo Plan for Hazardous Cargo (1 copy).

On departure:

5 copies Crew List, if any change.
List of Hazardous Cargoes, if loaded and Certificate of Stowage.

PILOTAGE: Advance notice 24 hours through ship's Agent. Pilot boat blue hull, white deck house, with letter "P" on each side. Pilot boards off West Breakwater. Use international signals to call Pilot. Pilot may be contacted on VHF Channel 16, working on Channel 6.

ANCHORAGE: Safe anchorage West and N.W. off West Breakwater. Anchoring not allowed nearer then 0.5 mile off Breakwater.

RESTRICTIONS: Vessels, including tankers, enter/leave port by day and night. Depth entrance 14 m.

No restriction on LOA and beam. Foreign nuclear ships enter only with special permission. Leaving or entering port for foreign tankers not allowed if not having said Certificate.

MAX. SIZE: Fully loaded vessels up to 12.5 m. draft.

RADIO/VHF: Bar Radio, call sign YUW, 500 kHz and 516 kHz. Radio telephony on 2182 kHz on 2 metre band and on Channel 16.

Agents can be contacted through Bar-Radio on VHF.

Port Authority on VHF Channels 16 and 12.

Tugs on VHF Channel 6.

TUGS: 2 tugs with twin 594 kW engine.

BERTHING: Berth assigned at Agent's request or Receiver's/Shipper's, both for liners or tramps, at the daily meeting of the Harbour Board.

3,500 m. of berthing space and able to accommodate up to 20 ocean-going vessels.

CARGO HANDLING FACILITIES: Available for all kinds of general cargo, containers, pallets, Ro/Ro, bulk, fuel oil and chemical cargoes. Regular passenger service to Italy and from May – October to Greece.

Grain silos with 30,000 tons capacity with covered Vacuvator.

STEVEDORES: The Port Enterprise "Luka Bar" is the sole stevedoring company. Work is done Monday to Friday in 2 shifts: First shift 0600 hrs. –1400 hrs. Second shift 1400 hrs. – 2200 hrs. Third shift can be ordered at daily meeting, paid as overtime. Saturdays, Sundays and holidays may be worked on overtime.

MEDICAL: Medical care available at Medical Centre at Bar.

TANKERS: New oil berth can accommodate tankers up to 80,000 d.w.t., draft limit 12.5 m. Bunkers from local bunker station. Tank cleaning, pumping of slops and gas freeing not permitted in port.

Tankers must be ready to leave port at 30 minutes' notice, at any time and at request of Port Authorities.

DENSITY: Sea water.

FRESH WATER: Available from hydrants on quay. It is also possible to supply fresh water in the roads.

FUEL: Can be obtained from local bunker station or by fuel barge. All grades available.

CONSULS: None.

REPAIRS/DRY DOCKS: Dry Docks at Shipyard "Veljko Vlahovic", Bijela, 36 miles from Port of Bar, capacity of about 130,000 d.w.t. and 35,000 d.w.t., available for all types of deck and engine repairs. Minor damage can be repaired while loading/discharging.

SURVEYORS: Representative of Yugoslav Register of Shipping at Tivat (80 km.).

GANGWAY/DECK WATCHMEN: Available at Master's request.

OPENING/CLOSING HATCHES: Normally performed by crew, or as per Charter Party.

CARGO GEAR: Mobile Shore Cranes: 6×5 – 6 tons, 3×3 tons, 3×8 tons, 2×20 – 30 tons, 3×12 tons for bulk cargoes. Forklifts of 1 ton up to 40 tons capable of handling containers and Vacuvators. 1×40 ton container crane. If not agreed in C/P, loading and discharging is by shore cranes.

CUSTOMS ALLOWANCES: Yugoslav Customs Regulations apply.

REPATRIATION: From Bar by bus, train (International Lines), and ship.

TIME: Central European Time, GMT plus 1 hour. Summer time kept from March to October (date fixed annually).

SERVICES: Compass adjuster at Bijela (100 km.), RDF representative at Bar. Other electronics repairs via Agent.

HOLIDAYS: January 1st and 2nd, May 1st and 2nd, July 4th and 13th, November 29th and 30th. Work can be arranged on Sundays and 2nd day of two-day holiday.

POLICE/AMBULANCE/FIRE: Police Tel. 92; Ambulance Tel. 94; Fire Tel. 93.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Not required.

GARBAGE DISPOSAL: Collection service is performed daily whilst alongside, by special trucks. Charges are from U.S.$ 17.70 to U.S.$ 64.95 per day, depending on tonnage of vessel. Should collection only be required every second day then charges increase by 50%. Contact Tel: 085-12-332 or 085-12-022, Extn. 609.

WASTE OIL DISPOSAL: Anti-pollution service exists, using floating boom, skimmer and other equipment. Collection service is carried out using drums and tanker trucks. In the near future a barge and oily water separator will be in use. This service is carried out by PIOB. Tel: 085-12-332 and 085-12-022, Extn. 609. Telex: 63139. Fax: 12-213.

SEAMAN'S CLUBS: None.

CURRENCY: Yugoslav Dinar (YUD).

AUTHORITY: Lucka Kapetanija Bar, Obala 13, Jula 18, 85000 Bar, Montenegro, Yugoslavia. *Tel:* (085) 11-382. *Telex:* 63188 Luckap. *FAX:* (085) 11384. *Cables:* Lucka Kapetanija Bar.

AGENT: Jadroagent – Bar. Obala 13, Jula 6, P.O.Box 10, 85000 Bar, Montenegro, Yugoslavia. Cables: Jadroagent Bar. Tel: (085) 11-195, 11-194, 11-193. Telex: 63141 Yu Jadrag. Fax: (085) 12751.

ZELENIKA: 42.27 N. 18.35 E.

DOCUMENTS: See "Bar".

PILOTAGE: Pilot boards at entrance of the Bay of Kotor, near point Punta Ostro. In bad weather Pilot boards at anchorage.

ANCHORAGE: Good ground for anchorage S.W. of Zelenika, about 0.25 miles off port light in about 27 fathoms.

MAX. SIZE: Port of Zelenika damaged by earthquake and temporarily closed, vessels berth at the passenger quay at Herceg-Novi.

HEALTH: Radio Agent requesting Free Pratique, 24 hours before arrival. For vessels over 500 g.r.t. Pratique is given at the anchorage. For small ships and yachts, Pratique is given at Herceg-Novi.

TUGS: None. In cases of necessity can be ordered from shipyard at Bijela.

BERTHING: The berth is assigned through the Agents giving notice 24 or 48 hours in advance. At present there is berthing for small ships only at the passenger port at Herceg-Novi.

STEVEDORES: State stevedoring company.

MEDICAL: Nearest hospital at nearby town of Herceg-Novi.

FRESH WATER: Available from hydrant on the passenger quay at Herceg-Novi.

FUEL: Nearest bunker station is at Bar.

CONSULS: None.

REPAIRS: Any kind of repairs including dry docking at nearby shipyard at Bijela.

DRY DOCKS: Floating dock lifting capacity 10,000 tons, LOA 184 m., length over keel blocks 165.6 m., inside free breadth 25.5 m.

Floating dock lifting capacity 33,000 tons. LOA 252 m., length over keel blocks 235 m., inside free breadth 44 m.

The yard is about 4 miles East of Zelenika. The yard has 1,300 m. of fitting pier.

OPENING/CLOSING HATCHES: If not performed by crew, can be done by stevedores.

CUSTOMS ALLOWANCES: About 40 cigarettes and 0.5 litres wine/spirits per man per day.

CARGO GEAR: Loading, unloading performed with ship's gear.

TIME: Central European Time. GMT plus 1 hour. Summertime kept.

HOLIDAYS: January 1st and 2nd; May 1st and 2nd; July 4th and 13th; November 29th and 30th. Work can be arranged on Sundays and on 2nd day of two-day holidays.

POLICE/AMBULANCE/FIRE: No direct connection, in case of necessity call Agency, Tel. (082) 81-456 Jadroagent or (082) 81-261 Jugoagent.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Shore passes issued by local police.

AUTHORITY: Lucka Ispostava Zelenika.

AGENT: Jadroagent, Medunarodna pomorska i saobracajna agencija, Poslovna jedinica, Bijela. Tel: (082) 81-456. Telegraphic address: Jadroagent Bijela.

Zaire Republic

GENERAL:

ETA: It is essential that any change of vessel's ETA should be transmitted sufficiently in advance in order to avoid short shipments of cargo.

Matadi is only a transit port where cargo is not stored in order to avoid congestion.

Imported cargo is immediately re-forwarded to the interior while export cargo is only brought to Matadi a few days before the ETA of the vessel for which it has been booked.

Therefore, in order to make the cargo available at Matadi, shippers need a notice varying according to the cargo concerned, but which cannot be less than 2 weeks as is the case for coffee.

Agents at Matadi and Boma have been instructed to inform Port Authorities latest 4 days before berthing of inward cargo tonnages.

Non compliance with this provision may result in berthing delay.

PILOTAGE: Vessel should cable ETA 24 hours before arrival to the Harbour Master. Cable address: "Maritime Banana" via Banana Radio.

Pilotage compulsory for all vessels over 500 g.r.t. bound for Boma and Matadi.

Ships bound for Matadi and/or Boma must take a Pilot at the pilot station at Banana (at the mouth of the Zaire River). Pilot station at Banana can be contacted directly by radio (VHF).

In order to increase the safety and to facilitate the navigation on the river the Regie des Voies Maritimes have decided that in case a vessel is not equipped with a VHF installation the Pilot will bring one on board, for which a charge is made.

The following rules must be observed at the request of the Regie des Voies Maritimes for embarking and dis-embarking of Pilots.

If gangway is rigged astern on the port side it is compulsory to use the pilot ladder.

If gangway rigged amidships on port side it is recommended that the pilot ladder is used in combination with the gangway.

Pilots requesting only the gangway do so at their own risk.

Theoretically sailing from Matadi/Boma is only authorised if vessel can reach Banana by 1800 hrs. at latest since navigation on the Zaire river is normally limited to daylight hours.

With regard to the trim the pilotage services ask Masters to comply with following rules:

Maximum draft 12 ft. aft; 2 ft. forward.

DOCUMENTS: *Ship's Documents required on arrival:*

Clearance from last port.
7 Crew Lists.
3 Lists of Arms and Ammunition.
7 Passenger Lists.
1 List of stowaways.
2 Crew Declarations.
3 Lists of Ports of Call.
2 Stores Lists.
1 International Tonnage Certificate.
1 International Load Line Certificate.
1 Derat Exemption Certificate.
1 Cargo Ship Safety Equipment Certificate.
1 Certificate of Registry.
1 Radiotelegraphy Certificate.
1 Construction Certificate.
1 Certificate Form on Board.
Free Pratique.

Documents required for disembarking passengers and discharging cargo:

A. To be received by mail at least 8 days before ship's arrival:
(1) Cargo:
  3 Freight Manifests
  8 Cargo Manifests
  5 copies of Bills of Lading
  6 copies of Stowage Plans.
(2) Passengers:
  1 Accountancy
  3 Passenger Lists, for passengers for the port/or in transit.
B. To be received by ship's bag at ship's arrival at quay:
(1) Cargo:
  1 Freight Manifest
  4 Cargo Manifests
  3 copies of Bills of Lading.
(2) Passengers:
  1 Freight Manifest
  4 Passenger Lists for passengers for the port and/or in transit.

It is most important that stowage plans be available before vessel's arrival. Vessel's operations are indeed delayed to the next shift if same are only remitted upon arrival.

DRAFTS AND CURRENTS: Drafts on Zaire River are influenced by seasonal water levels and by the state of dredging. They have been varying over the last 5 years from 21 ft. to 26 ft. and are presently (March 1994) as follows:

Inwards: High Water: 21 ft. 00 in.
Outwards: High Water: 22 ft. 00 in.

The authorised drafts are notified regularly by the Port Authorities.

The currents of the river and from berth to berth as well as in Matadi and Boma vary and depend upon the high and low levels of the water sometimes with adverse currents and still waters.

For proceeding to Matadi and according to the season vessels must have a speed of at least 10.5 to 11 knots, especially to pass the "Devil's Cauldron" about 3 miles before Matadi. 12-13 knots or greater sometimes requested for a 10-15 minute period.

HEALTH: Ship's crew must have an International Certificate of Vaccination against yellow fever and cholera.

RADIO: Banana Radio, 9PA.

Telegraphy – medium wave: 0430 – 2030 UTC.
500 kHz.
Working frequency: 489 kHz.
Listening frequency: 480 kHz.
512 kHz.
Traffic list each hour + 00 of each hour during service hours.

Telegraphy short waves: 0500 – 2000 UTC.

Traffic list at:
0500/0700/0900/1100/1600/1900: 8445.0 kHz
0600/0800/1200/1400/1700 : 12660.0 kHz
1000/1300/1800 : 22431.0 kHz
1500 : 17184.8 kHz

Reserve frequency for medium wave: 6491.5 kHz

Remarks: This frequency is used for traffic when QRN appears o 489 kHz.

Reserve frequency: 8546 kHz.

Listening on 8, 12 and 16 MHz, Channels 5, 6 and 15. On 22 MH Channels 3, 4 and 9.

Each Channel is monitored during 1 minute in a scanning system an this, during 15 minutes following traffic list (same frequency band a traffic list) after 15 minutes, the receiver is blocked on Channel 6 (4 o 22 MHz) until next traffic list.

Telex on Request

Paired frequencies:
Code 34646 (This is not definite since it must be allocated by UIT)

9PA:	8714 kHz	Ship: 8353 kHz
	13078.5 kHz	12498.5 kHz

1230/1730	on 17294.9 kHz – listening	16522 kHz
1330/1830	on 22658 kHz – listening	22062 kHz

Telephony VHF: 0430 – 2030 UTC.

Channel 16. Simplex Channels. Duplex Channels.

Remarks:

1. Telephone connections are possible and Agent accepts telegram in telephony.

2. Other available frequencies for telephony:

Banana Radio/9PA	*Ship*
4357.4 kHz	4063.0 kHz
4382.2 kHz	4087.8 kHz
8777.8 kHz	
8762.3 kHz	8238.4 kHz
13181.4 kHz	12410.6 kHz
17350.7 kHz	16577.8 kHz

3. Radio beacon continuous.
Frequency: 315 kHz. Call Sign: BAN.
Position: Lat. 05° 53′ 24″ S., Long. 12° 17′ 48″ E.
Power: 1kW.
Antenna: Omni-directional.
Range: 350 miles (daylight).

BRIDGES: *Bridge on River Zaire:* It is advisable to sound whistle o approaching bridge, to warn small canoes in the fairway.

FUEL: Must be ordered from Petrozaire at least 48 hours befor required. Normally supply of gasoil, light and heavy fuel is effected a Banana between Buoys 12 and 14 ex-barges with: minimum quantity - 250 tons; maximum quantity – 800 tons (total barge quantity).

Smaller quantities can also be supplied in Matadi or Ango Ango.

STEVEDORES: The ONATRA (Office National des Transports) – publ institution, has the monopoly of the handling, stevedoring and trans operations at the ports of Matadi and Boma.

At each berth the responsible "Pier Master" remains in constan contact with the Chief Officer during the whole operation.

Working shifts are as follows: 1st. shift: 0630 – 1430 hrs.; 2nd shi 1430 – 2230 hrs. overtime; 3rd shift: 2230 – 0630 hrs. overtime.

Work must be ordered the day before vessel's arrival. However, i gangs are available, work can still be ordered the day of vessel's arriv but latest at 0930 hrs. during week days.

In principle no work is done on Sundays, holidays and during th night. If required same has to be ordered by writing 1 working day i advance before 1000 hrs. Port Authorities will then decide according t the situation at that time.

According to the situation of the Port, the Authorities can also orde labour 24 hours per day Sundays and holidays included.

At Boma there is no third shift – however on special request, wo can eventually be granted until 2400 hrs.

At Matadi work during third shift will only be ordered upon speci request from vessel.

For all stevedoring operations the use of shore cranes/dock labour is compulsory. It is only in particular cases such as handling o containers/"heavy lifts" or prolonged (electrical) breakdowns that Po Operators can authorise use of vessel's equipment.

GENERAL: The following telex was received from an Agent in 1994: Quote:

"Commercial calls for discharging and/or loading cargo in Zaire ar subject to vessel's Owners and/or Operators, having been gran "Approved" status by Zairese freight office "Office Zairois de Gestio du Fret Maritime – OGEFREM", after signing a "Contrat d'Adhesio and making U.S.$10,000 deposit as security for compliance with Zaires Maritime Rules.

Cargoes loaded abroad for discharge in Zaire are subject to a waiver to be obtained at port of shipment with the local OGEFREM representatives. The waiver is evidenced by "Attestation de Reservation de Cale – A.R.C.", copy of which together with a copy of the Freight Manifest must be remitted by the vessel's Agents to OGEFREM office in the Zairese port of discharge. Vessels carrying cargoes to Zaire without A.R.C. are imposed with a penalty of 20% of the freight which, if not paid immediately, is deducted from the deposit, and the Owners are invited to complete it to reach again U.S.$ 10,000, pending which the Owners "Approved" status is suspended and their vessel's calls are not authorised."

Unquote.

Quay Practices:

The Zaire courtesy flag must be hoisted by foreign ships during daytime.

In view of the proximity of the town, the use of whistles, sirens and similar signals is forbidden, except on special occasions.

Safety nets must be put between ship and quay at each of the working hatches and beneath the gangway.

No rubbish whatsoever may be thrown overboard.

Official Language:

The official language used by the Port Authorities and Administration is French.

Cargo plans:

According to ONATRA's instructions, stowage plans of ships calling at Matadi/Boma must be issued in such a way that they show clearly where all goods loaded for Matadi/Boma in several ports are located. This enables ONATRA to have, at once, a clear view of each vessel and to study, before ship's arrival, the discharging/loading possibilities.

Those stowage plans must reach Agent before ship's arrival.

Vessel's loading/discharging operations will only start during the next shift if stowage plans are remitted upon vessel's arrival. A request can be made to shift the vessel to a more convenient berth depending upon the cargo concerned.

With regard to cargo loaded, ONATRA does not issue stowage plans and Masters should consequently be instructed to draw up stowage plans themselves for transmission to corresponding discharging ports.

It is customary not to moor ships at Matadi/Boma between 2200 hrs. and 0600 hrs. They remain at anchor.

Important Notices:

In connection with manifests for Matadi/Boma cargo:

1. Liner Terms Cargo:

According to the General Rules and Tariffs stowing, unstowing, loading, discharging rates are applied on weight/measurement, whichever is the highest irrespective of the freight unit.

The Port Authority ONATRA instructs therefore that:

(a) The Freighted Manifest remitted to them must show three columns detailing respectively weight and volume and freight unit (freight tons) of each cargo/bill of lading.

(b) At the bottom of each page a summing up of tonnage/weight, tonnage/volume and freight units (freight tons) should be mentioned.

(c) The last page of the manifest shall contain a separate recapitulation of weight tons, volumes and freight units (freight tons) showing thus the respective totals of each item.

Corrections or additionals added by the Agent at Matadi/Boma by hand or with typewriter are not accepted by ONATRA.

ONATRA is fully implementing the regulations and, for vessels whose manifests are incomplete or incorrect, a penalty, which may reach 1,000% of the stevedoring costs (or 10 times) is charged.

2. F.I.O. Cargo:

The same information is to be supplied as for Liner Cargo but, in addition, the manifest and B/L must clearly mention that cargo is carried on free out terms.

BANANA: 06.01 S. 12.25 E.

DOCUMENTS: See "General" before first port.

APPROACHES: In view of the strong current, and in view of the fact that the lights of the navigation buoys on the river do not always work properly, night navigation is practically impossible. Tankers, therefore, arriving at night, or in times of congestion, are recommended to anchor approx. 5 miles West of Moita Seca Light in approx. 10 fathoms, about 12 miles from Stella Buoy.

PILOTAGE: River can be entered direct from sea in deep water. Pilot (not compulsory) will board vessel from 0600 hrs. with Authorities at Pilot Station located one mile South of Banana Point.

The position of the flare of the SOCIR Refinery at Moanda is:

Lat. 5° 57′ 51″ S.
Long. 12° 25′ 07″ E.

The flare is visible during day and night and may be a good bearing for vessels approaching river.

Sailing from "Stella Buoy" at 0600 hrs. vessels with a speed of up to 14 knots must pass Bulabemba before 1400 hrs. and vessels with speed in excess of 14 knots by 1500 hrs.

MAX. SIZE: Tankers up to 35 ft. draft may discharge at buoy moorings. Also see "Berthing – Commercial Port".

HEALTH: Quarantine Officer boards at sea buoy. Free Pratique usually granted as soon as Maritime Health Declaration completed. Valid cholera and yellow fever inoculations required for all crew members.

RADIO: *Tankers:* At least 3 days' notice required to Agent (ETA and draft only) and to Harbour Master, "Maritime Banana" (ETA only). It is necessary to transmit these notices via another shore station (e.g. Cape Town Radio, Libreville Radio, etc.), as the Banana Radio Station can only be reached 2 days prior arrival. Close advice on changes in ETA necessary to prevent delays in waiting for Pilot and lighters.

Radio Banana (9PA) – see "General" before first port for details.

BERTHING:

Commercial Port:

The commercial port consists of a landing space of approximately 2,000 sq.m. in front of a warehouse with approximately 2,500 sq.m. storing room.

ONATRA, the Port Authority, has no cranes and the port equipment is extremely limited. Any discharging and/or loading must therefore be done by ships' gear.

With a draft of more than 17 ft. (indicative) cargo operations to be performed at anchor between Buoys No. 12 and No. 14. Barges and gangs are then supplied on request.

With a draft of less than 17 ft. (indicative) vessel can berth at ONATRA wharf inside Banana Bay.

Length of the wharf: 75 m.

DENSITY: Brackish to salt.

FRESH WATER: Not available.

FUEL: Must be ordered 48 hours in advance from Petro-Zaire. Bunkering takes place between Buoys No. 12 and 14. Gasoil, light and heavy fuel oil available. Barge capacity 800 tons, minimum order 250 tons.

MEDICAL: Doctor available for emergency only. No dental or hospital facilities.

TANKERS: Tankers remain at anchor between Buoys No. 12 and 16 on the river, anchorage being agreed upon by the Master and the local suppliers' representative who will have received the advice of the Pilot. Since there is no mooring buoy and in view of the strong currents it is recommended to use both anchors while main engine to remain on standby.

Cargo Operations: Tankers discharge into/load from cargo barges moored alongside either side. These barges (three in total) have a capacity of 1,650 long tons or 2,050 cu.m. and can receive the cargo at a rate up to 400 t.p.h. Under normal conditions the refinery will handle these barges per shift of 12 hours. Cargo operations are effected continuously day and night during Sunday and holidays, in shifts from 0600 – 1800 hrs. and from 1800 – 0600 hrs.

Sailing: Tankers sail without Pilot and may leave any time.

Moanda Terminal: To notify his arrival, Master to call M.V. "Afran Zenith" by radio. Vessel will then proceed to single buoy mooring berth with following particulars:

Depth: 57 ft.
Position: Lat. 5° 57′ 50″ S.
Long. 12° 08′ 19″ E.

where loading will take place.

The storage tanker is moored in position:

Lat: 05° 57′ 30″ S.
Long: 12° 06′ 00″ E.

No tank-cleaning facilities. Barge available for dirty ballast reception limited to 2,000 cu.m. per trip which occasionally and on special request can be put at disposal by the refinery.

Also see "Shipmaster's Report".

REPAIRS: No facilities.

HOLIDAYS: See "Matadi".

SHORE LEAVE: Shore leave is presently not allowed due to lack of communications; only in urgent cases may a crew member join one of the refinery tugs. There is no entertainment whatsoever ashore.

GENERAL: During stay of tankers at anchorage the discharge and/or loading operations are constantly supervised by representatives of the refinery, who are to be accommodated on board and to be provided with meals.

SHIPMASTER'S REPORT: September 1985.

Location: Moanda Oil Terminal is operated by the Zaire Gulf Oil Company. It is located about 10 miles offshore from Zaire. It consists of a SPM in position Lat. 5° 57′ 50″ S., Long. 12° 08′ 19″ E. in about 75 ft. of water. Crude oil is transferred to the export tanker at the SPM from the storage tanker "Afran Zenith" of 95,185 d.w.t.

Wind and Swell: Wind and swell are mostly from a Southwesterly direction with a heavy swell from March to September. The tidal range in the vicinity of the berth is 6.9 ft. The current in the area is a composite of the effect of the general Northwesterly drift and the outflow of the Zaire River. This results in a current of 3 – 4 knots or more in a Northerly at Westerly direction. In view of the foregoing, Masters of vessels calling at the terminal are advised that under no circumstances are engine repairs permitted within terminal limits.

Communications: Vessels bound for Zaire are required to advise their ETA:

(a) Via COMSAT to Master m.v. "Afran Zenith" GZOL 1242403; or

(b) Via telex or radiogram to the main office of the vessel's Agent in Kinshasa who will pass over the information to Zaire Gulf Oil Company (ZAGOC) and to their local office at Moanda.

ETA messages to be sent 72, 48 and 24 hours before arrival at the terminal and should contain the following information:

(a) Name of vessel.
(b) ETA in GMT (Zaire time is GMT plus 1 hour).
(c) Name of Master.
(d) Estimated arrival draft, fore and aft and displacement.
(e) Time for discharging clean ballast, if any.
(f) If vessel proceeding to any port(s) prior to Moanda and if so delays anticipated.

A 24 hour watch is maintained on VHF Channel 16 on "Afran Zenith" and contact is usually possible at a distance of 20 – 30 miles.

Dirty Ballast: No facilities exist for receiving dirty ballast and all tankers must arrive with clean ballast.

Cargo Information: Oil loaded at the Moanda Terminal is Zaire composite crude with an average API of 31.5. The loading temperature will vary from 80°F – 85°F and is fairly steady throughout the year. The loading rate is about 30,000 bbls.p.h.

Approach to Anchorage/Mooring Master Boarding Area: If vessel is required to anchor, the recommended tanker anchorage is within a circle 0.5 miles in diameter and its centre is located in a position 5 miles due West of the SPM. Owing to the presence of oil wells and submarine pipelines vessels should not enter into the area bounded by lines joining the following positions:

(a) Lat. 05° 46.5′ S., Long. 12° 12.5 E.
(b) Lat. 05° 49.5′ S., Long. 12° 09.0 E.
(c) Lat. 06° 00.0′ S., Long. 12° 09.0 E.
(d) Lat. 06° 00.0′ S., Long. 12° 18.0 E.
(e) Lat. 05° 53.5′ S., Long. 12° 18.0 E.

The ZAGOC Mooring Master Boarding Area is 3 miles due West (Lat. 05° 57.30′ S., Long. 12° 06′ E.) of the storage tanker "Afran Zenith" or boarding will be at the anchorage as appropriate.

Accommodation: During vessel's stay at the terminal the Mooring Master, Loading Master, Agent, Surveyor and 4 men for the hose gang will stay on board.

Mooring Arrangements: Mooring operations are only undertaken by day under normal weather conditions. Unmooring operations can be undertaken at any time. The following preparations are required on the export tanker:

(a) 4 mooring ropes, minimum length 220 m. and size 9 in., buoyant lines if possible e.g. polypropylene, in good condition.
(b) 2 suitable heaving lines of appropriate length.
(c) 2 mooring lines aft for securing a tug to realign the vessel to the buoy if necessary.

Hose Connections: 1×16 in. hose is connected to the ship's manifold.

Bunkers: Not available.

Fresh Water: Not available.

SHIPMASTER'S REPORT: April 1987.

Vessel discharged at Banana and Ango-Ango.

Approaches: Wide open with very deep water approach. Vessels can anchor at either side of the river mouth in 20 fathoms. Pirates do not appear to be a problem. The very small amount of traffic using the Congo indicates that there will be no problems with regard to crowded anchorage.

Pilotage: River passage is during daylight hours only. The Pilot boards off the Banana Creek Channel, and the lightening anchorage is between Buoys No. 12 and 14, however No. 12 Buoy is missing. A secondary anchorage is between Buoys No. 16 and 18, abeam of Crique Ariel Beacon. Both anchors with about 7 or 8 shackles will be used in either anchorage. The current is always out-flowing, so there is no fear of a fouled hawse on this visit. This vessel tried to anchor in the first anchorage, (vessels normally try the first anchorage, so as to be that much nearer to Banana for the lighters). Vessel started dragging anchors, so we hove up and moved into the second anchorage.

Officials: 14 officials boarded the vessel.

Documents:

8 copies Crew List.
6 copies Passenger and Mail List.
6 copies Stowaway List.
4 copies Cargo Manifest.
4 copies Ullage Report from Last Port.
6 copies Kroo Boy List.
6 copies Arms and Ammunition List.
6 copies Narcotics List.
6 copies List of Ports Visited.

Discharge: Lightering only at Banana.

The amount of lightering depends on the water available in the dredged sections further upstream, (all the cargo lightened has eventually to be taken up to Ango-Ango by the lighters).

On this occasion, we had to off-load into 5 lighters, to come up to 23 ft. draft (max. permissible draft up-river at this time). Only 1 tug was available so this meant 3 trips. No unloading took place between midnight and 0800 hrs. the next morning.

One pump was used, discharging to 1 barge each side simultaneously. The tug takes 2 barges at a time back to banana.

Passage to Banana and Ango-Ango: The passage to Banana takes 6 to 7 hours, and if vessel cannot arrive at Ango-Ango before 1700 hrs., then vessel will anchor at Boma. All passages take place during daylight hours.

The continuous outgoing river current can vary from 3 knots up to 6 – 7 knots, depending on rainy or dry season.

From Banana to Buoy No. 24, there is plenty of water and room to manoeuvre, etc. although it should be emphasised that here are very few aids to navigation which can be relied upon. The buoys throughout the river passage are very doubtful as to their position (they may have been moved as the channel moves, but no Notice to Mariners issued). The strength of the river current must make the mooring of these buoys very difficult, also many of them consist of oil drums fastened together.

There is a narrow channel section (dredged in parts) from Buoy position No. 46 to Buoy No. 78. Part of the new channel veers away from the dotted line on the chart, and goes off to the West of "Archipel des Tortues", up what appears on the chart to be a narrow creek. From here on there is no visual chart indication of where you are going. In the narrow parts there may be 2 buoys (oil drums) to go between, but even so there are quite a few severe turns. so there are quite a few severe turns.

From Buoy No. 86, you are back in soundings and there is plenty of water up to Boma. The Pilot changes at Boma.

We anchored overnight at Boma. The anchorage is opposite Boma town and is in a quiet stretch of water out of the current. Only one anchor is used (4 shackles), and as the current flow is always in the same direction, there is no reverse of heading, so although you are close to the South side of the river, the only problem will be if there is a sudde change of wind during one of the passing tropical downpours.

The passage from Boma to Ango-Ango is all in deep water, and i comparatively wide, although there is the occasional whirlpool, an navigation aids are sparse with a rocky shoreline.

Ango-Ango Berth Approaches: The approach is straightforwar although there are no mooring launches or tugs. The berth itself is n slack water. Normally, the vessel is put slightly ahead and off the bert and the port anchor is dropped, with 3 shackles. The bow is th manoeuvred into the berth using engines and anchor, then head lin are sent ashore via shore messengers (the headlines may look li breast lines, and the breast lines like half springs), but be sure to ge the correct lines as per plan (See "Plan"), they appear to have se messengers for each shore bollard, no springs are allowed on to th pontoon. The after lines are also sent via messengers, so be sure t organise with the Pilot as to which sequence is required, especially th springs being sent from aft, and the breast lines from the main deck.

Documents at Ango-Ango: The same number of documents as requir at Banana are again required in Ango-Ango.

Discharge: The discharge is made via 2 sets of 2 × 6 in. lines connecte via shore supplied "Y" pieces connected to ship's 8 in. manifolds. Bo jet fuel and MOGAS were discharged simultaneously.

The departure is fairly straightforward, heaving off on the anchor, an there is plenty of room to swing vessel round in, especially with the bo being out in the current, and the stern in comparatively slack water.

The passage down river is, of course, much quicker with all the curren with you.

AUTHORITY: Office National des Transports, ONATRA.

AGENT: See "Matadi".

BOMA: 05.51 S. 13.03 E.

DOCUMENTS: See "General" before first port.

PILOTAGE: Port is situated on the right bank of river, about 44 mile above pilot station at Banana.

Radio "Maritime Banana" 24 hours prior arrival giving ETA at Banan and requesting Pilot. Sailing for Banana from 0600 hrs. till 1600 hr Sailing for Matadi from 0500 hrs. till 1600 hrs.

RESTRICTIONS: Depth at bar 30 ft. Permissible draft for navigating rive varies between 20 ft. to 27 ft. according to local conditions and shoul be checked with Port Authority in advance.

HEALTH: Quarantine Officer boards on arrival. All crew member require valid cholera vaccinations and yellow fever inoculatio certificates.

TUGS: 2 tugs of 200 and 300 h.p. available to assist berthing.

BERTHING: Total quay length 450 m. with 3 berths alongside. Dep of water at the quay, 8 m. at low water. Maximum current at the berths i 3 knots.

STEVEDORES: See "General" before first port.

Port Equipment:

6 electric cranes on rails, capacity 3 – 6 tons.
2 steam cranes on rails, capacity 7.5 ton at 6 m. (5.0 ton at 10 m.)
5 banana conveyors.
1 electric crane, capacity 6 tons.
8 forklifts.
5 tractors and 40 trailers and carts.
1 Palm kernel elevator.
1 Automatic grab.
2 Hyster carry cranes.
7 barges, capacity 100 tons.
1 pontoon, capacity 75 tons.

FRESH WATER: Available from quays, suitable for drinking.

FUEL: See "General" before first port.

MEDICAL: Doctors and hospital facilities available.

REPAIRS: No facilities.

HOLIDAYS: See "Matadi".

GENERAL:

Exports: Logs and timber, plywood, veneerwood, coffee, cocoa, rubbe bananas, palm kernels, oils, cakes, about 8.8% of the total exports o the Zaire.

Imports: Various. About 2.5% of the total tonnage imported into Zair

Current at Quays: The currents of the river vary from berth to berth an depend upon the low and high level of the water with sometimes advers currents and still waters.

Maximum speed at high level: 3 knots.
Minimum depth at the lowest level: 8 m.

AUTHORITY: Office National des Transport – ONATRA.

MATADI, (including Ango-Ango): 05.49 S. 13.27 E.
(See Plan)

DOCUMENTS: 7 days before arrival of vessel the following must be in the hands of the Agent:
4 Manifests (detailing explosives, general cargo, heavy lifts).
3 Stowage Plans.
6 copies of Bills of Lading.
1 Freighted Manifest.
On arrival:
Maritime Declaration.
Ship's Register.
3 Crew Personal Effects Lists.
2 Stowage Plans.
1 Freighted Manifest.
3 Lists of Ports of Call.
7 Passengers Landed.
7 Passengers in Transit.
5 Crew Lists.
5 Kroo Boys Lists.
2 Provisions Lists.
4 Individual Manifests.

PILOTAGE: Compulsory for vessels over 500 g.r.t. Radio "Maritime Banana" 24 hours prior arrival giving ETA at Banana and requesting Pilot. Pilot boards at Banana Pilot station. Distance from Banana to Matadi about 75 miles. Sailing for Banana from 0600 hrs. – 1300 hrs./1400 hrs., depending on vessel's speed. Deadline for passing Boma 1600 hrs. Sailing for Boma from 0500 hrs. – 1600 hrs.

RESTRICTIONS: Depth at bar 30 ft. Permissible draft for navigating Zaire River varies between 20 ft. and 27 ft. according to local conditions and should be checked with the Port Authority 3 days in advance. Berthing at Ango-Ango up till 1800 hrs. only.

MAX. SIZE: Controlled by draft in river. Max. draft Berth No. 1 is 23 ft. – 24 ft.

HEALTH: Quarantine Officer boards on arrival. All crew members require valid cholera and yellow fever inoculation certificates.

TUGS: "Viva" 1,700 h.p., "Inga" 850 h.p., "Boma" 250 h.p., "Banana" 600 h.p. and "Soyo" 220 h.p.

BERTHING: At Matadi. Total length 1,728 m.

Pier 1 – 149 m.	Pier 6 – 176 m.
Pier 2 – 161 m.	Pier 7 – 188 m.
Pier 3 – 155 m.	Pier 8 – 149 m.
Pier 4 – 158 m.	Pier 9 – 167 m.
Pier 5 – 156 m.	Pier 10 – 143 m.

Piers No. 5, 6 and 7 for full container vessels.
Minimum depth at Piers 8 and 10 is 10 m.
In addition there is a berth length 400 m. for barges.
At Ango-Ango: Length of pier 150 m. Presently used for discharging and loading flammable goods and explosives.

UNLOADING RATE: 800 tons to 1,000 tons of general cargo per day of 3 shifts.

CRANES:

44 Cranes (Electric and hydraulic) on rails	3 – 6 tons	
1 Derrick Fixed	*50 tons	(Pier 4)
1 Bridge Crane	5 tons	
6 Electric Cranes	3 – 6 tons	
2 Electric Cranes	10 tons	
3 Electric Cranes	6 tons	
1 Floating Crane	14 tons	

*Actual capacity 34 tons.

BULK HANDLING FACILITIES: Palm oil is stocked by 4 companies in Matadi, 3 of which have pipelines to a main quay. The palm oil installations of CCP are at Ango-Ango where ships must berth at Sep Zaire pier. Vessels handling Sep Zaire cargoes are given priority at this pier and in case of unavailability of berth, palm oil would be loaded by barge of 260 tons capacity at Matadi.

Palm kernel oil is also loaded at Berths No. 2 – 9 and Palm Oil at Berth Nos. 2 – 8 in Matadi.

P.L.Z. (Plantations Lever au Zaire) capacity	13,450 tons
AMATO-Freres	3,700 tons
MADAIL	2,340 tons
C.C.P.	3,627 tons

Cereals discharged by suction at Berth No. 9. Rate 1,000 t.p.h.

BARGES/EQUIPMENT:
Barges:
2 Pontoons N.T. 41 tons each
8 Pontoons N.T. 75 tons each
1 Lighter N.T. 91 tons
2 Lighters N.T. 99 tons each
1 Tankbarge N.T. 279 tons
19 Lighters N.T. 339 tons each
1 Lighter N.T. 438 tons
11 Lighters N.T. 487 tons each
1 Lighter N.T. 514 tons
1 Lighter N.T. 522 tons
10 Lighters N.T. 557 tons each
2 Landing craft 875 tons each

Equipment:
28 Tractors and 242 trailers and carts
71 Forklifts with a maximum capacity of 2,500 kilos
2 Roller bridges 30 tons
3 Fork conveyors
34 Platforms × 20 ft.
6 Platforms × 40 ft. (Unilock)
1 Pushwagon tractor
Grain Elevators (Midema)

DENSITY: Fresh water.

STEVEDORES: See "General" before first port.

MEDICAL: Doctors and hospital facilities available.

TANKERS: Discharge at Sep Zaire pier at Ango-Ango or Matadi. If lightening necessary before berthing, this can be effected at Ramler Buoy, 17 miles above Banana. No tank-cleaning facilities. No fresh water.

Also see "Shipmaster's Report" dated September 1990.

FRESH WATER: Delivery aboard the ship through valves and at each pier. Maximum daily capacity 200 tons. Delivery takes place according to the quantity asked for and usually during night.

Delivery cannot be done at the loading berth of Sep Zaire at Ango Ango.

Suppliers need 48 hours' notice. It is therefore highly recommended that Masters cable their needs well in advance to Agent and/or through Owners.

FUEL: See "General" before first port.

GANGWAY/DECK WATCHMEN: Recommended.
Piracy: Acts of piracy have taken place in the port.

REPAIRS: Small repairs possible at railway workshop.

HOLIDAYS: *Legal Holidays in Zaire – 1989:*

1st January	New Year's Day
4th January	Martyrs of Independence
1st May	Labour Day
20th May	Anniversary of the M.P.R.
24th June	Money Day
30th June	Independence Day
1st August	Parents' Day
14th October	Zaire Youth Day
27th October	Zaire Day
17th November	Army Day
24th November	Anniversary of the New Regime
25th December	Christmas

GENERAL: *Currents at the quays:*
The currents of the river vary from berth to berth and depend upon the high and low levels of the water with sometimes adverse currents and still waters. Difference between high and low level of the river is approximately 5.50 m.

Maximum speed at high level: 6 knots.
Minimum depth at lowest level: Minimum 8 m. at low water and minimum 10 m. at low water at the new Kala Kala quays.

Exports: Logs and timber (plywood, veneerwood), coffee, cocoa, rubber, copal, bananas, manioc, groundnuts, palm kernels, oils, cakes, fibres, cotton and copper.

Port Equipment and Accommodation: Matadi is the only Zaire port handling the despatch of export products originating from the interior and the import of products destined to Zaire (excluding Boma which is of minor importance and only serves the Mayumbe area).

About 90% of the tonnage in – and outward goes through Matadi at the head of the S.N.C.Z. railroad from Matadi to Kinshasa. The latter locality being a handling and concentration centre of the goods directed to or coming from Matadi.

SHIPMASTER'S REPORT: January 1981.
Documents and papers required on arrival Matadi:
7 Crew Lists.
2 Maritime Declarations of Health.
7 Passenger Lists (even if nil).
5 Ports of Call Lists.
4 Arms and Ammunitions Lists (even if nil).
4 Narcotic Lists.
3 Stores Lists.
2 Crew Customs Declarations.
1 Vaccination List (Cholera/Yellow Fever).
4 Animal List. (even if nil).

Following documents have to be shown to the Port Authorities:
Classification Certificate.
Ship's Register.
Derat Certificate.
Certificate of Tonnage Measurement.
Cargo Ship Safety Construction Certificate.
Cargo Ship Safety Radio-telegraphy Certificate.
Cargo Ship Safety Equipment Certificate.
International Load Line Certificate.
The official Log Book of the vessel and the Articles.

The number of crew written in the Crew Lists will be checked with the entries in the Articles.

Shore Leave: Each crew member receives a shore pass without particulars, which has to be returned before departure of the vessel. Fines will be imposed if shore leave pass is lost.

SHIPMASTER'S REPORT: August 1982.
As far as I could ascertain the only point in the Congo River where one can expect currents of 12 knots is in the "Devil's Cauldron" between Matadi and Ango-Ango. The rainy season is Jan./Feb. and the dry season June/July. The average current in the rainy season is 4 knots and in the dry 3 knots.

Tankers and other vessels who clear at Banana generally must go through the same procedure again at Ango-Ango or Matadi. A complete set of papers is expected as though it is the first entry into the country.

SHIPMASTER'S REPORT: September 1990.
Ango-Ango: Vessel discharged refined oil products.
There was no attempted theft whilst in this port. The people are as friendly as one could wish to meet, and having been ashore over the weekend, the "run ashore" could be described as excellent without any risk of violence, to any crew member. The Port Authorities and Officials, though numerous, were efficient and helpful, as were the Agent and the plant personnel. The plant itself was well run and efficient.

On arrival off Zaire, the vessel had to wait 5 days whilst cargo payment was finalised. This problem is, I believe, not uncommon.

Due to entries in the Pilot Book supplement, the vessel stayed offshore, in case of piracy. This is in fact wholly unnecessary, and on confirmation of entry we went into anchor.

I anchored about 2.5 miles West of Moita Seca. It is the end of the dry season at present. I estimated current was running at between 3 knots and 4 knots in the river, but at this anchoring position, there was little or no current. Good holding ground was found here in about 50 ft. of water.

Pilot boarded off Banana Creek at exactly 0600 hrs. There were no formalities conducted here. Vessel berthed at 1500 hrs. Our charts were corrected up-to-date, but the rapid changes of the river meant that the channel, as shown on B.A. Chart No. 634, has altered completely, and is doing so all the time. The channel was well buoyed, Pilots are Belgium trained and of good standard. Pilots change at Boma both inbound or outbound, but, I believe, will do the entire pilotage when a shortage of pilots exists.

The Ango-Ango Terminal is managed by a former Belgium ship's master, who is friendly and very helpful. Having read the entry in the "Guide", he informed me that he can supply all grades of bunkers. The pontoon system at the berth is the same, there is little strength to the current at the berth, though a counter current exists, causing sets off the berth. Berthing was much easier than I anticipated, though the ropes had to be tied together to reach the shore. The boatmen have a winch system to pull the vessel's ropes ashore, two at a time. Vessel made fast with 2 head ropes, springs, and 2 stern lines and springs. There was no problem with the vessel whilst alongside, due to the strong current in the river.

Fresh water was available by meter from the shore, but we were advised that it had to be boiled prior to drinking.

Pilotage is only by daylight. On departure, vessel must leave the berth by 1300 hrs., or wait till daylight the following day.

Fresh stores were abundant, other stores were available, including meat of a good standard. However, a lot of items are expensive. A chandler is available, but if there is time, I would suggest purchase of stores direct from Matadi market.

Discharge of oil products was about 300 tonnes per hour, but lube oil was slow with a high back pressure, and a discharge rate at times of only 80 cu.m./hr. was obtained.

Communications are poor. We had to keep owner's informed by the ship's telex. At no time were we, prior to arrival, able to communicate with Zaire by telephone or telex.

ETA, arrival details, etc. were passed by telegram to Banana Radio on 500 kHz., this station seeming only to be in range 3 days prior to arrival. However, this route seemed to be successful. I am informed that any telephone contact with Europe is impossible. Banana Radio will only pass messages.

Agent's Notice:

1. *Documents required from Master on Arrival:*
   - (A) Clearance of the last Port of Call.
   - (B) 7 copies Crew List.
   - (C) 5 copies Arms and Ammunition List.
   - (D) 7 copies Passengers List.
   - (E) 5 copies Crew Declaration (Personal Effects).
   - (F) 5 copies Ports of Call List.
   - (G) 5 copies Stores List.
   - (H) 4 copies Narcotics List.
   - (I) Ship's Certificates:
     - Load Line Certificate.
     - International Tonnage Certificate.
     - Cargo Safety Equipment Certificate.
     - Register Certificate.
     - Safety Construction Certificate.
     - Radio Certificate.
     - Derat Exemption Certificate.
   - (J) Loading/Discharging Documents.
2. *Documents required from Port Authorities on Arrival/Departure:*
   - Free Pratique.
   - Clearance.
3. *To be filled/signed by Master:*
   - 1 set of the Harbour Master's Declaration.
   - 1 set of "Arrival Conditions".

AUTHORITY: Office National des Transports – ONATRA, Port of Matadi. *Telex:* 21017 Onatra ZR. *Contact:* Port Director.

BUCHANAN

(ORE LOADING QUAY)

1. Minimum reach of shiploader outside fendered quayside = 4.50m
2. Maximum reach of shiploader outside fendered quayside = 23.0m (incl. throw)
3. Max. possible beam of ship with 5m symmetrical spout trimming across hatch = 43m
4. Aftermost position of stern, when draft aft exceeds 9.0m
5. Foremost position of bow for acceptable mooring to anchor block
6. Any hatch located more than 245.0m from extreme stern must be loaded before draft aft exceeds 9.0m
7. Min. advisable clearance under keel: $c = \frac{3B \text{ ft.}}{125}$ (B = ship's beam in feet)
8. Max. advisable draft (cargo completed on high tide) is 41½ - 42½ ft. depending on height of tide and required clearance under keel. Ships drawing 39 feet can be handled at all times
9. Free board height under shiploader should not exceed 15m

NOTE: Information on this drawing is given as advice only and does not constitute a guarantee, that ships of indicated max. dimension can always be loaded. In addition, several other factors like trimming, ballasting and deballasting, stresses in the hull etc must be taken into account by the owner or master of the ship.

BULLEN BAY

CURACAO OIL TERMINAL

THROUGHPUT:

Transhipment	1,200,000 barrels per day
Refinery import	250,000 barrels per day

JETTIES:

- 1 – 500,000 DWT tanker jetty
- 1 – 350,000 DWT tanker jetty
- 1 – 250,000 DWT tanker jetty
- 2 – 100,000 DWT tanker jetties
- 1 – 70,000 DWT tanker jetty
- 2 – Tugboat jetties

TOTAL TANK CAPACITY – 17,750,000 barrels

1 –	1,000,000 barrels capacity –	1,000,000
16 –	750,000 barrels capacity –	12,000,000
6 –	375,000 barrels capacity –	2,250,000
38 –	Small tanks capacity –	2,500,000

PIPELINES: Main track consists of 5 strings of 36" pipe. The jetties carry 2 strings of 36" pipe in a loop. The loading rate is up to 12,000 tons per hour. Tankers' discharge rate is up to 25,000 tons per hour.

DEBALLASTING: Capacity 4,000 tons per hour per jetty. Ballast treatment produces affluent of less than 20 parts per million (20 ppm) oil content.

TUG SERVICE: Two tugs of 4,500 h.p. with 50 tons bollard pull each. One tug of 2,500 h.p. with 35 tons bollard pull.

REFINERY AREA

NOTE:

1 No anchors to be used within shaded area (Except in emergency situations)

2 Discuss method of approach with Harbour office (Channel 14)

POLLUTION: A submersible oil boom has been installed enclosing the oil pier. Normally, the boom rests on the sea-bed, but when needed it will be raised to the surface using compressed air.

The oil boom and its system of anchorage will be damaged by vessels' anchors. In order to ensure that the oil boom is operable at all times, and to avoid expensive repairs, which will be charged to the ship responsible for the damage, great care should be taken in connection with manoeuvres along the Slagen pier, which will require the use of anchors.

The drawing of the pier shows the position of the oil boom and the anchorage system. Except for emergency situations, anchors should not be used within the shaded area.

All manoeuvres to and from berths should be discussed with the Harbour office (Slagen Harbour Radio, Channel 14). The Harbour Office will give you information regarding current strength and setting.

Approach to Berth 2, and Berth 3 if Berth 2 is not occupied, is facilitated by the fendered sliding front shown on the drawing.

Before anchoring tankers should contact Fahal control on VHF 12 for a designated anchoring position. In all cases tankers are required to anchor at least 2 miles west of Fahal Island and at least 2 miles clear of the Omani Coastline

Note 1. Pilot will advise boarding position on V.H.F. radio prior to arrival.
2. Vessels should not enter prohibited area unless accompanied by Pilot. If proceeding to anchorage pass northward of Fahal Island.

Line of sight parallel to centreline from Conning Positions No. 1 & 3
Conning Position No. 3
Conning Position No. 5
Conning Position No. 1

Notes:

1. On vessels without centerline cranes or any other centerline obstructions, visibility shall be measured along the centerline over the stem.
2. On vessels with centerline cranes or any other centerline obstruction, visibility should be measured along lines which are parallel to vessels centerline keel from Conning Positions No. 2 & 3 over vessel's bow.
3. Conning Positions No. 2 & 3 are to be at those windows in the wheelhouse which are the nearest windows to the centreline which will provide a clear unobstructed view ahead along lines which are parallel to vessel's centreline.

CATWALK

LADDERS

Notes:

1. Sketches show acceptable and easily constructed catwalks and ladders to provide safe access to work areas on ships carrying deck load cargo.
2. Dimensions may vary. Provided basic safety requirements are maintained and construction is approved by PCC authorities.
3. All passageways shall be free of obstacles or hazards for the users.

PANAMA CANAL

LIMITING DRAFTS DUE TO BILGE RADIUS CONTACTING LOCKS CHAMBER BATTERS:

FIGURE 1

	Radius of Turn of Bilge (Meters)				
	0.30	0.60	0.90	1.20	1.50
0.000	10.87	11.12	11.37	11.62	11.87
0.025	10.89	11.14	11.39	11.64	11.89
0.050	10.91	11.16	11.41	11.66	11.91
0.075	10.93	11.18	11.43	11.68	11.93
0.100	10.95	11.20	11.45	11.70	11.96
0.125	10.97	11.22	11.47	11.73	11.98
0.150	10.99	11.24	11.50	11.75	12.00
0.175	11.01	11.27	11.52	11.77	12.02
0.200	11.04	11.29	11.54	11.79	12.04
0.225	11.06	11.31	11.56	11.81	
0.250	11.08	11.33	11.58	11.83	
0.275	11.10	11.35	11.60	11.85	

Example: To find draft of ship having a Radius-of-turn-of-bilge of 1.325 m., read across top of table to column headed 1.20 m. thence down column opposite 0.125 m. Read 11.73 m.

Notes: (a) Dead Rise not included in above tabulations and must be added to above reading
(b) Allows for 15 cm. thick rubber fenders on lock walls at batter locations

	Radius of turn of Bilge (Feet)				
	1'	2'	3'	4'	5'
0"	35' 8"	36' 6"	37' 4"	38' 2"	39' 0"
1"	35' 9"	36' 7"	37' 5"	38' 3"	39' 1"
2"	35' 10"	36' 8"	37' 6"	38' 4"	39' 2"
3"	35' 10"	36' 8"	37' 6"	38' 5"	39' 3"
4"	35' 11"	36' 9"	37' 7"	38' 5"	39' 3"
5"	36' 0"	36' 10"	37' 8"	38' 6"	39' 4"
6"	36' 1"	36' 11"	37' 9"	38' 7"	39' 5"
7"	36' 2"	37' 0"	37' 10"	38' 8"	39' 6"
8"	36' 3"	37' 1"	37' 11"	38' 10"	
9"	36' 3"	37' 1"	38' 0"	38' 10"	
10"	36' 4"	37' 2"	38' 0"	38' 10"	
11"	36' 5"	37' 3"	38' 1"	38' 11"	

Example: To find draft of ship having a Radius-of-turn-of-bilge of 4' 4", read across top of table to column headed 4' thence down column opposite 4" Read 38' 5".

Notes: (a) Dead Rise not included in above tabulations and must be added to above reading
(b) Allows for 6 inch thick rubber fenders on lock walls at batter locations

WIRE
SHACKLE
NYLON TAIL

PUERTO ARMUELLES

STAINLESS STEEL SHACKLE FOR LINES WITH TAILS

Tails, if used, should preferably be made of nylon line (3 strand construction should not be used) about 11 m. long overall, and have a breaking strength at least 25% greater than the MBL of the wire to which they are attached. They should be replaced at least every 18 months unless experience and/or inspection indicates more or less frequent replacement is necessary.
